Several times the boys thought the boat had been run into, and marvelled how the crew could sleep so soundly and snore so loudly. The thick fog swept down the open companionway, and the dampness chilled them to the bone.

At the first struggles of dawn, the boys, clasping each other, fell into a fitful doze from sheer exhaustion. During the day their distress increased. Non could not get on deck; he was too sick. The monotonous fog, the head-wind, the choppy sea, the impatient Captain, the ceaseless toot of that anxious horn, their distance from home—these and many other distresses combined to make the two more miserable even than when they were adrift in the dory.

The morning of the second day brought a clear sky. With a horizon in view came hope; but the day brought no sight of land.

It was their first experience of the immensity of the waters. The boys were very unhappy. They felt that they were cut off from home and all the world.

Before breakfast a sail hove in sight; but after coming nearer it stood off to the westward.

During the whole morning the boys scanned the horizon intently. The sailors now began to share their eagerness. Seamen are superstitious, and it had been remarked that bad weather had come with the two lads.

The Captain was as ready as the rest to be rid of them. So much was in their favor.

Toward noon they sighted another vessel.

"She's in from the Banks!" cried one.

"She's the *Fredony*," said another, "bound to Gloucester."

"No, she belongs daown East," insisted a third.

Each man clung to his opinion. Presently Crumpy, the sailor who had been kind to the boys, and who had kept quite still, keenly watching the advancing vessel, said slowly:

"She's a seiner, *she* is, with a full trip o' mackerel from Nova Scotia."

The two fishing schooners rolled toward each other. It did not take long for them to close together. The boys eyed the seiner with beating hearts. When the black stranger was quite near, there was a flurry on board the *Woodburn* which the boys could not understand.

A flag had been hoisted on the mast of the seiner. It stopped and fluttered half-way up.

"How many did you lose?" was the first question from the Captain of the *Woodburn*.

"Two, off the bow while a-reefin'."

The answer came mournfully, and there was a pause, but not a long one. The next question meant business.

"How many barr'l?"

"Two hundred A No. One, off Halifax."

"Where are you bound?"

"Gloucester."

At this answer Hal was about to shriek, "Take us there!" when Crumpy restrained him. "You jest wait! The skipper 'll fix it all right."

"I want you to take two kids in I picked up a-driftin' out to Kingdom Come," said the Captain.

"Send 'em aboard all-fired quick, then. There's six of 'em a-comin' after me. I've got to make the market first. Fish are skarse now."

Before they knew what had happened, the boys were bundled overboard in a dory. Their own was given them to tow. The good-bys were scant; only Crumpy leaned over the rail and called, "Good luck to ye, little shipmates!"

Hal was too much confused to answer, but he waved his cap. Afterward he remembered that he did not even thank Crumpy; but at that moment he remembered nothing except that he was on a great mackerel schooner, homeward bound.

The revulsion of feeling when they were actually speeding toward the land was intense. Hal and Non, very quiet, and feeling queer about the eyes and throat, took a long farewell look at the ship that had saved them. There was a fascination in seeing her spread her gray sails, and bear away toward an unknown fate without them.

It did not take the boys long to find out that they had fallen into good hands. A crew who have lost two shipmates at sea are apt to be considerate, and a Captain with a big haul is very likely to be good-natured. Then, too, it was thought to be good luck to return home with the same number as that with which they had started out.

The next morning the boys awoke with land in sight. Time flew as merrily as the schooner. It was not yet noon. The vessel, with all canvas set in order to make Gloucester before night, was bowling along at an eight-knot gait, and now and then sending the spray over her weather bow.

The boys, who were lying flat by the sharp prow, and who had ducked for the twentieth time to escape a shower-bath, espied directly in their course a little boat at a distance rising and falling in the choppy sea.

"Is she a yacht?" asked Non.

One of the crew gave a critical look and answered that it was no yacht, but probably a "hand-liner off the rocks;" which meant that the boat's business was fishing in shoal, rocky bottom for cod.

"It's a fishing-boat," said Hal, uneasily, "built like—Non! she *is* built like the *Kittiewink!*"

Non nodded sadly, but Hal was not satisfied. An unlikely thought came to him. He ran up and down the deck, and even climbed a little up the tarred rigging to get a better view.

His first impression deepened into conviction, then into certainty. Hal ran to the Captain excitedly.

"Isn't that the *Kittiewink*, Captain?" asked the boy.

He forgot that his insignificant boat was not the best known vessel on the coast.

"The Kittie *who?*"

"The *Kittiewink*. It *is* the *Kittiewink!* It's my boat! I'm Captain of her. It's the *Kittiewink—wink! wink!*" Hal yelled for joy.

"It's Scrod at the helm!" shrieked Hal.

"Scrod!" jeered a sailor, "I guess it's Halibut or Porpus!"

Presently the boys saw a dark little object moving slowly up and down on the roof of the cuddy.

"It's Trot!" Hal screamed. "That's the way he always marches up and down, looking for me, when I'm not on board!"

"But how came the *Kittiewink* here?" Non demanded.

"I'm sure I don't know —"

"Ahoy there! Is that the *Mollyblink?*" bawled the Captain.

"Aye! Aye!" screamed a well-known voice. "Have you seen two boys an' a dory anywheres?"

"Luff up there, Cap'n Codfish! Look here! Are these them?"

The Captain and crew were almost as much excited as the boys. It was a wonderful meeting.

"O Phin—we're safe!" called Non.

"Luff her up! Bear away there! Down with the helm! Ease the main-sheet! Haul in on the jib! Throw out the anchor! Take us aboard!"

Hal glibly gave these preposterous orders to show that he and his were at last one. Nothing more was needed to prove his identity.

Phineas looked at the boys, and seemed to be dazed. He rubbed his hand over his forehead.

"Be I a-dreamin' or a-dyin'?" he said, too low for the boys to hear; "be them *my* boys?"

Hal and Non could only see his lips move.

Meantime, Trot had begun to fly about in an ecstasy of excitement. He yelped and howled both at once, spun round and round, and over and over, and was evidently about to leap over the gunwale of the *Kittiewink* into the sea.

This performance on Trot's part settled it in Scrod's mind. "Them's my boys!" he said, at the same time catching up the little dog and throwing him into the cuddy.

"Hurry up, Phin! Make the jib-sheets fast!" called Hal, impatiently and importantly.

"I guess that's you. Now I kin face your father!"

Phin Scrod trembled from head to foot. His mate, Black Tarr, the Grand Banker from Marblehead, had to come and take the wheel from him.

"He's nigh tuckered out. Don't mind him," said Black Tarr, apologetically, "you see we'd given 'em up!"

"But how in the world did you get here?" demanded Hal, half an hour after. The mackerel schooner was now bowling along toward Gloucester under full sail. The boys and Trot were snuggling together on the deck of the *Kittiewink*, leaning against the boom of their own main-sail, the happiest creatures afloat on the Atlantic.

Phineas Scrod looked Hal solemnly in the eye.

"I don't think he meant to hurt me," said the skipper, slowly, "but he did. Them's the orders on which the *Kittiewink* set out to s'arch fur two lost boys on the Atlantic ocean."

Phineas handed to Hal a soiled and crumpled telegram, dated on the day after the disaster:

"To Phineas Scrod, yacht Kittiewink, Marblehead, Mass. On receipt of this, start to sea. Search for boys. I have lost faith in you.—H. Maynot."

"But he come himself," added Phineas; "that was the worst on't. And *she* come. I had to face 'em both. He chartered a steam tug an' put to sea to hunt ye up of his own account. Go Gresham went along of him, to help look for ye. He got ahead of me. He's in Portland, nigh as I can reckon. But *she* took to the Atlantic coast."

"What?" cried Hal. "My mother took to—what?"

"The Atlantic coast," replied Phineas, without a smile. "She's just s'archin' the coast of New England, that woman is. But she's a-shore. She's travellin' along from place to place, seein' if she can't hear anything from you. Where she is now I'm sure *I* don't know." HERBERT D. WARD.

(To be continued.)

For the Companion.

THE GODDESS OF LIBERTY.

Upon a hill in ancient Rome stood a temple, which was dedicated to a goddess still popular among Americans—more popular, indeed, than she appears to have been among the Romans of her own day, who rendered her no such honors as those lavished upon Juno, Venus and Diana.

This temple, erected by Tiberius Gracchus, is said to have been the first devoted to her worship. Within its precincts were deposited the archives of State, and in it stood a statue of the goddess, whose name was Libertas.

She was represented as a beautiful Roman matron, clothed in white. In one hand she held a broken sceptre; in the other, a pike surmounted by a cap—one of those caps which were worn by freemen in Rome, and placed upon the heads of slaves when they were endowed with freedom.

At her feet rested her favorite animal—the animal sacred to her; but this was not the bird-of-freedom with which she is now associated. It was a cat.

The "harmless, necessary cat" as a symbol of liberty seems strange to us at first, but it was selected because all creatures of the cat tribe hate

Digitized by Google

restraint. Certainly there are no animals more wild than the great cats of the African and Indian forests, and even our common pussy is domestic with limitations.

The connection between freedom and the feline race, moreover, seems still to be felt in the minds of poets.

The Greeks also had their worship of liberty, although no goddess bearing the name held a place in their mythology.

The Eleutheria or Festival of Liberty was celebrated once in five years at the town of Platæa, delegates from all the other Grecian cities being present to take part in the solemnity. There was a procession, led by trumpeters sounding the call to battle. A bull was sacrificed, and the occasion was further celebrated by athletic contests similar to the famous Olympic games.

The whole population shared in the rejoicings, and to each class was allotted some part in the ceremonial.

This festival had its origin in a battle near Platæa, in which an invading army of Persians was defeated by the Greeks. A large share of the spoil was awarded by general vote to the Platæans, to enable them to institute a festival that should fittingly honor the event.

A portion of this spoil was devoted to the erection of a statue and temple of Athena—the only connection of the feminine element with the rites of the Eleutheria, and possibly the source whence the Romans derived the first suggestion of their goddess of the cap and broken sceptre.

The cap of Liberty figured in the ancient arms of the city of London, while it was still under Roman dominion. After that time we find little trace of the goddess until a much later period.

She was not popular in the Middle Ages; the multitudinous banners, badges and devices of chivalric times pay little regard to Libertas.

It was during the great movement of the French Revolution that she sprang into sudden prominence. Her statue—of plaster, since the Republic could not wait for bronze—was erected with much ceremony in one of the squares of Paris. Her image was struck upon medals; her classic form was sketched rudely upon walls, with "Liberty, Equality, Fraternity" scrawled underneath.

Women personated her in tableaux both upon the public and the private stage; her red cap was adopted as the proper head-gear for good citizens.

Her statue stood close to the guillotine. Madame Roland, waiting to lay her head beneath the knife, said sadly, looking toward it, "O Liberty, how many crimes are committed in thy name!"

A better fame came to her through the poets of the French Revolution. Odes, hymns and sonnets of all degrees of excellence were addressed to her. Rouget de Lisle, in the last verse of the "Marseillaise," — perhaps the most inspiring battle-hymn ever composed,—invoked her name. The "Marseillaise" was sung everywhere: in the streets, in assemblies, in battle, by men mounting to death upon the scaffold, the voices growing fewer and fewer as the living lessened and the dead increased—very few as they reached the lines:

Amour sacré de la patrie,
Conduis, soutiens nos bras vengeurs!
Liberté, Liberté chérie,
Combats avec tes défenseurs!

Holy love of Fatherland,
Guide thou our avenging hand,
Liberty, loved Liberty!
Strike for those who strike for thee!

At that time the classic was fashionable with the French. Their *Liberté* was the *Libertas* of the Romans, unchanged except that often instead of the broken sceptre she bore a sword.

Our representation of Liberty is the same. We take occasional freedom with the symbols which she holds; we replace her cat by our eagle; we give her the sword of War, the olive-branch of Peace, the book of Law.

The great Liberty that stands in the harbor of New York holds a book in one hand, and lifts high her enlightening torch in the other, and has discarded her cap for a crown of light.

She is well placed indeed, standing at the wide portal of the nation to welcome all who enter.

Next to the New York Liberty, probably the most famous statue we have of the republican goddess is the great bronze figure by Crawford that surmounts the dome of the Capitol at Washington.

This statue, weighing fifteen thousand pounds, lay long in many pieces upon the ground near the building. During the Civil War men were at work upon the new dome, and this giant figure that was to crown it. It was felt to be a point of honor that the war should cause no interruption to a labor pertaining to the home of the nation. The statue, called variously Liberty, America, the Genius of America and Armed Liberty,—it really matters little which name is used, since the idea of all is essentially the same,—now stands at the summit of the great bronze dome three hundred feet above the ground.

It faces to the east, the direction symbolic of Hope, as indeed the Genius or goddess of a young nation should.

It was at first intended that the figure should overlook the city of Washington, which was expected to grow toward the eastward; but Washington has grown to the westward, and the Liberty of the Capitol now turns her majestic back upon the roofs and spires, the streets and avenues of the busy city, and looks steadily into the distance, across green fields, to the sunrise.

Her stately pose and severe Greek outlines produce a fine effect. She is called the best work of the sculptor who designed her, and from her lofty eminence she presides with fitting dignity and calmness over the destinies of our young nation.

JAMES PARTON.

OUR NATIVE LAND.

Swift may each hallowed influence expand
In ever-widening circles o'er the land,
Till the fine Seed of Life the Mayflower brought
Sows the vast continent with Noble Thought!
—*R. C. Waterston, D. D.*

GAMBLING IN ENGLAND.

A trial was brought to a close on the Ninth of June, in the Queen's Bench Division of the High Court of Justice, in London, which had been watched with eager interest, not only in England, but in this country.

This unwonted interest was aroused, less by reason of the causes of the trial itself, than by the prominent people—especially one of them—who figured in it. For no less a person than the Prince of Wales, the heir of the throne of the British Empire, was directly involved in the case.

It appears that last autumn a party of ladies and gentlemen were visiting at a country house, called "Tranby Croft," the owner of which is a Mr. Wilson, a man who has grown rich in trade.

Among the party were the Prince of Wales, the Earl of Coventry, Sir William Gordon Cumming, and other persons of rank and social standing.

On two successive evenings a gambling game, of pure chance, called "baccarat," was played by the guests of Tranby Croft. In the game the Prince of Wales took an active part, the counters used in it being the Prince's property.

After the games, several members of the party declared that they had seen Sir William Cumming cheating. Being confronted with the charge, he indignantly denied it; but as he declared, in order to prevent the scandal from becoming public, and to shield the heir to the throne from being known to have engaged in gambling, Sir William signed a paper in which he seemed to confess to cheating, and promised never to gamble again.

But the incident became public, and Sir William then brought a suit for libel against the ladies and gentlemen who had declared they saw him cheat at cards.

The trial which ended on June Ninth was the result of this suit. It abounded in startling and exciting incidents. The Prince of Wales himself took the stand, and was examined and cross-examined as a witness in the case. The counsel for Sir William, Sir Edward Clarke, boldly attacked the Prince in his summing up.

The result of the trial was, that Sir William Cumming failed to get his case; which meant really, that the jury found him guilty of the cheating with which he had been charged.

Sir William Cumming is a baronet, has been a brave army officer, and held a very high position in English aristocratic circles. His condemnation, therefore, would create a sensation under any circumstances.

But the chief public significance of the case lay, not in Sir William's downfall from his high place, but in the disclosure of the fact that the Prince of Wales is in the habit of gambling, and even of carrying the instruments of gambling with him when he makes visits to the houses of friends.

This disclosure has undoubtedly had a profound effect upon the religious and moral people of his mother's kingdom. The Prince's conduct is severely criticised.

It is not likely that serious political consequences will follow the revelation of the Prince's vice, although the event doubtless is one more blow at the prestige of English royalty, and at the reverence with which it has been popularly held.

If, on the other hand, the disclosures of this exciting trial shall lessen the vice of gambling in English society, and create a public sentiment against it strong enough to make the vice disreputable, it will have worked a decidedly good result. It is deplorable indeed that the upper and more cultivated classes should present so debasing an example to those below them in the social scale.

THE WAYS OF PLEASANTNESS.

Oh righteous doom that they who make
Pleasure their only end,
Ordering the whole life for its sake
Miss that whereto they tend;
While they who bid stern Duty lead
Content to follow, they—
Of Duty only taking heed—
Find Pleasure by the way.
—*Archbishop Trench.*

THE SCHOOLHOUSE FLAG.

The "schoolhouse flag movement" has been in progress during the greater part of three years. In that short time the seed sown in one earnest suggestion has borne fruit in school after school, in town after town, in State after State, until many thousands of schools have raised the flag whose pupils seldom saw it before.

Though there are still many schools which are not as yet provided with the flag, the time does not seem far distant when no public school shall be too poor, too remote, or too indifferent to have the stars and stripes floating above its roof.

Sufficient time has passed since the movement began, to make it possible to judge of the results of the unfurling of the flag above so many schools.

Has the proceeding had a real meaning to the scholars? Has it stirred up in the breasts of boys and girls the hope of living to be brave men and good women, and worthy patriots whether men or women?

Has it begun to serve, with the children of the millions from abroad who inherit no love for our country, as a symbol around which will grow up a thoroughly American feeling?

Has it stimulated a love of the study of history, and given children a new idea of the significance of law and order with freedom, so that they themselves become orderly and subject to wholesome discipline?

We have at hand a large number of letters from teachers throughout the country, over whose schools the flag has been raised, which answer these very questions.

"The flag has come to mean something," writes one teacher in Minnesota, "whereas before it was a meaningless piece of cloth." "I can see," writes another teacher from Missouri, "quite a change in the children's feelings toward the flag. Now they seem to think that it is their flag—an effect that never could have been produced by talking."

Many other teachers report a distinct growth of real patriotism. In a school in Maine, "Almost every day after the flag-raising one could hear the children cheering the old flag."

Even the little children count the stars in the blue field of their flag, and learn what they mean. The older pupils ransack the books for the history of the flag itself, and in so doing are impressed with a new idea of its story, and of its relation to their own condition and privileges.

In this way the schoolhouse flag, seen so often, and so constantly present in the pupils' thoughts, has a marked influence, as several teachers report, upon foreign-born children and the children of foreign-born parents. One teacher from the West writes:

"Eighty-six per cent. of my scholars were either born in other countries, or are the children of foreign-born parents. The effect of the flag upon my school has been to make every one of my pupils enthusiastic Americans. If, for any reason, the flag is not raised for a day, they clamor for its raising. No more enthusiastic or patriotic set of children can be found in the United States than those of my school."

These children begin to feel for America the same patriotic devotion which their fathers were taught from the cradle to manhood, in song and in story, to feel toward the lands from which they came.

The flag increases the children's interest in the school, and this must react upon conduct. Several teachers testify to this. One in Connecticut says, "I notice it is easier to govern the children since the flag was raised." Another in Massachusetts says, "It has been a grand step in our school toward making brave, manly boys and womanly girls."

The flag, rightly regarded, represents many good things besides loyalty; it represents truth, religion, liberty, law, self-sacrifice, mutual help and forbearance for a common good, and the sense of gladness in the beauty of the created things about us.

But the result in the cultivation of civic patriotism alone is richly worth all that has been expended upon it in money, time, or effort.

It is a strange man or woman whose love of country does not gain in force in looking on the flag. If grown people thus feel their patriotism swell at the sight of the banner, how important it is that the young should see it daily or upon frequent occasions, and have the stories of noble deeds that are associated with it interwoven with their earliest and keenest impressions!

It will form their patriotism, as it strengthens that of their elders, and in forming it, it will guard the country against many dangers, and prepare future glories even greater than any which the country has achieved in the past.

THE LAND OF THE FREE.

The Fourth of July does not mean so much to some of our fellow-citizens as it does to others. People who have breathed nothing but pure air all day, and every day, do not pause on the hill-top to say what a blessing they enjoy. They take fresh air entirely for granted.

It is no doubt an invented story that a little knot of students in a New England university leave unbuttoned the last button of their vests because the Prince of Wales, owing to his increasing corpulence, cannot make the two corners of that garment meet without a squeeze. This is represented to be the latest and neatest thing in Anglomaniacs.

It is a fine and noble conception! The young man who could have originated the idea is something short of a genius, but he will not celebrate the national holiday this year with undue enthusiasm.

He and his little band of followers take pleasure in remarking that it was a great pity the colonists separated from the mother country for so trifling a matter as a little tea. It is pleasing to hear them discourse on this subject. We are enabled thereby to realize afresh the happiness of living in a land where every simpleton can discharge his folly into the air without doing any harm to himself or others.

The open air of freedom is a wonderful disinfectant. From the beginning of time all the noxious gases of the earth have ascended toward the sky, and there, by the marvellous chemistry of nature, they change into the uncontaminated breeze that blows over the mountain-tops. America is like that! Here imbecility itself has its sacred rights.

An American student, returning lately from a German university, it is said, relates a curious mishap that befell a fellow-boarder of his in Germany.

This unfortunate boarder took the liberty of commenting upon the young Emperor's late remarks upon the defective school system of Germany, and finished by saying that the Emperor knew little more of education than he did of military science.

A spy reported this harmless observation to the police, and the man who made it was arrested, tried, and sentenced to nine months' imprisonment, which he served, in spite of earnest efforts made to procure his pardon.

That tea of which our students glibly speak, and other measures in harmony with it, such as the Stamp Act, the closing of the port of Boston, the quartering of troops upon an innocent people—what did it all mean? It meant the reduction of the American colonies to the condition of semi-slavery. That is all. The great-grandfathers of these young gentlemen rose to object, and they carried their point.

Englishmen long ago admitted that they did right, and that they deserved the independence which they won. Those who wish to be like the English cannot imitate them in a more commendable way than by accepting the almost universal admiration of America.

OUR DUMB FRIENDS.

Doctor Joseph Leidy, the famous naturalist, who died recently in Philadelphia, always showed a tenderness amounting to affection toward all dumb creatures. At the time of his death some of his pupils gave the following example of this trait:

Doctor Leidy was lecturing, several years ago, in Swarthmore College, about ten miles out of the city. He took from the mud of a pond near the college one day three little turtles for examination, saying as he did it, "Never mind, I'll take you home again."

When the lecture was over the turtles were put into a tank in the Doctor's private closet, which he only could unlock. About ten o'clock that night the janitor was awakened by a loud ringing at the bell, and admitted the doctor, who stalked directly to his closet.

He informed some of the students who then joined him that he had been suddenly summoned by cable to Germany, and must sail the next day. There were no night trains to Swarthmore.

"It was a pleasant walk over the hills," he said, "and I could not sail and think of these little things starving here. I will just take them to their home."

The man, whose learning was respected by all English-speaking peoples, carried the little dumb creatures carefully back to their nest, and the laughing boys, looking on, learned something probably which no sermon had ever taught them.

A close acquaintance with the habits and manners of animals usually converts their observers into their friends.

A certain naturalist who has made a special study of spiders for many years found more beauties and virtues in that repulsive black creature than in any other. His house swarmed

Digitized by Google

with them. They were his companions in his walks and at his meals.

"So great is his love for them," said one of his friends, "that a hint that they were poisonous would be regarded by him as a personal offence. Even the tarantula is in his eyes a gentle and much maligned creature."

One of the largest bee farmers in Quebec, on being asked why he spoke of them not as bees, but as "*Ces Messieurs*," or "*Mes amis*," replied, "They have been for thirty years my kind and faithful friends. Shall I not treat them with courtesy?"

OBEYING ORDERS.

Mr. Chittenden tells an anecdote in his "Recollections of President Lincoln," which illustrates how ready the President was to obey orders. Mr. Chittenden had gone out to Fort Stevens, anticipating an attack on Washington from the Confederate forces under General Early. As he entered the fort he was surprised to find there President Lincoln and Secretary Stanton.

A young Colonel of artillery, the officer of the day, was in great distress because the President would expose himself. He had warned Mr. Lincoln that the Confederate sharpshooters had recognized him and were firing at him, and a soldier near him had just fallen with a broken thigh. The officer asked Mr. Chittenden's advice, saying that the President was in great danger.

"What would you do with me under similar circumstances?" asked Mr. Chittenden.

"I would civilly ask you to take a position where you were not exposed."

"And if I refused to obey?"

"I would send a sergeant and a file of men, and make you obey."

"Then treat the President just as you would me or any civilian."

"I dare not. He is my superior officer; I have taken an oath to obey his orders."

"He has given you no orders. Follow my advice and you will not regret it."

"I will," said the officer. "I may as well die for one thing as another. If he were shot I should hold myself responsible."

He walked to where the President stood. "Mr. President," he said, "you are standing within range of five hundred rifles. Please come down to a safer place. If you do not, it will be my duty to call a file of men and make you."

"And you would do right, my boy," said the President, coming down at once. "You are in command of this fort. I should be the last man to set an example of disobedience."

The President was conducted to a place where the view was less extended, but where there was almost no exposure.

AMERICA FIRST.

This is the season when Young America celebrates the glorious deeds of the forefathers, when they cut the leading-strings that bound them to the Old World, and stepped forth with the independence of manhood.

It took Rome five hundred years, five centuries of war, intrigue and arrogance, to overspread Southern Europe. In a little more than one century America has grown to a magnitude, in area and perhaps in population also, equal to that of Rome in its most magnificent days.

"Civis Romanus sum!" was the proudest boast that could fall from the lips of man at the beginning of the Christian era. Is there to-day an American who rates his citizenship in the Great Republic at a lower value than Roman freedom nineteen hundred years ago?

The day for "spread-eagle" brag is long past, but there is no reason why we should hesitate to say what not we alone but all the people of the world believe, that it is the destiny of this country to become the greatest, the strongest, the wealthiest, the most self-supporting, of all the nations of the earth. It is already the greatest self-governing community the world has ever seen.

How can we make it greater? By standing together as Americans. We shall not magnify, but shall belittle ourselves, if we swagger before our neighbors — using bravado for the strong, and insolence in our treatment of the weak. But we should take American views instead of party views, when questions arise between this government and others.

The motto "America against the world" would be a contemptible motto. Yet is it not better to adopt even such a motto than to take the side of the world against America, or to be indifferent when the interests of one's own country are assailed?

The Fourth of July is a good time for us all to resolve that we will be Americans at heart. Not that we will build up our own country on the ruins of others, but that when there is a clashing of interests those of our native land shall have our hearty support.

A LARGE FAMILY.

One of the most remarkable families ever known, in at least one respect, was that of Count Babo of Avensburg, a vassal of Emperor Conrad I'. When the Emperor was holding his court at Regensburg he summoned all his vassals with their sons who were well-grown, to gather around him, on a certain day; but he strictly forbade them to bring any strangers into his presence.

When most of the nobles had assembled and offered their allegiance to their monarch, there was a stir in the court, and Count Babo, followed by a large company of knights, was announced.

"Is this the way you observe my commands?" inquired the Emperor, sternly. "Who are all these knights whom you have brought here with you?"

"Gracious Lord and Emperor," said Count Babo, making a courtly obeisance, but apparently not in the least disturbed or alarmed; "these are only my sons; they number thirty-two!"

The Emperor looked amazed for a moment, and then gave way to a fit of laughter, though he appeared a little incredulous as to the truth of his vassal's statement. But Count Babo, who failed to discover any joke, added with much dignity, and in a somewhat nettled tone, "At home, Sire, I have eight daughters, as well!"

WHAT SHE SAID.

The path of the census-taker is not strewn with roses at the best of times, but he has a particularly hard and delicate task before him when he sets about collecting the family statistics from residents of the outlying farms of a country village. A young man engaged in this work one day drove up to a lonely farm-house in a township of northern Vermont. Before he had time to hitch his horse, a tall, angular woman, evidently about fifty years old, opened the door, and stood in a defensive attitude, in the doorway.

"There aint no call fer you to git out o' yer wagon," said she, sullenly. "I know what you've come fer, an' I kin tell all ye need to know. They told me, down t' the Corner, you'd fetch up here sometime to-day, an' I've kep' watch fer ye!"

This was not a promising beginning, but the young man took out his book and proceeded to ask the necessary questions, to all of which he got grudging and unsatisfactory replies. When it came to the point of the woman's age, she rebelled.

"What's your call to know how old I be?" she demanded. "I aint covetin' the knowledge o' yours!"

"It's not curiosity on my part, ma'am," said the much tried young man, meekly; "it's a question that always has to be answered."

"Oh, does it!" sniffed the irate female in the doorway. "Wal, I'm 'baout thutty!"

The census-taker was forced to put down thirty, although he knew it could not be true. But just then the woman's only son came lumbering toward the house.

"Good morning," said the census-taker, politely, to the overgrown, ungainly youth who gazed blankly at the invader of their premises. "I am collecting the census statistics; will you kindly tell me your age?"

"Twenty-one last May," replied the son.

"Twenty-one!" echoed the census man; "why, I thought you said—" he began, turning to the mother, in apparent surprise, "I thought you said you were only —"

"I said *'baout*'" snapped the woman with great vigor, and with a slam of the door she vanished, leaving her son to settle all further inquiries without the aid of her presence.

SILLY AND COSTLY.

Many wise and carefully considered schemes have been brought to naught by a few thoughtless words. A tragical illustration of the text is furnished by the New York *Tribune*. At an entertainment last winter a gentleman well known in financial circles happened to sit at a dinner next to a very talkative and sprightly young lady.

As it fell out, they were not introduced to each other, but on reading the card by the young woman's plate, the gentleman became interested, and promptly engaged her in conversation.

He found her talk more interesting than she dreamed of, as she ran on about a new pair of ponies she intended buying, a proposed trip to Europe to fit herself for her Newport season, and more of the same sort—the whole being nothing but a lot of imaginary nonsense begotten of a desire to shine and dazzle.

When the ladies rose to go, and her neighbor drew back his chair, he said, gravely, "I am very glad to have met you, Miss A——. I know your father; pray tell him I have had the pleasure of making your acquaintance."

Pleased with her supposed conquest, Miss Vanity returned home, and at the breakfast-table the next morning told her people about the dinner and Mr. ——'s message. Her father, who had seemed pale and careworn of late, looked up with sudden interest.

"Mr. ——, do you say?" he asked, quickly. "I hope you made a good impression. That man's opinion is worth more to me to-day than any other man's in New York."

The poor man had been struggling through great financial difficulties, and had finally all but effected an arrangement which would once more set him on his feet; but alas! the "impression" which his daughter had produced upon the one man whose action would complete the pending negotiations was such as to upset the entire plan.

THE COLORING OF FISHES.

Various explanations have been suggested for the fact that most flat fish have the dorsal or upper surface colored, and the ventral or lower surface white. It has been said that the white ventral surface protects the fish, for the surrounding water with the light shining through it has about the same tint, and so an enemy floating below and looking up, could not distinguish him. Recent interesting experiments, to discover the influence of sunlight on the color of flat fish, are noted in the *Revue Scientifique*.

Having placed a few young fish in a glass vessel, the experimenter covered the sides and top of the vessel, placed it on a support, and beneath it so arranged a mirror that the sunlight was reflected into the water, and illuminated the ventral faces of the fish while the dorsal faces were in darkness.

The natural conditions were thus reversed. The water was frequently changed, and the fish were well fed. At the same time similar fish were placed in a glass vessel, and exposed to the light in the usual way.

The result was that out of thirty fish exposed to the sunlight from below, only three remained like those in the ordinary glass vessel, and the others developed greater or less quantities of pigment cells on the ventral face. This indicates that light has an important influence on the color of animals, but it evidently is not the only influence to be considered, since some animals whose habitat is dark have color.

CRUEL FATHER.

It is not often that the father of a would-be poet commends the publisher who declines his son's poems, but this rare man appears in the *Memoir of John Murray*, the eminent London publisher.

A young Quaker sent him a batch of poems. Mr. Murray wrote him a letter declining to publish the poems, which fell into the hands of the poet's father, of the same name, but without the word "Junr." The father answered:

Esteemed Friend, I feel very much obliged by thy refusing to publish the papers sent thee by my son. I was entirely ignorant of anything of the kind, or should have nipt it in the bud. On receipt of this, please burn the whole that was sent thee, and at thy convenience inform me that it has been done. With thanks for thy highly commendable care, I am respectfully thy friend,

JOHN PROCTOR.

Summer Camp and School for Boys. Seventh Season.

The Camp is beautifully situated on the west shore of Lake Quinsigamond, about four miles from Worcester, on the old camping and fishing grounds of the Nipmuck Indians. The object of the Worcester Natural History Society in establishing this Summer Camp is to afford a pleasant and profitable place for boys to spend a part or the whole of their summer vacation. Here they can live in tents, fish, row, swim, and do all other reasonable things that to a boy's mind constitute "camping out;" in daily association with men of liberal education who lecture on scientific subjects, take boys out on collecting expeditions, take part in their amusements, are ready at all times to answer questions and assist those who desire to carry on work in any department of Natural History, and do all in their power to make the season so enjoyable, that all will wish to spend every summer vacation at the Camp. During the past six seasons over 1000 people have been cared for, and the Camp has been recognized as a permanent educational institution. Its work has been heartily commended by Prof. Edward L. Morse, of Salem, Rev. Edward Everett Hale, Prof. Geo. L. Goodale, of Harvard College, Dr. Edward Hitchcock, of Amherst College, Prof. J. W. P. Jencks, of Brown University, and Col. T. W. Higginson. Circs. with blanks for admission will be mailed upon application. Opens July 6th. Address, PRESIDENT WORCESTER MASS. NATURAL HISTORY SOC'Y.

Pride of the West Bleached Muslin.

This brand of muslin is unsurpassed for fineness and excellence of manufacture, being particularly adapted for ladies' undergarments and gentlemen's shirts. 36-inch, 41-inch, 45-inch. The two latter widths are used for pillow-cases, etc.

SUGGESTIONS

CUD-CHEWERS.

What domestic animals chew the cud?

How early do their young chew?

Do they always chew on the same side of the mouth?

What grinding motion do they make?

Is it always in the same direction?

When you go to a menagerie look out for other ruminating animals.

For the Companion.

ORIGIN OF FIREWORKS.

A SONG FOR THE FOURTH OF JULY.

Away, far off in China,
In the days of Nanke-chin,
Lived a funny little fellow,
Who was priest and mandarin,
And ever through his shaven head,
A strain of music rang,
Which seemed to him like "Fizz
And crackle, fizz and crackle,—BANG."

One day this little fellow,
As he trolled his merry song,
Chanced to meet the royal viceroy,
As he rode in state along,
Who stopping, listened with delight,
To what he gaily sang,
And begged at once the music rare,
Of "Fizz and crackle,—BANG."

But naught had he of music,
Nor a note had ever read,
For this strain so shrill and stirring,
Was but running in his head;
Nor could the gongs nor kettle-drums,
With all their noisy clang,
Express a bit of what he meant
By "Fizz and crackle,—BANG."

Then said this little fellow,
"I will try what I can do,"
And he straightway set to moulding
Rockets, Roman candles too;
But what he sought and most desired,
Was something with a twang,
That could express in all its force,
His "Fizz and crackle,—BANG."

But e'en while he was planning,
Burst his rockets with such noise,
Frightened came the whole town running,
To behold the dreadful toys;
Then madly danced the mandarin,
And cried, "O, I will hang,
If I've not found the very thing,
To make my 'Crackle,—BANG.'"

* * * * * * *

Now sound the rattling crackers,
As in days of Nanke-chin,
(For the Fourth, to be well honored,
Must have clangor, clash, and din,)
The banners all are waving,
And the drums and trumpets clang,
Awaking echoes far and near,
Of "Fizz and crackle,—BANG."

And when the day departing,
Does the evening open out,
Sparkling, fiery little demons
Leap from wheels and dance about,
And hissing rockets upward fly,
Amidst prolonged huzza,
While crowds astonished, gaping,
Cry out, "*Sst.* BOOM. A-A-A-A-H."

H. M. GREENLEAF.

For the Companion.

A STREET WAIF.

A clergyman noted for his eloquence and wide-spread influence as a reformer among the dangerous classes died not long since in a Western town. A suggestive story is told of his early life.

About fifty years ago a lady, passing hurriedly down one of the crowded thoroughfares of New York, caught sight of a deformed, starved-looking boy selling flowers. His limbs were shrunken, but his head was large, and the protruding forehead and brilliant eyes told of a strong, keen intellect.

The woman remarked to her companion, "That boy ought to make his living by his brain. All the strength he has is there."

She stopped to question him, and found that he had been to school for two or three years, but at his father's death had been compelled to begin at once to earn his own living.

His new friend did not content herself with a few words of pity. She found some light, remunerative work for him, entered him at a night-school, and after a year or two, finding him worthy, procured for him a free scholarship in a Western college.

He became one of the most useful ministers in his denomination, laboring zealously among the poor and greatly tempted class to which he himself had belonged.

He told this story a short time before his death, adding, "If I have done any good in the world I owe it to the friend who took me literally out of the gutter, and gave me a place and work. Almost every woman who passed me, used to give a kind word and a sigh of pity to the deformed child. If she had done no more than this, I should probably have soon died of want."

The records of every profession and trade are full of the histories of men who have been started in the road to usefulness by a little timely encouragement and help.

Sympathy is a good thing to give to your needy brothers and sisters, whether you find them on the highway, in your own kitchen, in the shop, office or house. But do not stop with giving sympathy. Add a little efficient, practical help.

According to the old heathen fable, when the peasant's horse and cart sank in the bog his neighbors were sorry for him, and said, "Poor fellow!" and passed on. But Hercules showed his divine nature by putting his shoulder to the wheel, and helping him out of the mire.

The Scriptures bid us welcome strangers, "for thereby some have entertained angels unawares." But it is worth our while to note that we are not told to receive these angels because of the blessing they can leave. We are to give to them, to entertain them, to feed, clothe and warm them.

The result and the recompense to ourselves are in God's hands.

HOW PEOPLE SLEEP.

Though it is true, as the author of a school composition once asserted, that "Sleeping is a universal practice among all nations," it is also true that there is a great diversity in the methods of sleeping among people of different nations and different ways of life. The things which one person needs to make him sleep are precisely the things which would keep another awake all night. Even the sedative medicines which put one person immediately into a heavy slumber excite another into a condition of nervous restlessness.

The European or American, in order to sleep well, ordinarily requires a downy pillow under his head; but the Japanese, stretching himself upon a rush-mat on the floor, puts a hard, square block of wood under his head, and does not sleep well if he does not have it.

The Chinese makes great account of his bed, which is very low indeed,—scarcely rising from the floor,—but is often carved exquisitely of wood; but it never occurs to him to make it any softer than rush-mats will render it.

While the people of Northern countries cannot sleep unless they have plenty of room to stretch out their legs, the inhabitants of the tropics often curl themselves up like monkeys at the lower angle of a suspended hammock, and sleep soundly in that position.

The robust American often covers himself with a pair of blankets and throws his window wide open to the air, even in the winter time, and he does not complain if he finds a little drift of snow across the top of his bed in the morning.

The Russian, on the contrary, likes no sleeping-place so well as the top of the big soapstone stove in his domicile. Crawling out of this blistering bed in the morning, he likes to take a plunge in a cold stream, even if he has to break through the ice to get into it.

The Laplander crawls, head and all, into a bag made of reindeer skin, and sleeps, warm and comfortable, within it. The East Indian, at the other end of the world, also has a sleeping-bag, but it is more porous than the Laplander's. Its purpose is to keep out mosquitoes more than to keep the sleeper warm.

While the American still clings to his feather pillow, he is steadily discarding his old-fashioned feather-bed in favor of the hair or straw mattress. The feather-bed is relegated to the country, and many people who slept upon it all through their childhood find themselves uncomfortable upon it in their maturity.

The Germans not only sleep upon a feather-bed, but underneath one. The feather-covering used in Germany, however, is not as large or thick as the one which is used as a mattress, and the foreigner who undertakes to sleep beneath it often finds his feet suffering from cold, while his shoulders are suffering from heat.

SWIFT TRAVELLING.

A stirring incident took place not long ago in Courbevoie, when Paul Leprince, the aëronaut, and one of his friends, made a balloon ascension. They had reached an elevation of fifteen hundred feet, when they began to hear a peculiar whistling sound. Leprince climbed upon the ring, and discovered a tear, a few inches long, made by the branch of a tree, against which they had swept in their upward passage. What followed is related by Leprince in *L'Illustration*.

At this moment, the sun dispelled the clouds and shone with all its force upon the balloon. This produced such an expansion of gas that the valve was not sufficient to lessen the strain, and the fabric tore apart, with a noise like the rustling of leaves. Through the opening poured the gas in great volumes.

"We are lost!" cried my friend.

"The ballast!" shouted I. "The ballast!"

In an instant two bags were thrown out. I saw by the barometer that we were nearly five thousand feet from the ground, and then the fall began. We threw out everything of any weight, and prepared to cast off our clothing, and resolved to cling, at the moment of striking, to the netting above.

Fortunately, there was a strong wind blowing, which carried us along at the rate of thirty-five or forty miles an hour, and enabled us to fall at an angle, thus softening the shock.

The balloon was violently shaken in its flight, and kept swinging and swaying in a horrible manner, but this motion was, after all, what saved us.

During one of the most vigorous of these movements, the lower part of the balloon was thrown to the upper part of the netting, and rested there against the valve, in the shape of a dome, forming an immense parachute. At once, the fall was sensibly arrested, but we were still one hundred yards from the ground. The time had come to throw overboard our clothes, but there proved to be no time.

Scarcely had we reached the ropes attached to the ring, when a terrible shock was felt, and we, the basket and balloon, were rolled over on the ground together. We were not injured, nor did we even lose consciousness, and thus was a fall of nearly a mile accomplished in less than four minutes.

A MEMORABLE DAY.

Every living Union soldier who was a prisoner of war in the stockade at Macon on the Fourth of July, 1864, remembers that memorable day. The prisoners had crowded in and round one of the central buildings to listen to patriotic speeches. Suddenly Captain Todd, of the Eighth New Jersey Infantry, displayed a small United States flag, four by six inches, which he had secreted upon his person.

The air was rent with cheers. Tears streamed down the cheeks of rough men who hugged each other. Those who were near enough kissed the little flag, and men in the outer circle climbed upon the backs of their comrades that they might see it.

"Hold it up," shouted a voice; "don't be afraid, so that we can all feast our souls upon it!"

The "Star Spangled Banner" and "Rally Round the Flag" were sung. During the singing some of the older Confederate guards were seen leaning on their muskets, and crying like children.

The enthusiasm and noise caused the commandant of the stockade to send inside an officer with a company of troops, to compel the crowd to disperse to their quarters, and keep quiet; but the little star-spangled flag had done its work. Inspired by the sight, the prisoners forgot on that day hunger, nakedness and sickness, and felt that the flag must triumph.

The authors of "Prisoners of War and Military Prisons," from whose book we have condensed the story of that memorable "Fourth," tell a touching story of a dying man's joy on seeing the little flag.

The officer, a living skeleton, dying of a chronic disease, was stretched upon a board under a shed. He heard of the flag, and asked to see it. It was held before his face. Gasping for breath, and with an unearthly flush suffusing his cheeks, he said:

"Give me the flag in my hand. God bless it! Let me kiss it. Boys, this is God's own flag, and I believe He sent it here to-day. I never expected to see it again. I have seen it, and I can die happy. My dead body will be buried shortly; they may plant my bones where they please, but our flag, God's flag, will float over them before long."

A perfect peace came upon him, and that day he died.

For the Companion.

UNDERSONG.

Sing, bird in the meadow-tree,
And gladden the heart of me:
Shake from the shining leaf
The dew upon my grief,
To balm and bless
With sweet forgetfulness
The eyes of sorrow, red,
Mourning the dead.

Sing, bird in the meadow-tree,—
Your song is a memory
Of her glad voice that knew
The freshness of the dew:
And now, alas!
The dew is on the grass
Growing above the song,
Silent—how long!

FRANK DEMPSTER SHERMAN.

ILL-TIMED COFFEE.

In Mrs. Collis's narrative of her voyage through the inland seas of the Sitkan Archipelago she describes a somewhat exciting passage through a fleet of icebergs in Glacier Bay. It was of the greatest importance to keep the ship moving ahead, though her advance could be measured only by inches. At one time the Captain ran half-way up the foremast, glasses in hand, and for some minutes, like the picture of Farragut in Mobile Bay, shouted his orders to the wheel-house.

After this he resumed his monotonous and nervous pacing upon the bridge, all the while steering his immense vessel with such dexterity and mathematical precision that as the cakes of ice were upturned and fell gracefully into our wake, it was easy to see that the course selected was always the one of least resistance.

I took note of a few of the expressions whose magnetic influence twisted and turned us around in such beautiful curves, some of which were: "Starboard, sir!" "Slow her!" "Why don't he slow her when I tell him?" "Stop her!" "Go tell that engineer if he don't obey the signals quicker, the first thing he knows he'll have one of these boys in his engine-room!" "Hard-a-port, sir!" "Port her!" "Steady now!" "Keep your eye on the compass there!" "Put an extra man at the wheel!"

In the midst of all this strain, when the slightest error of judgment might have been fraught with disaster, the chief steward—it was his first voyage with Captain Carroll—was seen ascending the ladder with a bowl of steaming coffee.

"I've brought you a cup of coffee," said the steward, with outstretched hand.

"Take it away, sir! When I want coffee I'll send for it," shouted the skipper.

What became of the steward I don't know; but I do know that a few scraps of sentences were floating about the atmosphere for several minutes, such as:

"Nice time for coffee! Port her! Steady! Pretty time to be drinking coffee! Starboard a little! Coffee, indeed! Slow her, sir! Slow her, I say! Coffee!"

It is proper to add, however, that a few hours later the poor affrighted steward was addressed in different language.

"I'll take that coffee now, steward, but don't ever bother me again when I've got my hands full."

WRITING AS A PROFESSION.

It is a popular impression that most persons are glad to answer questions in reference to their own professions, or, in other words, to "talk shop." Few, however, of the misguided talkers who act on that supposition have any idea of the discomfort they may inflict on over-sensitive spirits.

"Writing much poetry nowadays?" asked a reporter of a poet, and one can imagine the involuntary distaste with which the latter shrank from this bluff attack.

"I suppose you are doing a good deal of literary work?" said a visitor to a well-known writer of short stories, to whom she wished to make herself agreeable.

"Nothing to speak of," was the gentle reply.

A week later the same acquaintance appeared again. "Now, really and truly, *aren't* you writing anything?" she asked, with an engaging frankness which seemed to challenge an equal candor.

"Nothing to speak of," was the courteous answer, and with that she was forced to be content; but it was not long before she returned to the charge.

"How could you tell me you were not writing anything?" she asked, reproachfully. "Yesterday I heard your mother say that you were too busy with a book of translations to do anything for the fair."

"Excuse me," said the victim, goaded into explanation. "I merely said, 'Nothing to speak of.' I meant that I am never doing anything in connection with literature of which I have anything to say."

The popular idea of the labor which goes to the making of books is often an amusing one. A literary woman, who had urged, as a reason for shortening her call on a dear old lady, the fact that she had some work to do when she got home, was confronted with the question:

"Don't you want a sheet of paper and a pencil right now?"

"What for?" was her astonished query.

"Why, to write something!"

LUCKY BLUNDER.

The "club man" of the Chicago *Mail* tells a story of a man who once saved more than eight thousand dollars by wearing home-made clothes. The adventure was related, he says, by "a pleasant-faced, gray-haired gentleman who sat in the lobby of the Grand Pacific Hotel, apparently healthy, wealthy, and at peace with the world."

I was raising fat cattle in the central part of the State, and had wintered an uncommonly fine lot of steers. Toward spring I came to Chicago to sell them, but received, as I thought, rather cool treatment. The dealers seemed to place my fine fat cattle on a par with the lean, scrawny things shipped in from the West, and would pay me no better prices. I was indignant, and declared that I would never sell anything in Chicago as long as I lived. I shipped my steers to New York, and went on to sell them.

Just before this my wife had made me a suit of clothes. When I first put them on I was so angry that I fear the white dove of peace flew away from my roof-tree for a while. The trousers were large enough for two men, and the coat looked as if it had been made to fit a two-bushel bag of meal.

I had given my wife special instructions to put in an inside vest pocket, and now I found that she had put an enormous bag-like affair on the left side, instead of on the right, where of course it belonged, and had placed it so far back that it came almost under my left armpit—the most awkward place imaginable.

I wore that wonderful suit to New York, and sold my steers, and received about eight thousand dollars in bills. I stepped to the window, counted the money, and placed it in my inside vest pocket—that unique pocket.

Then I bade the purchasers good-by, and jumped upon a street-car which happened to be passing at the moment. As I did so I noticed a man standing in the doorway of the car, with one hand resting carelessly upon the side of the door. I stooped to pass under his arm as I entered, and like a flash his hand came down, and was thrust into my vest.

The next instant he leaped from the car, and I lost sight of him in the crowd; but his scheme had failed, thanks to my wife's original method of tailoring. His hand sought the right-hand side of the vest, and my money was still safe under my left arm. It isn't wise to be too fastidious in matters of dress.

MOST IMPORTANT.

During the most serious anarchist uprising in the West, when the military was called out, and did some important work, the Armory telephone took an active share in the proceedings. Through its means, information from various points was constantly forwarded to this military centre, and a man was stationed at it, day and night, to receive and transmit messages. When, as the small hours approached, the tumult subsided, he was relieved at this tiresome task, and the fatigued soldiery endeavored to get a little rest. Says Captain King, in "Trials of a Staff Officer:"

Finally, drowsiness, oblivion, then, "R-r-r-ring—r-r-ring!" Loud, urgent, imperative. One bound takes Mr. X—— to the telephone.

"O Armory! I'm so glad to get you at last." The voice is feminine, but pleasant, motherly, benevolent. "I tried to get you several times this evening, but when I could get the wire, you were busy. I wanted to inquire about Willy Simpson. His mother and I are old friends, and she telephoned me to say she had to leave town, and please to have a motherly eye over him, in case of injury or trouble."

"No man of that name in this command has been wounded or injured in any way, madam."

"You're sure of that, are you? I couldn't go to bed without knowing. But who is this?"

"Colonel X——, madam."

"Oh, yes. Well, you know Willy, of course?"

"I regret to say I do not. What does he belong to?"

"Indeed, I'm not sure; but it's the military—the militia, you know. If Captain S—— were there, perhaps he could tell."

Enter Captain S——, and Mr. X—— gladly hands the case over to him.

"What can I do for you, Mrs. Ferguson? This is Captain S——," begins the one-sided colloquy.

"Willy Simpson, did you say? No, I don't know him. And you say you don't know what he belongs to?"

"Hm! yes. We've got as many as five hundred. I don't see how you *could* speak with him to-night."

"Oh yes! he must be here; but you wouldn't ask me to wake up every one of the five hundred to inquire if he was Willy Simpson?"

"No, madam; I'll do it in the morning, but I cannot now. It is simply impossible."

"Very well, madam, good-night."

Then with a comical grin on his tired face, the Captain turns to Mr. X——.

"What do you suppose the blessed old lady routed us out at this hour for? She says she must write to Willy's mother the first thing in the morning, and she wants to be able to tell her that the pies she sent him were safely received!"

GLAD TO SEE THEM.

"One of the early Governors of a certain Western State," writes a correspondent, "was a man of great popularity, commanding strength of character, and undisputed fitness for the duties of his office, but entirely without any gift for public speaking. Shortly after his election he paid an official visit to the State prison, in the course of which he was ushered into the chapel where the convicts were assembled in a body.

"Before the Governor could realize what was going on, the chaplain had presented him to the company, with the remark that he would doubtless have something to say.

"'But, my dear sir,' whispered the startled Governor, 'I haven't anything to say, and I couldn't say it if I had! I never made a speech in my life.'

"The chaplain, who was entirely innocent in the matter, could only reply:

"'I beg your excellency's pardon for being so premature, but as I have committed you so decidedly, I see no way out of it, and feel confident that you will not mind addressing them in a few words.'

"The Governor certainly was committed, and though he was literally trembling, he began:

"'Ladies and gentlemen!—No, no, I don't mean that—gentlemen and fellow-citizens!—no, I don't exactly mean that, either—but—but—well, men and fellow-prisoners, I can't make a speech; I—I don't know how to make a speech. I couldn't make a speech to save your souls, or—or—or even my own! and so—so—well, about all I can say is, that—that I'm very glad to see so many of you here!'"

TOO MANY STARS.

On the Fourth of July the Hales had a celebration in rivalry with their next-door neighbors, the Graysons. The Hales hung a big flag out in front of the house.

"It's the one my papa had for his regiment in the war," said Mary Hale.

Later in the day a bigger flag was hung out from the Graysons', and John Grayson announced to his neighbors over the fence that it was one that his ancestors had in the Revolution. This made a great impression upon the Hales until one of them came to count the stars.

There were thirty-two stars on that flag!

"NOW," said a Sunday-school teacher who had given the boys a treat, and wished also to point a moral, "would these strawberries have tasted as well, if you had stolen them out of my garden?"

"No, sir," said one demure lad, serenely, "we shouldn't ha' had cream and sugar with 'em."

DAISY'S CALENDAR.—VII.

The flags are floating against the sky,
The crackers crack and the rockets fly,
While we celebrate our nation great
And letter in red J-u-l-y.
To-morrow the blades, so steady and bright,
Will flash through the clover red and white;
We'll rake the hay through the shining day,
And ride aloft on the load at night.
Of all the frolics in all the year
There's none that's jollier, Daisy, my dear;
And the city cousins shall come by dozens
To the fragrant fields and the great round sky,
For it's hot in the town when the sun glares down,
And the gay little calendar spells July.

For the Companion.

THE BURTON BOYS' CANNON.

"Lucky stars! What a find!" cried Edwin.

"I declare! It's a rifle-barrel," said John.

And Willie and Lucius forgot their search for Indian arrow-heads, which they sometimes found on this worn old gravelly roadside, and hurried to have a look at the treasure.

"Just see the rust!" said John. "It may have laid here fifty years."

"I s'pose this was all thick woods then," said Edwin.

"And likely some man had this to fight the Injuns," said Lucius.

"Or bears," said Willie. "More likely bears."

"Look how the barrel's bent and twisted," said John.

"That's where he clubbed his rifle and whacked the old Injun over the head," said Lucius.

"That's where the bear grabbed it away from him," said Willie. "And I do believe there's the mark of his teeth right there near the muzzle!"

At this the older brothers hooted and laughed, and said that the bear must have had his teeth sharpened, and they guessed he ate up the rest of the gun, and that was why nothing could be found but the barrel.

Willie did not like any too well to be laughed at, but he kept his temper, and as soon as he could make himself heard, he cried, "O boys, I've got the *greatest* idea! Let's make a cannon out of this for the Fourth!"

"Now, Willie, you've struck it," said John.

"That's so," said Lucius, "but how'll we fix the thing?"

"I'll tell you," said Edwin. "Just come along to Fet Wheaton's blacksmith shop, and he'll do it up for us in grand shape."

"Father won't mind, will he?" asked Willie.

"Course not, if we pay out of our own Fourth of July money," said John.

"It'll be ten times better than crackers," said Edwin. "Come on, boys!"

So away they rushed to the good-natured, curly-headed blacksmith, who sawed off the straight part of the barrel, fitted a new breech-pin, bored a touchhole, and wouldn't take a cent.

On the evening of July Third the boys had quite an exciting time mounting and loading their cannon. Father Burton had not a word to say against the fun.

He dealt out the powder and watched the whole process, and when he saw the amount of brick they rammed in to help make a noise, he remarked that he guessed they were "loading for b'ar, sure enough!"

Mother looked rather anxious, but after all she was sure father would see that 'twas safe. And so he did—after his own fashion.

When all was ready there was quite a discussion as to who should touch it off next morning.

John thought he ought to, because he was oldest. Willie claimed the right, because he thought of the plan. Edwin was equally firm, because he found the rifle-barrel. And Lucius thought they had better trust him, because his legs were longest and he could get out of the way quick if it didn't work right.

Finally it was agreed that it should be whoever was on the ground first in the morning.

And Willie resolved at once not to sleep a wink all night. John made up his mind that he could rouse when old Cock-a-doodle first crowed. Edwin thought he could be sure to hear the clock strike three. While Lucius knew he should waken if either of the others stirred, and relied on his long legs to take him out ahead.

But how boys do sleep! Not one of them heard a sound after the clock struck nine until—*Boom!* CRASH! All their wonderful dreams were scattered into broad daylight, and they jerked their clothes on and gathered in the back yard almost before the smoke cleared away.

Mother was laughing to herself in bed. Father was laughing and shouting from the kitchen window. But where was the cannon?

"Just blown to nowhere!" said John.

"Lucky stars!" cried Edwin; "but it's a good thing we boys weren't hanging around when it went!"

BELL and May were riding in the horse-cars when a Chinese got in. Bell had never seen one, and asked May what kind of a man he was. May whispered that he was a Chinese. "But," said Bell, "where is his china?" May was puzzled, but finally settled the matter by saying, "I suppose he can't carry it around all of the time."

For the Companion.

A GIRL'S OPINION.

"Fizz-z—sputter-r—bang!"
Oh, what a horrid noise!
What can there be about it
That pleases all the boys!

"Twe-eet—tweet—tr-r-rill!"
There is the sound for me!
But boys' and girls' opinions
Never will agree.

For the Companion.

ANGELINA'S FIRECRACKERS.

O Angelina! Would you just as soon have a new head? Dollies don't mind having new heads, do they?

Oh dear, I wish I hadn't let you go to the Fourth at all! But teased me all the then you were just that bunch of crack-

I told you 'twas a thing; but you would stuck the match in and held the blaze then I jumped back slipped away from

O Angelina, what a dreadful hole it made right in your face! Mamma says she's so thankful 'twasn't me. She says s'posing I'd stumbled when I went to jump back, I never could have had a new head for me.

O Angelina, how you do look!

I hope mamma will get your new head to-morrow, and I do hope you will 'member never, never to meddle with crackers any more!

you know you morning. And *bound* to light ers!

dang'rous old do it. So I your hand down, and quick, and you me.

Enigmas, Charades, Puzzles, etc.

1.

CHARADE.

In selling a coat or a jacket,
My *first* may stoop to my *second*;
The sum of holiday racket
A fourth of my *whole* is reckoned.

E. S. B.

2.

DOUBLE CENTRAL ACROSTIC.

1. Artfully.
2. Furnished with wings.
3. Small birds.
4. Crawling.
5. Poured down.
6. Musing.
7. Eaten away.
8. Obscured.
9. To arrange in classes.

Fourth row of letters will spell the name of some articles that please the youngsters on the "Fourth." Fifth row of letters will spell more articles that please the youngsters on the "Fourth." O. D. V.

3.

BATTLES FOR INDEPENDENCE.

1. A city, and a settlement.
2. Law, a suffix, and a weight.
3. Fresh, reverence, name, and a contraction.
4. A sleeping place, to mistake, and a high place.
5. Not old, and an English city.
6. Two liquids.
7. A Latin pronoun, and a small brook.
8. A body of water, and a famous canal.
9. A badge of royalty, and to sharpen.
10. A river, and a preposition.
11. Quiet, and a liquid.

4.

CRYPTOGRAM.

One letter, taken from every second word beginning with the first, will spell the names of the men and the day of their death. A hint is also given as to the year.

A nation celebrated its anniversary amid many glad rejoicings, looking back over an honorable record. A jubilee comes none too often, and fifty years make many wonderful changes; some causing joy, others mourning. Two noted men died upon their country's birthday, both justly celebrated. Unlike in politics, they yet were fast friends throughout their useful careers. Their reputation stands to-day untarnished.

Conundrums.

Why was Independence Day, 1890, like the letter Y? Because it was the *last fourth* of July.

What letter of the alphabet do children arouse from slumber to help them in celebrating the Fourth? Torpid O's.

What do boys prefer for dinner upon the Fourth? Crackers.

What one thing can a mother contribute toward the celebration of the glorious Fourth, as she sits by her baby's cradle? Rock it.

Answers to Puzzles in Last Number.

1. Captain John Smith. Second word = King John Sans-terre or Lackland.

4. Lady Montague's description of a regatta, or fête, held on the water, which she witnessed in Venice, stimulated the English people of fashion to have something of a similar kind on the Thames. It took place on June 23, 1775. The rowers were to be uniformly dressed in red, white, and blue. The procession of boats was to move at seven o'clock in the evening. Early in the afternoon the river was crowded with pleasure boats, and scaffolds, decorated with flags, were erected wherever a view of the Thames could be obtained. Concerts were held under the arches of Westminster Bridge. Half-a-guinea was charged for a seat in a coal barge, and constables guarded every passage to the water, taking from half-a-crown to one penny for liberty to pass. Supper and dancing followed, and the entertainment did not conclude till the next morning. This was the first English Regatta.

Letters omitted—a, e, g, r, t; word—regatta.

AN INDIAN SCARE.

When fear stands at one's elbow it is easy to find dangers ahead. In the early settlement of New Gloucester, Maine, a block-house was found necessary in which the people could assemble for safety and mutual defence against the Indians. It was understood, says one of the early settlers, that if any one saw Indians about he should sound an alarm on the tin horn, and the folks should get to the block-house as quickly as possible. One fall we were kept pretty well stirred up by the redskins' ugly pranks.

Two men were killed and scalped on the outskirts of the town, and their horses carried off. A child was lost in some way, and most people laid it to the skulking savages, who, they supposed, had stolen her. A house was fired in the next settlement, and everything carried away, and we expected mischief any minute.

One afternoon in October, about dusk, there came a sudden and tremendous horn-blowing. That meant the Indians were near. Folks stopped whatever they were doing and hurried to the block-house—men, women and children. The horn blown that way brought a person's heart into his mouth.

When we were all inside and the great door was shut, we began to inquire what was up, and who had seen any Indians. A young fellow, Smith I believe was his name, had given the alarm, and now said that he saw an Indian in a tree reconnoitring, not a dozen rods from the block-house. He made no doubt the rest of the party were near; and he had been afraid we would be attacked before we could all get inside the block-house.

The guns were ready, and the men took up their stations at the loopholes, and we waited and watched for a long time. Some were sure they could make out, by the moon, that the redskin was still in the tree.

"He don't dare to git down," said one and another, "for fear he'll git peppered." Some were for firing at the tree, but the older ones said we had better wait and not be the first to shed blood, and this wise counsel prevailed. I have noticed, all through my life, that it is never best to be the first to start a fuss.

Finally Ben Hammond, who had been covering that tree with his gun, turned suddenly round and declared that he was going out to get a nigher view of that redskin. The women were dreadfully scared, and begged him not to be rash. But Ben smiled, unbolted the door and went out.

He went close up to the tree and burst out laughing heartily.

"Come out here," he shouted, "and see this Indian up a tree!"

The Indian in that tree was only a bear cub. But to pay for our scare we had plenty of bear meat in the settlement for a week afterward.

BUTTERFLIES BATHING.

It is commonly thought that butterflies dread water as a fine lady dreads rain; but evidently this is not true in Australia.

The case of an Australian butterfly deliberately entering the water to take a bath is recorded by M. G. Lyell, Jr., in the *Victoria Naturalist*. He saw it alight close to the water, into which it backed till the whole of the body and the lower part of the hind wings were submerged, the two fore-legs alone retaining their hold of the dry land. After remaining in this position for something like half a minute it flew away, apparently refreshed.

Mr. Lyell says, "During the morning I noticed a number doing the same thing. In one instance no less than four were to be seen within a space of not more than three yards, and to make sure that I was not deceived I captured several as they rose from the water, and found in each case the body and lower edge of the hind wings quite wet. While in the water the fluttering of the wings, so noticeable at other times, was suspended, and so intent were the butterflies in the enjoyment of their cold bath that they could hardly move, even when actually touched by the net. Apparently the heat of the weather drove them down to the water, as immediately upon emerging they flew up again to the hillsides."

Butterflies are often seen apparently sucking in the moisture around the edge of pools; but they have never before been seen actually to enter the water.

HOW HE DID IT.

There is a story of a Scotch professor, which, though not a new one, humorously illustrates a characteristic trait of Scotchmen—one that has put them at the front all over the world.

While a large party, among whom was an elderly Scotch professor, were shooting on the moors in Perthshire, it suddenly began to rain. There was no shelter in the neighborhood, and as the rain fell too fast to permit shooting, the sportsmen made, as they thought, the best of their misfortune by sitting down and getting drenched.

But the professor, as soon as the shower began, wandered off, and was not seen during the hour the rain fell. When it ceased he reappeared, and to every one's surprise there was not a drop of rain on his clothes. The wet sportsmen were annoyed as well as surprised, thinking he had discovered a place of shelter. But the professor was reticent, and it was with difficulty that at last they persuaded him to tell how he had managed to keep dry.

"Directly the rain came on," said he, "I stripped and sat on my clothes till it ceased."

PRECAUTIONS.

"I've made me will," said an Irishman who belonged to a quarrelsome family. "But if they fight over it after I'm dead, sure I'll write a codicil that'll make 'em dance!" Another worthy man was differently afflicted.

An elderly gentleman who knew something of law lived in an Irish village where no solicitor had ever penetrated, and was in the habit of arranging the disputes of his neighbors and making their wills.

At an early hour one morning he was aroused from his slumbers by a loud knocking at his gate, and putting his head out of the window, he asked who was there.

"It's me, yer honor—Paddy Flaherty. I could not get a wink of sleep thinking of the will I have made."

"What's the matter with the will?" said the amateur lawyer.

"Matter, indeed!" replied Pat. "Shure, I've not left myself a three-legged stool to sit upon."—*Judy.*

GRAYS HARBOR, Washington, is attracting the attention of Eastern investors because it has the only ocean harbor in the State, assured of railroad facilities, is the centre of a country rich in agriculture, timber and coal. For full information, address, *Grays Harbor Co., Grays Harbor, Wash.*

BIRD AND BURGLAR.

Our readers have not forgotten the little canary whose "song in the night" awoke and warned the household in time to put out a fire. A Cincinnati parrot deserves a similar remembrance. It has been with the same family for many years, according to the *Enquirer*, and is highly educated and a great pet. Its cage is usually hung at night in the rear room on the second floor. A window of the apartment overlooks a grape arbor, close against the wall of the dwelling.

About five o'clock the other morning Mr. Rothe, the bird's owner, was awakened by the parrot, which was loudly shrieking "Papa! papa!" It kept up these cries for several minutes, until Mr. Rothe, becoming alarmed by the unusual disturbance, determined to go and see what was the cause. When he turned on the light he saw Poll sitting on the crossbar of the cage. The bird immediately recognized him and set up a victorious "Ha! ha!"

Poll looked like his famous predecessor who had the exciting adventure with the monkey. One wing was broken and the bottom of the cage was covered with feathers. The bird was ruffled up generally, and in fact had the appearance of having passed through a threshing-machine.

There were blood marks on the wires of the cage, and everything indicated that Poll had engaged in a lively and desperate fight.

On looking around Mr. Rothe found that the window was open. On the sill were the bloody prints of a man's fingers. A burglar had made an early morning visit to the residence, entering the room through the window. His movement must have awakened Poll. The bird evidently gave the alarm, and the intruder, realizing that something had to be done quickly, at once thrust his hand into the cage and tried to wring the bird's neck. Instead of quietly submitting, Poll showed fight.

With beak and claws the parrot attacked the robber, sinking the sharp weapons into the flesh of the intruder's hand. So vigorously did Poll fight and scream that the burglar was forced to retire, baffled and bleeding from painful wounds. He must have dropped from the window just as help reached the door, as Mr. Rothe heard the noise of a fall as he entered.

DID NOT KNOW HIM.

A writer in the New York *Star* comments upon the bewildering change in a man's appearance which is often brought about by shaving the beard or letting it grow, and cites a story related to him by a lawyer. The lawyer was then wearing a heavy beard, which he had been cultivating, as he said, "since last October."

The other day I was riding on the front platform of a street-car, as I was smoking, when I saw a cousin of mine, with her husband and baby, get aboard. I had not seen her since the day she was married, in the summer of 1888, and had never met her husband except on the night of the wedding. At that time I had only a moustache.

When they were seated in the car I nodded to her, but she did not return the salutation. I repeated it, but still there was no response. Evidently she did not recognize me, but for the fun of the thing I kept on nodding and smiling.

She began to be disconcerted, and pretty soon I saw her whispering to her husband, who at once rose and made his way to the rear platform, where he spoke excitedly to the conductor. That worthy came through the car, and, opening the front door, said to me:

"You must either stop insulting the lady in the car or get off. Her husband has complained of your conduct."

I assured him that I had no wish to insult any one, and as he began to get excited I passed into the car, and, taking hold of a strap, leaned over the lady and said:

"Why, Minnie, how are you?"

She looked at me for a moment, and then exclaimed:

"Cousin Eddy! How do you do? I didn't know you with your whiskers."

The car was pretty full, and as all hands had understood that I was complained of, there was a general laugh at this unexpected turn of affairs.

A SURE MARK.

The tact that is born of true kind-heartedness is a thing for which its possessor may well be admired and imitated. "I like your friend Grace Hunt a great deal better than I do Ellen Mayo," said fourteen-year-old Tom to his sister Fanny at the tea-table, one evening.

"Why?" asked Fanny in some surprise. "I'm sure Ellen is a good deal brighter than Grace, and prettier, too!"

"She may be," assented Tom, doubtfully, "but I don't call her very polite. I told Grace that funny story father read us out of Mr. Black's letter to-day, and she laughed and said it was a splendid story, and that she should remember it and tell it to somebody else. But when I tried to tell it to Ellen Mayo, she interrupted me before I'd got half-way through, saying, 'Oh yes! I remember all about that, now; your sister told me a week ago; it's about that man who —' and she went on and finished the story herself."

"It wasn't polite, of course," admitted Fanny, "but I suppose she didn't think how it would make you feel. And, Tom, the fact is, I told the story to Grace, too, at the same time Ellen heard it!"

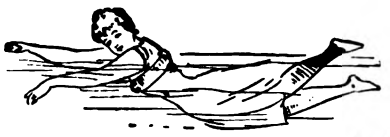
"I don't care anything about that," said Tom, decidedly, "except I like her all the better for it. She didn't make me feel uncomfortable, and as if I was an old newspaper, as Ellen did. I say she's a lady!"

"And I agree with you, my son," said his father, "and I'll venture to predict that she's a girl who'll make few enemies and many friends, as long as she lives."

DISRESPECTFULLY ABBREVIATED.

Men who become suddenly rich should be judged leniently. They have many temptations from which the rest of us are happily delivered.

Mr. John Johnson, a man of this class, was desirous to be known as of a literary turn, and to that end proceeded to lay in a library. One of his purchases was an old dictionary which, being somewhat out of repair, was sent to the binder's.



When it was returned to the purchaser, he found printed on its back the words "Johnson's Dictionary." The slight threw him into a furious passion, and he demanded of the messenger:

"Why didn't he put the full name on, 'John Johnson's Dictionary?'"

For an ache, pain or cramp, internal or external, use "*Brown's Household Panacea.*" A superior remedy. [*Adv.*

NEW YORK.

What Is the Matter

With wearing the best shoes at no more cost than ordinary ones? H. T. MARSHALL'S Pat. Lace Congress, for illustration, can be laced to accommodate any instep, and when tied just above, in a square knot, and laced loosely to the top, is the most comfortable shoe worn. It requires no lacing or unlacing in putting on or off, with no uncomfortable tension of elastics. It has all and more merit than both lace and congress without having their faults. Is nice-fitting, stylish and serviceable, and retails for $3 to $7 a pair.

Having licensed others to make this shoe I wish to be held responsible for those and only those of my own manufacture which have my name stamped on the bottom.

N. B. All shoes made like these must have date of my patent woven in front strap of each shoe, otherwise they are infringements rendering Dealers or Manufacturers who sell such liable for damages.

For sale at wholesale or retail with other lines, including Best Lawn Tennis, Yachting, Bicycle and Sporting Shoes at 160 Summer Street, Boston.

If you cannot find this shoe in quality or shape to suit, take no other, but write me giving size and width usually worn, and description, with price for pair desired, and I will forward by mail or express and guarantee satisfaction or refund the money.

H. T. MARSHALL, 160 Summer St., Boston, or Factory, Brockton, Mass.

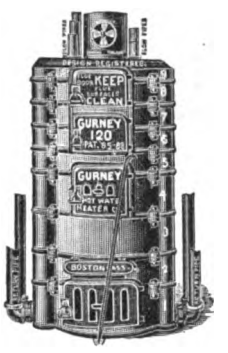
A $10.00 BOOK FOR ONLY $1.00!

HOW TO BUILD A HOUSE.

This book will save you hundreds of dollars if you are thinking about building a house.



If you are thinking of building a house you ought to buy the new book, PALLISER'S AMERICAN ARCHITECTURE, or, Every Man a Complete Builder, prepared by Palliser, Palliser & Co., the well-known Architects.

There is not a Builder, or anyone intending to build or otherwise interested, that can afford to be without it. It is a practical work, and the best, cheapest and most popular book ever issued on Building. Nearly four hundred drawings. A $10 book in size and style, but we have determined to make it meet the popular demand, to suit the times.

It contains 104 pages, 11 x 14 inches in size, and consists of large 9x12 plate pages, giving plans, elevations, perspective views, descriptions, owners' names, actual cost of construction, *no guess work*, and instructions HOW TO BUILD 70 Cottages, Villas, Double Houses, Brick Block Houses, suitable for city suburbs, town and country, houses for the farm, and workingmen's homes for all sections of the country, and costing from $800 to $6,500; also Barns, Stables, School House, Town Hall, Churches, and other public buildings, together with specifications, form of contract, and a large amount of information on the erection of buildings, selection of site, employment of Architects. It is worth $10 to any one, but we will send it in paper cover by mail, postpaid, on receipt of $1.00; bound in cloth, $2.00. Address all orders to

J. S. OGILVIE, Pub., 51 Rose St., New York.

COMFORT FOR HOT WEATHER.

The Crown Perfumery Co's

INVIGORATING LAVENDER SALTS.

(REGISTERED.)

In the sultry summer days, when any sort of exertion is unwelcome, and when we are only too thankful to enjoy anything which cools and refreshes us, we are glad to be able to recommend to the notice of our readers a delightful new invention recently patented by the Crown Perfumery Company, of 177 New Bond Street. Under the title of Lavender Salts they have prepared a strong and invigorating smelling salts, entirely free from the bitter, pungent and positively disagreeable odour which, as a rule, distinguishes all ordinary smelling salts. Here we have the delightfully fresh perfume of lavender, mingled with something which is strong and powerful, but not in the least degree unpleasant. These Lavender Salts will be found a delightful addition to every lady's toilet table, for they are beyond doubt the most agreeable deodorizer that exists. By leaving the stopper out of the bottle for a few minutes the air of any room will become purified, and the atmosphere rendered refreshing and invigorating.—*Lady's Pictorial, London.*

THE BRAID THAT IS KNOWN

THE WORLD AROUND.

Digitized by Google

FOUND HIS OLD GUN.

The recovery of a long-lost object is a moving event in any life. It freshens the past and brings a page of forgotten history with it. The soldier who said, "Good-by, old arm," to the wounded member cut off by the surgeon, parted with it forever. An old fire-arm, dropped on the field of battle, came back to its owner after twenty-five years. The Philadelphia *Ledger* says:

One of the happiest men who returned from the Gettysburg memorial encampment is C. W. Bishing, of Harveys Lake, Pa. He was a private in Captain Rice's company, Fifty-third Pennsylvania Volunteers. Bishing was shot twice at Gettysburg, one bullet shattering an arm and another entering near his right thigh. This occurred near the bloody angle, and not far from the spot on which the regimental monument stands.

As soon as he received the wounds he set to work to bury his musket. He fell near a big rock, and, though suffering great pain and bleeding profusely, he managed to scoop out enough dirt at the base of the boulder to slip his musket into the excavation. Afterward he carefully covered it, and wondered whether he should ever see it again.

Bishing accompanied the surviving members of his old regiment to Gettysburg on the occasion of the dedication of their monument. While there, accompanied by several old comrades, he started out to look for the musket he had buried over twenty-six years before.

The bloody angle was easily found, and he soon distinguished the huge boulder at whose base he had fallen, and where he had hidden the gun. It took but a few moments to dig the earth up, when to his joy he struck the old musket and quickly resurrected it. It had the appearance of Rip Van Winkle's fowling-piece. The stock had fallen apart, but was still in a good state of preservation. The barrel was bound about with a thick coat of rust, and the lock and other portions were in the same condition.

Bishing lifted the old musket tenderly, and as the recollections of the past filled his mind, he kissed it with the enthusiasm of a father who has found a long-lost child. He says he is poor, but no money will buy the musket.

AN HEIRLOOM.

In an old French household in New York the most carefully cherished heirloom is a slipper which was worn by Marie Antoinette in the last days before the French Revolution. It was one of the precious relics in the baggage of a court lady who fled with her husband to Louisiana when the storm broke. She left the tiny, blue, faded slipper to her daughter, with the injunction that it should go down in the family, to the eldest daughter, if she never allowed herself to have corns.

It is a pretty slipper, and has been carefully kept in the jewel-case of one Frenchwoman after another, so that it is perfectly preserved.

It is short, very narrow and very high-heeled, and is a brocaded blue, lined with soft white silk. The sole is of coarse-grained leather, and there are three satin straps over the instep, fastened with a paste buckle.

The pointed toe is embroidered with silver threads, and the edges are bound with silver braid.

The condition regarding its inheritance has always been strictly regarded. The women of the house have taken great care of their feet that they might rightfully claim the unhappy Queen's slipper, and for a hundred years there has not been a pinching shoe worn in that family.

A relic of this sort would be a boon in a good many households, if it had the effect of inducing the daughters to abandon the tight boots, which injure not only their feet, but their gait and carriage.

"LET JEEMS GO."

A simple argument stated in simple language, with sincere feeling behind it, is often more effective than anything which orators practise under the name of eloquence. A good example is furnished in the memoirs of Jefferson Davis. A young woman wrote to him:

"Dear Mr. President—I want you to let Jeems C. of company oneth, fifth South Carolina regiment come home and get married. Jeems is willin', I is willin', his mammy says she is willin', but Jeems' captain he aint willin'. Now when we are all willin' 'ceptin' Jeems' captain, I think you might let up and let Jeems come. I'll make him go straight back when he's done got married and fight just as hard as ever."

Mr. Davis wrote on the letter: "Let Jeems go." Jeems went home, married the affectionate correspondent of Mr. Davis, returned to his regiment, and did fight as well as ever.

ILLEGIBLE.

When the pot and the kettle "fall out," the conversation sometimes becomes amusing to the bystanders.

The Springfield *Republican* says that a Yale student recently handed in a paper to his professor, and was surprised the next day to have it returned, with a note scrawled on the margin. He studied it diligently, but was unable to decipher the note, and so he brought his paper back to the professor.

"I can't quite make out what this is, if you please," said the student.

"That, sir?" said the professor. "Why, that says I cannot read your handwriting. You write illegibly, sir."

HER CANDIDATE.

There are women who may not believe in suffrage for their sex, and yet are doing active work in the world. The Lincoln *Journal* says that a hard-working woman was one day asked:

"Madam, are you a woman suffragist?"

"No, sir," was the answer, "I haven't time to be."

"Haven't time? Well, if you had the privilege of voting, whom would you support?"

"The same man I have supported for the last ten years."

"And who is that?"

"My husband."

A MAN may magnify his office unduly, as when an apothecary said that doctors were only travelling salesmen to sell his goods.

Itching Piles.

LINCOLN IN CAMP.

On the morning after the battle of Bull Run the Army of the Potomac was in a sorry condition. Officers were looking after their men, and men were looking after their officers. A cold, drizzling rain was falling, tents and rations were wanting, and worse yet, the army had been beaten, and had not had time to recover itself. The chronicler of the Seventy-ninth New York Regiment pictures the scene as he saw it, and in the same connection relates a characteristic anecdote of President Lincoln.

During the forenoon a few of us had gathered in a barn, where we sat nursing our woes. "I want to go home" was pictured on every countenance.

Colonel Sherman,—the future general-in-chief of the army,—came in while we were talking, accompanied by two or three members of his staff, and in what appeared to us a gruff and unsympathetic tone, wanted to know what we were doing here.

"Keeping out of the rain," was the reply. "We have no tents, and few of us have blankets; and we have nothing to eat."

"Well, you had better go down in the woods and build bush huts. I want to put my horses in here."

We were in no condition to remonstrate, but we had our opinion of an officer who would turn men out of shelter for the purpose of giving it to dumb brutes.

Colonel Sherman's object was no doubt a good one. He knew that brooding over our troubles would do us more harm than good. But he might have advised us in a more kindly manner.

Next morning we moved to a better situation, and in the afternoon were honored by a visit from the President. As his carriage drove up we noticed Colonel Sherman occupying a seat by his side.

There was no formal reception given the President; he merely drove through the camp, and as he stopped before each regiment the men gathered round his carriage and listened to a few words of sympathy and encouragement.

"Now, boys, keep up a good heart, and all will yet be well," was his concluding sentence.

As he motioned the driver to go on, one of our men thought it a good opportunity to get even with Colonel Sherman.

"Mr. President," said he, "we don't think Colonel Sherman has treated us very well;" and he went on to relate the incident of the barn.

Mr. Lincoln listened patiently till the story was ended, and then, half-turning toward Colonel Sherman, who had sat like a statue during the recital, he said:

"Well, boys, I have a great deal of respect for Colonel Sherman, and if he turned you out of the barn I have no doubt it was for some good reason. I presume he thought you would feel better if you went to work and tried to forget your troubles."

With a bow and a wave of his hand he told the driver to go on to the next camp.

It was wonderful how much good that thoughtful visit of the President worked in the minds of the men. In the grave, serious, yet kindly face of Lincoln we each saw a sympathizing friend, and our own burden became lighter as we reflected on the terrible load our chief magistrate was carrying on his own heart.

BATTLEFIELD MUMMIES.

A sea-captain, who has recently returned from a long cruise along the South American coast, reports some very strange and interesting sights, especially in Peru. He visited the battlefield of Tarapaca, where the Chileans defeated the Peruvians with great slaughter, in November, 1879.

The Peruvians lost four thousand men, and were forced to leave them unburied on the field.

In almost any other country all these corpses would in a few weeks have been reduced to skeletons, either by wild beasts or by the action of the elements. Here, however, for more than a hundred miles on either side of the battlefield there is not a spear of grass, and as a natural result there are no wild animals.

The soil, moreover, is strongly impregnated with nitrate of soda, and this, in connection with the hot, dry atmosphere, has literally converted men and horses into perfect mummies.

The captain visited the place first by moonlight, and, as may well be imagined, was greatly impressed by the strange spectacle. To all appearance the battle might have been fought but a day or two before. The uniforms were still bright and the steel weapons untarnished.

Inspection by daylight brought out a still more curious phenomenon. The hair had continued to grow, both on the men and on the horses, for some time after death. Some of the soldiers' heads were covered with excessively long hair, while the horses' tails were long enough to trail for some distance on the ground.

GROUND FOR SUSPICION.

The French have a proverb, "*Qui s'excuse, s'accuse*," he who excuses himself, accuses himself. This was evidently in the mind of M. de Solilhac, whose amusing account of his ride in a diligence is quoted by the Baron du Casse in his volume of "Souvenirs."

My companion in the coupé was a litigant who was going to Neufchâtel to sustain a lawsuit against a M. de Hollande, of Amiens, who demanded of him the payment of a debt, and who repudiated as false the receipted bill which my companion showed.

He gave me the argument in his defence to read, and I had no sooner looked it over than I hastened to put in my pocket my purse, which I had placed in a pocket of the carriage. He exclaimed with considerable feeling that in taking this precaution I did him an injustice.

I replied, "Monsieur, I have read your defence."

MUSICAL COOKERY.

That the Germans are the most musical people in the world any one would be quite willing to believe after reading a certain cook-book which was published recently in Berlin, and which contained the following very explicit directions for cooking eggs "to a turn:"

"Take the required number of eggs, put them into boiling water, then place yourself at the piano and play a polka *allegro moderato*. At the end of the last movement the eggs will be done."

To cook a last year's spring chicken, nothing less than a symphony of Beethoven's would be necessary, probably.

For the teeth use "Brown's Camphorated Saponaceous Dentifrice." This preparation gives the best results obtainable. Soap destroys the animal and vegetable parasites on the teeth, and camphor hardens the gums. Price, 25 cents a bottle. Sold by druggists. [*Adv.*

Cholera Infantum.

Why Do the Largest Number of Deaths Come in July?

Common observation is right when it says that the mortality from diarrhœal diseases in children is greatest during the summer months.

Taking the average of a large number of years, the mortality increases rapidly from May to July, and then steadily decreases. In a total of 31,048 the mortality during May was 660, during June, 4,103, while during July it reached the enormous number of 12,468.

But just what are the causes of the frightful death rate of this month? Extreme heat and improper food. We cannot control the temperature, but every mother has it in her power to see that her child has healthful food. Mrs. I. J. Woodmansee, of Spencerport, N. Y., has a little girl who

Edna L. Woodmansee, Age 16 months.

was taken quite sick in May of last year with bowel trouble. Nothing helped the baby until she used Lactated Food, when improvement was rapid. All through the dread summer months, when cholera infantum's victims were numbered by thousands, little Edna lived on Lactated Food and kept well and strong. One circumstance stands out prominently in the investigations of cholera infantum—it is that infants fed on Lactated Food are almost exempt.

The grief and sorrow of a parent's heart can be saved by the use of this pure food. It is not medicine—it is an actual substitute for mother's milk, and will sustain and nourish life in the frail little body when all else signally fails.

Lactated Food is sold by druggists, or mailed on receipt of price: 25 cts., 50 cts., $1.00. Interesting book of "Prize Babies" and handsome birthday card free to any mother sending baby's name.
Wells, Richardson & Co., Burlington, Vt.

DR. LYON'S PERFECT

TOOTH POWDER
Thoroughly cleanses the teeth and purifies the breath. Absolutely pure and harmless. Put up in metal boxes with Patent Extension Measuring Tube. 25 cts.
AN ELEGANT TOILET LUXURY.
Very Convenient for Tourists.
Sold by all Dealers, or mailed on receipt of price. Address Dr. I. W. LYON, 88 Maiden Lane, New York.

Teething Made Easy.
Increased flow of saliva, sore gums, dry mouth, diarrhœa, unusual redness of cheeks, eruptions, ulcerations, itching of the nose, twitching of the muscles, dilation of the pupils, fretfulness, restless sleep or wakefulness, thirst, and loss of appetite, all are symptoms of Teething. Although painful, Teething is not in itself dangerous. It is not disputed, however, that during the teething period the greatest number of deaths occur. A cold, an indigestion or an eruptive fever, coming at this time, acts upon a system less able than usual to resist injurious influences.

"Tooth-Food"
will prevent or cure all teething pains and carry the child comfortably through a period of unusual irritation and danger.
Children who are late in cutting teeth, slow to walk and whose bone formation is defective, should be given "Tooth-Food." The use of this remedy will prevent rickets, convulsions, spasms of the glottis, St. Vitus dance, retention of the urine, etc. "Tooth-Food" is the best anti-scrofula remedy known.
This remedy is made of the nutrient elements necessary to bone growth, supplying material lacking in most natural and all artificial food. It is absolutely harmless and pleasant to the taste. Around each bottle is wrapped a circular with full description of "Tooth-Food" and directions for its use. A bottle will be sent, expressage free, to any address, on receipt of one dollar.
THE REYNOLDS M'F'G. CO., CINCINNATI, O.
Your druggist should have "Tooth-Food" and before sending to us you had better ask him for it.

PAINT YOUR ROOFS WITH DIXON'S SILICA GRAPHITE PAINT.
Water will run from it pure and clean. It covers double the surface of any other paint, and will *last four or five times longer.* Equally useful for any iron work. Send for circulars. Jos. Dixon Crucible Co., Jersey City, N. J.

The Youth's Companion is an illustrated weekly paper of eight pages. Its subscription price is $1.75 a year, payment in advance.

Twelve or sixteen pages are often given its subscribers in a single weekly issue of the paper. All additional pages over eight—which is the number given for $1.75—are a gift to the subscribers from the Publishers.

New Subscriptions can commence at any time during the year. The Companion does not employ agents to solicit renewals of subscriptions.

Payment for The Companion, when sent by mail, should be made in a Post-Office Money Order, Bank Check, or Draft, or an Express Money Order. WHEN NEITHER OF THESE CAN BE PROCURED, send the money in a Registered Letter. All postmasters are required to register letters whenever requested to do so.

Silver should never be sent through the mail. It is almost sure to wear a hole through the envelope and be lost, or else it is stolen. Persons who send silver to us in a letter must do it on their own responsibility.

Postal Notes are not a safe means of sending money. Any one can collect them at any Money-Order Post-office, and, if lost or stolen, the money cannot be recovered, as no duplicates are issued. Subscribers who send us Postal Notes must do so at their own risk.

Renewals.—Three weeks are required after the receipt of money by us before the date opposite your name on your paper, which shows to what time your subscription is paid, can be changed.

Discontinuances.—Remember that the publishers must be notified by letter when a subscriber wishes his paper stopped. All arrearages must be paid.

Returning your paper will not enable us to discontinue it, as we cannot find your name on our books unless your Post-office address is given.

Always give the name of the Post-office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed and drafts made payable to

THE YOUTH'S COMPANION,
41 Temple Place, Boston, Mass.

STAMMERING.

Speech is a very complicated process. Many muscles, and as many nerves, are concerned in it, with a delicacy and rapidity of movement truly wonderful. The whole process is presided over by cerebral centres, which supply the nervous force and coördinate or harmonize the various movements. We learn to use our vocal organs so early that our attention is not called to the difficulties involved, and we are much surprised at occasional failures.

In stammering, the trouble may be said to be in the brain, but there is no organic injury. Something so interferes with the normal outflow of motive force from the nervous centre, that some of the muscles concerned in speech act spasmodically. The spasm may be in the larynx, or in the muscles of respiration.

The difficulty very rarely occurs in pronouncing vowels or in singing, since singing has mainly to do with the vowel sounds. The chief difficulty is with consonants, especially with the explosive consonants, b, p, d, t, g (hard) and k.

The trouble generally shows itself between the ages of four and fourteen. Many causes may originate it, and it may pass away with the cause. Even confirmed stammerers commonly improve after maturity.

Medical treatment is of little avail. The main reliance is on educational methods. The patient must train himself to speak with calm deliberation; to keep his lungs well filled with air; and to check himself and begin the sentence again, instead of struggling with the impeding letter. He should also give much attention to deliberate reading.

An eminent physician, who had been a terrible stammerer in boyhood, and who never fully overcame the defect, says that the letter "m" gave him special trouble. But he could speak it readily, if he uttered the letter "o" before it. His upper teeth would wound his under lip in the effort to speak the word "method" in public.

He found great difficulty in saying "good morning," the "g" as well as the "m" troubling him, but he could say it if, at the same moment, he raised his hat. He could easily read a lecture in public, if he had carefully read it over beforehand, and thus secured calmness. Sometimes finding himself about to stammer over a particular word, he would substitute an equivalent expression, and thus escape.

For the Companion.

THE ZODIAC.

The zodiac is a belt in the heavens sixteen degrees in width, extending eight degrees on each side of the ecliptic. It receives its name from the Greek word zoön, meaning a living creature, for the reason that the constellations included in its boundaries, with the exception of Libra, are representations of animals.

The ecliptic, on each side of which the zodiac extends, is a great circle cutting the equator at two points one hundred and eighty degrees apart—the points being known as the equinoxes—and making, with the equator, an angle of twenty-three and one half degrees. It is called the ecliptic, because it was long ago discovered that eclipses take place only when the moon is crossing it.

The ecliptic is the apparent path of the sun among the stars, hence its great importance in the celestial economy.

A belt on each side of it was therefore marked off, and within this space the moon and such planets as were then known were always to be found. The classification has come down from prehistoric times, when it was believed that the earth was the central body in space, and at rest, while sun, moon and stars revolved around it—long before the Copernican system was adopted, the telescope invented, or Uranus, the asteroids and Neptune discovered. It shows how much observation can accomplish, even when resting on an untenable foundation.

The zodiac is divided into twelve equal parts, thirty degrees in length, called signs, each sign representing the progress of the sun during a month, and thus illustrating the sun's annual journey. The names of the twelve signs are these: Aries, Taurus and Gemini for spring; Cancer, Leo and Virgo for summer; Libra, Scorpio and Sagittarius for autumn; Capricornus, Aquarius and Pisces for winter.

The signs are unchangeable. Whenever the vernal equinox occurs, the sign Aries commences, and longitude is reckoned from that point. It is different with the constellations, for the vernal equinox falls back a little every year.

When the first catalogue of stars was formed, 140 B. C., the signs nearly corresponded to the constellations bearing their names; but in the two thousand years that have passed since that time the vernal equinox has fallen back twenty-eight degrees, so that the constellations seem to have advanced nearly a whole sign. The sign Taurus now corresponds with the constellation Aries, Gemini with Taurus, and so on. The cause of this seeming advance of the stars is called the precession of the equinoxes.

"ON TIME."

It is a matter of pride with railroad companies to run their trains on time, or to come as near to punctuality as possible. This well-known fact no doubt explains an incident which an English traveller relates in connection with a journey which he took across the American continent. It was on one of the great transcontinental lines which had made special promises as to punctuality.

On the journey, the English traveller seemed to notice a marked disregard for the time-table, but he was interested in the country, and made no complaint.

At last the Pacific terminus was reached. There he met a beaming official of the company, who, pulling his own watch out, said:

"Just look and see what time you've got, will you, please?"

"It wants ten minutes of one," said the Englishman, a little puzzled.

"Yes, sir; twelve-fifty, exactly! And that's the time she's scheduled to arrive! How's that for promptness? Crossing the continent, almost three thousand miles, and getting here at twelve-fifty o'clock, precisely as advertised."

"I can't deny that, you know," said the Englishman. "It's very fine, no doubt; but look here—how many *days* were you late?"

"Oh, a matter of two or three, perhaps; but we struck the coast at twelve-fifty!"

HE TOOK IT.

Confession is "good for the soul" when it is inspired by repentance, but not necessarily so when it is induced by fear—especially if the culprit is frightened into confessing to some offence that he did not commit.

Peter, a small boy, had been punished for disturbing things on the library table, where his father often sat to write; but his fondness for inspecting this table was so great that he could hardly refrain from taking some article which lay upon the prohibited spot.

One evening, when there was company at the house, Peter sat in a corner in the library, while his father and the guests conversed.

A discussion arose among them as to the proper pronunciation of the word "bicycle."

"Let's look in the dictionary," said Peter's father.

He took the book from the library table and opened it.

"Why," he said, presently, "the word isn't in the dictionary! How do you account for that?"

Peter, in his corner, heard the question, and felt guilty.

"I—I—I took it, papa," he exclaimed, "but I won't do it again—truly, I won't!"

COURAGEOUS WOMAN.

In the year 1705, John Harris and his wife, an English woman by birth, settled upon the bank of the Susquehanna River, at a place afterward known as "Harris Ferry"—now Harrisburg. There he carried on a trade with the Indians, great numbers of whom were in that neighborhood.

On one occasion, Mrs. Harris sent her servant into the cellar for something. The girl lighted a candle, and carrying it in her hand, without placing it in a candle-stick, disappeared down the stairway. She returned in a short time with the desired article, but without the light.

"Where did you leave the candle?" Mrs. Harris inquired.

"It is in the cellar, standing in a barrel of sand," the girl replied.

"Merciful goodness!" ejaculated Mrs. Harris, hastening down the stairs. There, sure enough, was the candle, standing erect, in an open barrel of gunpowder, its feeble flame throwing a circle of light around it.

Walking boldly up to the barrel, the brave woman deliberately placed her hands beneath and around the burning candle, and lifting it carefully from its dangerous position, carried it up the stairs.

COSTLY JOKE.

Of all forms of practical joking—and there is not one form which is not detestable—that which throws the victim into terror is the meanest. We copy from a daily paper a true incident, suppressing only the names.

While a young lady, nineteen years old, was seated in the parlor of a lady friend in a New York town not long ago, a young man approached her stealthily with a wooden snake, intending to frighten her. The shock was so great that she at once became hysterical, and has since been demented. It is feared that her mind is permanently injured. In her delirium she does nothing but fight off snakes.

SO IT WAS.

Mrs. Malaprop chooses her words well sometimes.

The rain was falling in torrents as she left church one Sunday lately without an umbrella.

"How irrigating this is!" she cried, in a vexed tone, as she placed her handkerchief carefully over her bonnet.

Yes, Vanilla is expensive, and when one buys an Extract at a low price, do not be disappointed if it is poor or disagreeable in flavor. For absolute purity, we recommend Burnett's Extract of Vanilla. [*Adv.*

The Best Things In Cookery

Are always made with the ROYAL BAKING POWDER. It imparts that peculiar lightness, sweetness and flavor noticed in the finest rolls, biscuit, cake, etc., and which the most expert pastry cooks declare is unobtainable by the use of any other raising agent.

The ROYAL BAKING POWDER, besides rendering the food more palatable and wholesome, is, because of its higher leavening power, the most economical.

If the ROYAL BAKING POWDER costs a few cents per pound more than others, the difference is more than made up by the superior flavor, purity and wholesomeness of the food it produces.

THE STUDENT WAITERS.

The boys' academy at Lennox had closed for the summer vacation. The old coach, which lumbered up the village hill three times a day, had taken its last noisy load of boys and its horns to the railway station, and the quiet old place had begun to settle down comfortably for the summer.

In front of the school building sat a group of boys, the only remaining members of the school. They were earnestly discussing plans for the summer.

"Blake," said a lazy-looking boy who lay flat on his back with his hat over his face, "I suppose you will spend the summer in accordance with your pet idea that vacation ought to be a mental stimulus as well as rest. What will you do? Read Lucretius or peddle maps?"

"I think of canvassing for the 'Universal History,'" replied Blake. "They say Wallace made as much as a dollar and a half on the book last summer."

"Umph!" said Wallace, who looked like a divinity student in his long black coat and spectacles. "I tramped about fifteen hundred miles, was barked at by scores of dogs, big and little, lost my self-respect, and made just six dollars and thirty cents over my expenses."

"Six dollars and thirty cents for your self-respect! Too cheap!" said Blake.

"Yes," answered Wallace, "and I don't advise any of you fellows to canvass unless you can talk English fluently, have a smattering of French and German, have dog-proof trousers and tireless legs, and are not afraid of women folks."

"That last clause shuts me out!" exclaimed Tom Comus, an odd-looking boy, who was sitting on the grass just behind Wallace, and playing a solitary game of mumble-the-peg. "But why don't you all go down to Sandy Shore? I went there last year, and had a pretty good time 'slinging chams,' as they call it there. You get all the advantages of a salubrious resort at the seaside, with board and washing thrown in, and a munificent salary of twelve dollars a month."

"I should advise you not to go there," said one of the group. "I was there two years ago. The whole business of the visitors was to see who could eat the greatest number of clams and survive. I was able to keep my self-respect, but found I was losing my respect for the human race at large."

"Why, Barnes!" said Blake, in a tone of surprise. "I never knew you had any such experience. You have never alluded to it before."

"Ashamed of it, I suppose!" muttered Barnes, pulling up a tuft of grass fiercely. "And yet I don't know why I should be."

Crosby, who had been reading a newspaper while the talk was going on, rose and struck an attitude.

"O Conscript Fathers and fellow Greeks, I have a plan to propose, and if any one has a better, let him speak. Permit me to read the following advertisement from the *Daily Yes and Cry*:

"WANTED.—At the Hillside Hotel, Glenvale, on Lake Shawnut, a dozen waiters. Student waiters preferred. For terms and particulars address, J. L. TRASK, Proprietor.

"Say we all go together!" exclaimed Tom. "We couldn't do better. Here are eight of us. We all want work. Genteel work, such as Blake craves! Let's apply to J. L. Trask at once. Come, fellows, what do you say? Shall we move on the Hillside Hotel in a body?"

The boys talked it over, and decided that they could not do better.

Unusual circumstances had brought this group together. Three of them were Western boys, who could not afford to go home even for the long vacation. Blake's home was in New York. He had been kept in Lennox a day or two after the close of school to do some extra work for the principal.

Barnes lived in Maine, and was tired of working on a farm during the summer. He and Wallace had been looking for something else to do, for Wallace had no home to go to when the school year ended.

Rex, or as he was better known in the school catalogue, King, had the unenviable reputation of being the laziest boy in the academy. Tom Comus and Crosby were room-mates, and where one went the other followed.

Most of these boys had been compelled to lose a year for want of means to go on; but a poor student may enjoy life as much as any.

"I have been discharged."

The letter of application was written and sent, and the boys anxiously waited two days for an answer. It came, and Tom read it to the group:

Come up at once. I can offer the new hands, who have not had experience, only fifteen dollars a month. Those who have waited in hotels before will have twenty dollars. This includes washing, which I shall expect you to take at once and oblige.
Yours truly, J. L. TRASK.

Next morning the train from Lennox carried as cheerful a party of eight boys as could be found in the world.

The day seemed all too short when the little steamer, which made connection at Wilton, drew up at the wharf at Glenvale. It was dusk when they reached the great hotel.

There was nothing for them to do that night, as supper had been served. They went into the carving-room, where the head-waiter assigned them tables, and gave them instruction in their work.

Their bedrooms were at the top of the house, but the windows all looked out on the lake, and they were too tired and good-natured to grumble at the hard beds. They slept soundly until the waiters' bell sounded at six o'clock in the morning.

At a long table in the basement the boys found the other waiters taking their breakfast, and were assigned their seats. There were more than sixty waiters in all, of whom twenty or thirty seemed to be students like themselves.

After their breakfast the great dining-room upstairs became the scene of action. The boys were assigned, as far as possible, to tables where there were few guests, or with an experienced waiter. Tom and Barnes had a table together, which seated twelve persons.

During breakfast, Wallace, who was rushing into the carving-room for a hasty order from a guest who must leave on an early boat, ran into Tom just as he was coming out with a tray full of coffee. There was a crash, and a smothered shriek from Tom, as the hot coffee splashed upon him, and half a dozen cups and saucers rolled to the floor.

"Are you very much burned?" asked Wallace, anxiously.

"N-no—I guess I shall live!" gasped Tom, while he and Wallace bent down to gather up the fragments.

When Wallace stood up he looked more rueful than ever.

"I've forgotten what my order was," he said, "and the man was in a great hurry. This has knocked it all out of me!"

"Well, I'll tell you what to do," said Tom. "Go back and ask him if he wants it well-done or rare."

"But I don't know what 'it' was!"

"No, but you may find out that way."

"Hem!" said Wallace, a little dubiously. "It might be beefsteak or an omelet. Ah! I remember now! It was an omelet! You're all right, Tom!"

At dinner the tables filled up rapidly, so that several orders had to be taken at once. The boys' white aprons flashed hither and thither. Several lost their heads amid the rattle of dishes in the glass-room and the shouts for orders in the carving-room. Wallace forgot his orders, and Tom spilled soup recklessly. The indolent Rex actually caught himself running once.

"I took out an order for almost the whole bill of fare a little while ago," Tom said to Barnes, "and when I got in here I couldn't for the life of me think of anything but string-beans! It's worse than learning the paradigm of the Greek verb."

In the afternoon the waiters had a little time to themselves, and compared experiences as they rested by the shore of the lake.

"I think I had rather peddle the 'Universal History,'" said Wallace. "I had a fourness for that, and when I stopped at a house to sell, I could get it off. But how is a fellow going to remember several lists of dishes, most of them with impossible French names? By the time I have taken six different orders, my mind is in a state of utter imbecility."

"I believe we can do it after some practice," said Blake. "Did you see that young fellow in the dazzling white trousers come into the dining-room with two trays, one on each hand, and pile up with dishes four or five deep? I envied him. Really, for a few minutes my highest ambition in life was to be a model waiter in a hotel."

"There's a good deal to learn, and it's good discipline," said Barnes, modestly. "It took me a long time last year to learn how to fill a glass of water and put it, gracefully and without spilling, at the guest's right hand."

"By the way, Barnes," said Blake, a day or two afterward, "have you seen the landlord yet? Strange he does not put in his appearance. I wish he would come and take down 'Blisters' a little."

"Blisters" was the name the boys had given to the head-waiter, and the other waiters had immediately taken it up.

They had discovered that the proprietor was absent on important business, though his family were at the house. Meanwhile all the authority in the office was assumed by the lordly clerk, while in the dining-room "Blisters" ruled with a high hand, tyrannizing over the waiters.

The Lennox boys had not yet fallen under his particular displeasure, for they had all been anxious to please and ready to do extra work, and after the first week or two became good waiters; but the more they did, the more Blisters required, and they were beginning to chafe under his orders.

Waiters have certain well-defined and recognized rights in hotels, and the boys had perceived that these were not observed. They were even ordered to do the work of personal favorites of the head-waiter, while these favored servants slept or flirted in the lake.

Just before the next dinner, Blisters called for Barnes and told him, in a very blustering tone, that his table would be served by one of the other waiters that day, and that Barnes might go to the other end of the dining-room and wait on a party of his own "gentlemen friends," who were stopping for dinner at the hotel.

Barnes did not like the order, but obeyed. His pride had already been wounded several times by the overbearing insolence of his superior.

The head-waiter's friends were boisterous and ill-mannered young men, who, after calling for almost everything on the bill of fare, came to the wine list.

"Here, John!" called out one of them, familiarly, to Barnes, "get us a bottle of brandy, and be lively!"

Barnes went in search of Blisters. Very little liquor was sold in the hotel, and Barnes had told the head-waiter on the night of his arrival that he would not serve it.

"They want a bottle of brandy," said Barnes to the head-waiter.

"Well, there is a bottle on the sideboard. Take it to them!"

"I have not carried liquors to any of the guests since I came into the hotel; I told you when I first came that I would not, and it was understood that I should not," replied Barnes.

"You won't!" blustered Blisters.

"No," said Barnes. "I said I would not have anything to do with the wine list when I first came, and you set me at work knowing my objections to serving liquor. You must get some one else to help your friends."

"You are discharged from the hotel," said Blisters, angrily, "and the sooner you leave the better it will be for you."

"Very well," said Barnes. He untied his apron strings, and put the garment away.

Digitized by Google

The head-waiter gave him a card stating the amount of wages due him. He presented it to the clerk, and was paid his due.

Barnes rushed upstairs, gathered up his few possessions, thrust them into his satchel, and was down again before dinner was over. He was too much enraged to stop to say good-by to the other boys, and the whole affair had happened so quickly that none of them knew it.

He looked at the time-table in the office, and saw that he had just time to run down to the wharf and catch the steamer for Wilton.

Down he ran, and arrived just as the little steamer was approaching with a large number of passengers. A few of them were preparing to land, and the boat made but a short stop before going on to Wilton.

As usual, there was a crowd on the dock watching the boat and awaiting friends. As the steamer came up, broadside on, to the little wharf, there was a movement among the crowd, some of those who were behind pushing, in order to be nearer the incoming boat.

Suddenly there was a loud cry, the shriek of a child's voice, and a splash in the water; while the crowd, as if alarmed, surged back from the front of the wharf.

Barnes, who was standing on one of the piles at the end of the wharf, ready to leap upon the boat when it was near enough, saw a small figure fall from the end of the wharf almost under the splashing paddle-wheels of the boat.

Without hesitation, Barnes, who was a good swimmer, threw off his coat, and leaped down between the steamer and the wharf.

Three or four vigorous strokes brought him to the object. Even in the confusion of the moment, amidst the shrieks of the women and the shouting of the Captain on the boat, he recognized the boy as one who had been at his table in the morning, and whom he had seen two or three times about the hotel.

The boat had surged up so close to the wharf that it seemed as if there were small hope that anything could escape crushing in that narrow space. Once Barnes thought the paddle-wheels had struck him, and he was blinded and choked by the yellow foam as it rushed back from the piles about the wharf, but he kept his hold upon the boy.

The man at the wheel rang his bell to back the boat; the paddles slowly reversed their motion, and the boat stopped and gradually receded. The spectators breathed more freely as they saw the distance widen.

All this had taken place in a briefer space of time than it takes to tell it. But it seemed a long time to Barnes before a rope was thrown to him, and strong arms reached down and lifted him and the boy carefully upon the wharf.

"Whose boy is it?" asked more than one voice, while Barnes mechanically wrung the water out of his hair, and looked about in a confused manner.

"Why, it's Trask's boy at the Hillside!" cried several, in answer.

The lad was not much the worse for his fall; only a good deal frightened. He had been sitting on the edge of the wharf as the steamer came up, and the crowd, as it surged forward, had pushed him over into the lake.

Barnes began to look for his coat, after seeing that the boy had good care and was not seriously hurt. In the confusion he might have walked away to the boat unnoticed, as he sought to do, if the proprietor of the Hillside, who had been on board the incoming boat, had not rushed down upon the wharf and clasped his boy in his arms.

"Where is the man who saved my child?" cried the father.

"Here he is, father!" cried the boy, running up to Barnes.

Mr. Trask seized Barnes's hand and wrung it fervently.

"You must come right back with me. My wife must see you, and you must change your wet clothes."

"I beg your pardon," said Barnes, somewhat stiffly, "but I have been discharged."

"Discharged from what?"

"From the dining-room of your hotel."

"Well, I reinstate you. Young man, this is not a time to stand upon ceremony! Come!"

The invitation was irresistible. Barnes followed, and was questioned all the way by the hotel proprietor as to the affair. Mr. Trask listened attentively, but said little.

That evening the guests, who had heard the whole story, insisted on giving Barnes an "ovation." The hotel was lighted up, the drawing-rooms were thrown open, the band played its best. Barnes was the hero of the hour.

The next morning he went back to his place, to receive the congratulations of his friends. Tom whispered, when he found an opportunity, "Blisters all gone! We're entirely convalescent in that particular."

The head-waiter had received his deserved discharge.

During the remainder of the season none of the Lennox boys had reason to complain of unjust treatment.

As Barnes was leaving the house at the end of the season, Mr. Trask slipped a letter into his hand with the remark, "This is not to be opened until you are within ten miles of Lennox."

"Ten miles from Lennox," said Wallace, at the end of a pleasant day's ride, to remind Barnes of the letter. Barnes, who had forgotten it, drew it out and opened it.

A check for one hundred dollars was folded in a letter which read thus:

I trust you will not consider this as expressing in any coarse way my appreciation of your heroism in rescuing my boy. But please accept it as a slight token of my regard for you, and use it for the good of some one, either yourself, or some other student who may be in need of it. I wish you the happiness of a long and successful life.—Your friend, J. L. TRASK.

"Well," said Wallace, after a pause, "I wish a boy would have the kindness to tumble off a wharf for me when I've nothing else to do but pull him out."

Barnes smiled. "It has been a pleasant summer for me. I shall never grumble at my poverty again."

"I should think not!" replied Wallace, as the other boys gathered around; and a jolly crowd of poor students rolled into Lennox singing:

Oh, 'tis very, very sure
We are very, very poor,
But taking into close consideration
The circumstances of our situation,
We are not exactly what you might call
So very, very poor after all.

CHARLES M. SHELDON.

A SUMMER WISH.

To live a poem under thick green boughs,
With patches here and there of blue above—
Mingled with crooning of the brooding dove,
And pine-trees sighing of the wind that blows
From cool, high mountain range and arctic snows.

For the Companion.

CAR'LINE'S ELOISA.

"Hold your head still, Car'line!" commanded Aunt Maria, giving the hair she was braiding an impatient twitch.

Car'line stiffened her neck, drew her mouth into a small round pucker, and winked her eyes very fast and hard.

If the combing of Car'line's hair was a daily trial to Aunt Maria, it was an ordeal, also, to Car'line. Her hair was long, fine, thick and inclined to snarl. Aunt Maria plied the brush with a smart hand, and combed through the snarls with a vigorous comb.

"I'm a good mind to cut your hair short in your neck—it's such a bother," Aunt Maria said, almost every day, when Car'line winced and flinched under the comb.

Car'line almost wished she would cut it, though none of the girls at school wore short hair. Aunt Maria, although she would have scouted the idea, must have had a secret regard for Car'line's appearance, for she never carried out the threat, but tugged at the snarls and braided the hair in two long, tight braids every day.

It was not so bad when the snarls were conquered and the braiding had begun. Then the puckers smoothed out of Car'line's face; she stopped winking so fast, and began to think of other things.

"Aunt M'ria," she remarked, "Emma Jane's grandmother has brought her a new doll."

"Humph!" said Aunt Maria.

"It's a handsome doll," continued Car'line, not much encouraged to go on, but too full of the subject to keep still, "with a blue dress and black slippers—a boughten doll! Emma Jane's grandmother dressed it."

"It's all vanity and foolishness," said Aunt Maria, scornfully, "buying a doll for that great girl. Why, she was eight year old last May. I sh'd think she's old enough to begin to do something besides play with dolls. She'd better be sewing up sheets for her mother, or learning to knit."

Car'line was silent. She was almost nine—nearly a year older than Emma Jane. What would Aunt Maria say if she knew that Car'line longed in the depths of her heart for a doll?

Most of her dolls had been pillow-case babies, without faces or limbs, and with just a little shawl or cape pinned about them for clothing.

That was when she was a very little girl, years ago. But once, for a brief time, Car'line had owned a "store doll." It had a pink illusion dress, and a plaster-of-paris head and shoulders. Aunt Maria kept it carefully for Car'line, laid away in the top of the great bureau.

One night, when she was sick with measles, Car'line begged for the doll, to hold in her arms before she went to sleep. Somehow—Car'line could hardly realize how such a dreadful thing could have happened—she had fallen asleep and rolled upon dolly, and in the morning the remains of the head had been found crushed to fragments.

That had happened three years ago; but even now Car'line could not think without pain of that morning of bereavement.

When Aunt Maria had tied the ends of the braids with a stout black thread, she reached up to the corner of the looking-glass and took down Car'line's yellow hair-ribbons—her second best pair.

A pair of blue ones was kept in the drawer for Sundays. The yellow ones were worn when Car'line went to school, or on errands to the neighbors' houses. For home use ribbons were not necessary.

"Am I going somewhere, Aunt M'ria?" she asked, as her aunt proceeded to tie on the yellow ribbons.

"Yes. I want you to go over to the Walker place and carry a pail of butter. You may put on your clean apron and your shoes and stockings. You must go careful, and not jounce the pail. Go slow and keep in the shade all you can. Will you remember?"

"Yes, ma'am," replied Car'line.

Aunt Maria brought up the pail of butter when Car'line was ready.

"There's two pounds and twelve ounces. That aint as much as I usually send, but there's only the housekeeper and the gov'ness there now, and I suppose it'll be enough. Now be careful and not lose the money."

"No, marm," returned Car'line.

She took the pail and started down the path, between the beds of garden pinks, toward the white gate.

Going over to the Walker place was a duty pleasant to Car'line, even when there was no one at home but the housekeeper. It was a beautiful place; the Walkers were rich city people, who came to the country only in the summer. Their house, grounds, carriage and horses were a source of unfailing interest to the neighborhood.

Sometimes the family remained no more than a week or two at a time, though servants were there through the summer to keep the house ready for their pleasure.

There was a little girl in the family—a child who seemed to live in a world wholly different from Car'line's. Car'line had never spoken to little Miss Annette Walker, and never expected to speak to her; but she had once or twice had the honor and delight of meeting Miss Pratt, Annette's governess, in the garden.

Miss Pratt was a very pretty young lady, with a pleasant smile and a dimple in her chin.

About half-way between Aunt Maria's and the Walker place was a field where wild strawberries grew, richer and sweeter and larger than Car'line had ever gathered elsewhere.

She stopped there a moment on her way, and, kneeling on the green bank, pushed her head between the rails of the fence to see if the berries had begun to ripen. Her sunbonnet was almost crushed when she withdrew it, but her face was full of satisfaction.

"When I've left the butter, I'll come back and see if I can't pick a cupful for Miss Pratt," she said. "I 'most know she'll like 'em."

Car'line always walked along the shady, flagged path leading around to Mr. Walker's back door with a sense of timidity approaching awe. The house was so large and imposing, with its piazzaed front and long pillars; and the elms in the yard were so great, and the lawn and garden so beautiful!

If the housekeeper had not been a friendly, social person, Car'line would hardly have dared to go there.

There was a stately front door in the part of the house facing the road; then another entrance from the flagged walk into a side hall; further along another door opened upon a porch in the L, and still further a doorway into the shed which adjoined the kitchen.

Car'line, in her humility, always went to the last door of all.

The shed-door was open, and Car'line stepped softly in. Even here everything was daintily clean and tidy. The floor was swept and scrubbed every day, and the household utensils, which were kept here, were tidily set back against the wall.

There were two barrels standing near the door, into which were dumped the household odds and ends of rubbish, to wait till a man from the village came and carted it away.

Car'line had heard the neighborhood gossip about the nice things that were thrown into the Walkers' rubbish barrels.

"Such a sinful waste!" Aunt Maria had exclaimed, more than once; "throwing away good cloth, and bedding that's hardly worn at all, and clothes good enough for anybody to wear."

Naturally Car'line glanced at the much-discussed barrels as she passed them, and saw there, lying on the top of the nearest one—a doll!

It was a doll that little Annette Walker had thrown away; but to Car'line's eyes it was beautiful. True, the dress and lace-trimmed skirts were somewhat soiled, the paint on the smiling face was a little tarnished, and the curly hair tangled. But with all these drawbacks, it was a doll rarely elegant and desirable to the little country girl.

It was hard to pass by the doll and go on to the kitchen where she met the housekeeper and did Aunt Maria's errand; harder still to go away and leave the doll lying there on the ash-barrel.

"Oh, dear, what if they should bring out a lot of ashes and throw on her!" Car'line thought, as she passed down the flagged walk again. "I wish I could buy her. Oh, I wish I dared ask Mrs. Priest to give her to me."

But Car'line could not do that. To ask for anything—to beg, as Aunt Maria would put it—was almost the lowest form of impropriety and disgrace. Never to take anything you cannot pay for was, in Aunt Maria's code, one of the prime principles of right and decent living.

Car'line had caught a glimpse of Miss Pratt sitting in the arbor in the garden, but she decided not to attract the young lady's attention until she came back with her offering of strawberries.

She ran down the road now, with her pail relieved of the butter, and in a few minutes was scrambling through the fence into the field where the wild strawberries grew.

Here a lucky thought struck her—a plan by which she might become the honorable owner of the doll. If only she could summon the courage to propose it to Mrs. Priest!

"And if I do get her," thought Car'line, "I'll name her Eloisa."

About half an hour later Car'line appeared suddenly before Miss Pratt, who was still reading in the arbor. The girl had brought a little green basket, which she had ingeniously twisted of bulrushes and lined with leaves, and had filled with ripe, sweet-looking strawberries.

As Miss Pratt looked up from her book, Car'line timidly held the basket toward her.

"I picked 'em for you," she said, bashfully.

"For me? Why, you dear little girl! How nice it was of you to think of it!" exclaimed the pretty governess.

Car'line's face grew pink with embarrassment and delight, under her green and white sunbonnet.

"'Twasn't nothing—I—I just liked to do it," she stammered, blushing deeper in her confusion, and wondering what was the proper thing for her to say.

"Won't you sit down here and eat them with me?" asked Miss Pratt, pitying Car'line's timidity, and trying to put her at her ease.

"No, ma'am, I can't stop now," said Car'line. "I've got something to see Mrs. Priest about."

Car'line was an unusually bashful child, and her heart beat fast with excitement and fright as she approached the house to make her request.

"Oh, I can't do it, I can't do it after all!" she whispered, as she stood quaking in the shed. She half turned to run home.

Then she looked again at Eloisa, lying plaintively on the ash-barrel, with her blue eyes placidly staring up to the shed-roof, and the sight nerved her courage afresh.

Hurrying through the shed, she met Mrs. Priest at the kitchen door.

"Mrs. Priest," she said, speaking very fast, "I came back to see if you'd sell me Eloisa—I mean that doll there on the barrel—and let me pick berries enough to pay for her!"

Mrs. Priest looked pleasantly down at the little flushed face and excited eyes.

"That old doll!" she exclaimed. "Why, you needn't pay for it, child. You may have it and welcome. It'll only be carted away with the other rubbish."

Car'line shook her head.

"I can't take it, ma'am," she faltered, "'less you'll let me pay for it somehow."

"Oh, well, you may bring the berries then," she said, considerately. "I think a pint will be enough."

Car'line's eyes were shining with delight now, and she turned to take the doll. But Miss Pratt had come into the shed, and lifted Eloisa from the barrel. She had heard the conversation.

"I wish you would leave the doll a little while," she said, kindly, "and let me paint her face afresh, and curl over the hair. I have some paints that will make the face as clean and pretty as when the doll was new."

Two days later Car'line went up the flagged walk again, with a little pail of ripe strawberries in her hand. All this time she had been thinking and dreaming of Eloisa.

"Come in two days; the face will be dry then," Miss Pratt had said. How the time had dragged!

Miss Pratt met her, this time, and led her through the kitchen, past the splendid dining-room with its table a-glitter with silver; past beautiful rooms where Car'line caught glimpses of statuary and pictures, rich carpets and elegant mirrors; up the great stairway, and along the fine hall to the governess's own room at the end.

Then she removed a tissue-paper cover from something that was lying on the bed, and held up to Car'line's delighted view Eloisa—but Eloisa transformed!

The governess's paint-brushes had reproduced all the beauties of the doll's face when it was new. The cheeks were just as pink, the eyes as blue, the face as fair and clear as if it had never lain in the Walkers' rubbish barrel.

The tangled hair, too, had been carefully combed out and re-curled, the pretty blue and white checked dress washed and ironed and trimmed with new ribbons, and the lace-trimmed skirts laundered, pinked and fluted with the nicest care.

Car'line caught her breath with a gasp of admiration and delight.

She could not think of a word to say when Miss Pratt carefully rolled the doll in the tissue-paper and gave it into her possession. But perhaps the tears of joy in her eyes, with which the smile on her trembling mouth was struggling, thanked Miss Pratt better than any words that Car'line could possibly have said.

"And you never even thanked her?" said Aunt Maria, severely, when Car'line afterwards gave all the particulars at home. "Car'line Maria Jones, I'm ashamed of you!"

Aunt Maria did not quite understand.

Car'line is a woman now, and a good many outgrown joys and sorrows strew the pathway between that long-ago summer and this; but it is not likely she has ever known a moment of

Digitized by Google

happiness more complete and satisfying than the one when she went back over the flagged walk and turned her happy face homeward, with Eloisa clasped tenderly in her arms.

For the Companion.

THE CAPTAIN OF THE "KITTIEWINK."

In Seven Chapters.—Chapter VI.

Phineas and the Captain.

Imagine a tidal river, thirty feet wide at its mouth, emptying into the Atlantic. Imagine this river almost shallow enough at its outlet at low tide to swamp a rowboat, and deep enough when the tide is full to float a three-master. Imagine the waters rushing one way or the other at a whirlpool rate at the mouth of this river, as the tide comes or goes. It has often taken a sailboat in a fair wind two hours to run fifty feet in the face of this tide.

Imagine a long stone pier reaching out into the tumultuous ocean, and beside it a tide-rip with white breakers gleaming like tigers' teeth.

In stormy weather these are impassable by one who does not ride them at the right moment, or who is ignorant of the channel.

Here, too, are foam-tossed ledges, some of them above the high-water mark, some below; some marked by a black buoy, some not marked at all; but all dreaded alike by the mariner.

Add to all this an easterly wind and an angry sea, and you have Pennylunk Harbor as it was on the morning that Phin Scrod found his lost Captain and his mate Non.

The *Kittiewink* was off Cape Porpoise, scudding before the wind, trying with all her might to make shore, somewhere, in some way, and more quickly than she had ever done before.

"'Taint no use to make for anywhere but Pennylunk. The tide's a-goin'. We can fetch Pennylunk, an' jog a bit until it comes, an' run in an' telegraph to your folks."

So said Phineas, hopefully. He was quite as impatient to land as the boys were. He took in the lay of the wind, and at the same time gave what might be called a hysterical laugh.

He was almost beside himself for joy. Non was not so exuberant, for he was still sea-sick; but Hal performed what he thought was a sailor's hornpipe upon the cockpit floor, and immediately asked to take the wheel.

"Not yet, sonny," answered the cautious sailing-master. "This is a purty stiff bit o' wind, and Pennylunk is a harbor to steer clear on, unless you've been there, as I've been with many a bar'l of herring."

"But how soon can we send off the telegram?"

Hal's anxiety to relieve his mother's distress had begun to take definite and urgent shapes. He was a considerate boy, but the continual round of excitement had, for a time, taken his mind off Sweet Fern and the dear ones there.

But while his parents had been worrying, Hal had been growing much better in health. Doctor Parkhurst was right. The change worked wonders in the few weeks. Hal was not strong, but he was now likely to become so.

The yachting season had only begun. What would it not do for him by the end of the summer?

But a new thought had troubled his mind; it had even suggested itself to the skipper. Non, too, had secretly shared it, and without regret. After

all that had happened, would Mrs. Maynot allow Hal to set foot on the *Kittiewink* again, if he once safely set foot on shore?

Hal thought of this possibility sadly. This might be his last sail. He made up his mind to enjoy it to the fullest extent while it lasted.

The *Kittiewink* had now skirted the shore until the long pier at Pennylunk was well in sight. The summer cottages and hotels were so near that people walking on the shore could be seen, and women distinguished from men.

A high sea was running. The waves curled and snapped at the bar of the river. When the tide is low, as it was at the moment when the *Kittiewink* approached it, the water breaks with a roar along the whole outlet which goes by the name of a harbor.

The rocks stood out in bare relief off the shore, and the white caps played over the dark, green reefs.

In windy weather the summer visitors like to walk the length of their pier. Some fish for cunners at its end in the deep rock bottom, but even that sport gives way to interest, and often to anxiety, when a strange sail makes for the narrow channel under the stone breastwork. Many a native fisherman, with frantic gestures, warns the stranger who attempts the impossible entrance at low tide.

One such mariner was greatly relieved when the *Kittiewink* presently stood off from the harbor and "began to jog;" that is, carried her jib to windward and her helm up.

"Why don't you run right in?" asked Hal, impatiently. "We can't wait here. I must telegraph right away."

"We've got to jog about here a couple of hours, until the tide'll serve us. There aint five feet of water there now," said Phineas, serenely.

He resolutely kept the *Kittiewink* on her course until she came to breakers ahead, and then brought her about to jog on the other tack. Hal stood beside him, and impatiently made fast the jib-sheets at the skipper's orders.

The boy was nervous and irritable. His wonderful escape had not so much sobered as exhausted him. Though he had gained so much in bodily health, his nerves had undergone a long strain. This condition took its lowest form on this occasion, and made him unreasonable, ungrateful and fretful at the very moment when he might have been expected to be humble, gentle and patient.

It occurred to him suddenly that where he ought to command he was made to obey. He felt what he considered the indignity of his position. The title of Captain, so dear to him, was an open mockery.

He felt angry that Phin, the uneducated Phin, Phin the gardener, whom his father could buy out a hundred times, and who had always treated him so respectfully at home, that Phineas Scrod should lord it over him in this peremptory way just because they were in a boat—and *his* boat, too!

A desperate idea took possession of Hal's brain. Phineas and he were alone on deck. Black Tarr, Non and Trot were below, preparing dinner.

"Say, Phin," said Hal, in his sweetest tones, "let me take the wheel while you go down and hurry up dinner."

But the *Kittiewink* was in a dangerous position. On the one side were the shore and the impassable channel; on the other, reefs over which the choppy sea was continually breaking. Phin had made up his mind not to risk the boys again. So he answered, firmly:

"No, Hal. You can't take the wheel now. Walt till she's safe in at the wharf. Then ye can play with it."

It was no easy jogging, for the wind blew almost as heavily as it did on the day of the race. It was increasing with the tide.

Phin Scrod was exercising his best caution and seamanship; but if the wind were rising, Hal's temper had done more—it had risen.

"Look here, Phin!" Hal spoke hotly. "Whose boat *is* this?"

Phin turned quizzically. He had found it not an easy task to manage the boys and the boat, too. He allowed some time to pass before he ventured an answer to this easy question. Hal watched him sullenly, and broke out again:

"But I want to get in! I want to telegraph mother right away! Do you hear? Right away!"

In the boy's mind his design seemed praiseworthy, and his mutiny appeared to him to be filial devotion. Hal steadied himself by the companionway. False pride and duty, lawlessness and obedience, were confounded in his heart.

"But it's *my* boat, not his!" kept running through his mind. "I'm Captain; I will do as I please! He's keeping mother in agony."

He began to disregard the tide, the harbor and the wind. He had now lashed himself blindly to the point of believing that Phin was simply delaying the boat in order to exercise his authority. Should his father's gardener treat him like a baby?

Such preposterous questions as this flitted through his mind like bats through a dark cave.

The sailing-master finally answered the lad's first question, slowly:

"It aint *your* boat. It's your dad's, an' he put me here as skipper to look arter it an' you, an' I'll do it, even if I have to go to Davy Jones's locker for it. I've got into one scrape; ye don't ketch me in another."

This reasonable reply stung Hal.

"We'll see if it isn't my boat!" he shouted.

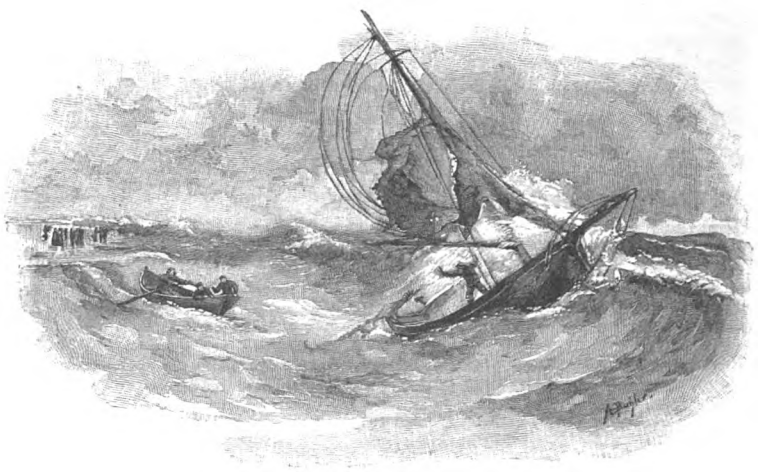
He sprang to the wheel, with a quick motion wrenched it from the unprepared skipper, and with one turn spun the *Kittiewink* around.

Phineas, with a violent exclamation, jumped for the wheel and the jib-sheet in one bound. But it was too late. The wind astern caught the long boom, and swung the main-sail from one side of the boat to the other.

In nautical terms the sail jibed, and did so with a shock that shook the whole boat.

There was a crash, and a sound of splintering wood. The main boom broke in two in the middle. In an instant the gaff above, unable to stand the strain upon it, snapped. The main-sail slapped here and there in the gale, an utter wreck.

Hal was aghast at the result of his mad impulse. No worse accident could have happened to the *Kittiewink*.



Phineas said not a word. He made a dash at the anchor to let it out. As he sprang forward, the flying main-sail thrust upon him like an enemy, and the broken boom felled him to the deck.

By this time the two below had rushed above. The little dog came barking after them. The splintered boom tore here and there, and threatened to knock every occupant of the disabled boat overboard.

The skipper's order came distinctly above the dreadful confusion:

"Pay out that road for your life!"

By this time Black Tarr was working forward of

The Wreck of the "Kittiewink."

the mast. The bow of the *Kittiewink* heaved up and down. At every dip, Scrod was half-buried in the waves, and his mate was drenched in the spray.

Hal and Non crouched in the cockpit in shivering terror. They did not know what to expect.

"Does she hold?" yelled Scrod to his mate, indicating the anchor.

"Aye! Aye!".

There was a sudden wrench, as if some huge monster had grasped the *Kittiewink* from beneath; then a trembling and an upward leap.

"Heaven save us!" cried Scrod; "she snapped like a pipe-stem. Down with that helm there!"

Neither of the boys had the strength to obey. Hal stared at the scene vacantly. Non could only grasp the spokes for support.

Black Tarr made a leap for the cockpit. The slatting boom struck him down. He rolled over, and fell heavily in the cockpit.

It occurred to Hal, in a vague way, that the man was dead; but Tarr shook himself like a water-spaniel, grasped the wheel, and hauled in on the fluttering jib-sheet.

Scrod now let the throat and peak halyards go as best he could. The main-sail fell as if reluctantly.

Before them were the reefs. If they could gather headway with the jib, and escape these, they might beach the boat on the sandy shore. The *Kittiewink*, as if ashamed of her previous performance, now answered nobly to her rudder.

Phineas Scrod had managed to get safely to the stern. He had made the main-sheet fast, so that the boom at that end could not knock about.

He now busied himself with untying the painter that held the dory. He had not yet spoken to the boys. But there was an angry look, more terrible than scolding, about his mouth.

The *Kittiewink* now bade fair to make the course of the river. If there were only water enough, and she could weather the tide-rip, she might perhaps be saved.

Crowds by this time surged on the shore. Hal gazed stupidly at the land, coming rapidly nearer, and then at Phin's mate at the wheel.

He saw that the boat was staggering towards the sandy side of the river's mouth opposite the pier. He felt as if he were watching a panorama in the Town Hall at Sweet Fern. He heard Trot whine with a dull idea that it would interrupt the performance.

Nevertheless, he expected to be drowned. He felt that it would be the righteous consequence of his crazy deed.

The events of the summer's yachting danced before his eyes in startling vividness. What a failure it had all been! The thought of his parents' suffering filled his head.

Then, there was his friend. If they were lost, Non's death would be upon his head. The burden was more than he could bear.

Mechanically he pushed Trot away from him, and the dog fell yelping into the flooded cockpit. Non stooped and picked him up, and both looked at Hal reproachfully.

Hal staggered to his feet. He had but one impulse—to throw himself overboard. Perhaps, in some strange way, his life might expiate his fault—might save the rest.

Phin was watching their course steadily. It was exceedingly doubtful if a thirteen-foot dory could stand the tide-rip. He was seeking to decide—and the decision must be made instantly—whether to stick to the boat, and trust it to be cast high on shore, with a chance of rescue by the people on the beach, or forsake the *Kittiewink* at the last moment, and make for the mouth of the river in the dory, trusting to Heaven to take them safely through the breakers at the bar.

Scrod misunderstood Hal's movement. He thought the boy meant to get into the dory.

"I don't know but you're right this time," he shouted. "Ketch hold o' this painter while I get 'em in! Look sharp!"

Hal obeyed promptly. A new idea shot through his head, as desperate as those which had gone before it. He would help them all in, then shove off the dory and perish with the ship. That was a fit sacrifice! In his excitement, he remembered that all captains do that.

Hal was almost elated at the thought of enacting this tragedy; and the worst of the matter was that the delirious boy was very much in earnest.

His heart grew big at this plan. He felt that the country would applaud his thrilling heroism, and that his parents would be quite reconciled to so glorious a death.

There was no time to be lost. The *Kittiewink* was already dangerously near the shore. Non threw Trot into the dory, and followed as best he could. Phin's mate got in, and grasped the oars, to be ready when they shoved off.

"Jump in!" yelled Scrod to Hal, who was holding the dory's bow, so that it should not be shattered by the *Kittiewink*.

"You first—I'll sit in the bow!"

There was something in Hal's wild eyes that Phineas did not trust.

"Hurry up there! Haint you done enough for one day? Git in, or I'll heave you!"

Phin took Hal firmly by the arm. At the touch Hal sprang back.

"Let me alone! I'll stay here to the death!"

There was almost no time at all. The roar of the breakers was upon them. If the little dory should be caught in these, who could escape?

With a hot cry, and hotter words, Phin grasped his Captain. All the suppleness, agility and strength of the old fisherman's youth returned at this supreme moment. He twined his arms about the slender lad, lifted him, in spite of the unsteady rocking of the boat, and threw him into the dory.

Hal fell upon a thwart that gave way opportunely, and sank between Non and the sailor at the bottom of the boat.

Hal had also fallen upon Trot, who howled at the top of his lungs with fright and pain.

In the confusion of this scene Phineas had forgotten that Hal held the painter that bound the dory to the *Kittiewink*. It was too late for the gallant skipper to follow. The dory, impelled by the shock and a wave, was too far for a leap.

The opportunity of rescue had passed for Phineas Scrod.

"Keep off!" he cried. "Keep off for your lives!"

His old dory mate saw that it was useless to try to save the skipper. All he could do, was to back water with all his might.

There was a crunching and grating, a cry of horror from the shore, a splash of waters, and the *Kittiewink*, with Phineas on board, was rolled over by the breakers and hidden by a cloud of impenetrable spray.

HERBERT D. WARD.

(To be continued.)

For the Companion.

A CHINESE JUNK.

In the river Hoogly, at Calcutta, a thousand vessels are sometimes anchored at one time. They lie in tiers parallel to the shore, each vessel moored stem and stern to buoys. Among so large a number of vessels there are always some curious specimens. I remember once seeing a small, square-sterned Dutch galliot, with two masts, which had safely brought a cargo of "Hollands" round the Cape in midwinter.

Perhaps the most interesting of all the craft which go to swell the shipping list at Calcutta are the Chinese junks. They are such clumsy-looking tubs that a European sailor wonders how any man will trust himself in one of them; and they do not look as if they could sail at all, except with the wind exactly aft.

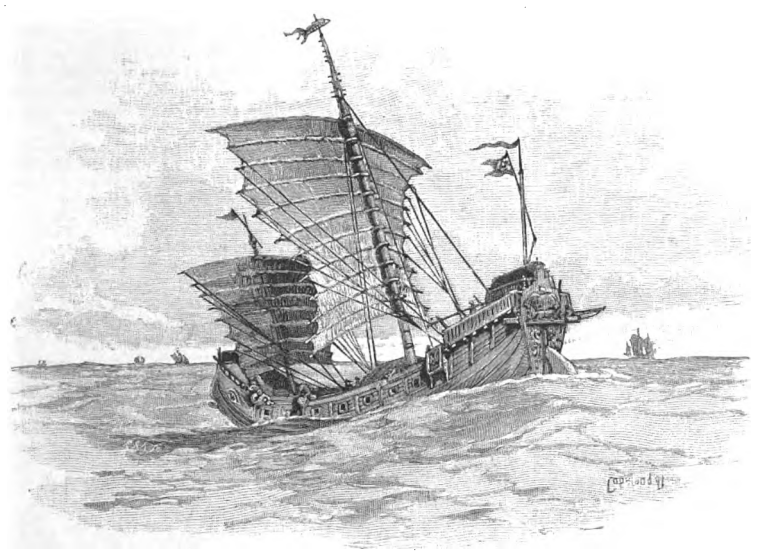
I have met old people who had never seen the sea, and who supposed that when night came on the captain always made his ship fast to a tree, or something else, till morning; and looking at a Chinese junk for the first time one would think such a proceeding would be necessary with her whenever the wind came ahead.

After all, however, these junks are better sailers than they appear to be, and with due allowance for their superstitions, the Chinese are not bad sailors, either.

Some years ago our ship was lying off Garden Reach at Calcutta, in the outside tier. There was a vacant mooring abaft us. One evening, just after eight bells, we were roused from our meditations over a pipe by a tremendous fusillade astern.

Rushing to the rail, we discovered that a large three-masted Chinese junk had just slipped into the vacant moorings, and the shooting was being done by the crew, probably as a thanksgiving for their safe arrival.

We could not see much more of the junk that night; but the next day, which was Sunday, a party of us took the ship's boat and went on board.



At first appearance she looked like an immense toy boat. Her sides were painted in the most gaudy colors, and decorated with pictures of dragons and other fabulous monsters. On what we presumed was the bow, from the fact that the anchors were there, and just above the hawse-pipes, were painted two immense eyes, one on each side, with eyelids and eyelashes.

The eyes are features never missing from a junk, and we had often seen them and wondered why they were so used. We asked a Chinaman of the crew, who spoke a little "pigeon English," and he explained to us that it was necessary for a junk to have eyes in order that she might get along safely.

Digitized by Google

"No can see, how can sabe?" he asked us, with a very expressive shrug. The pictures of dragons and other monsters, our guide also explained to us, were intended to inspire terror in pirates.

The shape of the junk was something like the crescent moon, the stem and stern rising high above the middle part of the deck. The three

A Junk under full Sail.

masts were not connected by fore-and-aft stays, as on our ships; and each mast had only one sail. The sails were of finely woven bamboo matting, with ribs of cane running across them at equal distances of about two feet. With this construction the yard can be lowered and the sail reefed as many times as there are ribs.

The after-mast or mizzen, as we should call it, was very small, and was perched on the extreme point of the stern. On the top of the main-mast was a huge vane in the shape of a fish, made of cane-work, with long streamers affixed to the tail. The anchors were of ironwood, the pieces being lashed together with bamboo; and the cables were of woven cocoanut husk or coir.

The rudder was enormous in size, and was worked by an extremely long tiller. Our guide told us that it sometimes required a dozen men to put it "hard up" or "hard down."

There was very little clear space on what we should call the main deck, the slope of the stem and stern taking up most of the room.

Large beams, painted in all the colors of the rainbow, met our eyes everywhere.

On one side of the main deck was the galley or cook-house. This was a large shed, containing two brick furnaces, under which were fire-holes filled with water, to catch the hot coals as they fell.

The saloon was aft, half of it sunk below the deck and the upper half forming the first story of the poop or quarter-deck. We descended by three steps and found ourselves in a large apartment, nearly thirty feet square, lighted by large glass dead-lights and a skylight in the quarter gallery above.

It was very tastefully finished. Its walls and ceiling were painted yellow, and covered with pictures of monkeys, birds, flowers and fruit. All around were hung curiously and wonderfully made Chinese lanterns. The centre-table was made of rare woods, beautifully inlaid, and the seats were of the same construction.

But the most wonderful and interesting piece of furniture in the cabin was the shrine or Joss-house, which was situated in the after part of the room, and was like a doll's-house on a large scale, with the front removed.

There sat the idol, tailor-fashion; if I remember aright, her name was Chin-Tee. She was made of camphor-wood and richly gilded, and had eighteen arms spread out like a fan on each side.

In each of the hands belonging to these arms she held some familiar object, such as a flag, a flower or a bell. In front of her was a censer in which some perfumed wood was burning, and on the altar were many pieces of gilt paper, which, I believe, represented the prayers of the crew.

On the gallery above the saloon was a smaller Joss-house, protected from the elements by a canvas covering, which contained another female deity whose name I have forgotten, but who was supposed to be the goddess of the sea; so we may call her Amphitrite. She was favored with two female attendants, each clad in red scarfs, and before her were also burning censers of incense.

The most revered object, however, in the whole vessel was the compass. This was decked with red flags and surrounded by offerings of pork, tea and sweetcakes, as a reward for its bringing the ship safe to port.

The hold of the junk contained several huge water-tight compartments, as a safeguard against sinking.

Our guide told us many curious customs of the Chinese mariners; how, in times of danger, they tie red flags to the tiller, masts and cable, and burn gilt paper prayers before the shrine of the sea deity; that in a storm this Joss-paper, as they call it, is burned by the bushel, and roast sucking pigs are offered to the compass, that it may remain faithful and true. We spent an entire forenoon in looking over the odd craft, and found a great deal to interest us.

During our stay in Calcutta the crew of the junk never allowed us to feel dull or lonesome, for every night after dark they set off fireworks, beat gongs, and illuminated the vessel fore and aft with Chinese lanterns.

At last we almost wished that their compass had proved false, and carried them in safety to some other port.

A. J. GRANT.

TEST OF GREATNESS.

Though thy name be borne abroad,
Like wing'd seed, from shore to shore,
What thou art before thy God,
That thou art, and nothing more!

Independent. —*Eleanor C. Donelly.*

COÖPERATION IN ENGLAND.

The idea of coöperation—that is, of combinations of workingmen to buy and sell goods on their own account, supplying their own capital, and receiving and dividing the profits—has now been in practical operation in England for nearly fifty years.

In 1844 twenty-eight poor weavers of Rochdale joined together, established a common fund to which each paid four or five cents a week, and bought tea and sugar for their use at wholesale. Later on, they added bread, meat, and clothes to the articles bought in this way, and thus procured the necessaries of life for themselves at wholesale prices.

This was the beginning of the great system in England known as "Coöperation."

Twelve years later, the society of weavers had grown to such proportions that, under the name of the "Rochdale Equitable Pioneers," it had a capital of sixty thousand dollars.

The profits were divided at the end of each quarter between the shareholders and the customers, and a small portion was also, at each division, applied to educational purposes.

The experiment of coöperation has proved a very interesting one, and in the sphere of wholesale and retail trade, at least, its results have abundantly justified the hopes of its promoters.

To what proportions it has grown may be judged from the reports laid before the congress of coöperative societies, which met at Lincoln about the middle of May.

These societies are organized under a central board, which is divided into six sections, each having a certain district under its supervision. There are fifty-five members of these sections.

The number of societies now enrolled in the coöperative union is no less than twelve hundred, scattered all over the British islands. The movement has an organ, *The Coöperative News*. It has an insurance company; and has recently undertaken a scheme of coöperative cottage-building, to be occupied by its members at low rents.

Thus far, the coöperative system, while it has been tried in many branches of industry, has been most successful in wholesale and retail stores, for the purchase and sale of the necessaries of life.

In twenty-five years the annual business done by the retail stores has increased from twenty million dollars to one hundred and forty million dollars. These figures strikingly show the vast scale of the coöperative movement. In the same period, the number of members of the societies has increased from one hundred and seventy-five thousand to one million.

But the growth of the wholesale coöperative stores has been yet more remarkable. These stores had scarcely begun operations twenty-five years ago. Now they do a business of some fifty million dollars a year. Two of the wholesale stores paid duties on tea last year to an amount exceeding half a million of dollars.

Large profits have by this system accrued to the affiliated workmen, and heavy surpluses have been applied to saving funds and investments.

The good results of the system of coöperation, moreover, have not been confined to their financial prosperity and success. The members of the societies have bought the necessaries of life more cheaply, and have also made direct savings in cash. They have also been taught to know something of political economy, and the various and complex conditions of trade. They have, besides, learned the evils of getting into debt, and the advantage and thrift of paying as they go.

That the cash system, instead of the credit system, has been adopted generally through every branch of English trade, has been largely due to the example of the coöperative stores.

The success which has attended coöperation in wholesale and retail trade, however, has not followed the attempts which have been made in England to apply the coöperative method to industrial production.

Coöperative manufacturing has been tried many times, but has always so far failed. It has been found that skilful management could not be secured for such operations, that the working people would not submit to the orders of agents selected by themselves, and that sufficient capital often could not be collected when needed for the business.

THE MAN-O'-WAR'S FLAG.

For the grand old flag at the head of her,
The flag of battle and song;
The flag that was ever the dread of her
Enemies proud and strong.
Though trials and tempters throng,
May it always be sung and said of her,
Hurrah! for the flag at the head of her,
The flag we have floated long!

Temple Bar. —*S. Frances Harrison.*

OUR PROPOSED NEW COINAGE.

One of the bills passed in the last Congress instructed the director of the United States mint to secure new designs for our silver coins. It was intended to change the designs on both sides of the silver dollar, and on the face of the small silver pieces.

The director of the mint, in his circular to the artists of the country, inviting them to compete, offered a prize of five hundred dollars for each design accepted. The leading designers and sculptors of the United States considered the amount of the prize too small, and declined to compete. They wished, too, to have the designs ordered and paid for, whether they were accepted or not.

When the competing designs submitted by other artists were opened on the First of June, the committee found none better than the designs now in use on our coins. All were therefore rejected, and we shall not have our new coinage until another more successful trial has been made.

This may possibly not be for a year or more; for the artists who objected to the mint director's proposition asked also for a longer time in which to prepare their drawings.

One great difficulty in the way of the artists is the limited variety in the designs which can be used for national coins. The coinage is not like the government paper money and postage-stamps, on which in this country are usually printed the pictures of eminent dead statesmen or generals.

Since the foundation of the government, practically only two designs have been used for the face of either gold or silver coins. One is the head of the allegorical Goddess of Liberty; the other is the full figure of Liberty seated, with a shield in her hand.

Both of these designs are now in use, the first on the silver dollar, the second on the half-dollar and minor silver coins.

There have been surprisingly few alterations, even in these designs. The design on half-dollars and small silver has not been changed since 1837, when it was substituted for the simple head of Liberty.

The dollars, however, have been altered four or five times, changing from the head of Liberty with no cap and with loose flowing hair, in the coinage of 1794 and 1795, to the same full figure as our half-dollars now bear; and then again, thirteen years ago, to the Greek face on the present dollar.

The reverse side has always borne the eagle, but in a great variety of postures, sometimes flying forward through the air, sometimes simply spreading its wings and bearing the Union shield on its breast.

It is not easy to plan out a really original design with so limited a field for ideas. Not one of the coinage designs in our history has been entirely satisfactory; yet repeated experiments, and especially the experience of this year's competitive work, show how difficult it is to improve upon what we already have.

Foreign nations, too, have had much the same experience. Many of their coins, it is true, are better in workmanship than ours, and their designs are not always so restricted.

Yet even in European countries the republics use for their coinage only the same allegorical figures as the United States, while the royal governments stamp on their gold and silver either the head of the country's sovereign, or the national arms, or the emblematic eagle which all governments are fond of using.

England alone has varied with its figure of Britannia, similar in design to our own Goddess of Liberty.

Great Britain has for some time been busy in a work similar to our own, of remodelling and improving its coinage designs. Its "jubilee" coins, issued four years ago, on the fiftieth anniversary of Queen Victoria's coronation, were a very great artistic improvement.

At the present time that government is awaiting the result of offers made to artists to send in designs for its gold and silver coins.

It will be interesting to watch the final results in that country, compared with what our own country manages to secure.

The United States has the reputation of leading the world in the work of fine engraving. Many authorities believe that we shall gain an equally high rank in artistic ingenuity and originality. To those who are in doubt on the subject, the two experiments will afford a valuable test.

ABSTAIN.

Doctor Dash, a successful physician in the West, returned to his old home lately after a long absence, and visited the college in which he had been educated.

"Twenty years ago," he said to a group of students, "I graduated in this hall. There were eighteen men in my class.

"Of the eighteen six drank habitually while at college. Not to excess, but regularly—a glass or two each day. Not one of these men has succeeded in attaining fortune, reputation, or even a respectable position. Yet they were among the ablest men in the class.

"While at college, I was in the habit of frequenting the daily newspaper office here. There were ten men in it—editors and reporters. I knew them all—a lot of bright, jolly fellows. The work was hard, the hours late, the meals irregular.

"Every man in the office drank but one, a reporter, Ben Perry. One of the editors told me that he had seen Ben come in from a fire at two o'clock in the morning, drenched to the skin and tired out. He would look wistfully at the whiskey bottle but he never touched it.

"I inquired for the boys to-day. Three had died from drinking; six were holding inferior positions in newspaper offices.

"'Habits bad,' said my informant. 'They could not make their way, and so fell lower and lower. Perry's head was always clear, and he was regular at his work. He is editor-in-chief of one of the principal newspapers in a seaboard city.' He had not half the natural ability of at least three of the others.

"These are facts," said the doctor. "I advise you who are beginning life to consider them. I have not a word to say about the moral question involved in drinking. But I know, as a physician, that no American, with his nervous organization, in this wearing climate, can habitually take liquor without injury to his health, and without in greater or less degree hindering his chances of success."

A schoolboy in Australia recently put the matter tersely, thus: "I abstain from liquor because if I wish to excel as a cricketer, Grace says 'abstain'; as a walker, Weston says 'abstain'; as an oarsman, Hanlon says 'abstain'; as a swimmer, Webb says 'abstain'; as a missionary, Livingstone says 'abstain'; as a doctor, Clark says 'abstain'; as a preacher, Farrar says 'abstain.'" Asylums, prisons and work-houses repeat the cry, "Abstain."

FOUR-FOOTED FRIENDS.

Is evolution a real thing? If so, how far have animals that can love and suffer progressed on the road toward humanity?

Christopher ought to have known something about it; for Christopher, the cat, was more than twenty years old; and twenty years of a contemplative life at one peaceful fireside ought to give even a stupid cat time to form a few opinions, and Christopher was not a stupid cat, by any means.

The only trouble was that there is no system of common-school education for kittens; and nobody had taken the pains to teach Christopher any language beside his own, and his own, nobody but Dick, who was probably his great-grandson, understood.

Dick did not pass much time in reflection. He was only three years old then, and yet he was a mighty hunter, and so full of adventure that nothing kept him in his one quiet corner of the world except his respect for Christopher.

When Christopher was nearly twenty-one his health began to fail, and that was a trouble to Dick. Christopher hunted no more. His diet was narrowed to the uninteresting bill of fare the cook provided. Richard must have noted this. What was the matter? Was Christopher lazy? No—it meant that strength was failing him.

Then Dick went hunting for two. Sometimes he brought a mouse, and laid it down before Christopher, the patriarch; sometimes a bird; sometimes a squirrel; but whatever he brought he waited until Christopher had eaten his fill, before he even offered to taste anything himself.

Then when Christopher failed still more and neglected his toilet—cruel sign of old age and decrepitude—Dick noted this also. Henceforth, before making himself spick and span, he always licked Christopher from head to foot. And this went on all one winter.

The warmest place by the fire Dick gave to Christopher. When the old fellow consented to make a good meal, Dick was happy. But as the languid spring days came on, Christopher's appetite failed sadly. He turned wearily away from a fat mouse.

"Perhaps a bird would please him better," thought anxious Dick, and he got an early bird from somewhere, and brought that in its turn. No—it shared the fate of the fat mouse. Dick had to eat it himself.

"What does all this mean?" he seemed to ask.

Digitized by Google

He did not hunt any more when Christopher would not eat. He contented himself with the cook's odds and ends, and lay beside Christopher, and washed him and watched him; until, at last, Christopher was dead—what should a cat do but die, when he has lived twenty-one years?

They buried him out under the grass, and there for days—for four long days—Dick sat and watched. Would the gray patriarch come forth? "No," he evidently concluded at length, for he turned away from the place where he had seen them bury the patriarch—turned away, and came to his mistress, and stood beside her as she sat sewing, and cried bitterly.

He is blithe again now,—so much the worse for the mice,—but he mourned for weeks with a sorrow that seemed nothing less than human. And this is literally a true story.

BEAU NASH.

In the last century English persons of fashion went to Bath at the close of the London season. And in Bath Beau Nash, reformer of manners and social customs, ruled autocratically as master of ceremonies. In general his principles of government were excellent, as is indicated by the "Rules to be Observed in Bath," which he had hung up for the instruction of visitors. Among these were, "That no person take it that any one goes to another's play or breakfast, and not theirs—except captious by nature. That all repeaters of lies and scandal be shunned by all company except such as have been guilty of the same crime."

He was a brave man who appeared at the assemblies booted and spurred. Nash would survey him from head to foot, and tell him to go back as "he had forgotten to bring his horse."

Although the wearing of white aprons was a bygone fashion and was at this time contrary to etiquette, the Duchess of Queensberry, rather than part with her white apron, had refused to pay homage to her sovereign at court; and she attended a Bath ball wearing the garment which had been condemned by the master of ceremonies.

Mr. Nash courteously deplored his inability to make an exception in her favor. He reminded her that only domestics now wore aprons, and that he had no alternative to offer her but to abandon her apron or the ball.

The Duchess hesitated. This was Nash's court. Any one seeking admittance to it must conform to his laws. Finally she yielded. "It was *only* Nash! She would humor him." So she untied her apron and gave it to her attendant.

"One more dance, Mr. Nash; remember I am a Princess," once entreated the Princess Amelia, then a lady of twenty-five. The hour of eleven, when Nash had ruled that the ball should cease, had struck. He was inexorable.

"Yes, madam," he replied, "but I reign here, and my laws must be kept."

Nash was again triumphant.

SOMETHING FOR NOTHING.

"One hundred dollars for forty dollars!"

"Fifty dollars in six months, or one hundred dollars in seven months."

"Average cost has been about fifty-five dollars to receive one hundred dollars."

These announcements are taken from three advertisements of different "endowment orders." The theatre programme from which we copy them contains the advertisements of sixteen such "orders," "fraternities" and societies.

The promises made by these "orders" are much alike. They are exactly alike in one respect—that they cannot be kept. The member pays five dollars upon joining, an assessment now and then, and at the end of a year he is entitled to one hundred dollars.

How happy we all might be—if money could make us happy—were such a rapid overturn of capital possible! Eighty to one hundred or more per cent. in a year! When the rate is so big it does not pay to reckon it too closely.

If you ask one of the managers of an order of this sort how it can afford to pay so much he will tell you, probably, that it comes from "lapses." That is, John Junkins will fail to pay his assessments, and what he has already paid in goes to increase the amount due to Thomas Bodwell, who keeps up his payments.

Then those to whom the promises are kept profit by the losses of others.

It is simply impossible for an order of this sort *not* to be a swindle. Money lends in this country, on good security, for an average of not more than six per cent., probably much less. A positive promise of five per cent. is more than a conservative savings-bank will make.

Beware, then, the delusions and false promises of these orders. Either you will make profit out of the misfortunes of others, or they will make out of your misfortunes. Or, what is more likely than either, you will all lose your money when the "orders" burst up—as they will.

AMERICAN IDIOM.

Those who think the idioms in foreign languages hard to master and understand, do not always realize that the English idioms are even more trying to the people of other nationalities than theirs are to us.

"But no," sighed a poor young Frenchwoman who was struggling to "acquire" our language, by living for six months with an American family, "I cannot understand you. I am entirely confuse!"

"What is the trouble to-day?" asked the young lady of the family who was the special instructor of the foreigner.

"Last week when you return from the concert you say that you think Mademoiselle Gould, who sing, cannot 'make up' so as to look well.

"Early this morning," this she said dolefully, "Margaret, your little sister, came into my room and said that yesterday she and the little Albert, her playfellow, had a quarrel, but to-day she had the intention to 'make up' with him. And this afternoon when I have ask you to walk with me, you said, 'I must study, to "make up" what I lost last week.'

"And now this evening," she concluded, with a comical grimace of despair, "you come to me and say, 'Tell me what I shall wear to the concert, for I cannot *make up* my mind.' What does it mean, this 'make up'?"

"If you try to explain," put in Frank, the irrepressible boy of the family, "she'll say that the whole 'make up' of the English language is wrong!"

"TO MAKE ME KING?"

Perhaps no heir to a throne ever received the news of his accession more carelessly and modestly than did the Duc de Bordeaux, better known as the Comte de Chambord, who, had he actually become King, would have been Henry V. of France. He was in his tenth year at the time, and was deeply interested in driving four-in-hand a carriage and horses made of chairs. Naturally he looked upon the announcement of his change of title as a frivolous interruption. Madame de Gontaut-Biron, the little prince's governess, tells the story:

At Rambouillet on the Second of August, in the morning, the old King summoned his son the Duc d'Angoulême, and the Duchess, the Baron de Damas, the Duchesse de Gontaut, and the Duc de Bordeaux and his sister. He took the little boy on his knee, embraced him tenderly, and turned away.

"Here is my abdication," he said, taking a paper from the table.

The King's little granddaughter said in a low tone to the Duc de Bordeaux, "Some misfortune is going to befall us, my brother, every one is looking at us and crying. Let us go and pray to the good God," and they walked softly away to the balcony, where they knelt down.

An hour later the two children had constructed a carriage and horses of chairs, and the duke on a high seat was driving four-in-hand. The Baron de Damas entered and bowed low.

"Sire!" There was a silence. "Sire! I am commissioned to tell you that the King, your august grandfather, not being able to make France happy, in spite of his heartfelt wish to do so, has abdicated the throne, and you, monseigneur, will be King, under the name of Henry V."

The child climbed down from his seat, put his hands on the baron's shoulders and looked up into his face.

"Grandpapa, who is so good, is not able to make France happy, and so they want to make me King? What nonsense!" He shrugged his shoulders. "But, monsieur, what you say is impossible."

He had already picked up his whip and his reins.

"Come, sister, let's play," and he remounted his driver's seat.

Possibly years later when his supporters had attempted to make him King and failed, he repeated that youthful comment; certainly France, figuratively speaking, shrugged her shoulders, said, "What nonsense!" and turned her attention to other matters.

THIN ICE.

The danger of discussing persons when in company with strangers is amusingly illustrated by an anecdote borrowed from a Stuttgart musical journal. Several ladies and gentlemen were travelling together in a railway carriage from Dresden to Leipsic. They were mostly strangers to one another, but the conversation soon became general.

One of the ladies had been at the Court Theatre the night before, where the opera of "Euryanthe" had been sung, and was loud in her expressions of disapproval.

"Worse than all," she went on, "that Madame Schröder is much too old for her part; her singing is becoming unbearable. Don't you think so, too?" she asked, turning to the gentleman next to her.

"Wouldn't you rather tell all this to Madame Schröder herself? She is sitting opposite to you," he replied, coldly.

After the general silence which followed this remark the critical lady turned to the singer with many confused apologies.

"It is that horrid critic, Schmieder, who has influenced my judgment concerning your singing. I believe it is he who is always writing against you. He must be a most disagreeable and pedantic person."

"Had you not better tell all this to Mr. Schmieder himself?" calmly inquired Madame Schröder. "He is sitting next to you."

VAGARIES OF MALARIA.

Walter Coote, who has spent considerable time in the Fiji Islands, has some interesting notes upon the vagaries of malaria. He had seen, he says, Englishmen living in Fiji, on the borders of almost stagnant estuaries, with the densest and most rank vegetation around them on all sides, with mosquitoes and a hundred such insects infesting the district like a plague.

In dry seasons their houses would stand in the very centre of great plains of reeking ooze; in times of flood the muddy river will rise to their very verandas, and yet these people were robust and healthy.

I have gone from there, and a few weeks later visited islands in the Solomon group, or New Hebrides, where I have found a dry coral soil and high, well-drained land, upon which the pure trade-wind blows freshly month after month, and all this but a few hundred miles from the Fiji group.

Yet in these places it is almost death for a white man to spend more than a few months in the year on shore, and practically no one who lives ashore at all can hope to escape frequent and severe attacks of fever.

In fact, it is only by being thoroughly acclimated, through a long period of time, that he can hope to live there at all.

NOT ON THE MAPS.

It was a long while ago, but it is worth telling still. A correspondent in the South writes that a young lady, whose sweetheart was in the Confederate Army, received from him a letter that had been smuggled through the lines; for he had been taken a prisoner and sent to Tennessee.

After reading the letter she went to the house of a neighbor and asked to see a map. After a long search she said she could not find the place where Mr. W—— was.

"Where is it, do you say, Mollie?" asked her friend.

"Duranceville," replied Mollie, after looking again at the letter.

Her friends and she still diligently searched the map, but no such place could be found. At last they persuaded her to show them that part of the letter. It read thus:

"I am in *durance vile*, but hope soon to be exchanged and to return home."

"Brown's Camphorated Saponaceous Dentifrice" cleanses and preserves the teeth. Used daily it prevents trouble from bad teeth or soft gums. [*Adv.*

SUGGESTIONS

CATS AND DOGS.

What are some of the principal physical differences between the two? Look especially at teeth and claws.

Name (1) the wild relatives of each; (2) the more conspicuous mental traits of each; (3) the uses of each to mankind; (4) the varieties of each.

Why do dogs turn round and round before lying down?

How do cats purr?

For the Companion.

TO DEPARTED JUNE.

Not hours enough in all those pleasant days
To give expression to the joy you felt;
Like some rare spirit in our midst you dwelt,
Then like a spirit sought some happier ways.

A few fair roses, lying on your breast,
Still bloom in sweet remembrance of that time
When roses and the year were in their prime;
And still the sun sinks late into the West.

The summer lilies, too, are now in bloom,
But they are pale and bowed with secret woe
For some glad time they came too late to know;
And even in the sunshine there is gloom.

The birds have flown their nests; they quickly learn
To soar, and yet I doubt if flying brings
The peace they felt beneath their mother's wings;
You would not know your own should you return.

The hills fade in a quiet mist away,—
Who knows but you, dear June, still linger there
In answer to some faithful lover's prayer,
And seem through pity half inclined to stay.

The moon has made her weary round once more,
And sends weird shadows through the wood to learn
If you are hiding there, but leaf and fern
Breathe only of a blessing gone before.

The river takes a slower, calmer pace,
The brook has lost its happy, buoyant bound,
Less sweetness seems to thrill through every sound,
And some rare light is missed from every place.

We even stop to count our pleasures now;
Before, we only knew that they were here;
And one by one do ripened leaves appear,
Like silver threads on tired Nature's brow.

Without are all things changed, within the soul
Are changes, too, that have been wrought by June;—
We've listened to a strain of perfect tune,
And now our spirits long to hear the whole!

THE LIFE.

The western counties of Virginia and Pennsylvania were settled by Scotch-Irish emigrants, a sturdy, devout people, many of whose descendants still live on the land which their ancestors rescued from the wilderness. In some of these families old journals and letters have been preserved which give glimpses of the early life on the plantations.

One letter, dated 1790, from an old settler to his son, contains the following story:

"The first thing which the settlers in this valley thought of was a church. The men worked evenings till they had raised a comfortable log-house, with a pulpit and seats. The other settlements had to depend on itinerant preachers, but we had one of our own, Father Holmes, a godly old man, whose son lived among us.

"My father could neither read nor write, but he was one of the deacons in the church.

"One Sunday morning, as he was getting the horses ready for us to go to meeting, my mother ran out, white with fear.

"'We cannot go!' she cried. 'Sam Wright has come to tell us that the Indians have been seen in the valley with war paint on. There will be no congregation, no singing nor preaching to-day.'

"'The church will be there and Father Holmes,' said my father, doggedly. 'So shall I.'

"He went, and was the only hearer of the sermon which the old man preached.

"The next Sunday Sam Wright came up again, to tell us that Father Holmes had died suddenly on Saturday, and would not be there.

"'The church will be there,' said my father. He found some of the other members present, and they prayed together.

"But on the next Sunday, when they came across the hills from their scattered cabins, they found the church a heap of ashes. The Indians had burned it. Some of the women cried, and the men began to mount their horses to go back home.

"'Stop!' said my father. 'What do we need of a church? Here is the ground to kneel on, and God is with us.'

"Since I grew to be a man, I have listened to great preachers in fine churches. But I never came so close to God as I did that day kneeling on the bare ground, and listening to my father's prayer."

The old pioneer had reached a truth which escapes many well-meaning, highly-cultured people to-day. It is that religion does not consist of the church, or the sermon, or even the traditions and forms of service or sectarian opinions which are so useful and so dear to us.

These are often good and helpful to our souls' life, but we must not mistake them for the life itself.

Hinton, a missionary in Africa, tried in vain to induce his servant to give up the worship of a wooden idol in his hut, until one day the missionary exclaimed:

"If it is alive I will worship it, too!"

He sawed it into four pieces. "See!" he said. "Where is the red blood?"

"There is no red blood," the poor heathen said, sadly. From that day he lost faith in his idol.

Try the thing you venerate. If it does not give to your soul more of God's spirit, more love for Christ and your brother than you had before, it is not divine. It has no red blood. It is a manufactured thing, good in its way, perhaps; but perishable and of the earth, earthy.

A POLICE MATRON.

The work that a good woman can do for the fallen of her sex is well illustrated by a story related by Mrs. Barney in an address upon the subject of police matrons. She was once urging the necessity of such matrons upon the authorities of a certain city, when the chief of police said, "Well, if you could see one woman that comes in here three or four times a year—'Old Sal!'" It took four policemen, he said, to bring her in to the cell, and usually they got their faces scratched. One morning Mrs. Barney was told that this woman had been put in a cell the previous night. "We would like to see you bring her into court," the police said. "If you can do that, we shall believe in police matrons."

The chief offered to send two men to protect me, but I declined their services. As I reached the cell door I rapped with the key, and then unlocked the door and entered. There in the dark, narrow cell crouched the woman, looking more like a wild beast. She was just ready to spring, as she was expecting the police. She cried out:

"Who are you?"

"I am your friend," I replied.

"It's a lie!" she said. "I haven't got any friends."

"But I am your friend," I reiterated, gently.

The woman laughed mockingly. "Who are you, anyway?"

"I am a police woman."

"Oh, I didn't know they had any such things," she said. "I never saw one before. What do you think you're goin' to do?"

"Help you," I replied, simply; and as I stood there beside her, I dropped my hands upon her shoulders, and calling her by her married name, I said, "You know you have to go into the court in a minute, and you are not fit to go."

I began to arrange her hair. I took a pin from my own hair; she hadn't a button or a pin or a fastening of any kind in her clothes; she sat there tugging to hold them together, and as I tried to dress her she said:

"Tell me what you're up to; tell me what you mean."

Looking in her eyes, I asked, kindly, "Do you remember the first time you were ever in a police station?"

"Don't I remember it?"

"How old were you?"

"I wasn't sixteen then, and I am more than sixty now."

"How many times have you been in these places?"

"Oh, I don't know; I guess God don't know—it's so often."

"Do you remember how you felt the first time?"

"I was almost scared to death. I cried all night."

"Sally, if a good woman had been there and had wiped the tears off your face, and had put up your hair and rested a motherly hand on your shoulder, as I have done to-day, what would it have meant to you?"

"Oh, I would never have gone back again; but nobody ever cared."

"Now, Sally, I want you to do something for me. I want to get a woman to go into these places to care for the women in the way I have suggested. Wouldn't you like to help me?"

"I would do anything I could to help you."

"The police think you will not go quietly into court with me this morning; but I'm sure you will."

We talked together a little while longer, and then came the call for us to go into court. As we rose from the bed where we had been sitting, I said, "Will you take my arm, or shall I take yours?"

She looked me over and said, "Wal, I am about three times as large as you; I guess you'd better take mine."

So we went into court. The policemen said they would have cheered us if it had been proper, and one of them said that I had "bewitched Sally." And so the poor creature was bewitched, but only with gentle treatment and kind words.

RUNNING A RAPID.

Scribner's Magazine contains a thrilling account of a boat-run through the cañons of the Colorado, from which we glean a description of running the four hundred and sixty-fifth rapid. This rapid is in a part of the gorge where two streams enter directly opposite each other. The boulders have washed down the river, forming three dams across it, and three drops or falls in the one great rapid that in all has a descent of thirty feet. On the right side is a perpendicular cliff, fifty to one hundred feet high, extending two-thirds of the length of the rapid. On the left side is a perpendicular cliff a thousand feet or more in height, and extending the whole length of the rapid.

The current of the river, after passing over the first fall, dashes against the left cliff, just at the head of the second fall, and is thrown back with awful force, and as it meets the current from the right, curls up in angry waves fifteen or twenty feet high. After the second plunge the whole current is thrown against the right wall, as it curves out into the stream, just at the head of the third fall.

It took but a few moments to see that there was no way to get our boats and supplies around this rapid. It must be run! We passed the first fall, over or through a half-dozen huge waves.

As we neared the second fall, and I looked down into that pit of fury, I wondered if it were possible for our boats to go through it and come out whole, and right side up. In an instant we were in the midst of the breakers. They lashed us first one side and then the other, breaking far above our heads, and half-filling our boats. For a second we were blinded with the dashing, muddy waters.

And then we were through, and were being carried with fearful force toward the right cliff, where the whole current of water was piled up in one boiling mass against the solid granite.

Hislop gave the helm a sudden turn, and assisted by the rebounding wave, we went by the cliff, and I shouted, "That's good! We are past!" But the words were hardly out of my mouth when, as we rounded the point into the third fall, our boat, thrown in by a huge wave, crashed into a rock and stopped. She filled with water, sank upon the rock, and stuck fast.

Wave after wave in quick succession rolled over us. I tried to straighten myself up, when a great wave struck me in the back, and I was washed clean out of the boat into the whirlpool below the rock. For an instant I knew nothing; but as I was drawn down my consciousness returned, and as I was carried by that whirlpool, down, down, down, I wondered if I should ever reach the bottom of the river. The time seemed an age. The river seemed bottomless.

In a few moments I was seized as by two forces—one around my legs, and the other around my back—and twisted in opposite directions. Then I was shot to the surface fifty feet down the rapid from where I went in. I caught my breath just in time to be carried under the next big wave coming out in the lighter waves at the lower end of the rapid. Thanks to my cork jacket I floated high above the water, but was carried along through the swiftest of the current.

The rest of the men and the second boat went safely through.

For the Companion.

SANTA CATALINA.

The perfect days went slowly by,
And all the far horizon line,
A mystery of sea and sky,
Was void of faintest form or sign.

We saw the wide Pacific main,
With here and there a shining sail;
No more; from moon to moon again,
No dimmest fancy pierced the veil.

The sun was glorious o'er the blue,
The moonbeams dwelt in deepest calm,
The shadowy space familiar grew
Like daily prayers or blessed psalm.

Then, O the wonder of the sight!
There came one morning thro' the mist
An island, wrapt in softest light,
With hues of rose and amethyst.

Like stately ship it seemed to ride,
Advancing slow within our ken,
Belief was still unsatisfied,
When all was empty space again.

What mystic country could it be,
Thus like a wraith to come and go?
Did not our eyes, anointed, see
The magic isle of Prospero?

ELIZABETH W. DENISON.

AMPLE REDRESS.

A strange bit of diplomatic dealing was that which took place in Alaska in 1869, soon after the purchase of that country from the Russian Government. Secretary Seward was visiting Alaska, and one day a Chilcat chief said to him, gravely, "Some time ago the Kalosh (Sitka Indians) killed three of the Chilcats. Now the great Tyee has come, we have gathered to ask him what he is going to do about it." "When did this killing take place?" asked Mr. Seward. The date, nine or ten years ago, was given in Indian fashion, reckoning by suns and moons.

"Then it happened," replied Mr. Seward, "when this country belonged to the Emperor of Russia. He was a great sovereign, who listened to the Indians and treated them with kindness."

"We did appeal to the Emperor of Russia," was the answer, "but he gave us no redress. He was too poor. We know he was poor, because he had to sell his land to the great Tyee. But now the great Tyee himself is here in his stead, and we want to know what he is going to do about it."

Seward conferred with his companion, General Davis, and then asked:

"How many men were murdered?"

"Three."

"And what sort of redress do you desire?"

The Indian brightened visibly.

"A life for a life is the Indian law," they replied. "But as these three Chilcats were of the chief's family, we reckon each of their lives to be equal to the lives of three common Indians. What we want, then, is the great Tyee's permission to send our warriors down to kill nine of the Kalosh, in order to avenge the death of the Chilcats."

To this Mr. Seward replied with promptness that no killing whatever would be allowed. He then asked:

"Is there any other form of reparation which would be satisfactory?"

The faces of the Indians actually beamed at this business-like inquiry, and they replied, after consultation:

"We know that the 'Boston men' are averse to any killing, except by their own soldiers. So we have sometimes consented to take pay in blankets. We think that the life of each Indian is worth about four blankets. Nine times four blankets would give us full redress, and we should henceforth regard the Kalosh as our friends and brothers."

"Well, General," said Mr. Seward, "there you have the conclusion of the case. I think you can afford thirty-six blankets, to make peace between the tribes."

The General was well pleased, as this promised to end the last of the disputes, and establish peace throughout the Territory. The blankets were not delivered then, because it was considered best to conclude the affair with great formality; but when they were finally counted out before the chief, he expressed himself as amply satisfied, and declared his willingness to live thenceforth on amicable terms with his former foes.

WELCOMED.

The Salzburg emigration is now almost forgotten, but in the early part of the Eighteenth Century no event inspired such widespread interest in Europe. The story of the wanderings of the Salzburgers, expelled by the archbishop from their quiet mountain homes on account of their Protestant faith, is full of pathetic and dramatic incident. Frederick William of Prussia offered them a home. In their journey thither they showed much courage and patient endurance, and were treated with great generosity and sympathy by the Germans.

In the Protestant towns they were received with applause, bell-ringing, appropriate addresses, vigorous hand-shaking and tears. Sometimes the citizens actually quarrelled for guests. At Zeitz some houses were stormed, and the guests carried off by force. The hotel keeper could often get nothing to do. In orderly Voigtland each pilgrim received a ticket with his quarters written on it, and sentinels were placed before the doors so that their sleep might not be disturbed by the unruly or curious.

Town ladies washed and dressed the babies in order to relieve the mothers. At Erlangen the French refugees presented them with clothes of their own weaving. Huguenots who had lost their own children begged to adopt some little Salzburgers.

In Leipsic, on a market day, the butchers and fish merchants gave them copious supplies. As they passed along they were taken into houses, and came out laden with bundles of all shapes and sizes. Booksellers stood at their shop doors and handed them provision for their minds. Ministers presented them with newly bound prayer-books and Bibles.

Crowds of country people came to see them, bringing loads of bread, cheese and butter. One poor flower-girl, who had nothing else to give, distributed all her little bouquets amongst them. A poor woman was seen cutting up a big four-penny loaf, buttering the slices and handing them to the little hungry pilgrims.

One merchant gave them as a parting gift six hundred pairs of stockings, and another sent them a supply of muslin for neckcloths. Very joyful and grateful the Salzburgers showed themselves.

Such splendid farmers were they that they soon made the desolate stretches of Lithuania rejoice and blossom as the rose. Thus, after a pilgrimage of twelve hundred miles, some twenty thousand Salzburgers found a home in Prussia, and there their descendants, with many of the old characteristics, remain to this day.

TWO DOGS.

Dogs, as well as human beings, are liable to be misunderstood and underestimated. A gentleman whose stable was infested with rats brought home one evening, to his place in the country, a rough-coated, sad-eyed, undemonstrative Scotch terrier, which, he told his friends, who happened to be at the house when he arrived, was a celebrated ratter. He had bought the dog in the city that afternoon.

It was suggested that the new arrival be put to the test at once, and accordingly the party adjourned to the stable, where a cage containing mice was placed on the floor in front of the dog.

The door of the cage was opened, the mice scampered over the floor in all directions, and the distinguished terrier stood, with his head on one side, calmly watching them. A roar of laughter followed at the expense of the disappointed purchaser.

Just then one of the grooms brought in a wire trap containing a large, vicious-looking rat, and placed it on the floor, as before, in front of the dog. The renowned ratter maintained the same nonchalant, uninterested air, and the door of the trap was opened.

The rat, perhaps a better judge of his adversary than were the gentlemen, made one high spring straight over the dog's head; but he was too slow. When the terrier dropped him on the floor, after a single shake, he was dead, with his back broken, while his destroyer sat down comfortably, with the look of having done a very commonplace thing.

A different dog was one which a friend of Mr. William R. Travers, the celebrated wit, brought him on trial. A rat was released in a room with closed doors, and the gentlemen watched anxiously to see how the dog would behave.

Alas! the probationer failed completely. With his tail between his legs, he crawled off to a corner, leaving the rat in possession of the field.

"Well, Travers," said his prospective purchaser, "what would you do?"

"B-b-buy the rat," stammered Mr. Travers in reply.

SUMMER SUMS.

Young John B. Crumb was a pretty good scholar, but unhappily he had inherited a distaste for mathematics. At the close of his first year in the high school, therefore, he found himself "conditioned" in arithmetic. All the examples on numerous pages were to be done and copied into a little book, before the fall term began.

The book, when finished, bore this title:

SOME SUMMER SUMS,
OF JOHN B. CRUMB'S.

But alas! the next summer he was again conditioned in arithmetic, and his brother also, and two new books had to be filled with tedious calculations. The cover of John's book was superscribed:

SOME MORE SUMMER SUMS,
LAST OF JOHN B. CRUMB'S,

and below this was written:

Some summer sums? Yes, some more sums;
Come some more sums when summer comes;
Some sums each summer for these Crumbs.

No winter of our discontent
Was e'er in such vexation spent
As to this summer sums have lent.

Some sumless summers somewhere shine,
Consummate sum of summers fine;
Oh, were some sumless summer mine!

John's brother—the smaller Crumb, as we may call him—was not to be outdone, and diversified his mathematical labors as follows:

Vacation! Oh, where are the joys
That youngsters have seen in thy days?
Better far be at school with the boys,
Than at home in this ciphering maze.
I am monarch of nought I survey,
My time has been all in dispute,
To September all round from last May,
These sums I have toiled to compute.

SHIRT AND PIGTAIL.

A correspondent sends us a copy of a letter written by an English sailor on his return from an India voyage. It is dated, "*Warren Hastings*, East Indiaman, off Gravesend, March 14, 1813." One thought was uppermost in the writer's mind, as will be perceived by the hastiest reader.

DEAR BROTHER TOM, This cums hoppin to find you in good health, as it leaves me safe anchor'd here yesterday after a pleasant voyage, toleable short and few squalls.

Dear Tom—Hopes to find poor old father stout, and am quite out of pig-tail. Sights of pigtail at Gravesend, but unfortinately not fit for a dog to chor. Dear Tom—Captain's boy will bring you this, and put pigtail in his pocket when bort. Best in Lunnon at the black boy in seven diles, where go acks for the best pigtail, pound pigtail will do and am short of shirts, only took two whereof one is wored out, and t'other most, but dont forget the pigtail, as I 'aven't 'ad a quid to chor since a Thursday.

Dear Tom—as for shirts, yer size will do only longer, I like 'em long—get one at present—best at Tower Hill, and cheap—But be particler to go to 7 diles at the black boy for the pigtail, and dear Tom—acks for pound best pigtail, and let it be good—captain's boy will put the pigtail in his pocket Boy likes pigtail so ty it up strong.

But dear tom, shall be up on Monday, there or there-abouts—according not so particler about the shirt, as the present can be washed, but dont forget the pigtail without fail, and so am your loving brother. T. P.

P. S.—be sure you dont forget the PIGTAIL.

CONFUSED.

An editor—a very positive and sometimes sharp-spoken man—was approached timidly one day by a proof-reader, who said, "Excuse me, sir, but you have used a word here which I don't find in the dictionary."

"What is it?" said the editor, bristling up and looking a little fierce.

"You say, 'In this case it was the office that sook the man.'"

"Well, well, what is the matter with it?"

"I don't find 'sook' in the dictionary."

"'*Sook!*' Why, it's the past tense of —."

The editor paused, and then looked sheepish. "Queer," he said, after reflecting a moment, "how that monosyllable got into my head. *Sook!* I guess you may change it to 'sought.'"

MAMMA'S LESSON.

You have taken the flower apart, dear,
And very learnedly told
The name of each part, from root to tip,
From calyx to crown of gold;
But say, do you think, my darling,
That all of those learned men,
Who have taught you to treat lovely flowers so,
Could put one together again?

You chased a butterfly, love, this morn,
I was watching you at your play,
You only bruised it, and brushed the down
From its marvellous wings away;
But could any surgeon, my darling,
Re-set those delicate limbs,
Or restore the beautiful, golden bloom
That you spoiled for your idle whims?

The butterfly and the flower, dear,
Were only transient things,
And flowers will bloom, and butterflies
Still flit upon golden wings;
But remember, love, that the bloom of truth
Once brushed from your soul away,
Or an impure word, will leave a scar
That will last for many a day.

LIVING AMONG ROBBERS.

"O Cousin Sadie, do tell me a story, *please* do!" coaxed Fred. "I've broken my top, and I mustn't bounce my ball in the house, and my engine won't run, and I guess it's going to rain about a week. Oh, dear!"

"What if my story-maker won't run?" said Cousin Sadie. "I'm sure I've told all the old ones six times apiece at least."

"Can't you possibly think of just one more?" begged Fred. "Seems to me if I had a good story-maker right in my head, I'd keep it running day and night."

"O Fred, I wish you had one, but 'twould surely run down sometimes. Well, if you really must have a story, what shall it be about?"

"Oh, castles and robbers and all that," cried Fred, "and secret doors and dark passages and dungeons!"

"Well, let me think a minute," said Cousin Sadie. "We'll see if the story-maker can be wound up and oiled once more."

So Fred sat expectant and quiet, and it was so still he could hear the cat purr, and a stray mouse nibbling softly in some distant corner, until at last Cousin Sadie said, "I know a true story about robbers. We lived right among them once."

"Good! good!" cried Fred. "Where was it?"

"We had moved to a house in the country," she replied. "Shall I call it a castle?"

"Please do!" said he. "It sounds more like a real story."

"Well then, we'll have it real story fashion. Once upon a time we lived in a great castle high on a hill. There was a lovely grove around it, and the birds sang in the trees, and the breeze blew fresh and sweet all day long.

"It seemed like the safest and quietest place in the whole world, but when night came, just when it should have been most pleasant and peaceful, there were strange noises to be heard all through the castle; and after we were in bed there were quick, stealthy footsteps—and in the morning we found we had been robbed!"

"What! really, Cousin Sadie? You know you said this was a true story. And were you all killed and murdered in your beds, too?"

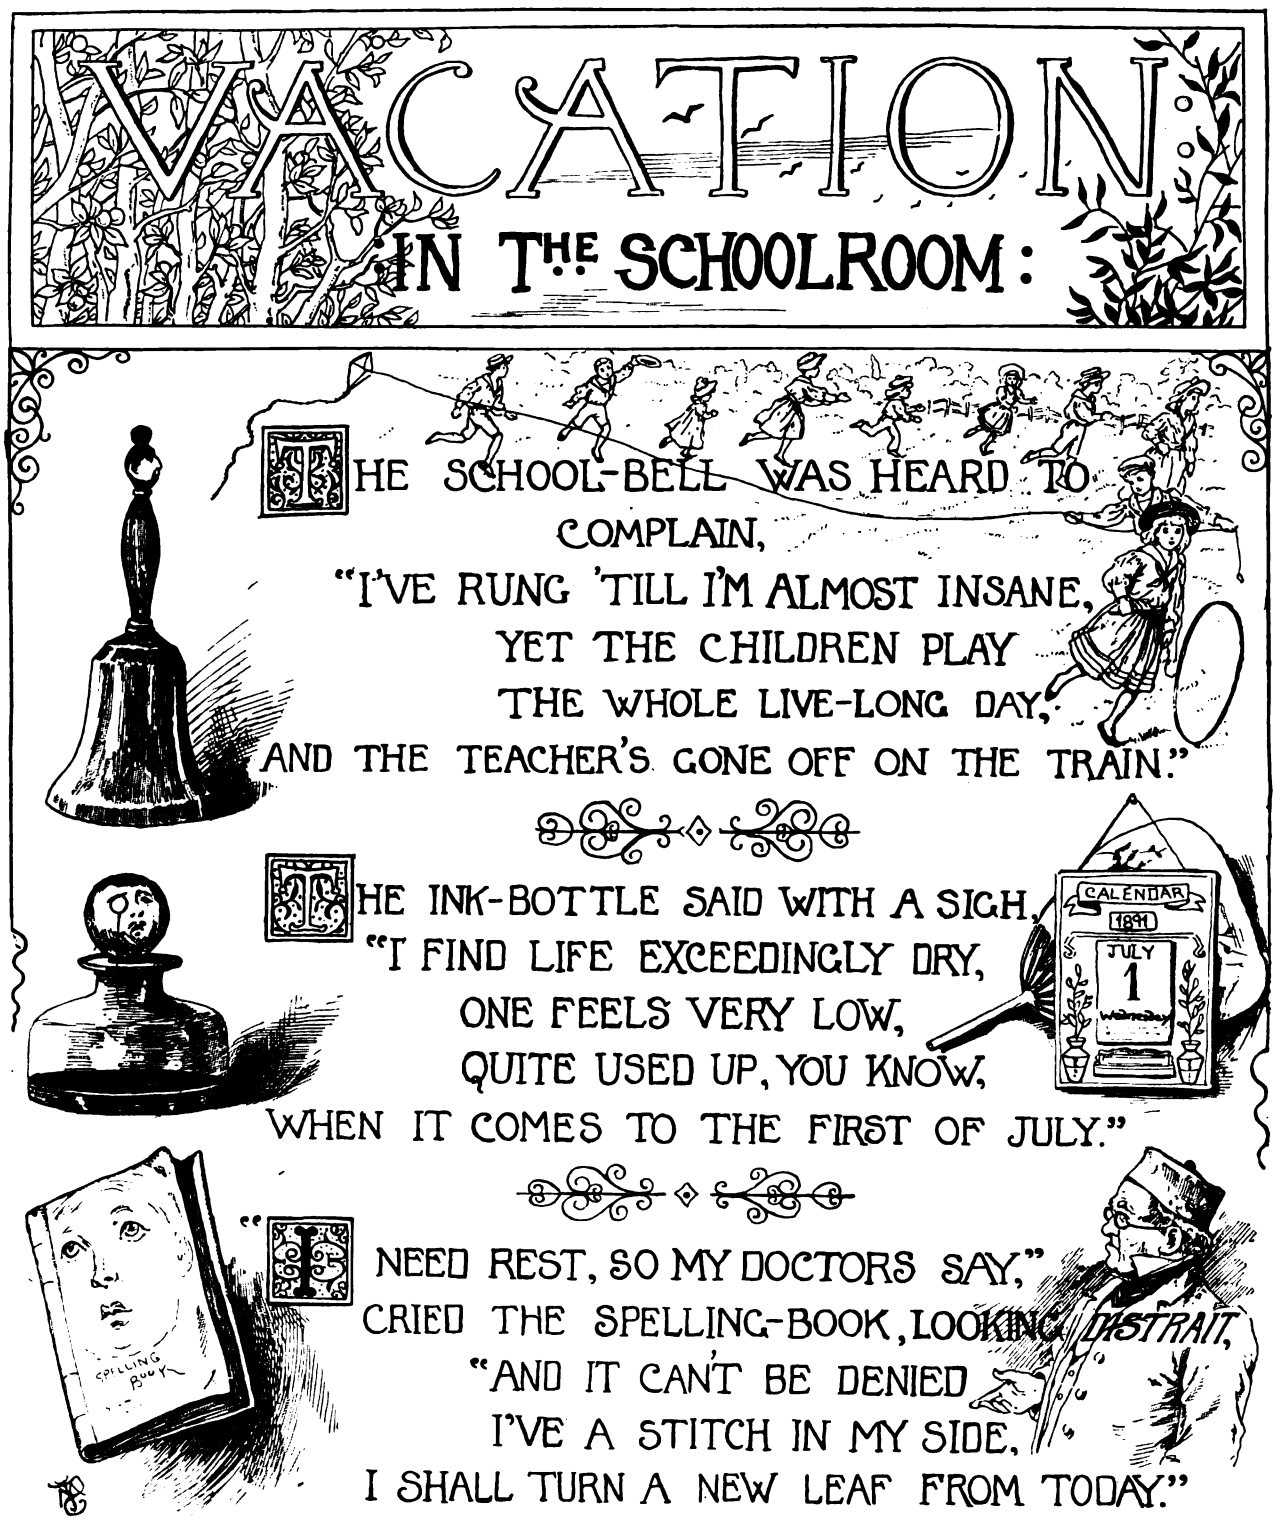
"Not so bad as that," said Cousin Sadie, laughing. "But we were really robbed. And the worst of it was we found there were winding passages and secret chambers in our castle that we knew nothing about; and finally it was plain enough that a whole clan of bold robbers lived right under the same roof with us!"

"Why, Cousin Sadie! What a story-maker you've got!"

"Oh, that wasn't made in any story-maker. That's really true.

"The Governor of the castle (that was grandpa, you know) offered rewards to any one who would bring the rascals to justice. But that was all the good it did. Those robbers just came and took their choice of the best we had every night, and then hid away in safe places where they might laugh at us if we tried to follow them.

"We could hear them dragging away our things, and quarrelling and fighting over them in their dens.



"I tell you, it fairly made my blood run cold. There must have been at least twenty of them, to judge by the noise they made.

"All our locks and bolts were no help at all, for you know they were in the same house with us. And as to fighting them, what could we do against so many?"

"I don't see what you *could* do," cried Fred. "But it don't hardly seem like a true story, Cousin Sadie. What *did* you do?"

"Well, I'll tell you, Freddie. *We just got a good cat!*"

LITTLE Millie's papa and grandpapa were loyal Republicans, and as election drew near they spoke of their opponents with ever increasing warmth, never heeding Millie's attentive ears and wondering eyes. One night, however, as the little maid was preparing for bed, she cast a fearful glance across the room, and whispered in a frightened little voice, "O mamma, I'm afraid to go to bed; I'm afraid there's a Democrat in the closet."

SWEET PEA.

Sweet Pea put on her prettiest hood
And climbed the garden wall,
'Twas a narrow ledge where the darling stood
And I feared that she might fall.
But she danced with the butterfly,
Bowed to the bee,
And never even noticed me,
The pretty, pinky, saucy Pea.

For the Companion.

BETH AND THE KITTY.

Beth could not go out to play one day when it rained, and she felt a little cross about it.

By and by she walked over from the window, where she had been watching the rain, to where her great gray Maltese kitty was asleep on the rug, and she picked up kitty rather roughly. Kitty did not enjoy this at all, so she growled and spit at Beth.

When mamma came into the room presently, Beth had kitty tucked into her dolls' crib so tight that she could not get out, and poor kitty looked very unhappy indeed.

"What's the trouble with kitty?" asked mamma.

"She is a most distempered cat, mamma, and I put her to bed to cure her," said Beth, who loved big words.

Mamma laughed. "Is it the kitty or you that is cross, I wonder?" she said, taking her sewing.

Beth thought about it for awhile, and by and by she took kitty up, and kissing her, put her down on her own rug in front of the grate fire.

"Please do excuse me, kitty. I felt cross, and I thought it was you, and I am a pretty mean thing, I think," she said.

Kitty only yawned and purred, as she curled up before the fire, but Beth went to singing and playing with her dolls very happily.

LITTLE Carrie is very fond of going to entertainments. Her mother had been reading aloud notices of different kinds, and turning the paper over, said, "The Russian plague is coming." Carrie hopped up and down and exclaimed, "Mamma, let me go, let me go."

HISTORICAL ACROSTICS.

The cross-words of the first, second and fourth acrostics consist of seven letters each; those of the third, of six letters. The finals of the first acrostic make the initials of the second; the finals of the second are the primals of the third; the finals of the third are the primals of the fourth.

I.

1. An Irish fairy. 2. One who relates. 3. A town in the Austrian dominions. 4. Efficacious. 5. To debate. 6. Surpasses. 7. A city in Illinois. 8. One who manages barges and vessels.

Primals—The name of a general who was defeated on July 9, 1775.

Finals—The name of a distinguished inventor, who was born on July 31, 1803.

II.

1. Things to be eaten. 2. To relieve or revive after pain. 3. To repeat. 4. A guardian. 5. An island in the Russian Empire. 6. To prosper. 7. A character in Shakespeare's "Hamlet." 8. An office or religious service at night.

Finals—The name of an English author who died on July 7, 1816.

III.

1. Resting. 2. A shout of joy or exultation. 3. A town in Italy. 4. A well-known species of grass. 5. A part of the foot. 6. To expand. 7. A masculine name. 8. Sickness.

Finals—The name of a battle fought on July 5, 1814.

IV.

1. A certain piece of timber in a ship. 2. An exclamation of praise to the Lord. 3. One who absorbs. 4. A high priest. 5. An ancient city of Italy. 6. To reduce to subjection. 7. A merry song. 8. To astonish.

Finals—The name of an American statesman who was shot on July 2, 1881.

CYRIL DEANE.

The Youth's Companion is an illustrated weekly paper of eight pages. Its subscription price is $1.75 a year, payment in advance.

Twelve or sixteen pages are often given its subscribers in a single weekly issue of the paper. All additional pages over eight—which is the number given for $1.75—are a gift to the subscribers from the Publishers.

New Subscriptions can commence at any time during the year. The Companion does not employ agents to solicit renewals of subscriptions.

Payment for The Companion, when sent by mail, should be made in a Post-Office Money Order, Bank Check, or Draft, or an Express Money Order. WHEN NEITHER OF THESE CAN BE PROCURED, send the money in a Registered Letter. All postmasters are required to register letters whenever requested to do so.

Silver should never be sent through the mail. It is almost sure to wear a hole through the envelope and be lost, or else it is stolen. Persons who send silver to us in a letter must do it on their own responsibility.

Postal Notes are not a safe means of sending money. Any one can collect them at any Money-Order Post-Office, and, if lost or stolen, the money cannot be recovered as no duplicates are issued. Subscribers who send us Postal Notes must do so at their own risk.

Renewals.—Three weeks are required after the receipt of money by us before the date opposite your name on your paper, which shows to what time your subscription is paid, can be changed.

Discontinuances.—Remember that the publishers must be notified by letter when a subscriber wishes his paper stopped. All arrearages must be paid.

Returning your paper will not enable us to discontinue it, as we cannot find your name on our books unless your Post-Office address is given.

Always give the name of the Post-Office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed and drafts made payable to

THE YOUTH'S COMPANION,
41 Temple Place, Boston, Mass.

VERTIGO.

One of the principal causes of the more serious forms of vertigo, or dizziness, is a diseased condition of the inmost portion of the ear, the labyrinth. Vertigo of greater or less severity may result from whatever disturbs the blood pressure, either within the labyrinth, or in the middle ear. Similar effects are also produced by false impressions received through the eye, or through the sense of touch, and by disease of the spinal cord.

Since the great nerve which goes to the stomach is at its cerebral centre intimately associated with the auditory nerve, disturbance of the stomach may cause vertigo; and on the other hand, a disturbance of the auditory nerve may occasion nausea or vomiting. Vertigo is sometimes brought on by paralysis of a single muscle of the eye, or even by the temporary weakness of an overtaxed ocular muscle.

The form of vertigo now known as "Menière's disease" is that form which the famous Dean Swift suffered, and under which he often appeared like a staggering drunkard. The patient, on rising in the morning, feels as if the room were whirling round, or as if he were floating or sinking. Sometimes he falls when attacked, but he never loses consciousness. There are noises—sometimes quite loud—in the ear, and more or less deafness. There may be also faintness and vomiting. The attacks incline to be repeated with increasing frequency. In the intervals, however, the patient remains well.

The most common forms of vertigo are the gastric and the nervous. Gastric vertigo is sometimes induced by a very slight disorder of the stomach. The patient may feel a sudden swimming at the head; objects may seem to revolve; he totters and perhaps falls. There may be nausea, faintness, headache, visual hallucinations and buzzing in the ear; but there is no deafness, nor any danger of a loss of consciousness. Gastric vertigo is cured by treatment directed to the cause.

Nervous vertigo may come from nervous exhaustion resulting from various causes—intellectual strain, or an immoderate use of tobacco, alcohol or tea.

The symptoms are much the same as in gastric vertigo. They are felt strongly in an elevated position—by the preacher in the pulpit, or the speaker on the platform. As in gastric vertigo, the treatment must be directed to the cause. But patients need not fea an attack of paralysis or of apoplexy.

"TAPE-A-L'ŒIL."

One of the most prominent citizens of Paris died recently. It was a dog—Tape-à-l'Œil or Black-Eye, by name—who had passed the full space of a dog's life on the boulevards of the capital, acknowledging no owner or master, but living an easy and elegant life, in a very formal, well-regulated way.

Most dogs who lead an independent, unattached existence are miserable and half-starved curs. It was not so with Tape-à-l'Œil. Though he was not of aristocratic birth, being of unknown origin, and evidently about half-mastiff and half-setter by race, he "worked his way up" until he was able to lead the life of a gentleman. He was emphatically a self-made dog.

Perhaps, however, he was indebted in a certain degree to the large spot over his left eye, which gave him his name, for his start in life. His head was perfectly white except for this black spot in the shape of a half-moon, which completely covered his eye and ran back to the left ear.

Every morning he took a run in the Champs Elysees, and arrived at about eleven o'clock in the forenoon, with a good appetite, at the restaurant called the Bouillon Duval, in the Place de la Madeleine, where he was always well received. On the occasion of his first visits people were no doubt attracted by his black eye, as well as by his amiable disposition, and gave him a nibble from their plates. As time went by, he came to be regarded as a regular customer.

He went from table to table, receiving a bit of meat here, a scrap of bread there, a bone at one place, and at another a plate to lap. From the whole he made an excellent breakfast.

There were other eating-houses at which he obtained his dessert and his dinner. By the time he had made his tour, it was time to go to bed; and for his lodging place, he accepted nothing less magnificent than the Grand Hotel. He slept on a mat in a corner near the steamship ticket agency.

His costume had been provided for by a generous unknown friend, who had presented him with a very handsome collar, with his name, "Tape-à-l'Œil," engraved on the plate.

Following this regular round, petted by everybody, and unmolested by the police, though he paid no license and wore no muzzle, the dog lived on in great comfort.

But at last he became old, excessively fat, and almost blind. One day he refused to eat, but contrary to his custom, went down into the kitchen of the Grand Café, and lay down under a table; and when, some time later, an effort was made to induce him to come out, it was found that he was dead.

The newspapers published his "obituary," and many of his old friends wiped a tear from their eyes as they read it.

AFTER FIFTEEN YEARS.

A few miles out of the city of Bankok there is a mineral spring, and near it a bungalow much frequented by the Europeans in the city. An Englishman says that one evening as he rode up to this bungalow, a gentleman was alighting from his howdah at the entrance.

As soon as he had dismounted, his elephant was moved to one side, and my driver, who was seated on the head of my elephant, ordered it to advance. The instant he spoke, the animal which had moved aside to make room for us flapped his great ears, and then turned sharply around, facing my driver.

Suddenly, without the least warning, he stretched out his long trunk and wrapped it about the body of my man. Then, before any one had time to interfere, he raised him high in the air and brought him to the ground with tremendous force! As the poor fellow struck the earth we could hear his bones crack. But the elephant was not done with him. The next moment he had placed his huge foot on the head and chest of the prostrate driver. When he raised it again, all semblance of life was gone from the crushed, mutilated body.

The gentleman whose elephant had committed the terrible deed was greatly distressed. He said that he had purchased the animal from the king's pen, that it had always been exceedingly gentle and well-disposed. The animal was blind, one eye having been put out by an attendant fifteen years previous.

It was my driver, I learned the next day, who had put out the elephant's eye. He was at the time one of the guards at the king's stock pen, and, for some misdemeanor committed by the animal, had thrown a stone, which struck the creature full in the eye.

The elephant was so enraged thereafter at the sight of him, that, fearing for his life, the man left the place. But the injured animal had bided his time, and after fifteen years of waiting had terribly punished his enemy.

A KING'S AMBITION.

The little King of Spain, Alfonso XIII., has his boyish ambitions, it seems, even though he is a king. He is now five years old, and is no longer a "baby king." Recently, it is related by a correspondent at Madrid, the celebrated sculptor, Señor Querol, was engaged to make a statue of the young king.

The sculptor had great difficulty in finding a pose for his subject which should be at once spirited and natural, and sat one day in a brown study, regarding the boy as he looked out at the window.

All at once the sound of a band of music was heard on the street. The king sprang up, and brought his hand to his forehead in the military salute.

"The flag, sir! the flag!" the boy exclaimed. "Salute it!"

The sculptor had found the pose he sought, and made his statue represent the king in the act of saluting his country's flag.

As he was at work, the boy asked the artist:

"Are you going to make me *big?*"

"The statue will represent your majesty a little larger than you are," said Señor Querol.

"Well," said the five-year-old, "I want you to make me very big, with a long moustache!"

FRUIT-RAISING.

Large figures are sometimes bewildering, but they may be instructive also. The following facts teach that the "Golden State" is destined to be rather the Orchard of America:

Fifteen years ago there were no oranges shipped from California. Last year more than three thousand car-loads were sent East. In 1875 the Southern Pacific Road shipped five hundred pounds of raisins; last year twenty-six millions. In seventeen years there has arisen an industry which in 1890 returned to California people eight million dollars.

DID HE GET ONE?

Puns are not to be highly commended as specimens of wit, but now and then one has a pecuniary value.

A passenger in a Pullman car was inclined to be friendly with the porter, but hadn't yet shown him the "color of his money."

"Do you enjoy your position?" the passenger inquired.

"Yes," answered the porter, "I likes de quarters heah berry much—when I gets 'em."—*Exchange.*

ABBY HANNAH'S PATCHWORK.

A burly bumblebee was out in the sunshine dressed in yellow with trimmings of black. Under a rosebush a well-fed cat nodded, singing a tune without variations.

At a window of an old-fashioned house a little girl sat, with down-bent head, sewing a square of patchwork. Very faint music came from her occupation; it was only Abby Hannah's needle which had grown tarnished by being pushed through stiff calico with moist and weary fingers.

She ceased her work, and lifted her pretty head to take a look into the pleasant garden. It was a sweet face, but at this moment it was an anxious one.

"Deborah! Deborah!" she called, in subdued tones. The cat stopped singing, opened her yellow eyes, stretched and went toward the house.

Abby Hannah, with Deborah in her lap, watched the lively bee as he hovered over "boy's-love" in Miss Lucindy's garden, to reach finally the corner where grew "love-lies-bleeding," "bachelor's-buttons," and a few small "lady's-delights."

Just then they saw the minister coming down the street in his Sunday best. He must be going home from some funeral; and yet the bell has not been heard tolling for the dead. Abby Hannah rose respectfully as the minister went by, much to Deborah's disgust.

The minister did not keep on to the parsonage, which was a few steps below, but came in at the gate.

From the wood-shed Jarvis, "the head hired man," as he was accustomed to call himself, although his Cousin Lucindy kept no other, came to ask what Parson Ridley wanted.

"To see Miss Lucinda," was the minister's answer.

"She's a-chorin' about town in the shay," said Jarvis; "and she's to wind up with goin' to Turkey Higgins's to buy a couple of hens. Won't ye step into the house and wait for her?"

No; the minister would not step in. "I wish a personal interview," he said, and went away.

"Set down, Abby Hannah!" said Jarvis, looking in at the open window. "Ye aint in meetin'. What be ye a-doin', little un?"

"Sewing my patchwork."

"How many squares have ye hoed out now?"

Abby Hannah counted them. "Fifteen, Jarvis, for my conduct quilt. I just hate 'em!"

Jarvis took them up one by one, a sorrowful expression coming into his honest, kindly face. In the middle of each square was a piece of white cloth on which was worked, in "sampler-stitch," the word "Diligent" or "Indolent," "Good," "Bad," "Lazy," and so forth, according to the little girl's daily conduct.

Tears came into Abby Hannah's eyes as she told Jarvis, her sole comforter, that Aunt Lucindy was to have a "quilting" when the conduct quilt was done, and then all the town would know how naughty she had been. After the quilting, this monument to her sins, as Aunt Lucindy called it, "was to be forever on the spare bed!"

"Don't cry, little un," said Jarvis. "Come, le's have a spell of school-keepin' out here under the old ellum. Lucindy is off with old Billy, who aint much like a harricane, and when she gets to Turkey Higgins's farm, they'll talk way up into fourteenthly, same as the parson did last Sunday. Bring out your dolls, Abby Hannah, and set 'em in battle array, and I'll be fust *se*lectman and 'zamin' 'em."

The little girl wiped her eyes. She went to a closet, and produced a clothespin dressed in a tight-fitting costume, with a bed-ticking cape to hide her lack of arms.

"Now pass out 'Yaller,'" said Jarvis, who was seating the pupils under the elm.

A crooked-necked squash next appeared, with stem cut close to the head, having green buttons for eyes, a squash-seed for a nose, and shoe-pegs for teeth.

"She aint handsome," said Jarvis. "Howsomever, 'Handsome is as handsome does,' the copy-book says."

A rag-doll came next, a flat and shapeless creature with pen and ink features. At last came Deborah the cat.

Jarvis sat up on the fence to "have a weather-eye to where the enemy might be looked for," while Abby Hannah drilled her pupils in high-pitched reading and spelling.

Suddenly the sound of instruction ceased. Aunt Lucindy was turning the corner homeward.

Abby Hannah and Jarvis hear the Ceremony.

Jarvis stooped low and gathered up the dolls, but he was clumsy in his haste, and lodged Clothespin in a cherry-tree.

Aunt Lucindy came up with an air of suspicion, and discovered the doll.

The fury of her wrath fell upon Abby Hannah.

"What under the canopy have you been a-doing!" she asked the frightened child, dragging her into the house. "Not patchworking, I'll be bound. Git your square!"

The half-completed square was produced, and then Miss Lucindy ordered Abby Hannah to sampler-stitch this sentence on the white centre:

"Abby Hannah Barrows, lazy and disobedient, 20th June, 1788."

As Abby Hannah cowered before her angry aunt, Parson Ridley again came up the yard.

"The parsonage is being painted," he said. "Would you allow a young and highly respectable young couple to be united in matrimony in your parlor?"

"I should be very happy to receive the young folks under my humble roof," said Miss Barrows, grandly.

The minister went out, and the best parlor was opened. The six-legged spinnet, a London instrument, was dusted. Miss Lucindy took an approving glance about at her mourning piece done in crewels and water-colors, her sampler, various silhouettes, and one or two pictures in water-colors. There were stiff chairs against the wall, a slippery sofa and a claw-footed table on which was a Bible.

In her black silk and mitts and false curls Miss Lucinda received her guests. Outside, Jarvis and Abby Hannah listened. There was a solemn silence; then the parson gave a loud "ahem!" and began the ceremony.

It seemed a long time before the minister pronounced Ellen Gordon and Colonel Arthur Bennett man and wife. Pretty names, thought little Abby Hannah; she would write them in her old copy-book for future dolls.

When it was over, there was a murmur of voices, a few low-toned words and they came out—a lovely bride, prettily dressed, and a tall Englishman of military appearance.

"I'd give her a white rose if I dared," said Abby Hannah.

Then she ran out by a side door, and when the pretty bride stepped into the carriage that waited, the timid child thrust a white rose and a cluster of buds into her hand and fled.

Only Parson Ridley knew why the English officer and the pretty girl from over the sea were married in the seclusion of Miss Barrows's parlor, and with all their talent for investigation, the people of the town learned nothing about it, beyond the bare fact that they had driven from Boston in a chaise. Very soon the quiet wedding was forgotten.

But it was not forgotten by little Abby Hannah. The appearance of the officer and his young bride had filled her with wistful thoughts of a world strange to her. She wrote their names in her old copy-book, in a painstaking way, and under them pinned a white rose with clustering buds.

That night she dreamed that Ellen Gordon had taken the conduct quilt across the sea, with its humiliating record.

Another June day. Deborah, the cat, is eight years older, and so is Abby Hannah. The conduct quilt adorns the four-poster in the spare room. As she had promised, Miss Lucinda Barrows had a quilting on its completion, and sorrowful, humiliated Abby Hannah helped by threading needles, and "passing round tea."

Scarcely a kind word did the child receive that long, sad afternoon. No one spoke of the neat, tiny stitches and the evenness of her sampler work.

The tea was perfect. The guests praised and Miss Lucinda politely condemned every article of the skilfully cooked food. But whether she told too many untruths on the occasion, or whether she made and "just nibbled, 'cause it was *so* poor," too many kinds of cake, is not known. At any rate, she failed in health from that time.

One by one her duties were given over to Jarvis and Abby Hannah with wearisome directions and repining words. Again Parson Ridley came to the house; not to perform a marriage ceremony, but to conduct the funeral of Lucinda Barrows.

Outside, Jarvis "saw to the teams" until it was time to appear as second chief mourner.

To all he told the same story; how "Lucindy grew less and less chirk all last year, and about dig-pertatering-time tuk her bed and never riz."

All the aunt's modest fortune, with many restrictions and directions, was left to Abby Hannah, except a few hundreds to Jarvis, who was to remain on the place.

The day after the funeral Jarvis helped Abby Hannah "slick up," inwardly rejoiced that training day was so near. In an honest, kindly way he wondered how it would "set" on Abby Hannah to be forehanded, and rejoiced that she could now read her book with no one to forbid her doing so.

Training day was fine. In their best, Jarvis and Abby Hannah went to Windmill Hill, where the sham fight was to take place. The people poured in from all parts, and Jarvis moved among the throng, conscious of his hundreds well salted down, and radiant in a "weskit" of gorgeous pattern.

Abby Hannah, in her simple black, sat where she could see the distant hills with cloud shadows upon them, and cattle quietly grazing in the fields. She cared little for the crowd or the soldiers in their gay dress; she longed for what she knew not of, suggested by the cloud glory and the distance.

Down the hill came a party of three, leaving a handsome carriage in charge of a man. They seemed also to avoid the crowd, and were approaching Abby Hannah's retreat. As she watched them, she felt as if she were reading in her poetry book.

How graceful they were! The handsome young man offered his gloved hand to the stately lady with white hair, helping her over every unevenness. The little girl with flaxen curls danced before them.

The lady sat down on a shelving rock, the young man by her side, while the child wandered in search of flowers.

As the little girl came up the hill she saw Abby Hannah, and was attracted to her. She first offered a dandelion out of her bouquet, and then a daisy. Presently she asked, "What is your name?" and Abby Hannah told it, with a feeling that it was not pretty.

"And what is yours?" she asked the child.

"Ellen Sinclair."

They grew so well acquainted that they went together where violets grew, and, with her hands full of them, the child ran to the lady on the rock. The lady nodded and smiled her thanks to Abby Hannah, as the party came up the hill. The little girl went back to where her new friend stood with timid, blushing face, and took fast hold of her hand.

The sham fight began. For a better view of the fight the crowd left the side of the hill where Abby Hannah was seated. Hidden from sight as the soldiers were by the brow of the hill and a clump of larches, the loud report of fire-arms came unexpectedly.

Ellen, the little girl, was standing on a rock, trying to reach the lower branches of a tree. Startled and bewildered, she let go her hold of the branch and fell to the ground.

When her uncle attempted to raise her she moaned, and then fell into his arms with a cry. At this Abby Hannah forgot her timidity and helped to soothe the frightened child.

The foot was badly injured.

"What can we do! Was there ever anything so very unfortunate!" exclaimed the lady.

"Take her to my house," promptly answered Abby Hannah. Jarvis had told her that these people were "Britishers," but she forgot her awe of them.

When Jarvis returned from the war that night, his surprise was great to see an Englishwoman in Lucindy's high-backed rocker, dressed in a rustling silk with finger-rings on her white hands, and a wounded, small-sized Britisher on the old "soffy."

He stood in the low kitchen while Abby

Digitized by Google

Hannah told him all about it, and confessed to be "tuck a-back to see any of their sort under Lucindy Barrows's roof, she that never favored 'em!"

In the evening young Sinclair reported that he had made arrangements at the tavern for Ellen's comfort, and that he would carry her there in his arms. But she stoutly refused to move without Abby Hannah and the cat. Tears and sobs helped her cause, and seconded by the persuasion of Abby Hannah and Jarvis she carried the day. So it came about that, during the child's days of pain, she lay on the old sofa with a stalwart son of Deborah's for company, and a bunch of white roses from the old bush in her hand. And when, in the moonlight, the little one dozed, the stately lady and Abby Hannah grew to be friends.

The lonely girl tenderly loved this woman, who treated her with caressing tenderness, listening with interest to past worries and sorrows. How like seeing the loveliest of pictures, such as the parson had in his best parlor, to hear of the wonderful things in England! And yet that was the country Aunt Lucindy had taught her to despise. The girl's head was full of dreams.

The last Churning.

Little Ellen Sinclair was well at last, and must soon leave Abby and the cat. But before she went away she must see the funny dolls Abby had told her that she used to play with.

Crook-Neck was no longer in existence, but Clothespin was in a hair trunk in the attic—with the hated conduct quilt and the old copy-book. The child dragged them all out with other treasures, her little head bobbing about under the bunches of pennyroyal and catnip which Lucinda Barrows had carefully gathered each year.

Tired at last, she went down to show her grandmother Clothespin and the quilt Abby had made, while Abby Hannah idly carried in her hand the old copy-book.

She could now laugh over the cotton monument of her disgrace; and in the soft summer twilight she told the one romance of her short life—of the quiet wedding in that very room.

Outside was the white rosebush filling the air with perfume. In her hand was her old copy-book, with the dried and withered flowers just as she had placed them there years before. Young Sinclair had come from the tavern to say good-by. He leaned in at the open window.

The lady examined curiously the conduct quilt, and read the record that had caused the child so many tears.

"Abby Hannah Barrows, lazy and disobedient, 20th June, 1788."

The young man leaned farther into the room. For a moment nothing was heard but the cat's low song.

Then Abby Hannah read from the old copy-book, to make the story complete:

"In awful disgrace—have sampler-stitched the worstest square to-day. Pretty Ellen Gordon was married to Arthur Bennett, a soldier, in Aunt —"

A groan and a cry made Abby Hannah drop her copy-book, and look with wonder at the lady. Young Sinclair with a bound was in the room and by her side.

"Read that again!" he said. Then he picked up the book and pressed the withered flowers to his lips.

The first chapters of the story Abby Hannah had told, and now Mrs. Sinclair took it up. Ellen Gordon was her dead sister's child, and hers by adoption. She came to Boston with a brother, who died soon after they reached this country.

She was to marry Colonel Bennett when she returned; he came for her, and was married in Aunt Lucindy's parlor instead.

They delayed their return a long time; then came a stormy voyage and a shipwreck.

Among the few saved were baby Ellen and her nurse. The young father and mother went down into the sea. Their relatives never learned when or where the marriage had taken place, and had found no record of it until this moment, on their American visit.

The lady told no more, but leaned back in Lucindy's old rocking-chair, and gave herself up to her thoughts, leaving Ellen singing Deborah's son to sleep done up in the conduct quilt.

One of Abby Hannah's dreams came true. The conduct quilt went across the sea with a pretty Ellen, and was cared for like rare old tapestry.

In time she herself went to England, and lived and died in London.

The railroad from Boston passes through what was once Aunt Lucindy's garden, near the elm where Abby Hannah taught her doll school. The rosebush is not there; it was transplanted to Surrey, in England, and flourished there many a year.

MAY KINGSTON.

YOUNG HAPPINESS.

Our childhood's pleasures are like the rivers,
Whose onward flowing is deep and free.
We prize them highly above all treasures.
How sweet the sunshine, how glad, how free!
—Old Song.

For the Companion.

THE BLEXLEY FEUD.

In Two Chapters.—Chapter I.

How It Began.

There was no reason why it should have been called the Blexley feud, rather than the Pierson feud; though, to be sure, the place of its origin was in old Mrs. Blexley's house; or to be more exact, in old Mrs. Blexley's butter-tub.

She was not old Mrs. Blexley then, but merely a matron in her forties, with a house full of children, who were all the way from babes to young men.

It bade fair to be an unusually busy summer, for Mrs. Blexley had eight cows upon her hands; and she had felt herself very fortunate in having gained the Piersons' consent that their youngest girl, Dorothy, should help her through the summer with the butter.

She proved to be a help. "What Dorothy don't know 'bout butter-makin' aint worth knowin'," was no empty boast by Mrs. Pierson. The girl had been brought up, as her Aunt Lyddy repeatedly expressed it, "in the good old-fashioned way of not only knowing well how to work, but how to work well."

Mrs. Blexley gave over to Dorothy the work of butter-making, and all the packing.

Even then matters might have gone on smoothly if the Blexleys' chief dependence in the shape of a dun cow had not choked herself to death with a turnip. That event delayed the packing of the June butter in the new tub just brought home for the purpose.

Mrs. Blexley always declared that when people bought tubs of 'Lijah Starks they "knew what they was doin'; 'Lijah's tubs didn't need soakin' a month after he'd cured the staves; they didn't soak nothin', out or in. They'd weigh, too, just so much, whether or no."

It is possible that her opinion was influenced to some extent by the fact that 'Lijah was her brother. It was a fact, however, that butter kept well in Mr. Starks's firkins and tubs; and if Mrs. Blexley chose to put down hers without a long preparatory soaking of the receptacle in brine, it was no one's business but her own, and perhaps that of the buyer of the butter.

At any rate this tub, prepared for the dun cow's butter, was simply laid aside in the buttery off the kitchen until it was needed, six weeks later, after the two brindle cows' calves had been sent to the butcher. Then a simple brine and saltpetre rinse was enough, in Mrs. Blexley's judgment.

"And now, Dorothy," she said, as she brought the first five pounds from the scales,—for Mrs. Blexley invariably weighed every pound herself, and chalked it down on the "butter shingle" which always hung behind the scales,—"now, Dorothy, see how quick you can get that tub full. I promised it to Mrs. Miller to send to her son, a fortn't ago."

"I can fill it in another fortn't, if you don't mind skimpin' at table a little," Dorothy answered, proudly, as she put down the first compact layer.

"I can skimp if I must, but you'll all know just what I'm doin' it for. I b'lieve in bein' honest, even in skimpin'."

That was something she prided herself upon. It was a Blexley boast. The Blexleys were stiff-backed people on this score, and woe to all persons who fell short in weight or measure of any kind!

Mrs. Blexley always considered it but a Christian duty unflinchingly to make known the deficiencies of such people, and to announce that she "had no further use for them."

The performance of this duty was only the exhibition of another trait in the possession of which the Blexleys had equal pride. This trait was candor—one which people who make inordinate boast of honesty feel bound to cultivate.

"I'd rather a body'd fire into my face than into my back, any time," would be Mrs. Blexley's only apology for the plain statements she so often made—statements with barbed points and edges.

There were those who felt that Silas Pierson expressed their own views when he answered her at the oat-threshing:

"Jes' so, Mis' Blexley; but a body aint called upon to be always firin' at nary face nor back, simply 'cause a body's got a gun!"

But other people's views did not affect her own. She still spoke with exceeding candor on all occasions.

The last churning had gone into the tub in less than the fortnight. The white cloth had even received its thin layer of salt, and the cover was ready to be put in place, when Dorothy proudly turned it over to Jim Blexley at the foot of the cellar stairs, with a beaming face in answer to his admiring look.

It was sweet, fresh and firm—either the face or the butter; and if Mrs. Blexley was pleased with the butter, Jim could not be blamed for admiring the face.

"The man that gets you'll get somebody," she emphatically asserted, as the choice tub was deposited on the scales; and Jim nodded as he stole another glance at Dorothy's blushing face.

But, strange to say, the tub only tipped the beam at fifty-eight and a half pounds!

"Five, eight, ten, six —"

Mrs. Blexley hurriedly went over the figures on the shingle.

"Why, Dorothy, there aint butter 'nough here into two pounds and a quarter!"

"Perhaps you've made a mistake in countin'. Let me see."

Both counted. The whole Blexley household in turn counted the column on the shingle; but try as they might, they saw that Daboll's arithmetic never could countenance fifty-eight and a half as the answer to this problem: "If you put forty-eight and three-fourths pounds of butter into a tub weighing twelve pounds, what is the weight of the whole?"

"What has become of that two pounds and a quarter of butter?"

Mrs. Blexley asked the question again and again, as she went about the house.

She knew there must be as much as she had estimated. Her figures didn't lie. She was almost inclined to prove it by "taking it all up," but Mrs. Miller was even now clamoring for it, and it was sent on immediately.

Polly, her daughter, had witnessed each weighing before it went to the tub. That the tub could have run under 'Lijah's rule—twelve pounds—was not to be thought of. He had said it didn't, and that was enough.

He certainly had not made a tub under the usual weight in the last batch he made before he died, she conclusively argued; and Jim had to confess that he had weighed it when he brought it home, and it met the requirements.

It was a puzzler. If it had only stopped at that! But it did not. Next day Mrs. Blexley put a point-blank question to the astonished Dorothy.

"Dorothy, what did you do with that butter?"

"I? I packed every ounce you sent downstairs!" she indignantly exclaimed.

"But you couldn't 've," protested Mrs. Blexley.

Dorothy's Answer to an Insinuation.

For answer Dorothy walked straight over to the nail which held her sunbonnet, put on her head-wear and went home. Later in the day her brother's wagon came to fetch her things.

"To think Mrs. Blexley the same's called me a thief!" she said, in telling of it to her friends.

Shortly the Blexleys heard a report that Dorothy had said that Mrs. Blexley called her a thief.

"I didn't!" declared Mrs. Blexley. "But where did that butter go? I'd ruther lost a tub than b'lieve Dorothy took it; but it don't seem real honest to flare up so at a candid question."

"Such candid folks 're apt to get slander mixed up with candor," said Dorothy's brother. "A Pierson's as honest as a Blexley, any day."

"Folks don't put on back braces unless they need 'em," retorted Mrs. Blexley, when this remark came to her ears; and this brought a retort from one of the Piersons, to the effect that "folks could be so straight-backed that they leaned the wrong way."

These were mild shafts which grew rapidly into most venomous ones, the immediate result of which was that Dorothy passed Jim on the road without looking at him. The good-hearted fellow had it on his tongue to tell her that his mother meant no harm; but it occurred to him that such a statement would require an explanation which he was unable to give.

Then, when a friend told him that Dorothy had said that she "wouldn't have one of the Blexley tribe if they were the only ones on earth" he gave up, left home, and was brought back in six months, dead—killed in a steam-boat disaster.

A fierce feud had well begun, which presently extended not only to every relative on either side, but took in all the people in the village. Almost every inhabitant was connected in some way with one family or the other, and even those who had no connection with either were drawn into the quarrel.

In fact, as Uncle Billy, the stage-driver, said, no one could live in peace in Weston without fighting on one side or the other; and in time each had married so strictly among its adherents that, as Uncle Billy also remarked, "'Twan't safe to wag yer head 'fore every one, for you was sure to hook a Blexley or a Pierson."

This was not all. The Pierson faction set up a rival cooper shop, so injuring Jason Starks's trade that he was unable to meet his notes, and lost almost all he had. Ab Blexley did not report a brush fire that had caught in the Piersons' lot, and two families were made nearly penniless by the damage that ensued.

Banfield Pierson bought up Joel Blexley's notes and sold him out for a small mortgage he held, and the shock to the old people was so great that Mrs. Joel had a stroke of paralysis, while Joel went insane.

Everything that bad blood was capable of doing, except the actually criminal, was resorted to by both sides. Politics, patriotism and religion were forgotten or swallowed up in the quarrel which raged.

The town meetings served only to reveal which faction was present in the greater strength at a given occasion. Sometimes the town went for the Blexleys and sometimes for the Piersons. Smaller school district and line-fence feuds were engrafted upon the greater ones.

Religion ceased to be fostered. No minister could please both sides. Subscriptions could not be raised for salaries for more than one side, and two societies could not be supported. A feeble prayer-meeting took the place of the regular Sunday services.

Some of the people sold out their farms and moved away. A rude outside element began to push in. Soon the staid old tavern was converted into a billiard saloon and a drinking-house, which was freely patronized by a rising generation undisturbed by wholesome restraints.

The village seemed to be deserted by God and man; but the old residents only withdrew more within themselves, and, with groans over the lost prosperity, let evil-doing run riot.

Twenty-five years later, as old Mrs. Pierson said on her deathbed, "You wouldn't 've known that 'twas the same place."

SARAH BIERCE SCARBOROUGH.

(To be continued.)

ONE POOR LITTLE MONKEY.

Professor Angell tells a touching story of a little monkey which was the constant companion and pet of a colony of artists in Düsseldorf. He was permitted to roam from studio to studio, dressing himself in the various art properties scattered about, grinning, chattering, soliciting fondness from his favorites more like a merry, dumb child than an unintelligent beast.

After the monkey had been left alone for a time, the return of his friends was celebrated for him by a sugar treat which was to him the event of the day.

A small square box was given him, in which he always found when he succeeded in raising the cover several large, beautiful white lumps of sugar.

The little fellow always knew when his treat was coming, leaped about expectantly, and chattered with delight when he found himself with a lump of sugar in each cheek, one in each hand and more spread out before him on the floor.

One day a young artist came in with a box exactly like the sugar-box in form and size, which he put down before the little expectant, saying to his companions that they would see some fun.

The little beast tugged anxiously at the cover, which came off with more than usual trouble, looking up and grinning happily at his master; but suddenly the box flew open and a hideous creature flew up in the little brown face bent forward.

The monkey gave a cry of mortal terror and sprang across the room, running nimbly up a curtain and hiding himself in its folds.

There he stayed, hour after hour, in spite of coaxings, not venturing from his refuge until the obnoxious box was concealed from view.

The next day, when the box of sugar was given

Digitized by Google

to him, the little creature fled, and could not be coaxed to touch it; but the second day the impression had faded sufficiently, so that, with the greatest caution, he opened the lid, and then sprang back out of reach, with tightly closed eyes.

When he ventured to open them his beloved sugar lay before him, and his joy and relief was almost painful to witness.

Alas for human nature! The abject terror had been so amusing that at intervals the experiment was repeated, always with the same success. The poor little creature grew thin and haggard, his merry chatter ceased, his tricks were abandoned.

A morbid fascination, also a love for sugar, drew him again and again to his torture or joy, as the case might be.

His misery when the demon was revealed, and his extravagant delight when the coveted sweets were found, were equally funny to his thoughtless tormentors, and the sport went on until at last the master came to his poor little pet's rescue and positively forbade further torture.

Daily the sugar appeared, the old chatter was resumed; the merry, harmless play, the gleeful antics. Life was once more worth living for the little caricature of humanity.

But again, alas! after some months had passed, and the monkey's unreasoning terror had become only a good joke to be told to new-comers, his master, his *friend*, thought that he would try the experiment just once more, and see whether it would have the old effect.

He called the confiding little fellow and handed him the box, which he took with the usual pleasure. The lid flew back, there was a stifled cry, then the box dropped from a pair of small, nerveless brown hands, and the little monkey sank in a heap at his master's feet. The torture had been applied once too often; the little sufferer was dead.

THE MOUNTAIN TORRENT.

The current brave—now swift, now slow—
Onward through rocky gorges fights its way,
Leaping at last, bright in the glow of day,
To the smooth river's bosom bordered fair
With fertile fields and happy homes of men.

THE CAPTAIN OF THE "KITTIEWINK."

In Seven Chapters.—Chapter VII.

Wreck and Rescue.

"Steady there! She's comin'!"

This exclamation from Black Tarr, who stood stolidly in the dory, brought Non to his senses.

Indeed, there was the greatest need of steadiness. Hal looked up from the bottom of the dory, but as he did so the end of a curling wave from the chop sea struck him full in the face, and for the moment blinded him. The elements seemed to be conspiring to the bitter end against the Captain of the *Kittiewink*.

The dory was now in the middle of the seething waves. Could it pass the white line of breakers at the bar, or not?

The man at the oars kept the boat in its position as firmly as he could hold it. He knew well that every third wave was the one to be dreaded. He was measuring the billows and awaiting his opportunity.

"Bail her out, quick!" he shouted to Hal, who was still bent up on the bottom of the dory, and very nearly helpless.

Black Tarr thrust his oilskin hat into Hal's hands. Hal took the sou'wester and he was not long in finding out what to do. The sea was washing from side to side in the gallant dory, and Hal washed with it. He bailed with all his might with the sou'wester.

"Now hold to her! Don't let go! *Ugh!*"

There was a roar, a mass of white-green foam, a dead weight, a staggering, a manful pull, and the deed was done; but with what slight margin!

Beyond was still water, and willing hands dragged the half-swamped but victorious dory to the firm land.

A wave had almost filled her. Hal was struck down for the third time by its force. He thought all was over then, and blindly clung to the seat. Non had shut his eyes. He, too, expected to die.

The three were pulled ashore with joyful cries. Trot got out, no one knew how—but there might well have been a lurking suspicion in his mind that no one thought of him in that crisis.

Hal staggered up the beach a few steps, and then fell exhausted. His legs could not carry him. But Black Tarr shook himself like a Newfoundland, and rushed along the shore toward the *Kittiewink*.

Hal seemed at first to be seriously hurt. Ladies bent over him as he was borne up upon the high, dry sand, and Non walked trembling by his side. Trot followed, shivering and silent.

When Phineas Scrod saw that his own shipwreck was inevitable, he plunged into the cabin to reach for something heavy. He was a man of quick expedients. He knew that if, in a lull, he could get a line to the shore, before the crushing waves exhausted him, he might be saved.

Groping about, his fingers closed upon the soapstone with the iron handle, which Mrs. Maynot had insisted that Hal should take to keep him warm at night. There was no time for a choice.

Like a cat Phin was on deck and had time to cling to the mast with both arms, before the onslaught of waters struck the *Kittiewink*.

The wave enveloped the doomed boat, turning her over on her side. Phineas for the moment was completely submerged. He needed all his muscle and all his courage to enable him to clasp the mast, as the terrible wave fell back.

The waterfall of pebbles on the beach resounded in his ears. He clung to the mast like a barnacle. Half-entangled in the rigging, he had not a fair chance to jump. Besides, the water was too deep, the rush of the returning wave too quick, the undertow too deadly.

Again the surge of the breakers overwhelmed him. A few more such onsets, and even tough old Phineas Scrod must yield.

Phin thought that he must go now. He wished it had been on the *Susan Jinks*, and not here. But he was not ashamed of his fate.

"Any way," he muttered, "I found the boys."

The receding mass of waters almost tore him away from the mast. But, with a coolness worthy of all admiration, Phin, even while under the wave, and maintaining his grip, tied the long end of the jib-halyards to the handle of the soapstone.

When the sea left him for the space of a few seconds, he landed the precious stone on shore with a mighty throw. Some one grasped it.

Again came the shock of the sea. For the third time he was overwhelmed. The fury of the rising tide was added to the torrents.

This onslaught drove the *Kittiewink* higher on the beach. At the same time it nearly stripped her. The tremendous wave receded, the white surf fell back and gathered itself anew. Had it accomplished its purpose?

Slowly Scrod emerged. He was badly bruised, but the saving rope was taut, held at one end by straining arms on the beach, at the other by the pin at the saddle of the mast.

Phineas scrambled out. It was a desperate risk. The *Kittiewink*, creaking and groaning, was left alone to its doom.

Phin Loses the Rope.

Phineas hung upon the quivering rope. He had only a few feet to swing himself along; but the weight of the waters had been almost more than he could bear. He was desperate, but exhausted.

The roll of the returning surf, the boiling of the sea at his waist, the murmuring sands, the cry of the horror-stricken people almost within reach, stunned the old sailor as he braved his fate. There was a surge and a rush, a singing as of distant music in his ears, and Phineas was twisted from the rope and hurled into the seething water.

"Seize him! Grab him!" shrieked a very loud voice. A man flung himself into the white foam. He grappled with it, and grasped a dark object desperately. Was it a senseless wreck or a breathing man? From the shores it was impossible to tell.

Then the fisherman was seen to turn a white, streaming face to the land. A line of strong men had already been formed. There was a desperate and magnificent pull.

Then the waters fell back. Phineas Scrod had been saved by his mate.

When the half-drowned and unconscious man was carried upon the shore and laid down, some of the bystanders wished to roll him over a barrel, and some to stand him on his head, while one scientific summer boarder whipped out a "Guide for all Emergencies," and opening at the wrong page, wildly prescribed chalk and milk for the sake of precipitating the salt water, and thereby saving him from the convulsions of poisoning.

It was reserved for Trot to be equal to the occasion. With anxious whines he forced his way through the crowd and cuddled at the limp man's face, licking eyes and ears and mouth with a warm tongue and piteous cries.

This method of treatment for drowning, not prescribed in any medical treatise, caused Phin to open his eyes with a low groan. Trot, encouraged by success, redoubled his attentions, snapping spitefully at any interference.

Scrod, after a few minutes of hazy remembrance, rose to his right elbow. He cast an intelligent look about him and recognized the dog. His first words were:

"Where's your master?"

Then he asked, "Are them boys safe? Save them boys!"

The crowd were deeply touched. Some one's voice was heard in a half-sob. The people parted, and a tall boy tottered before the prostrate sailor and fell upon his knees in the sand.

"O Phin!" cried Hal, with streaming eyes, "dear Phin. Thank God you're saved! Forgive me, Phin. I'll never undertake to be captain in all my life again!"

Phin looked upon his employer's son and held out his hand.

Seeing Non, looking scared in the crowd, Phineas beckoned to him. It seemed to the bystanders like a sacred family meeting.

Black Tarr had stepped back when Hal appeared.

"I'm glad my boys are safe. Now we can go home in peace. Whar's my mate?" asked Phineas. "I knowed *he's* safe. Nothin' can't drownd him."

"Here he is—he saved you," called out a voice from the crowd.

The stolid old fisherman was shoved to the front, still dripping, and with sand clinging to his wet clothes. His head was bare, and he looked as if he were ashamed of his prominence.

"No, I didn't," he stammered; "that is—we all hauled you in, but you saved yourself more'n we saved ye. Can't some un give ye a dry bit o' clothes?"

He looked around, and then lifted Phin carefully to his feet.

This practical point relieved the strain. The crowd closed upon them, and Phineas was carried off to one of the hotels in triumph. Hal followed with Trot a little way, and then turned back to the sea and the *Kittiewink*. He was now able to walk and think calmly. Many people were still watching to see the surf pound the boat to pieces. The beach was beginning to be strewn with jetsam.

Hal looked at the wreck with a feeling very much like glee. He was sorry that the boat was being destroyed, but not that the end of his boating had been reached.

His foot struck a hard substance. He stooped and picked up—his mother's soapstone. The saving rope had been untied.

Hal did not think it strange that the soapstone should be there. He had come to feel no wonder at anything the sea might do.

A small boy picked up a can of tomatoes cast up on the beach, and with great honesty brought it to Hal.

"Is that yours?" asked the boy.

"Yes," said Hal.

He mechanically put the can under his arm.

The tide had almost come, and with it a still higher wind and sea. As Hal watched, a mighty wave struck the ill-fated sloop. There was a tearing of wood; the mast was wrenched out of her body, and, entangled in sails and rigging, was carried on the crest of the breaker to the beach.

The *Kittiewink* yawned before him and drifted apart.

At this sight Hal drew a deep breath, and turned his back forever on the *Kittiewink*. With his soapstone swaying in one hand, his can of tomatoes in the other, Trot rolling in the sand to dry himself, and the honest small boy behind, Hal followed the crowd as best he might.

He now began to think of the telegram and of his anxious mother. Somehow, he thought that his father could stand the uncertainty, but his mother—might she not die under the nervous strain? Hal ran on as fast as he could.

A quarter of an hour afterward when some one had kindly ferried the shipwrecked boy and the terrier over the river into the town, Hal walked up to the telegraph office, which was situated in a large white hotel.

The men in the hall, who seemed to be staring in two ways, as if after two curiosities, withdrew their divided gaze and centred it upon our dilapidated hero.

The operator seemed to expect him. He had just sent two surprising messages; but of these Hal knew nothing. The first of the two was written in a very scrawly hand with a bad telegraph-office pen, and was much blotted by the blue ink:

to mister Henry maynot. Steamtug Sculpin, anywere on the new Englend cost. try Portland.

i found um. we Go hum tomorrer in fust Trane. Kittiewink druv ashore. phineas Scrod.

"But how can the Western Union deliver this message? Isn't its destination a little vague?" the operator had suggested, mildly. He was only too willing to do all he could for the interesting waifs.

"Thet's the comp'ny's business," said Phineas, composedly. "You send that off, young fellow, right away, and mark it paid. Here's two quarters, all I hev."

The operator started it off, and, stranger than all the strange events of that day, Mr. Maynot received the message before sundown, in Portland Harbor, where the discouraged *Sculpin* had run in for the night.

The next message was written in a precise hand.

To Doctor Parkhurst, Sweet Fern, Mass.

Don't worry. Saved by Phin and sailor. Phin saved by sailor and others. Kittiewink not saved at all. All well. Algernon.

Hal took the pen with trembling fingers, and wrote nervously:

To Mr. and Mrs. Maynot, Sweet Fern, Mass.

Kittiewink gone to pieces. Phin is a brick. Telegraph money, shoes and clothes immediately. We're all broken up. Tell mother it's all right. I'm coming right home for good. We'll start by early morning train. I guess I'm not fit to be captain of anything except a washtub. The only thing saved is Trot and us and the soapstone. Very lovingly your son, Hal.

This remarkable telegram was marked "collect." It was Hal's first telegram, and he was not in a frame of mind for counting words.

About sunset that night Hal went out alone to the long pier. He had meant to take another look at the wreck.

The evening train had brought many strange faces to the hotels and boarding-houses. Hal was diverted by the sight of the tourists, and for the moment forgot the errand on which he had come out.

As he was looking about, his eye caught sight of a lonely figure sitting on the rocks, eagerly watching the ocean. Something about the lady seemed familiar to him. He approached her timidly. The woman's travelling dress was dusty and disordered, and her face was haggard. Her eyes stared straight out upon the waters.

It was his mother, "searching the Atlantic Ocean," as Phineas had said.

Hal stood still. He was afraid to speak to her; but Trot, without any hesitation, bounded into her lap, and said enough for all three.

HERBERT D. WARD.

The End.

For the Companion.

A FRESH-WATER AQUARIUM.

Every home which has a healthy growth of domestic life welcomes new elements of beauty and household interest. Most families keep flowers and plants; and their beauty and fragrance amply repay the trouble of raising or tending them.

Many others, perhaps, would gladly keep an aquarium, not only as an adornment, but also as a means of instruction and agreeable recreation, if they were sure that they could keep its inhabitants in a healthy state. It may be that former attempts have failed, or exaggerated notions of the amount of care necessary have deterred them from venturing to keep an aquarium. I hope to show how simple an affair a fresh-water aquarium really is.

The elaborately decorative aquarium is too large a subject for this article. Nor shall I treat of tank arrangements in which it is necessary to maintain a flow of water.

An aquarium, as we shall here understand the word, is a self-sustaining collection, never requiring any other change of water than that which comes with the replacing of water which has evaporated, and which is, therefore, within the reach of every girl and boy.

A few words of explanation are necessary. Fishes breathe air as land animals do, but they extract the air from the water through their gills, absorbing the oxygen and exhaling carbonic acid. If kept in a confined water space, they soon use all the oxygen; the water becomes stale from the excess of carbonic acid, and the fish die.

All plants, on the other hand, absorb carbonic acid. They use the pure carbon to build up tissue, and they give out free oxygen. They further distil oxygen from water, taking up the hydrogen.

Now if we can establish a just balance, by growing plants in a tank which contains fish, we shall not have to change or aërate the water, for the plants and fishes will supply each other with life-giving elements.

Let the reader, then, get any kind of vessel which holds five gallons or more, and which will not contaminate water with any poisonous quality of its own. A wooden tub will do, but a glass tank is better, since it affords better means of observation.

A square glass tank is preferable to a round one, as the unequal refraction of curved glass distorts the view.

Whatever vessel is chosen, cover the bottom with about an inch of clean sand and pebbles, and pour in river, spring, artesian or well water through the nose of a watering-pot, in order not to disturb the arrangements of the pebbles and sand.

Let the water fill the tank about two-thirds full, and let it stand a few days before introducing the fish.

If you have a microscope you will soon detect a rapid growth of minute plants. A green slime will cover the pebbles and the inner surface of the glass sides.

But do not be alarmed; this growth is just what you want. The slime is made up of the plants that will supply your fish with oxygen, and enable you to keep your tank for years without any trouble.

You will see thousands of small bubbles covering these plants and ascending from them. They are oxygen bubbles.

Furthermore, this green growth will prevent an excess of light, which is highly injurious to fish. You will, however, keep one side of your glass

Digitized by Google

tank clean to facilitate observation. Tie a small sponge on a short stick, and use it exclusively to wipe the scum from this side of the tank.

Never put the tank in the sunshine, but choose a northerly aspect, with little direct light. For decorative tanks adorned with flowering plants

HOME MADE AQUARIUM.

sunlight is, of course, necessary, but our aquarium needs other management.

When dust accumulates a glass cover must be used; but it is better to remove the tank when dust must fly.

Hang a small thermometer in the water, and never let the temperature rise to sixty degrees nor sink below forty degrees. Fish stand cold better than heat; so beware of stoves in winter.

If your fish rise gasping to the surface, you will know that your aquarium is a failure. You must in that case either renew the water or aërate it; but with a little care you will never need to do either.

After plant life has flourished in your tank for a week, a microscope will show thousands of infusorial animalculæ swarming through the water. You will learn that vegetable matter in water always induces these important growths. They serve as food for the smaller fishes, and, like plants, absorb carbonic acid and give out oxygen.

Now for the inmates. As a general rule, have too few rather than too many fishes. Allow a gallon of water to every fish less than four inches in length, if your plant growth is abundant. Fishes over eight inches long require eight gallons of water each, and ten-inch fish twelve gallons apiece.

Stock moderately at first, and with the increase of plant growth your tank will support more fish.

Minnows, small perch, goldfish and German carp look well and thrive in an aquarium. They are very hardy and easily tamed. If fed regularly they soon learn to take bread crumbs out of your fingers, and allow you to stroke them gently.

Feed your fish twice a week with bread crumbs, white of egg, flies, spiders, small worms and ants; but do not give food in very cold weather, for then fish do not eat.

Always see that every fragment is eaten up, or else remove it at once; any decaying object will soon poison the water.

For the removal of crumbs, shreds of meat and any black growths use a dipping-tube—a glass tube about half an inch in diameter, and open at both ends.

To use it, place your finger on the top of the tube, and thrust it down over the object to be removed; lift up the finger, and the water will rise in the tube, carrying the object with it. Bring it to the surface, place the finger on the top again, and lift it out.

Of course evaporation will lower the surface of the water, and every week the loss in this way must be supplied.

If, from some unexplainable cause, a fish appears to be sick, remove it to a shallow vessel containing sand and pebbles covered by a few inches of water, where it will rub itself among them and perhaps recover.

The ambitious student will have several small tanks to use in studying the habits of pond and brook inhabitants. Preserve-jars serve admirably for such work. Put pebbles at the bottom of each jar, and plant a few tufts of some growing water-weed. A few hours' work with a net at any stagnant pond or ditch will put the student in possession of water-bugs of all shapes and sizes, dragon-fly, gnat and mosquito larvæ, caddis worms, polyps, newts and mollusks.

A good book on natural history will give details which may be verified easily; and these jars will not only serve as subjects of domestic diversion and interest, but will stimulate a spirit of inquiry, and bring within the view of the poorest student many of God's mysterious ways in nature.

Perhaps some readers will be disappointed because nothing has been said about decorative features. But it should be remembered that every piece of rock-work displaces a like amount of water, and makes it possible for fewer fishes to live in our primitive tank.

If the tank is large enough, some rock-work made of coke or pumice-stone, dipped several times in a thin batter of cement, may be put in. Cement the pieces together, and use your taste in making an archway, through which the fish will be glad to sport. Pockets may be made in this arch for the insertion of flower-pots. When the plants are in full bloom, set them into these pockets, and you will have a very pretty and effective piece of decoration.

This is the only way our aquarium for the beginner will submit to receive flowering plants. The constant care occasioned by the decay of parts of plants will not allow the young student to grow them in the water; but when he has successfully maintained a self-sustaining aquarium for at least six months, he may venture to introduce some aquatic plants, such as grow in ponds.

Water thyme, the yellow water-lily, and the various duck-weeds are all good tank plants. Cover their roots with pebbles, and they will flourish; but do not let them choke up the tank. They blossom in early summer, and certainly add much to the beauty of a fresh-water aquarium.

ZU BEFEHL.

LOWLINESS.

Not in the stately oak the fragrance dwelleth
Which charms the general wood,
But in the violet low whose sweetness telleth
Its unseen neighborhood.

—*Rev. J. D. Burns.*

THE PURCHASE OF IRISH LAND.

Undoubtedly the most important and far-reaching measure which has been acted upon by the British House of Commons, during its present session, has been the "Irish Land Purchase Bill," a scheme devised by the Conservative Government with the double purpose, undoubtedly, of lessening Irish discontent and of "taking the wind out of the sails" of the Liberal party.

It has occupied a large share of the time of the House for several months. Having been introduced in March, 1890, it did not reach its final stage in the Commons until the Fifteenth of June of this year.

On that day it passed its final stage, by a majority of one hundred and twenty-nine out of a total vote of three hundred and twenty-one. The bill was voted for by the Conservatives and the section of the Home Rule party which still follows the fortunes of Mr. Parnell; and was opposed by a large body of the Liberals, and by those of the Home Rulers who are led by Mr. McCarthy.

Stated broadly, this highly important measure embodies a scheme for transferring a great portion of the land in Ireland from its present landlords to its tenants and occupiers. It is not the first plan having this end in view that has passed Parliament; but it is by far the most complete, and is much more likely to be effective than preceding measures.

The bill proposes that the British Government shall advance the money needed to buy out the landed estates, and shall allow the tenants to purchase them by paying annual instalments.

In order to do this, a fund amounting to one hundred and sixty-five million dollars is to be provided from certain specified sources of national revenue.

The annual instalments to be paid by the tenant will amount to less than the annual rents he now pays; and by paying them regularly, the tenant will in forty-nine years become the absolute owner of the land he tills.

If, for instance, a tenant has been paying one hundred dollars a year in rent, he will now pay an annual instalment of eighty dollars for five years, and only seventy dollars for the remaining forty-four years; and will own the land at the end of that period.

The amounts paid in instalments will be again paid out for further purchases; so that, if the scheme is successful, much more than one hundred and sixty-five million dollars will ultimately be spent in making the occupiers of the soil also its owners.

In payment for the land, the present owners are to receive government stock bearing interest at the rate of two and three-quarters per cent., payable in not less than thirty years; and this stock may at any time be exchanged for consols.

But the bill does not compel the landlord to sell, or the tenant to buy. It only takes effect in case both agree to make the transaction.

The advances and transfers of the land will be made by the government land commission.

The bill is especially intended to convert the smaller and poorer class of farmers into owners of the land. Its operation, therefore, is to be limited to farmers who now pay a rental of two hundred and fifty dollars or less. The money advanced is to be divided between the larger and lesser tenants according to their respective numbers in any Irish county.

Such are the main features of a bill which Mr. Gladstone himself has declared to be very complicated in its details. It is intended to benefit both landlords and tenants; to give the landlords a higher interest than they now receive in the form of rent; and to enable the tenants at once to pay a less sum a year, and in the end to own their holdings.

Whether it will succeed in its purpose the future alone can reveal; but it is certain that if it does place the tenantry of Ireland in possession of the land, it will finally remove one of the heaviest burdens and grievances which the Irish have suffered for centuries.

LIFE.

If I can stop one heart from breaking,
I shall not live in vain;
If I can ease one life the aching,
Or cool one pain,
Or help one fainting robin
Into his nest again,
I shall not live in vain.

—*Emily Dickinson.*

THE SUN BECOMING SPOTTED AGAIN.

The eyes of astronomers are once more directed with renewed interest to the face of the sun, which this year has shown a decided increase in the size and number of the black spots upon its surface.

These spots are great sink-holes in the sun into which are descending vapors that are cooler and consequently darker than the surrounding surface. There is an intimate connection between the spots and certain explosions or eruptions that occur on the sun, by which vast quantities of glowing hydrogen and vaporized metals are cast up to an enormous height, as stones and ashes are thrown out by volcanoes on the earth.

The late Father Secchi, a celebrated Italian astronomer, thought that the spots were caused by the settling down of the materials thus cast forth, which had been partially cooled and condensed during their lofty flight.

Great sun-spots are frequently completely encircled by tremendous eruptions, which sometimes hurl the dazzling substance of the sun two or three hundred thousand miles high!

We must not forget in considering these startling facts, that the surface of the sun is not solid, like the crust of the earth, but probably consists of a shell of luminous and intensely heated clouds in which iron and many others of our familiar metals appear in the form of intensely hot vapors.

Within this shell, which is formed by the partial condensation resulting from exposure to the cold of outer space, just as vapor from a tea-kettle is condensed into clouds of steam when it passes out into the air, the body of the sun is believed to be composed of matter in a similar vaporous condition, but even hotter.

It is easy to see that such a body can never be entirely at rest, but the disturbances that it undergoes, which are manifested to us by the appearance of spots and eruptions, become very intense, then gradually die away and then again increase in intensity in pretty regular periods, the time from one maximum, or point of greatest intensity, to another being, on the average, about eleven years.

The latest maximum occurred in 1883 or 1884, and the latest minimum in 1889, when very few spots could be seen. Their rapid increase now indicates that the approaching maximum, which should occur about 1894, may be a memorable one.

Some of the spots that have lately appeared could be easily seen without a telescope by simply protecting the eye with a smoked glass. Any one can see the larger spots by fixing a spy-glass in such a way that it can be directed steadily at the sun while a sheet of white cardboard is placed at a distance of several inches behind the eye-piece where the image of the sun may fall upon it.

If the observation can be made through an aperture in a darkened room the effect is greatly heightened.

The question whether sun-spots exercise any influence upon the weather, and if so, what the effect is, has naturally arisen again now that the spots are coming back.

It is certain that extraordinary outbursts in the sun produce violent magnetic disturbances upon the earth, and splendid displays of the aurora borealis, or Northern lights, which are caused by atmospheric electricity.

It has also been suspected that certain destructive storms, like our Western tornadoes and the typhoons of the China Sea, are more frequent when sun-spots are most numerous, but this remains to be proved by further observations.

A fact to be kept in mind when thinking of the influence of disturbances on the sun, is that while the earth would be swallowed up completely if dropped into some of the sun-spot holes that look to us like mere specks on the solar surface, the sun, on the other hand, is so large that although its distance from us is nearly ninety-three million miles, yet only a little more than one hundred suns laid in a row, touching one another, would reach the earth.

HALF-A-CHANCE MEN.

How many men have succeeded in life to whom not a single circumstance was kind! How often we hear people say of some worthless fellow, "Ah, well, he never had half a chance!" But there are plenty of boys who have come to the front, in life's battle, who never had even a quarter of a chance.

Take Thomas Ball, the sculptor, for instance. He was but twelve years old when his father died. The poor widow—Thomas's mother, young, herself, and far from strong—had five young children. There was no more school for Thomas, after his father's death. He must go to work and help to support the rest. He got a place in a grocery store, where they gave him a dollar a week.

Not much, that—but what a difference it made to the poor little family!

From the time he was twelve, young Ball had always to work for the others, until they were all grown up.

He had little instruction, even in his art, and he never had that little until after he had earned the money to pay for it. But—he succeeded.

Then there was that other sculptor, Hiram Powers. Hiram was the eighth of nine children, and he was a very small boy when his father died; and like Ball, he had to go to work for the family. He had been born in Vermont, but his parents had moved out to Ohio in that way poor people have of roaming hither and yon after better luck.

It was in Ohio that the father died, and in Ohio that Hiram fought his youthful battle. For seven years he had charge of the wax figures in a Cincinnati Museum, and it was while there that he felt an impulse toward his future art, and tried his prentice hand at modelling in clay.

But it was not until he was thirty years old that he was at liberty to strike out for himself, and he was thirty-two before he had money enough to go to Italy. Yet he was to be the sculptor of the "Greek Slave!"

Peter Cooper, who founded the Cooper Institute, had a still harder struggle, because, as a boy, his health was of the frailest. He went to school but one year of his life, and during that year he could only go every other day. But when he was eight years old he was earning his living, by pulling hair from the skins of the rabbits his father shot, to make hat-pulp.

He had not "half a chance." It seemed almost literally that he had no chance at all. He went to New York, when he was seventeen years old, to make his fortune. He walked the streets for days before he got a place, and then apprenticed himself to a carriage-maker for five years, for his board and two dollars a month.

He had neither time nor money for what people call pleasures—but he had the pleasure of hope. While he was working for fifty cents a week, he said to himself, "If I ever get rich, I will build a place where the poor boys and girls of New York may have an education free"—and he did it.

William Hunt, the painter, used to say:

"Don't talk of what you *want* to do—DO IT!"

A SCHOOL TRAGEDY.

Every boy and girl in the world old enough to go to school might profitably lay to heart the story lately told in the English newspapers of the girl who was driven insane by the cruel taunts of her schoolmates, and fled out of the world to escape them.

Kate Hughes was an English girl, twelve years of age, upon whose birth there was a stain—not dishonorable to her. She was a good girl, of gentle and sensitive disposition, who should have been an object of respectful compassion, rather than of censure or ridicule.

The coarser-minded scholars, learning by chance the secret of which she herself had been scarcely aware, cast upon her withering glances of scorn, called her by opprobrious names, asked her insulting questions, and practised the other means of torture which thoughtless and dull children are so ingenious in using towards shy and gentle companions who cannot defend themselves.

Horrible to relate, the teacher shared this mean and groundless antipathy toward her, and visited her trifling school faults with a severity that was marked.

The poor child bore this misery for six weeks, until the torture crazed her. She had a happy home with kind relations, but the daily shame and torment that she experienced at school were beyond her strength to bear.

Being sent one day into the fields to pick some clover for a pet rabbit, she went to the track of a railroad, and placing herself in the way of an express train, was instantly killed. At the inquest it was proved that the only reason for the act was the reproaches and sneers daily cast upon her at her school.

Upon reading this sad tale many readers will condemn the school-children whose mean and cruel conduct crazed the brain of this sensitive child.

But there is hardly a school of fifty members in this country in which *some* unfortunate scholar,

Digitized by Google

for *some* personal or other peculiarity, does not suffer from the daily taunt, or the belittling nickname. This incident should enable those who inflict such pangs upon unoffending comrades to see clearly the cruelty and possible danger of such conduct.

ARAGO'S DILEMMA.

Arago, the great French scientist, was never seen with a decoration on his breast. He valued honors slightly. One evening Leverrier, the astronomer, called on him, on his way to dine with a minister. He expressed a wish to appear decorated with an order, to which he was entitled, having received the official notice of the honor, although he had not as yet the decoration itself.

"Open that drawer," said Arago, "and take whatever you want."

In that drawer were all the crosses and ribbons which kings and emperors confer.

While Arago wished above everything to promulgate science, and to make his researches useful, he did not attempt to identify himself forever with his discoveries by writing books. He had no time for writing, but contented himself with noting the results of his work in the record of the Bureau of Longitude, or announcing it verbally to the Academy.

But this distinguished man dreaded nothing more than seeming ridiculous. He was careful of his dignity even with his most intimate friends.

Eugène de Mirecourt gives an amusing account in his "Portraits et Silhouettes du XIX Siècle," of Arago's mortification at having to share a room with his friend, M. Quetelet, director of the Brussels Observatory.

They were at Louvain. When it appeared that the best accommodation that could be given them was one room with two beds, Arago seemed much disturbed. When they went to the room he paced the floor impatiently, while the Belgian astronomer watched him in astonishment and dared not prepare for bed.

Finally Arago seemed to form a desperate resolution. He exclaimed, "I ought to tell you, my dear friend, that it is impossible for me to sleep unless I have on my head —"

"What?"

"A cotton nightcap!"

"Faith, that is my own habit," replied M. Quetelet. "Many persons cover their heads so when they go to bed."

"Do you think so?" said Arago, with a sigh of relief. "But that is not all. When I sleep —"

"Well?"

"I snore!"

"Ah, so do I. I make as much noise as a pipe organ," returned the Belgian.

"Oh well, then, that is different," said Arago, much consoled. "Let us go to bed."

BLESSED RAIN.

How much is a shower of rain worth? It may be worth millions of dollars, if it comes in the right place and at the right time.

Perhaps some of our readers do not know what a powerful thing a shower of rain is. We will suppose an inch of rain to fall on the two Dakotas. The amount would be sufficient to fill a tank two miles long, a mile wide and a mile deep. In other words, more than two cubic miles of water fall in such a shower.

The weight of such a body of water is more than ten thousand million tons.

But these figures are not nearly so interesting to the farmers as are those which express the money value of a timely shower. According to the last report of the Agricultural Department of the United States a little more than six million acres of land in the Dakotas were devoted to cereal crops.

It is probable that the rain which came to these two States about the first of June, which is believed to have made secure a fine yield of grain, added a value of not less than two dollars to the production of every acre under cultivation; and this means not less than twelve million dollars in the whole.

American crops this year are almost certain to be good, all over the country and for all classes of products. European crops, on the other hand, are equally sure to be bad.

We congratulate the farmers most heartily upon their prospects. Bad times are bad in more ways than one. Not only are men pinched to meet their expenses, although they have labored hard and faithfully, but they are apt, at such times, to try to find additional reasons, besides the unkindness of Mother Earth, for the hardships they encounter.

This is as natural as it is to breathe. But when the reaper moves through teeming fields, all the wheels of industry move swiftly and noiselessly, and many of the frictions that are caused by hard times disappear.

CYNICAL.

Suwaroff, the great Russian General, affected a "saucy roughness" of speech, especially when the pettiness of small natures awoke his contempt. One day, after a review of troops, the Empress Catherine was so pleased with the precision of their movement that she distributed rewards broadcast among the officers. Suwaroff regarded the obsequious crowd in grim silence, until the Empress, turning to him, inquired:

"And you, General, do you require nothing?"

"Well, mother," he replied, "pay the rent of my lodgings!"

"Are you much in debt, then?"

"Three and a half rubles!"

The grim old soldier was wont after this to boast that the Czarina had paid his debts. The sum total was about two dollars and a half.

After a great victory over the Turks he refused to share in the spoils, and persistently declined an Arab horse which one of the generals pressed upon him.

"A pony of the Don brought me here," he said, "and a pony of the Don shall take me away."

"But," objected the other, "he will now be unequal to bearing the weight of your laurels."

"A Don pony has always carried me and my fortunes," was the sturdy response.

Certain indiscretions of speech, most offensive to his sovereign, caused him to be dismissed from the active military list. An order was also brought him directing him to leave Moscow at once.

"How much time to pack up?" he inquired.

"Four hours."

"Time and to spare," exclaimed he. "I've packed up, and beaten Turks and Poles in less than that."

Later, when he was restored to all his honors, the hollowness of court flattery again awoke his cynicism. A parasite of the great bowed low to him, one day, and Suwaroff, instead of returning the salute, made a succession of deep reverences to a statue near by.

The error was pointed out by some one who supposed him to be growing blind, and Suwaroff replied, "Never mind! there's no knowing what rank and position this statue may hold in a few days."

GLAD HE KEPT STILL.

A correspondent of the Boston *Courier* says that in 1878 he was returning from Salt Lake City to Boston. In the sleeping-car two gentlemen were awaiting the making up of their berths, and he took a seat opposite and engaged one of them in conversation—a man, who, from his dress, seemed to be a returning California miner or a frontiersman. He wore a blue underflannel in place of a white shirt, and a tie with a sailor's knot.

His intelligence greatly surprised me, and I soon concluded that I had mistaken my man.

A little later, when I had become acquainted with his travelling companion, who proved to be General McCook, I asked him with whom I had had the pleasure of conversing.

"General Sherman, of the United States Army, sir," he replied.

In due time we reached Omaha, where we were to make a short stay. General Sherman went at once to the news-stand on one side of the station, and said to the boy in charge in rather a peremptory tone, "Give me a sheet of letter paper."

I followed, and asked for the latest newspaper, and then, turning to the boy, inquired if he knew the gentleman who had preceded me.

"No, I don't," said the boy; "but he owes me two cents for that sheet of paper, and I'm going to get it, before he goes out of this station."

Meanwhile the General had gone to the telegraph office, opposite the news-stand, presumably to send a message to Washington.

"Young man," said I, "that is General Sherman."

"General Sherman!" and the boy looked at the tall man with all his eyes. "General Sherman!" he repeated. "Well, now, aint I glad I didn't ask him for them two cents!"

Undoubtedly he received the money after the General had attended to his dispatch, but I did not wait to see.

"AND WHAT, AGAIN!"

A man who has been insulted till his veins are ready to burst with anger, may sometimes be excused for expressing himself in somewhat picturesque language. A Japanese boy who works in a San Francisco club-house is reported by an exchange to have sent the following complaint to the officers of the club:

"To-day I went to the club to get my wages. The steward, Mr. John, ordered me to leave, with many repetitions of abominable oaths which a man of some honor can't restrain his passion from revolt on such a violent shower of curse. Anger was beyond my control, and involuntarily I returned my share of compliments, upon which he snatched the potato-masher and was brutal enough to give me two severe blows on my person, and inflicting quite painful injury.

"Through all this affair I was never offensive. When I went there to demand the money to which I was entitled he unjustly enjoined me to get out. That is an unreasonable movement and cannot fail to hurt a man's feelings. What! Without being satisfied with that insult made my blood boil and the veins burst with successive onslaught of ignominious swear.

"My returning was completely excusable, for to be indifferent to such an ignoble treatment denotes that one is a stranger to the sense of honor; and so he ought to have relished it with abashed submission. And what, again! The tongue,—the countenance was not capable enough to wreak his savage fury,—and then he resorted to that final step of violence as though I was a mass of clay, insensible to disgrace and pain."

ROYAL TEACHER.

Many stories are told of the Emperor Frederick of Germany, known to the people while he was Crown Prince as "Unser Fritz," which show why he was so loved, almost adored by his subjects, over whom his reign was so short.

He was always kind to the poor, the sick and the helpless, and reading of his many deeds of charity one can easily understand how, during the war of 1870, the terrified French peasants so quickly learned to feel confidence in the commander of the invading army.

One day, while he was Crown Prince, "Unser Fritz" was paying his accustomed visit to the school at Bornstedt, and talking to the children, when a telegram was handed to the schoolmaster, informing him of the severe illness of his mother.

"Go at once," said the prince, "and leave the school to me!"

Though the poor schoolmaster at first demurred, he was at last persuaded to hurry off, and "Unser Fritz" continued his instruction of the astonished but delighted scholars, until eleven o'clock, when the clergyman arrived, and relieved him from his duties as schoolmaster.

HIS OFFERING.

A Boston newspaper reports an amusing scene in an open horse-car. The conductor had collected his fares and returned to his station upon the rear platform, when one of the passengers left his seat and took another nearer the front.

The conductor, meantime, was presumably on the lookout for passengers, and when his gaze reverted to the car he saw, as he thought, a new man in one of the forward seats. He proceeded at once to collect the fare, and tapped the gentleman courteously on the shoulder.

The gentleman at once put his hand into his pocket and offered the conductor a coin.

"This is a one-cent piece," said the official.

"Yes," answered the passenger, "I know it. I paid my fare when I was in the other seat. This time I supposed you were taking up a collection."

HOME STUDY FOR VACATION Spend a part of vacation time in studying practical subjects not taught in Common Schools. A good business education will pay every one. Book-keeping, Business Forms, Arithmetic, Penmanship, Shorthand, etc., thoroughly taught by **mail** at student's **home.** No experiment; years of successful experience. Adapted to all ages and both sexes. Students from every State. Trial Lessons sent free. Write to BRYANT & STRATTON'S COLLEGE, 467 Main Street, Buffalo, N. Y.

SUMMER MUSIC
FOR SEASHORE AND COUNTRY.

POPULAR SONG COLLECTION.
Thirty-six songs. A fine collection of refined, yet popular songs, with piano accompaniment. Heavy paper, $1.00; boards, $1.25; cloth gilt, $2.00.

POPULAR DANCE COLLECTION.
No. 1, twenty-nine pieces; No. 2, twenty-five pieces. The best dance music, especially adapted for the average musician. Heavy paper, $1.00; boards, $1.25; cloth gilt, $2.00.

POPULAR PIANO COLLECTION.
No. 1, twenty-seven pieces; No. 2, twenty-four pieces. Many of the best higher-grade compositions of the day. Heavy paper, $1.00; boards, $1.25; cloth gilt, $2.00.

POPULAR FOUR HAND COLLECTION.
Twenty pieces. 128 pages. Just published. Heavy paper, $1.00; boards, $1.25; cloth gilt, $2.00.

Send postal-card for Catalogue of Choice Music Books, covering every possible want of any musician.

OLIVER DITSON COMPANY,
453-463 Washington St., Boston.

The Robt. Mitchell Furniture Co., Cincinnati, O., will pack and ship this thoroughly seasoned Oak, Cherry or Walnut Wood Mantel, with brass frame; nickel basket and ash screen; ash pan; fire brick, clay and top tile; unglazed tile facing and hearth; complete as shown, ready, and with printed directions, for setting up, to any railroad station east of the Rocky Mountains,

Freight prepaid, for $22.00,

Cash with order. When ordering ask for Mantel A, and state style of finish desired, either Black Walnut, Cherry, (natural or mahogany color) or Oak, (antique or natural.)

THE ROBT. MITCHELL FURNITURE CO.,
Established 1836. CINCINNATI, OHIO.

Our catalogue of many styles of Wood **Mantels** will be sent free to any address on receipt of eight cents for postage.

Hand-Woven Hammocks.

A Summer Offer.

Great improvements have been made in the manufacture of this Hammock. Now we offer a Close Hand-Woven Hammock, made to our order, that is the very embodiment of comfort, luxury and durability.

This is the third season we have used this Hammock. It is the best Hammock in the world at the price. It is strong, durable and handsome. Has no knots to untie. Cannot catch your buttons, and does not become stretched and baggy. We have this Hammock in two sizes:

Hammock No. 1. This is a closely-woven Hammock, with every one of its warp-threads joined to the suspension cords. Has a colored border. Extreme length 10 feet, length of body 5½ feet, width 3 feet. Will sustain four hundred pounds. Price, $1.00. **Postage and packing 35 cents** additional.

Hammock No. 2. This is also closely-woven, made from heavy 60-thread prize cotton cord. Has a colored border. Size of body 6½ x 3½ feet, extreme length 12½ feet. Will sustain eight hundred pounds. Price $1.75. **Postage and packing 45 cents** additional, or it can be sent by express and charges paid by receiver.

Special Offer for Sixty Days.

With every Hammock purchased from us during the next two months, we will include a Folding Hammock Fan. This Fan is made with russet leather handles, muslin body, and nickel-trimmed. The above combination will prove itself a useful warm-weather friend.

THE YOUTH'S COMPANION, Boston, Mass.

No Substitutes

For Royal Baking Powder. The "Royal" is shown by all tests, official, scientific, and practical, stronger, purer, and better in every way than all other Baking Powders. Its superiority is privately acknowledged by other manufacturers, and well known by all dealers.

If some grocers try to sell another baking powder in place of the "Royal," it is because of the greater profit. This of itself is good evidence of the superiority of the "Royal." To give greater profit the other must be a lower cost powder, and to cost less it must be made with cheaper and inferior materials, and thus, though selling for the same, give less value to the consumer.

LOOK with suspicion upon every attempt to palm off upon you any baking powder in place of the "Royal." There is no substitute for the "Royal."

For the Companion.

CITY LIFE FOR WORKING GIRLS.

Finding Employment.

Working in a Store.

Low Wages!

Dangers.

When the census of 1885 was taken, the number of girls and women employed in Boston as clerks, saleswomen, bundle, cash and errand girls was about four thousand three hundred. To-day these employees number over five thousand. Of these, probably about one-third are from fourteen to nineteen years old; about one-half from twenty to twenty-nine. A large proportion of them have come from country homes, and are living in lodging-houses, and taking their meals in restaurants.

For the purpose of showing country girls, and their fathers and mothers, some of the difficulties in the way of obtaining employment in a city store, and having found it, what a girl's duties are, and the conditions under which she must live, the writer has carefully looked into this phase of city life.

Asking for Employment.

Many interviews have been had with representative girls employed in most of the subdivisions of store labor allotted to young women.

Seeking Employment.

One of the first of these was a highly intelligent young woman of a little over twenty years of age who, without business experience of any sort, had two years before left a distant fishing town to find employment in Boston.

"I came alone," she said, "but my friends at home had given me the address of a woman who keeps a respectable lodging-house. To her I went as soon as I reached Boston, and then started out to find employment."

"Had you heard of any vacancy which you thought you could fill?"

"No."

"Then you had letters of introduction, I suppose, from persons of influence?"

"No, sir, I simply came to Boston as I say, and took my chances at finding something to do. The first place I went to was one of the great stores.

"I happened to be acquainted with a sales girl in that store, and went directly to her counter, and asked her to direct me to the man who hired the help. She referred me to the superintendent."

"Was there a sign up asking for help?"

"No; but I thought I was more likely to find a situation in that store than in a smaller one, so I went to the superintendent and asked him if he had a place for me as a saleswoman.

"He looked at me critically, and then asked if I had had any business experience in that line.

"I told him none whatever.

"Then he asked for references, and I gave him some from home; I had no other.

"'Come in next Monday morning at eight,' he said, 'and try what you can do.'

"Promptly at eight o'clock I was at the store on the day named. The floor-walker showed me to a counter where children's books were sold, and I began my work."

"Weren't you surprisingly fortunate in finding employment with so little delay, and at the first store you happened to visit?"

"Yes, my experience was unusual, perhaps remarkable. It took me three months, though, to learn *all* that belonged to me to do."

On the whole, this young lady impressed the writer as being exceptionally happy in what is always a trying and too often an ill-paid form of employment. Her pride both in the stock carried in her department, and in the fine class of customers it attracted, as well as her thorough identification with her employers' interests, were all pleasant to note. The life of the saleswoman perhaps appeared at its best in her testimony.

Three Months Finding a Situation.

A lady a few years older, employed in another of Boston's great stores, when asked how she obtained her situation, said:

"I went from store to store and asked for employment. I had no experience and no 'influence.' My parents had then just moved to Boston, so I was living at home. I applied at a great many places, large and small, and for at least three months received no definite encouragement.

"At the end of this time I made one more call on the superintendent of a great dry goods store; I was completely disheartened, and told him so.

"He replied, 'Don't be discouraged; you must pound and pound and *pound*.'"

"And you kept on 'pounding'?"

"Yes, sir, a little longer; and then this superintendent gave me a place in this very store. I have been here seven years."

Of the remaining workers examined, most obtained their places through the help of interested friends in or out of the stores; some in answer to advertisements.

Life in the Stores.

Before we pass to the statements with regard to wages given to girls in stores, it may be profitable to learn something of the features of store-life as given in the testimony of the young workers. Here is a typical conversation:

"You are a sales girl in one of the great stores?"

"Yes, sir."

"Will you tell me at what time you must be at the store in the morning?"

"At eight o'clock."

"What if you are not on hand then?"

"We are fined if we are a second late after the time-bell strikes."

"How are you timed?"

"Why, in this way: All the workers pass into the building by a certain entrance that leads to the cloak-room, where we must hang up our things before we go to work. At the passageway by which we enter the store as we come back from the cloak-room, is the time-keeper, who takes our number as we pass in. Every worker is numbered, and knows her number."

Giving her Number.

"You call your number, and the time-keeper checks it off?"

"Yes, or else we drop what is called a time-card in a box. Different stores have different ways of keeping this account."

"Well, what system is followed in fining?"

"Different systems. In some stores they'll fine you twenty-five cents anyway, and more I suppose according to the time you lose. In others they won't dock you more than ten cents, unless you lose more than an hour; then you'll perhaps lose pay for a quarter of a day or a half, according to circumstances. Or again, in some places they just reprimand you, and after you have been spoken to a certain number of times, you are discharged."

"Now after a sales girl gets in the store, what follows?"

"Why, she uncovers the goods that were left covered the night before,—sometimes the 'cash girls' help, and sometimes they don't,—and then, as a general thing, she dusts off her part of the stock."

"Her part of the stock?"

"Why, it's this way: The great stores, you know, are divided up into departments, such as the linen department, or the cloak department. Each department is under the charge of a head, who is quite often a young woman. A department may have a good many sales girls in it, and each girl keeps to a certain part of the counter, and sells from and looks after a certain definite portion of the stock."

"Well?"

"The customers begin to come in soon after uncovering the goods—sometimes before. Every sales girl has a book in which she enters her sales as she makes them."

"The head of the counter has general charge of the counter, and looks to the conduct of her associates. She has a responsible place. I wouldn't like it; there's too much care about it."

"The head of a department, I suppose, has similar duties, only more extensive?"

"I think so; yes, sir."

"You say the stores mostly open at 8 A. M.—when do they close?"

"Well, from the middle of September to January 1st, at 5.45 P.M. to 6 P.M., sometimes later during the holiday 'rush.' From January 1st to September 15th, some stores close at 5 P.M. Most, I think, at 5.45 P.M. or 6 P.M., and on Saturdays, in summer, from about June 15th to September 15th at 1 P.M. o'clock."

"How about vacations?"

"Some stores don't give any, though in such stores, if you want to take a vacation and are willing to pay for it, you often can do so. Others give a week's vacation. I know of one firm that gives all the help a two weeks' vacation, and pays for it in advance, too. I have not heard of any other firm being so generous."

"And holidays?"

"They are generally given. I know one great store that deducts holidays from the weekly pay of the girls—except for Christmas. I think, though, that the firms generally give them half the holidays, and pay for the day as they do for other days."

The statements here given were confirmed by further inquiry.

Wages Paid the Girls.

Having given one or two glimpses of the inner life of the great stores, we turn to the consideration of the wages paid the girls. The usual wages of an errand, or so-called "cash" girl of fourteen years or upward, appears to be from $2.00 to $2.25 a week.

Bundle and stock girls—ordinarily from fifteen to sixteen years of age—receive from $2.50 to $3.00 weekly. A head bundle girl or very capable stock girl can sometimes earn $3.50 or, in exceptional cases, perhaps $4.00 a week.

One young woman of the writer's acquaintance, who began work as an errand and stock girl when fourteen, and became a sales girl when about sixteen years of age, continued to sell for two years later upon stock girl wages. Then, in answer to repeated solicitation the sum of fifty cents a week was added to her pay. She is now, at eighteen, a faithful sales girl at $4.00 a week with no assured hope of an increase. It seems probable that similar cases are numerous.

The girl cashiers commonly get from $4.00 to $6.00 a week.

The Restaurant.

A thoroughly competent bookkeeper may hope to get $10.00 weekly, though many work for less.

General office work in the lower grades will bring perhaps $4.00 to $6.00 a week.

A girl of from sixteen to eighteen years of age, and wholly without business experience, who enters an average store as a sales girl, should not expect to get over $3.50 or $4.00 a week the first year. If a dollar a week is added each year, for three years thereafter, her pay remaining nearly stationary afterward, she will do better, we judge, than do the great majority of sales girls.

An exceptionally competent worker may sometimes, after three to four years of faithful service, at some stores obtain $8.00 a week. Heads of counters are said sometimes to receive this sum, and sometimes $9.00 weekly.

Yet too much hope should not be built upon these latter figures. The writer knows an American girl of about twenty, of very pleasing appearance and address, who after seven years of faithful service begun as a cash girl, fills to-day in one of Boston's large stores the place of head of a counter; she instructs new help, and is practically the buyer for her section of a department; and is paid just $5.50 a week, with little hope of an increase. Her case, undoubtedly, has many parallels.

In some and probably in all of the stores, $10.00 is considered very good average weekly pay for heads of departments, if they are women.

Girls in departments like the millinery and suit divisions—requiring workers of especial taste and judgment—receive better pay than most other employees. A thoroughly competent saleswoman in the suit department may, after years of service, earn $10.00 to $11.00 a week. A head of department in millinery and suits sometimes earns $12.00, and in exceptional instances $15.00 weekly.

We hear of a woman who, having served a great dry goods house twenty-five years, now acts as buyer for her department at a salary of $25.00 a week; her case appears to stand almost alone.

It is probably not unjust to say that the vast majority of sales girls in any line, after three and perhaps four years of service, fall short of earning $6.50 weekly. Seven years ago, the average weekly earnings of saleswomen for all terms of service was $5.75.

How the Girls Live.

After considering the wages paid, let us see whether the girls are able to live comfortably on the salaries they receive.

A well-furnished room in a respectable neighborhood, large enough to accommodate two persons, will cost if in the second or third stories, including furnace-heat, gas and the use of an adjoining bath-room, $4.00 to $5.50 a week. To this 50 cents will probably be added if two persons occupy it.

A very much smaller room, accommodating two occupants, will cost from $3.00 to $3.50 weekly. The "side room"—a common feature of the Boston lodging-house, and often not larger than a rather roomy closet—has no register, grate or stove, but derives whatever heat it receives from the general heat of the house, or as the phrase invariably goes, "from the hall." It is meagrely furnished. Such a room for one person—and only one could with any comfort occupy it—usually costs, with light and water privileges, $2.00 to $2.50 a week.

Very small rooms of the sort can occasionally be had for $1.50 to $1.75.

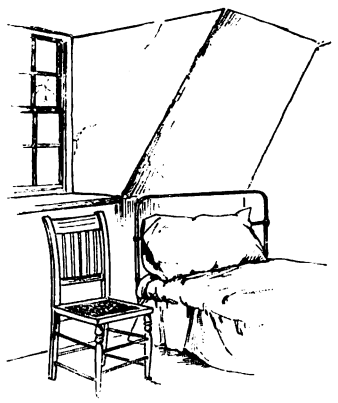
In some cases the lodger is expected to care herself, in part at least, for the proper order of her room. Some lodging-houses offer to guests the use of a small parlor or reception room. Others, perhaps most, are forced to utilize all their available space for lodgings. In such cases the lodger has, of course, no place for receiving visitors but her own apartment.

The associations of some of the low-priced lodging-houses are all that could be wished. We cannot say as much for others. Care is nowhere more necessary than in the selection of lodgings.

The cost of board at respectable restaurants that rely on the support of persons of limited means, will be $3.00 per week of twenty-one meals.

To meet in part, at least, the call for some place where young women working on very small pay may live under good, wholesome influences, the Young Women's Christian Association of Boston was formed.

In the building supervised by this Association, young women may board for three dollars and twenty-five cents weekly, receiving for this sum,



Digitized by Google

beside meals, a pleasant room with light and heat, the privilege of a reasonable amount of washing and the use of the Association's library and its pleasant reception room.

The Association is ever ready to assist with kindly advice all who come to it, and the writer knows of no better suggestion to offer to the young woman venturing alone and friendless into city life than this: that she go first to the Young Women's Christian Association.

Starved Lives.

We will suppose that a girl earning a salary of six dollars a week—subject to deduction through occasional "docking" from absences enforced by illness or fatigue—hires a "side room" for two dollars a week, and takes her meals at one of the cheap restaurants at three dollars a week. The reader can figure out how much will be left her

Attic Bedroom.

for such necessities as washing and dress, to say nothing of occasional recreation or inevitable doctor's bills.

When we remember that the majority of sales girls (not to mention the workers in the "primary grades" of store life) can only earn—at least during their first and second year in an average store—a weekly sum of hardly five dollars, we shall see that unless these girls restrict their food to mere bread and water, at a cost of ten or twelve cents a day, they simply *cannot* live, in Boston, upon their salaries.

The salary of the store girl then must be eked out by the help of parents, guardians, or interested relatives or friends. Heaven help the young woman whose only support is what she can earn as an average Boston sales girl! Here the door is opened to dangerous temptation.

It is said that the moral tone of the stores as a whole is low. A young Boston sales girl, shocked by a recent experience, is quoted by her motherly confidante as declaring a short time ago that "One *can't* be a good girl and stay in a store."

This is not true. The lives of many noble girls in our stores confute it. Yet enough truth remains in the charge, to cause solicitude and care on the part of the true friends of girls who contemplate entering upon city work, and encountering the dangers of city life.

The writer has no *data* whatever for asserting that young women retain their places under conditions that no self-respecting girl would accept. That responsible persons in stores sometimes connive at evil ways to enable poorly paid help to dress in a becoming manner, has been repeatedly affirmed. We have no reason to suppose that this is true. But we do certainly know that store life, of itself, necessitates no stronger moral temptation to girls than is found in the world of work at large. The danger lies in the meagre wages, and the starved, lonely lives, that many poor country girls, who come as strangers to our city, must encounter.

Is Life in the Store a Hard One?

The reader will probably inquire whether the life of a girl in a store is a hard one. The average pay is unquestionably too small, but the work itself does not seem to be more exacting than good work requires anywhere. Average store life does not compare in the severity of its requirements with the average life of a coat-shop under the contract system.

Repeated visits to the stores, great and small, and extended conversations with workers, together with the very considerable commercial experience of the writer, do not justify him in asserting—leaving out the meagreness of wages—that any very grave abuses exist in the business management of Boston stores as a whole.

Except in a few cases the sales girl of to-day is allowed to sit down when she is not busy. Most stores give regular holidays, and many of them give vacations.

As to the advantage or disadvantage of entering a small store rather than a large one, it is to be said that the working hours of most small stores are generally longer than in the large stores, and the duties more miscellaneous.

Many small stores are, however, less exacting in their requirements, and the relations between proprietors and employees are more cordial and sympathetic than it is possible for them to be in great establishments.

The prospect of advancement in small stores is perhaps better, on the average, than it can be in the larger ones. Much depends as to this on particular circumstances.

While it is true that to secure any sort of a situation the average girl applicant must "pound and pound and pound," it is also certain that after a situation is secured, any advance whatever in salary is very slow, commonly very small, and obtained as a rule only upon urgent request, many times repeated. The would-be store-worker and her advisers should look this fact in the face.

What a Girl Seeking Employment Should Do.

The novice, when applying for store-work, should bring references with her. They are always required. If possible, she should obtain a recommendation from some one already holding a responsible position in the store where the application is made, or from men of influence well known to the stores at large.

Failing of this, let her not attempt as a stranger to enter city life until her lodging-place is properly chosen; and then let her have money enough laid aside to support herself until she finds a situation. She may be forced to wait long for it.

New help is commonly taken on during the last two weeks of December to care for the holiday "rush." The chance for a place is better, perhaps, at this season than at any other, though the dull season immediately follows when most of the new help is discharged. Retention in place is surest when a situation is obtained in the spring or fall rather than during the crush of the holidays.

We must urge upon every girl who feels impelled to try her chances in city store-work, to weigh carefully the serious character of such an experience, and to inquire with due diligence whether she cannot do as well or better at home.

If at last—with the approval of her own carefully formed judgment, and the consent of her best friends—she seeks any of our cities for work, she may be assured that only slow-coming, meagre success at the most will be the result.

FLETCHER OSGOOD.

For the Companion.

HOW TO BUILD A CANOE.

A practical answer to the question, "How can I get a canoe?" may be welcome to boys who are perhaps planning a cruise to take place during the coming summer, and are in uncertainty concerning the most essential detail of the whole matter.

There is a great difference in price between a canoe made by a regular manufacturer and a home-made boat of the same kind. In other respects, the difference is often very small.

It is pleasant to own one of those polished, varnished, brass-rigged craft, if one can afford to buy one. But one may have as much enjoyment in a less pretentious canoe; and if one has built it with one's own hands, its value to him is increased tenfold.

The directions which I shall give can be followed readily by a boy who has any mechanical knack, and the cost will be slight. Any "fancy work" desired may be added. My instructions will be with a view to simplicity, durability and economy.

The first step is to make the bow and stern-posts. Procure two blocks of ash or oak, one and one-half inches thick and sixteen inches square. Draw the design as shown in Fig. 1—the dotted lines in each figure merely show the original shape of the blocks—and saw it out.

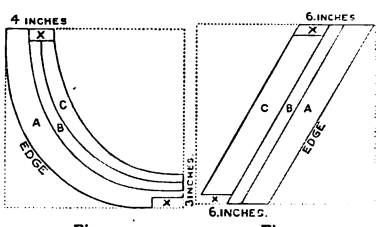


Fig. 1.

Fig. 2.

The first part, A, is merely shaved off to a moderately sharp edge all the way from top to bottom. The space B must be grooved out to the depth of one-eighth of an inch, to make a place upon which to tack the canvas; and the space C must be just as much deeper than B as the thickness of the strips which are to be tacked on. A uniformity of surface is thus preserved.

The width of the bow-posts should be four inches at the top and three at the bottom.

The stern-post (Fig. 2) is practically the same. The outer end, A, is shaved off to an edge. The spaces B and C are dug out precisely as in the bow-post. The width of the stern-post should be six inches.

The spaces X at the top of the bow and stern-posts are cut out on each side to receive the gunwales; and the spaces X at the bottom are to receive the extremities of the keel-board.

Fig. 3.

Fig. 3 is the upper surface view of the bow-post, showing how it is shaved off to a point, and showing the cuts made for the gunwales. The stern-post is nearly the same.

The keel-board (Fig. 4) should be one and one-quarter inches thick, fourteen feet long, and eight inches across at the widest part. Of course it will taper at each end to one and one-half

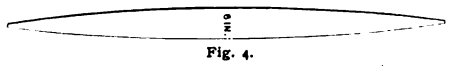

Fig. 4.

inches, and will fit exactly into the spaces cut to receive it in the bow and stern-posts. Fig. 5 shows the keel in position.

We now come to the molding-boards. Cut two, as shown in Fig. 6. They should be one inch thick and twenty-four inches wide at the widest part.

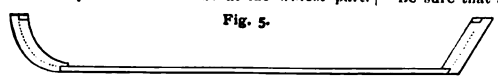

Fig. 5.

The spaces A, A, A are cut to receive the gunwales and the top strip. B is cut to receive the keel-board; and the notches C, C are for the side strips. Do not put the side strips too close together.

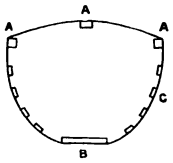

Fig. 6.

Place the molding-boards upright on the keel-board, and screw them on firmly from beneath. Place them four feet apart.

As the molding-boards regulate the location of the cockpit, they must be placed not in a central position, but slightly forward, so that the back of the cockpit, where the paddler sits in propelling the boat, will be in the very centre of the canoe.

The gunwales should be one and one-eighth inches square, except at the ends, where they will taper off; and when these are fastened in place, from bow-post to stern-post on each side, fitting, of course, into the notches cut in the molding-boards to receive them, a crude outline of the canoe will appear.

Extend two heavy strips along the very centre of the deck, from the molding-boards each way to bow and stern-posts. This forms a slight ridge and makes the boat shed the rain.

Fig. 7 is a surface view of the canoe, as it now appears; A, A, A are the gunwales, B the keel-board, D, D the bow and stern-posts. The dotted lines mark the deck strips.

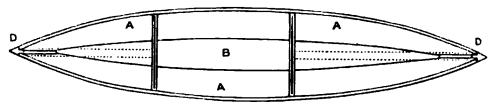

Fig. 7.

The framework of strips, which should be one-third of an inch thick, can now be stretched on both sides of the canoe, running from bow-post to stern-post, two or three inches apart.

The material used up to this point should be white pine or ash. The ribs, which must now be firmly riveted with clinch nails to the strips, running from gunwale to gunwale, one foot apart, should be, if possible, of swamp willow. Soak them previously for forty-eight hours and peel off all the bark. Put them on while wet, so that they will dry in position. Barrel hoops will serve almost as well.

Fig. 8 shows the construction of the cockpit; it is a bird's-eye view of the upper deck. A, A are the gunwales; B, B are the molding-boards; C, C are two strips, one and one-half inches square, which are fastened across the molding-boards to form a frame for the combing. D, D are two blocks which serve as braces and add strength to the framework. H, H are the strips running fore and aft to ridge the deck.

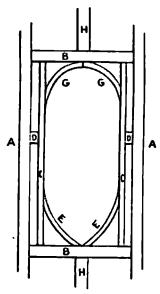

Fig. 8.

The combing should come to a point, so that any water which breaks over the deck may be shed and thrown to one side. E, E and G, G are the strips which shape the combing. They should be sawn from blocks and placed in position as shown in the sketch.

Now, before the combing is put in place, the most important and difficult work of all must be done—namely, the stretching on of the canvas. Get three lengths of canvas, each piece the length of the canoe. Place two of them parallel, and sew them together firmly.

Turn the canoe keel upward, and tack the seam of the canvas firmly along the keel-board. Be sure that the seam takes up the exact centre, for the keel must be fastened directly over the seam to prevent leakage.

There is only one way to stretch on the canvas. Start in the centre of the canoe; fasten and stretch from keel-board to gunwale, and work both ways, toward the bow and toward the stern. Fasten the canvas to the spaces cut to receive it in the bow and stern-posts.

The deck covering is put on much more easily. Fasten to the gunwale all around. Then cut out the space for the cockpit, and tack the edges tightly over the framework. The cockpit will appear thus:

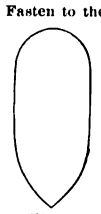

Fig. 9.

The combing should be of ash, and one-quarter of an inch by three inches. Soak it so that it will bend, and then fasten tightly around the cockpit, so that it will project two inches above the deck.

If hatches are wanted, they can be made easily by cutting square blocks fore and aft through the centre of the deck, fitting in a framework, and making covers to fit tightly.

Now put on a two-inch keel with good screws, tack narrow strips, "ovaled," on the outer side, over the canvas seams on the gunwales, and put copper sheeting on the bow and stern-posts, extending from the gunwale to keel, and covering the rough edges of the canvas. Apply over all a mixed coat of linseed oil and yellow ochre. This fills up the pores of the canvas, and prepares the way for the paint. One coat of paint will do, if well laid on. Make a soft cushion to sit on and a comfortable rest to place behind your back.

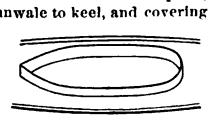

Fig. 10.

Be sure that all parts of the work are fastened securely.

When you are stretching the gunwales from bow to stern around the molding-boards, bind them tightly at the ends with strong cord, in addition to nails and glue.

The lumber needed will cost three or four dollars. The canvas, which should be eight-ounce on top and twelve-ounce on the sides, may cost a dollar and a half or two dollars. The paint and copper will cost two dollars more.

Thus for seven or eight dollars one may have a canoe that will equal in speed any built.

You can make a paddle to suit yourself. There are many varieties. This shape is probably the best:

Fig. 11.

I have seen very many excellent canoes which were built on this plan. If directions are followed closely, the result must be satisfactory; and I hope that this little paper may lead to many a pleasant cruise during the coming summer.

WILLIAM MURRAY GRAYDON.

For the Companion.

TOO BIG.

Fourteen years old, and already taller than her mother!

She feels, as she sits side-saddle fashion on the piazza railing and gazes piteously at the hem of a dress, new this spring, which has just had to be let down half an inch, that life is hardly worth living. She wishes she were four or forty years old instead of fourteen.

If she were four she could play all the time, and scramble about anywhere. Then, when she ran, and tumbled, and shouted, and got bumps, and bounced, and sat on the ground to play games, and got her clothes dirty and her hair tousled, people would only laugh and say, "How healthy and happy the little darling is! What a pleasure to see her so strong and active!"

If she were forty, she could not do any of these things, of course; but then she supposes that in that case she would not want to.

But she is fourteen, looks sixteen, and feels—she tells herself desperately—not a week older than ten.

She is an out-of-doors girl and wants to race and romp in the open air. She could have *such* a good time this summer, if only people wouldn't keep interfering with her. But they can't seem to let her alone.

"My dear! You really must *not* climb up Mrs. Jones's wood-shed roof again, nor run along the back fences whooping like an Indian. You are too old for such things."

And it is of no use, she reflects sadly, to explain that you have to do those things when you play Barbaree. They only say, "Then you mustn't play Barbaree; you must find some quieter game;" and they come back again to that terrible phrase, "too old."

"Too old!" She kicks a stray stick viciously across the piazza. "Too big," they mean. Nobody objects to letting her friends Polly and Patty play Barbaree, and they are only a few months younger than she is.

But Polly and Patty are short, and that makes all the difference. People think that they are little girls, and that she is a young lady.

She is not a young lady! She is still a little girl,—little, little, little, no matter how tall she is,—just a little girl and not a young lady at all; nor even a miss.

How dreadful it is to be called "Miss Edith!" But people are beginning to do it, and really she can't wonder, with such long dresses as she has to wear now.

They will want to make her do her hair up next! She will not submit to that, however; she will cut it off first. She made up her mind long ago to wear it hanging in a braid until she is nineteen and graduates, and she means to stick to her resolution, although she knows it will be very difficult to do so.

Dresses reaching to the tops of her boots, and an outside jacket of a "lady's size," and much too grown-up and stylish in consequence! It is simply cruel!

If only they would let her dress like the other girls it would be all right, she knows. Of course she would look gawky, but she wouldn't mind that; she wouldn't care if she was as ugly as a bean-pole with a pumpkin on top, as her brother says she would be.

She wants to climb wood-sheds and apple-trees for *years* to come, and be called plain Edith, and play with the boys as if she were one of them, and go up into the haymow to talk secrets with her intimate friends.

She wants to "stump" the others to walk on the beams of the barn, and swing, and paddle about the pond in a leaky old punt, and run races, and whistle, and sit on fence-posts, and hunt birds' nests, and fish off the bridge, and never, never, never have to think about clothes or elegant behavior.

Just then her mother calls, and she flounces her five feet four of vigorous young womanhood resentfully into the house, where the little-girl heart within it is greatly cheered and comforted by a piece of spicy gingerbread hot from the oven, and a refreshing glass of cold milk.

After this efficient form of consolation she does not find it difficult to forget her sorrows, curled up among a pile of cushions in a corner, following the fortunes of Mr. Phineas Fogg in that fascinating romance, "Around the World in Eighty Days."

SUGGESTIONS

BODILY CHANGES.

Very carefully compare your height in the morning and in the evening for several days. Explain any difference.

Compare—for several days—your weight before breakfast with your weight just before retiring. Explain.

About what weight of food and drink do you add to your body daily?

Why do you not gain an equal weight?

Does a change of your work change the above results?

For the Companion.

A TENDER HEART.

I met an old and withered man,
With beard as white as snow;
Adown his cheeks the tear-drops ran,
Feeble his step and slow.
So thin his face, so starved his mien,
I offered him a crust;
Never such famine had I seen
As made his cheeks like dust.

"I beg you eat a bit of this,"
I said in pleading tones.
"So small a piece I shall not miss,
And you are naught but bones."
"I cannot taste," he said, "of bread
That has been raised with leaven,
Since they cut off Queen Mary's head
In Fifteen eighty-seven."

"At least," I urged, "an oyster take,
'Twill easily digest;
Of this a frugal meal to make
Surely were for the best."
"To offer oysters is in vain;
I cannot eat them more,
Through grief that Cæsar should be slain
In B. C. Forty-four."

"Old man," I cried, "at least be moved
A cup of tea to taste.
Often its virtues have been proved
When strength has run to waste."
"No more I comfort take," he saith,
"In mild, inspiring tea,
Since I was told Elizabeth
Died Sixteen hundred three."

I heaved a sigh, I wiped a tear,
I took him by the hand.
"You need some wine," I urged, in fear
That he was quite unmanned.
"You do not know, alas!" moaned he,
"I cannot taste of wine
For Catherine de' Medici
Died Fifteen eighty-nine."

Desperate I tried one viand else.
"There is ice-cream," I said;
"It nourishes as well as melts,
And cannot harm the dead."
"I cannot eat ice-cream," he sighed,
"For in my throat it sticks
Since I have learned Columbus died
In Fifteen hundred six."

"My heart so tender is," he said,
"It quivers through and through
To think Mohammed should be dead
Six hundred thirty-two.
Then Shakespeare died Sixteen sixteen;
Mæcenas Eight B. C.;
And since these figures I have seen,
What's eating now to me?"

I left him then and went my way,
Weeping and moaning much,
It really did no good to stay,
Though he my heart did touch.
But as I munch my buttered toast
Or eat cold mutton stew,
His image haunts me like a ghost
Making his sad ado!

ARLO BATES.

For the Companion.

THE LITTLE THINGS.

John Jefferson came to the city to visit his brother George. The brothers were middle-aged men, and though they met but seldom, were singularly fond of each other.

"Yes," said the farmer, as they walked down the street together, "my sons Tom and Hugh are, as you know, honorable and religious men. So far God has been good to me. I prayed for their conversion from the day of their birth, and I think He heard me."

"He has promised to hear prayer," said his brother, gently. "But what is it, then, that troubles you?"

"Nothing about which I can pray with confidence; for somehow I cannot carry trifles to God. My boy, Tom, is in a business for which he is not fitted. He is unsuccessful and discontented. He would make his way in trade, but no chance opens. Hugh has married a woman of peculiar temper. She is irritable, and complains incessantly. His home is wretched. Of course these things give me anxiety. But what can I do? There is no place to turn for help."

They had reached the door of his brother's office. "Come in," he said, "and wait awhile. I must attend to some business, and then we will talk of this matter."

George was an architect. He had just designed a large and beautiful dwelling, and in a few moments he laid the sketch of it before his brother, who admired the stately front and delicate, refined decorations. "It is fit for a prince to live in!" he said. "What delight it must be to form a conception of such a beautiful building, and then make it real!"

George's assistants were busy with drawing up the specifications for the house, to be given to the builders. They appealed to him at every point.

"Of what size shall this waste-pipe be, sir?" queried one.

"What will be the dimensions of the pantry sink, sir?" said another.

"Of what wood shall the dado in the dining-room be?" asked a third.

An hour later, when the brothers were alone, the farmer said: "Do you look after all the petty details of the building, George? I supposed the grand plan was yours, but that you personally entrusted the minor details to subordinates."

"And yet the strength and beauty of the whole building depends on my attention to the details," George said. "Until the house is finished I oversee everything. That which seems to us the most petty may be one of the most important parts of the building." He was silent for a moment, and then said, earnestly:

"Do you not think, John, that the great Architect who plans a human life knows and cares for each incident in it, however small? Why not carry your little needs as well as your great troubles to Him? His wisdom planned the foot of a fly as well as the courses of the sun. I cannot believe that He will fail you, no matter how petty the anxiety for which you ask His help."

As the farmer went back to his home that day, he had a new view of the fatherhood of God, and felt in his heart a great security and peace. He would carry all his troubles, small and great, to the one Helper, and leave them there. Had he not been bidden to receive the kingdom of heaven as a little child? And would not a child carry all its pains and longings and hopes to its Father?

MARIE ANTOINETTE AND MOZART.

Among the many incidents recorded in the various memoirs of Marie Antoinette, one which seems to be eminently characteristic of the simplicity and ingenuousness of her nature, and which has also the additional interest of being connected with her early childhood, is especially pathetic. It will be remembered that Mozart, when he was a child, made a visit to the Austrian Court, and played before the Empress Maria Theresa. So favorably impressed was the great Queen, both with his ability as a musician, and his attractiveness as a child, that she personally invited him to prolong his stay at the court.

Her daughter Caroline, who afterward became the accomplished and beautiful Queen of Naples, possessed most excellent musical talent; and she and the boy musician were mutually delighted in their performances on the piano.

Marie Antoinette, younger than her sister Caroline, was of course present at all these musical recreations, although she took no part in them. But her beauty and vivacity captivated the boy musician.

With the enthusiasm and confidence of childhood, the two soon grew into each other's esteem, and after a few days' acquaintance became firm friends. Marie Antoinette insisted that Mozart should see all the interesting sights of court life, and he in turn was anxious that she should become acquainted with all the details of his travels and musical career.

Thus, many days were passed, when, upon the morning which was to terminate his visit at the Austrian Court, Mozart suddenly turned to his little friend and said, "When I am a grown man, Marie Antoinette, I intend to come back here and marry you."

The little representative of one of the oldest houses of royalty in Europe drew herself up with great dignity, and replied, "Are you a King? I cannot marry you. I am a Princess, and when I marry, I must marry a King, and when I leave Mamma's Court, I shall go to the court of a King."

They never met again, but as years passed, Mozart continued to grow into popular favor. His melodies, so well-known for their sweetness and simplicity, became the delight of the musical world. Marie Antoinette, then Queen of France, was greatly interested in his growing success and reputation.

PANAMA HATS.

Panama hats are so named from the circumstance of their being shipped from the port of Panama. They are manufactured in Ecuador and the neighboring states. The material used is the fibre of the leaf of the screw pine, which is related to the palms. It grows only on the slopes of the Andes. The tree is described as having no trunk. The leaves are on slender stems that spring from the ground. They are about two feet long, fan-shaped, and four-parted. Each of the segments is ten-cleft, so that when the leaf is folded, as in the bud, there are eighty layers.

The fibre of these leaves is finely plaited, and each hat consists of a single piece of work. The plaiting of the hats is a slow and tiresome process. Coarse hats may be finished in two or three days, but the fine ones take as many months. The work is begun at the crown and finished at the brim. The hat is made on a block, which is placed on the knees, and has to be constantly pressed with the breast.

About two hundred thousand dozens of these hats are made every year. The price varies according to the firmness of the material and the quality of the work. They are valued at from five to one hundred dollars.

Panama hats are much prized for wear in the tropics, because of their lightness and flexibility. They may be rolled up and put into the pocket without injury. In the rainy season they are apt to get black, but by washing them with soap and water, treating them with lime juice, or any similar acid, and exposing them to the sun, their whiteness is easily restored.

In Australia there is manufactured a hat which is said to resemble the Panama hat very closely. It is made from the unexpanded leaves of a native plant, which are immersed in boiling water, and then dried. The fibre obtained by this treatment is plaited as in South America.

Under the name of "Chattahs," a kind of umbrella hat, or sunshade, is made in India of the leaves of a palm, or of the plantain leaf. Chattahs are worn by the plowmen, cowkeepers and coolies of Bengal and Assam.

FLORA.

One of the most pathetic incidents to be read in dog biography is given by Doctor Dio Lewis, and again quoted in his recent "Life." He was travelling in the West, and came to a ranch, the owner of which showed him a shepherd dog which he said he would not sell for five hundred dollars. She had at that time four young puppies. While they were admiring the little mother and her babies, on the night of their arrival, the assistant herder came in to say that there were more than twenty sheep missing.

Two male dogs, both larger than the little mother, were standing about, but the herder said neither Tom nor Dick would find them; Flora must go. It was urged by the assistant that her foot was sore, that she had been hard at work all day, was nearly worn out, and must give her puppies their supper. The master insisted that she must go.

The sun was setting, and there was no time to lose. Flora was called, and told to hunt for lost sheep, while her master pointed to the great forest, through the edge of which they had just passed. She raised her head, but seemed very loath to leave her babies. The master called sharply to her. She rose, looked tired and low-spirited, and with head and tail down, trotted wearily off toward the forest.

"That is too bad," said I.

"Oh, she'll be right back," was the assured answer. "She's lightning on stray sheep."

The next morning, I went over to learn whether Flora had found the strays. While we were speaking, the sheep returned, driven by the little dog, who did not raise her head nor wag her tail, even when spoken to, but crawled to her puppies, and lay down by them. She had been out all night, and scarcely able to notice her babies, she fell asleep.

How often that scene comes back to me! The vast, gloomy forest, and that little creature with the sore foot and her heart crying for her babies, limping and creeping about in the wild cañons, all through the long, dark hours, finding and gathering in the lost sheep.

For the Companion.

ON AN ANTIQUE LAMP.

Deft was the patient artisan
Who moulded thee in such a way
That thou hast long outlasted man,
Thy brother, built of frailer clay.

Dim ages since for mortal eyes
The purple dark thou didst illume;
But they, these fleeting centuries,
Have known the light beyond the tomb.

Forever quenched thy flaring fire,
And yet, to us, thou seem'st to cast
The ghost-flame of some dead desire
From out the vistas of the past.

CLINTON SCOLLARD.

DINNER-PAILS AT SCHOOL.

Cold dinners are not in high favor among grown people, as a steady diet, but one of our contributors looks back with great pleasure to the time when he "carried his dinner" daily, and no doubt many of his readers will share his feeling. Every boy and girl, or at least one from each family, he says, came to the little country schoolhouse bringing a dinner-pail or basket, varying in size according to the number of children who were to partake of its contents.

The appetite of a country-bred boy or girl is usually something to excite a dyspeptic's envy. Nearly every pupil in our school visited his dinner-pail at recess, and it was wonderful with what address some of the boys could play shinny or base-ball and eat steadily during the progress of the game.

A modern base-ball catcher might not think it possible to catch a swift-flying ball with one hand while holding a quarter of a pie or a huge "twister" of a doughnut in the other, but I have seen schoolboys accomplish this feat with the utmost ease and grace.

As the dinner-pail was kept under the desk, it sometimes happened that a boy would be overcome with hunger between recess and noon, or between the opening of the school and recess, and would slyly extract a piece of pie or a chunk of bread and endeavor to dispose of it in secret behind his books.

If the culprit was detected he was sometimes made to come forward, dinner-pail in hand, and eat its entire contents while standing before the grinning, giggling school. This was a trying ordeal, and I have seen boys who were almost men in size break down and cry and sob under it, while their unsympathetic schoolmates laughed immoderately.

At noon there was always a grand scramble for pails and baskets. In the spring and summer we raced out to the woods and sat in little groups under the trees, or on the banks of a pretty stream behind the schoolhouse; but in winter we gathered in a great circle around the schoolroom stove, and, with much joking and laughter, put out of sight the contents of our pails, often trading a piece of pie for a slice of gingerbread, or a big red apple for a frosted cookie.

Then, if it was too stormy or cold to play out of doors, what pandemonium there would be in that little schoolroom until the noon hour was done! Such racing and shouting! Few teachers ever tried to maintain order during this hour.

They felt, perhaps, that it would be impossible, or they may have been as much in sympathy with us as was one of our teachers, a good-natured, easy-going, elderly woman, with strong nerves, who would sit and knit in the midst of our deafening noise, saying simply that she "loved to see us enjoy ourselves."

Some of these boys and girls, who are rich men and women now, have been heard to say that they were happier in those days than they have ever been since.

NOT INVITED.

A semi-tragic incident occurred at a pioneer dinner party at Green Bay, Wisconsin, in the early days of this century. Charles Reaume was an exemplification of the old adage of a "rolling stone." He could never stick to one place or one thing for any great length of time. He led an easy, happy-go-lucky life, and in the course of his wanderings went to Green Bay, where he did a little trading.

One day Reaume invited John Porlier, Laurent Fily and three other men to dine with him, and arranged a really nice little dinner for them. The principal dish was *pe-we-ta-gah*, composed of dried venison finely pounded, and cooked in maple sugar and bear's oil, and it was regarded as a most appetizing dish.

As Reaume was seating his guests about the table, a half-breed, Amable Chevalier, made his appearance. He looked the table over and then slyly remarked that there were not plates enough, as he saw none for himself.

"You won't see any plate for you at my table," Reaume gruffly answered.

The half-breed already owed Reaume a grudge, and his quick temper taking affront at this reply, he seized the opportunity to be revenged.

"Sho! Won't I?" he answered, scornfully, and in an instant snatched Reaume's red cap from his head and laid it on the table.

"Here's my plate," he cried, and he plunged both hands into the *pe-we-ta-gah*, scooped out a mess, and flung it into the cap.

Reaume was as quick as he, for the next moment the capful of hot venison stew was dashed into Amable's face.

The half-breed retaliated by scooping up another handful from the dish and flinging it full in Reaume's face.

The two men then grappled with each other and fought furiously. They rolled over and over upon the floor, each trying for the advantage.

Scenes of this kind were not so very infrequent then, and for a time the guests contented themselves with watching the contest; but when the half-breed tried to stab his opponent, they interfered between the angry combatants and sent Amable on his way.

Matters were soon set to rights, and the dinner proceeded merrily, despite its unlucky beginning.

SIR MARK'S BILL.

About sixty-five years ago, says the London *Spectator*, Sir Mark Somerville received a bill which he had framed and preserved in Somerville House. Whatever else a bill may be, it certainly is not often amusing, interesting and solemnly conscientious, all at once, as Sir Mark no doubt thought this was, when he put it in a frame. During the time of a contested election in Meath he had sent orders to the proprietor of the hotel in Trim to board and lodge all persons who should vote for him. In course of time he received the following communication:

MY BILL YOUR HONOUR.

	£	s.	d.
To eating 16 freeholders above stairs for Sir Marks at 3*s.* 6*d.* a head is to me	2	12	0
For eating 16 more below stairs and two Priests after supper is to me	2	15	9
To six beds in one room and four in another at two guineas every bed and not more than four in any bed at a time—cheap enough, is to me	22	15	0
To 18 horses and 5 mules about my yard all night at 13*s.* every one of them, and for a man which was lost on head of watching them all night, is to me	5	5	0
For breakfast on tay in the morning for every one of them and as many more as they brought as near as I can guess, is to me	4	12	0
To raw whiskey and punch without talking of pipes and tobacco as well as for porter, and as well as for breakfasting a lot above stairs and for glasses and delf for the first day and night I am not sure, but for three days and a half of the election as little as I can call it and not to be very exact it is in all or thereabouts and not to be too particular it is to me at least	79	15	9
For shaving and cropping of the heads of the 49 freeholders for Sir Marks at 13*d.* for every head of them by my brother who has a vote, is to me	2	13	1
For medicine and nurse for poor Tom Kernan in the middle of the night when he was not expected, is to me ten hogs—I don't talk of the Piper or for keeping him sober, as long as he was sober, is to me	40	10	0

The total is £100 10*s.* 7*d.*, you may say £111; so your honour Sir Mark send me this Eleven hundred by Bryan himself, who and I prays for your success always in Trim and no more at present.

Signed in place of Jemmy Can's wife,
his
BRYAN X GARRATY.
mark

CONTRARY.

Not all the residents of Cape Cod are eccentric, as those who are not familiar with the region might infer from the many stories which are told of queer characters there. But it is no doubt a fact that many Cape Cod people have strongly accentuated dispositions in one way or another.

In Cotuit, many years ago, a local legend runs, Captain Barnabas Z—— and his wife Abigail, who were both queer after their way, lived at peace for a good many years, in spite of the fact that Abigail was said to be the "contrariest woman on Cape Cod." Whatever was said or proposed she was almost sure to go against it.

But Captain Barnabas was as patient as his wife was contrary; and by dint of always allowing for his wife's disposition, and usually proposing the exact opposite of what he wished her to do, he got along very comfortably for many years.

But at last, on one evil day, when Mrs. Abigail Z—— was down at the harbor visiting a relative on board a schooner then in the port, she fell overboard, and sank in the water.

Captain Barnabas was near by, and was called in haste. He reached the spot, and immediately went out in a boat to search for his wife.

"Look here!" some one called out, frantically, seeing him push off. "You're going the wrong way of the tide! You're looking up the tide, not down the tide."

The captain kept on.

"Mebbe," said he, calmly, "you wa'n't acquainted with Abigail. If 'twas anybody else, they'd 'a' gone with the tide; but bein' as it's Abigail, I reckon if she haint gone *ag'inst* the tide, it wa'n't her that fell in!"

This time Barnabas's philosophy was wrong. His wife's body was found next day down the harbor. For once she had gone with the tide.

WELL SAID.

Mr. Spurgeon has been reviewing a book on "Primitive Methodism on the Yorkshire Wolds," and finds in it some stories very much to his mind. He is especially pleased with one criticism of a sermon.

"Ah, say, Mister, you preached a goodish sermon to-night; but if it had been cut short at beath ends, and set a-fire in the middle, it wad a dean us mare good."

Mr. Spurgeon "scarcely remembers a better criticism than this."

Another story is of a not very fluent young man, who, being in the habit of saying in his prayers, "Lord, help me to pray," was answered one night by an old man's ejaculation: "And the Lord help thee to give ower."

Mr. Spurgeon also likes the story of a clergyman who, at a noisy prayer-meeting, commanded silence and said: "My dear friends, the Lord is not deaf. Now don't you think you could pray a little more quietly? You remember, when the temple was being built at Jerusalem, there was no sound of any tool heard in it while building."

"Yes, sir," said one of the brothers, "that's all very true; but you see, we're not building the temple; we're only blasting the rocks."

ABSENCE OF MIND.

Some people find it hard, in using the telephone, to realize that they are not face to face with the person they are addressing.

A prominent merchant in the capital city of a State sat at his desk one hot day in July. In order to secure some degree of comfort he had taken off his coat and his collar and necktie.

A clerk came into the room.

"His excellency, the governor, wishes to speak with you through the telephone," said the clerk.

"The governor! Dear me!" said the merchant.

He rose, hastily put on his collar, his necktie, and his coat, gave his hair a stroke, and went to the telephone to answer the governor's call.

SHINING.

"Ah! where is the little Sunshine?—
Missing an hour ago;
Every one in the house abroad
Hunting her high and low.

"Down where the spring is bubbling
Under the tangled vine,
Out on the merry playground,
No little bright Sunshine.

"No bonny curls are gleaming,
No pretty eyes of blue,
No little voice is singing.
Sunshine!—*where are you?*"

There—by the arbor shady,
Out in the garden gay,
Close by a rose-bush blooming,
Under the boughs she lay.

"Why are you here, my birdling?
Why, little treasure, mine?"—
"See, these poor flowers have waited
All day for the sun to shine,

"So I came at last my own self
(For he wouldn't give a peep),
And shined for them a little,
And—maybe I fell asleep."

For the Companion.

PAPA'S BIRTHDAY.

"O Maysie!" said Seth, in a horrified tone. "It's papa's birthday to-morrow!"

"To-morrow!" echoed Maysie, the corners of her sweet mouth suddenly drooping. "O Sethie! and this is the first time, too."

Seth didn't laugh, although Maysie's statement sounded funny. He understood it too well. It *was* papa's first birthday in their new home, away out West. And it was, also, the first time that they had ever been too poor to give him a present.

For papa had lost all his money the winter before, and they had had to sell their fine house and pretty things to get enough money to go to Montana and begin again.

Everything was strange to Seth and Maysie, but they rather liked it. Papa's birthday was the first real stumbling-block to their happiness.

They stood looking at each other in woful silence. Seth was nine years old, and he didn't want to cry before Maysie, because she was only six and a girl besides.

But the tears were slowly coming, when suddenly Maysie flew at him, her eyes sparkling and her mouth all dimples again.

"Come on, Sethie! I know something!" she cried, excitedly, and danced out into the yard.

There, on her tiptoes, where nobody could possibly hear, she whispered and whispered in his ear, until Seth threw his hat into the air with a shout.

"It's a go, Maysie! You're a brick!"

The next morning a cautious little voice at Seth's door said, "Are you ready, Sethie? It's nearly daylight."

"Yes. Come on down these stairs, Maysie, and don't let 'em creak a mite. Sh-h!"

"Let me slip the bolt, Sethie, 'cause my fingers are little. Th-e-r-e! Now, you take the basket, and let's run, for it's late."

In reality, the dawn was just breaking; but Seth gave Maysie his hand and away they scampered down the street until they had passed all the houses.

Then they crossed a gulch on a miner's sluice-box, and began to climb the high mountain, back of the little town.

"S'pose you don't know where they are, Maysie?"

"Oh, I do. They're right around that big rock."

A few steps more, and there was an "Oh-h!" of delight from both children.

Then silence for a long time; when they came from behind the big rock again, and started down the mountain, they carried the little basket in a very different way.

They walked quickly up the silent streets, and stole back into the house again as quiet as mice. Then began a muffled rattling of pots and pans and crockery amidst much tiptoeing and whispering.

Then once more all was quiet in the kitchen, but a most mysterious writing was going on in the dining-room. Seth struggled with the pen, while Maysie hung over him, breathless.

When it was done she just hugged Seth in a whirl of joy, and then danced around the table, saying, "Isn't it jolly! Isn't it jolly!"

In the midst of her capering there were steps on the stairs. Then what a scattering! Seth flew to hold the door, shouting, "You can't come down yet, mamma and papa! Bring the handkerchiefs, Maysie, quick!"

Maysie flew, and returned with two large folded handkerchiefs. Seth opened the door a little way, and they both slipped through and stood before their astonished parents.

"Papa, I'm going to tie up your eyes, and Sethie's going to tie mamma's, and then you can go down," Maysie announced, in a business-like way.

"Now, come on, and we'll lead you."

"What *is* going to be done to us?" asked mamma, groping around with her hands.

"Sethie, don't let her see a teenty-weenty!" cried Maysie, anxiously.

"Here's the table," said Seth. "Now, sit down, please, and wait a minute."

The children scampered to the other side of the table and took their places. "Now you can take off your blindfolds!" they cried.

And what a surprise! A snowy breakfast-table all ready, with a dainty dish of spring flowers by mamma's plate, and a luscious basket of red-ripe wild strawberries, crisp with the mountain dew, by papa's.

There was also a pitcher of cream, cold, sliced tongue, and coffee of Seth's particular make.

A little white note lay on papa's plate, which he opened and read:

DERE PAPA—We went upp on the mountine thise moning and piked these strawberies and floures fore you becaus we couldent bear not too giv you enything fore your burthday. We havent enything else, dere papa but we lov you veri much and so dus mama. Your too litle childern,
MAYSIE AND SETH.

Papa's eyes filled with tears, and dropping the note he went to his little ones, and putting an arm around each, kissed their brown heads. Then, looking at their mamma, he said, tenderly, "My blesseds! This is the happiest and best birthday papa ever had."

And Seth and Maysie were too full of joy to speak.

ONE day, in my school of little ones, we had been having a conversation lesson about things we could sit in or on. We had almost exhausted the list of objects, but, as I had one in my mind that had not been named, I said, "*I* can think of something else we can sit in; can any one else?" One little maid raised her hand, and on my saying, "Yes, Alice?" meekly suiting the action to the words, said innocently, "We can sit in position."

HOWARD was making his first visit in the country. Seeing a large pond of water, he asked in astonishment, "Who spilled all that water?"

BABY'S SUSPENSION BRIDGE.

Above the river of Tumblewoze,
That flows thro' the Valley of Stumbletoze,
With its numerous falls
And frequent squalls,
Where the bitter berry of Grumble grows,
There hangeth a bridge all blue and red,
And when Baby's morning of play is sped
He passeth o'er
On its yielding floor
To the Territory of Trundlebed.

ANGELINA IN CALIFORNIA.

O Angelina! I just wish you'd been with me this morning, for I saw things that would really have s'prised you, or any other dolly. But you know this is only the very first time I've been out since we came to San Diego, and next time you shall go, too.

First, we went past such lovely gardens of flowers—the biggest, beautifullest posies you ever did see. I tell you they didn't look much like the gardens we left at home, all full of snow-drifts!

Why, the calla lilies were taller than me and the geraniums were taller than papa. Some of 'em were as tall as the eaves of houses—that is, of some houses.

And so many different kinds of vines over the porches! And so many new trees that I'd never even heard of.

Pepper-trees with pepper berries on 'em that looked like currants,—only bigger bunches,—and they tasted just like the pepper-box.

Then we saw the wonderfullest palms, growing right out of doors, you know; and orange-trees full of oranges, so't they had to be propped up. I counted seventeen, my own self, in one bunch, thick as they could hang.

And then the banana-trees, with great long leaves all made into coarse fringes; and with purple blossoms longer than my arm. And some of the blossom leaves were just lifted a little, and cuddled right under every purple leaf were 'bout a dozen baby bananas. Oh, they were the cutest little things!

And when we got to the Chamber of Cram-us—or something like that—we saw one single orange that was half a yard around.

Why, Angelina, I do believe it was as big as a pumpkin—that is, quite a small pumpkin; but the pumpkins there were not quite small ones. I should think they were 'bout as big as wash-tubs.

And there was a corn stalk 'most as tall as a tree—well, anyway, papa couldn't reach the very first ear even when he stood on tiptoe. And there was a cabbage stalk as tall as the corn stalk.

Like as not the pep'mint drops'll be the size of biscuits here; like as not the cookies'll be bigger than pancakes; like as not you'll grow, yourself, and get to be a great, beautiful new dolly in just no time. But I shall love you every bit the same if you don't, Angelina. So, now let's go to supper.

JIMMY was once asked how he would like to go to a military school.

"Not at all," was his prompt reply.

"Why," we asked.

"'Cause," he said, "they hang a fellow up there for little or nothing."

"Oh, no," we said, "that can't be so."

With an emphatic nod he replied, "Yes, it is; Mr. Fox [his teacher] says so."

"What! hang a boy! kill him!" we exclaimed.

"I don't know about that," he said. "Mr. Fox says they hang 'em up."

Then it dawned upon us, and we suggested that a boy might be suspended.

"Yes," he replied, "and what is suspending a boy, but hanging him up?"

Enigmas, Charades, Puzzles, etc.

1.

CHARADE.

I.

Though I've delicate wings
Ready poised as for flight,
Yet I stay by the ship
With its colors bright
Where I first saw the light
And never take flight!

II.

I often hold threads,
But no shuttle can trace
By any of them
A pattern of grace.
And though I do well, I truly confess
That I often am found in a very tight place.
Now (if by my riddle you have not been beaten)
My whole (from the ground) you quite often have eaten!

2.

WORD DELETIONS.

1. Take the language of the ancient Romans from isinglass, and leave to turn to the off side.
2. Take to inquire from packings of hemp, and leave traps or snares.
3. Take an intermittent fever with cold fits succeeded by hot from allied, and leave conducted.
4. Take a trough in which a bricklayer carries mortar, etc., from exact, and leave one living with others in their dwelling or city.
5. Take a musical instrument from greeted, and leave melancholy.
6. Take to speak from wearing apparel, and leave to adhere.

3.

BURIED CITIES.

(Three in each sentence.)

1. Last Monday, Tony and Isaac were over in Macon cording up some goods when Tony got a bang or a blow from one of the workmen.
2. Tell Carlos we go in Bert Royal's wagon through a prolific, level and well cultivated piece of land.
3. The nomad is on the hill, and he told Tom a happy life is that of a wanderer and is a congenial one to him.
4. Esau burns the brush, Nebo stones cats, while Lew is to nail down the carpet.
5. The pacal Ai saw in Peru he has talked so much about I can almost see, myself, from earnest listening.

4.

METAMORPHOSES.

Change one given word to another given word, by altering one letter at a time—each alteration making a new word, the number of letters being always the same, and the letters remaining in the same order.

Example — Change *east* to *west* in three moves. East, last, lest, west.

1. Change *boy* to *man* in four moves.
2. Change *wolf* to *lion* in eight moves.
3. Change *meat* to *soup* in six moves.
4. Change *Jane* to *Mary* in three moves.
5. Change *book* to *tent* in five moves.
6. Change *four* to *nine* in ten moves.

5.

RHYMED WORD-SQUARE.

1. Vessels of any sort under the sun.
2. To snatch away, or a kind of gun.
3. Later in time, or behind in place;
   The name of a song of sweetness and grace.
4. Troublesome insects, agile and fleet.
5. Concise and elegant, polished and neat.

Conundrums.

When is your temper like a stray kitten? When it is lost.

When are babies like cartridges? When they are carried in arms.

When is Fortune a worker in wood? When she turns the tables.

When is a bell like a secret that is not kept? When it is tolled (told).

What kind of nuts grow without shucks? Doughnuts.

What article of jewelry might keep off robbers? A watch.

What is the difference between Arabs and great brain-workers? The former are men in tents, the latter are intense men.

What is the difference between a dime and the answer to this conundrum? One is a sentence and the other ten cents.

What is the difference between a silver dollar and the gulf stream? One is a sea current and the other is currency.

Answers to Puzzles in Last Number.

1. Diddle diddle dumpling.

For the Companion.

OLD MAUMA.

Black as the blackest of her race,
Ill-featured, too—and yet
Her kindly voice, her smiling face,
I never can forget.

* * * * *

When dreams enchant me, and the eyes
Of memory perceive
Bright visions of the morn arise
To bless the sight at eve;

How few there are of all the old
Home pictures that appear,
But in the foreground I behold
Her figure standing there!

She loved me well—my infant heart
That gracious truth divined,
Ere yet her language could impart
Such meaning to my mind.

My youthful joys she shared with me,
My youthful sorrows shared,
She spared me heartache constantly,
Herself she never spared.

If lulled to sleep upon her knee,
She nodded while I slept,
And when I laughed she laughed with me,
And when I wept she wept.

Beset by visionary harms,
Weary and seeking rest,
I knew no choice 'twixt mother's arms
And Mauma's ebon breast.

What cared I that her skin was rough,
And dusky-brown of hue?
For me this truth was quite enough—
The heart was warm and true.

I grew a man, she old and gray
And missed me from her side,
But many a day, and oft, they say,
She called my name and cried.

And when she went, whose years were spent
In servitude below,
Death from its sombre tenement
Released a soul of snow.

* * * * *

Black as the blackest of her race,
Coarse-featured, too—and yet
My second mother's kindly face
I never can forget.

WHITEMARSH SEABROOK.

MOTHER'S INFLUENCE.

Writing in the *Princess* of a mother, who, though "no Angel," was "a dearer being, all dipt in Angel instincts, breathing Paradise," Tennyson exclaims:

Happy he
With such a mother! faith in womankind
Beats with his blood, and trust in all things high
Comes easy to him, and though he trip and fall,
He shall not bind his soul with clay.

The poet's thought is illustrated by a little story told by the Rev. Joshua Cooke in an article on the mule-deer, contributed to "The Big Game of North America."

The clergyman's oldest son, a ranchman in Oregon, stands six feet and an inch in his stockings, and is a powerful man, a good shot, a fine hunter, warm-hearted and generous. One day a fellow-ranchman came to his cabin, and said:

"Mr. Cooke, my old mother is dead. She was a Christian woman, and I don't want to put her in the ground like the cattle we bury. There isn't a minister within thirty miles. Your father is a minister; you have taught in our Sabbath school. Would you come and say a word over my mother?"

It was a new experience; the big boy thought a moment, and then said:

"Whitehead, I never did anything of the kind, but if it was my mother,—and I have one whom I worship,—I should feel as you do. Your mother sha'n't be buried like a dog. I'll come."

Afterward he wrote to his father:

"I recalled the words I had so often heard you pronounce over the dead. All alone I read a passage of Scripture, sang a verse of a hymn, said a short prayer, said the 'dust to dust,' and all was over. It was a tight place, father; all the men and women of the valley were there, but I thought of mother, and it carried me through."

A rough young ranchman said to this son one day, "Bates, we notice that you will take part with us in our sports up to a certain point, and then you stop. We wonder why."

"Jerry," he answered, "when I left home, I made up my mind to go nowhere and take part in nothing that would displease my mother."

HONESTY IN FINLAND.

The Finns are an upright, faithful and hospitable people. A writer in the *Saturday Review* speaks of their honesty as proverbial, and proceeds to give some experiences of his own as illustrative of the scrupulous and even "heroic" manner in which they tell the truth, and the whole truth, under the most difficult circumstances.

"This seems to be exactly the kind of apparatus I am looking for," I said to a merchant in Helsingfors, as I looked at an article worth about seventy-five dollars; "I will buy it at once if, knowing what I want it for, you can honestly advise me to take it."

"No, sir," he answered, "I do not recommend you to take it, nor have I anything in stock just now that would suit you." And I left the shop and purchased what I wanted elsewhere.

"Here's your fare," said I to a peasant in the interior, who had driven for three hours through the woods in his drosky, as I handed him four shillings.

"No, sir, that's double my fare," he replied, returning me half the money. And when I told him he might keep it for his honesty, he slightly nodded his thanks with the dignity of one of nature's gentlemen, from which defiant pride and cringing obsequiousness were equally absent.

WORTH REMEMBERING.

Any one, no matter how slight his influence over others may appear to himself, can at least set a good example.

A lady who is much interested in the temperance cause says that some words spoken by Lady Seabright—as an ending to a lecture she had given on temperance and the closing of public houses and saloons—seem to her to go straight to the point, and be well worth remembering.

There is a little public house
That every one can close.
And that's the little public house
That's just beneath your nose.

To cleanse and preserve the teeth use "*Brown's Camphorated Saponaceous Dentifrice.*" Microscopical examinations have proved that the use of soap is the only safeguard against the accumulation of animal and vegetable parasites on the teeth. Camphor strengthens and relieves soreness of the gums. Price, 25 cents a bottle. Sold at drug stores. [*Adv.*

HAVE YOU SEEN THE **FIRE-PROOF LACE CURTAINS** MADE BY THE WILKES-BARRE LACE M'F'G. CO. WILKES-BARRE, PA.

Shawknit TRADE MARK

The Shawknit Stockings were long ago recognized as the *most comfortable, most durable,* and *best-fitting stockings* in the market. They are as far *superior to all other stockings* now as they were then. They are a *standard* in the market. Other stockings are not only often represented as being "*as good as Shawknit*," but are sometimes sold *as and for Shawknit*, by unscrupulous dealers. The public has only to remember that *every Shawknit stocking* is *stamped on the toe*, and to look for this trade mark before buying. Shawknit

☞ For sale by the trade generally and obtainable direct from the manufacturers, who will send *descriptive post-paid parcel price-list* upon application.

UNDER AUTHORITY.

A correspondent of the New York *Sun* was visiting a family in a suburb of San Francisco when their Chinese servant fell out of a window which he was cleaning, and injured his back. He was taken care of by his countrymen, and sent another man to say that he was not seriously hurt, and would return to his work in a week.

"What you do, John?" the lady of the house asked the messenger.

"Me no work. Me go China some week. Me get a wife."

"Well, you stay here and do work, eh?"

"Oh, no," answered the Chinaman, his face expressing alarm at the proposition.

"Yes; you stay and do Ah Fun's work while Ah Fun sick."

"Me no got China shoes," said the man, apparently hitting upon the only excuse he could express in English.

"Ah!" said the lady. "No got China shoes? Well, you go back to city; you get China shoes, you come back, go work for Ah Fun till Ah Fun come back."

"Me go city—get China shoe—all light," said the man, and off he went.

"Do you think he will come back?" I asked.

"Oh, yes; he must come back. He understood me. They always do what they agree to."

He did return, and went to work. He cleaned the garden, got out the hose and watered the flowers, and then came in and began the preparation of dinner. But he seemed to have something on his mind. At last he spoke.

"See here, lady," said he, "me got bludder (brother) come China last week. Me put bludder in laundly. He want me come so he go San Flancisco city; no can find his way."

"Sorry," said the lady, "but we give dinner-party to-night, and after dinner we have dance and refreshments, and you got stay and wait on people."

The Chinaman was kept there for four days. Once, as we all took our places in a carriage at the door, the patient fellow came out with his hat and coat on, evidently prepared to go to the city without authority. I was called upon to exert a masculine authority, and ordered him to go back. With the utmost meekness, merely saying, "All light," he shuffled into the house again.

It was and is my opinion that the poor wretch went every night to see his brother, and came back every day at daylight. What sleep he got, if any, I do not know, but it must have been very little.

LITERAL.

It is a good thing for a boy to obey orders, but there is such a thing as interpreting them too literally. A certain milkman, who lives in the country town of L——, and collects milk from the neighboring farmers, had in his employ a boy whom he sent about with a wagon every morning picking up his supply. There is a rather dangerous railroad crossing on the road; and when the boy began work for him, the milkman said: "When there's a train coming, just stop and sit still in your wagon until it gets by."

The boy went about his task, but instead of collecting the milk in about an hour and a half, as should have been done, he took at least two hours, and sometimes more.

The farmer grumbled a little, but the boy said nothing, and, as he seemed honest, nothing was done.

One evening the milkman went out over his "collecting route" to see some of his customers.

"What ails that boy of yours?" asked one of the farmers.

"Why, nothing, only that he's rather slow, I guess."

"Slow? Well, I guess you'd think he was slow if you saw him resting for half an hour in his wagon, down here by the railroad track, every morning."

The milkman called the boy as soon as he reached home.

"Is it true that you stop half an hour every morning down at the railroad track?" he asked.

"Generally I have to," said the boy.

"Have to? What do you mean?"

"Why, you told me when there was a train coming, to wait till it got by. Well, there's a crook in the track there, so't I never can see whether there's a train comin' down the track, or not. So I stop and wait till there's one goes by anyway, and then I just skip over lively!"

DIDN'T NEED IT.

It is one of the universally recognized signs of greatness that it can afford to dispense with external and adventitious marks of distinction. Mrs. Wilcox, a niece of Andrew Jackson, is reported by an exchange as telling with a touch of pride an incident of Jackson's life at the Hermitage.

During Martin Van Buren's term my uncle entertained him at the Hermitage, and of course the arrival of the President was made a great occasion.

Many of the servants in holiday dress went out on the turnpike to see the presidential coach make its appearance. Among them was old Aunt Betsy, an oracle among the house-servants. When she returned she said to me in a tone of unqualified surprise:

"Why, land, Miss Mary, he aint got no crown on!"

"But, Aunt Betsy," said I, "why did you expect to see him with a crown on? Uncle Jackson never wore a crown."

"Massa Jackson!" exclaimed Aunt Betsy, her face shining with pride, "Law, Miss Mary, Massa Jackson don't need no crown."

HER JOKE.

The best planned jokes sometimes take an unexpected turn, as those of us who are given to making jokes have no doubt all noticed.

Mrs. Dean said to a friend the other day, "I am so glad you can stay to tea. There is to be such a joke on Mr. Dean. He's always criticising my cooking. To-day his mother happened in, and I persuaded her to make some cakes. Will it not be very funny when he finds faults with the cakes and I tell him that his mother made them herself?"

Half an hour later, Mr. Dean remarked, "My dear, you are becoming a perfect cook. These cakes are as fine as those my mother makes."—*Family Herald.*

SIGSBEE'S SEAMLESS SHIELDS.

Patented May 20, 1890.

Sales this year over 50 per cent. greater than 1890.

One of the most troublesome parts of a lady's apparel is the Dress Shield. They are hot, causing profuse perspiration and annoying odors. Dresses set uncomfortably on account of this cumbersome attachment under the arm, and every lady has experienced much trouble by her shields constantly ripping out. The **Sigsbee Shields** overcome all of these difficulties. They are worn next to, or underneath, the undervest with equal comfort, thus keeping the corset and corset cover sweet and clean. They conform perfectly to the shape of the arm, do not wrinkle. Instantly adjusted. Impervious. The only perfect Dress Shield. All sizes. In ordering, give measure of arm-scye. Price, per pair, 38c. Sold by Dry Goods Dealers everywhere. Sent by mail, postage prepaid, on receipt of price. **SIGSBEE MANUFG. CO., Ayer, Mass.**

If you are suffering from either painful corns or bunions, send *Ten Cents* to the POROUS PLASTER CO., 274 CANAL STREET, NEW YORK, and a package of ALLCOCK'S CORN SHIELDS or a sample of ALLCOCK'S BUNION SHIELDS will be forwarded, prepaid, to your address. The CORN SHIELDS are made large and small. In ordering, state size wanted.

The Youth's Companion is an illustrated weekly paper of eight pages. Its subscription price is $1.75 a year, payment in advance.

Twelve or sixteen pages are often given its subscribers in a single weekly issue of the paper. All additional pages over eight—which is the number given for $1.75—are a gift to the subscribers from the Publishers.

New Subscriptions can commence at any time during the year. The Companion does not employ agents to solicit renewals of subscriptions.

Payment for The Companion, when sent by mail, should be made in a Post-Office Money Order, Bank Check, or Draft, or an Express Money Order. WHEN NEITHER OF THESE CAN BE PROCURED, send the money in a Registered Letter. All postmasters are required to register letters whenever requested to do so.

Silver should never be sent through the mail. It is almost sure to wear a hole through the envelope and be lost, or else it is stolen. Persons who send silver to us in a letter must do it on their own responsibility.

Postal Notes are not a safe means of sending money. Any one can collect them at any Money-Order Post-office, and, if lost or stolen, the money cannot be recovered, as no duplicates are issued. Subscribers who send us Postal Notes must do so at their own risk.

Renewals.—Three weeks are required after the receipt of money by us before the date opposite your name on your paper, which shows to what time your subscription is paid, can be changed.

Discontinuances.—Remember that the publishers must be notified by letter when a subscriber wishes his paper stopped. All arrearages must be paid.

Returning your paper will not enable us to discontinue it, as we cannot find your name on our books unless your Post-office address is given.

Always give the name of the Post-office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed and drafts made payable to

THE YOUTH'S COMPANION,
41 Temple Place, Boston, Mass.

For the Companion.

TEPID BATHS.

The remedial use of warm baths has come down from ancient times. The water generally contained medicinal constituents in natural solution, but the relief, in many cases, was doubtless due solely, or mainly, to the temperature. The effect of hot flannels or warm poultices in relieving internal inflammation and pain is familiar to most families.

For inflamed and painful eyes, nothing is so good as hot water, applied with a woollen cloth. Equal benefit is derived from such an application in many forms of headache. The best thing to do with a sprained ankle is to immerse the foot in water as hot as can be borne. A crushed foot or hand may be similarly treated until the arrival of a surgeon, the hot water being frequently renewed.

A communication in the *Medical Record*, October 4, 1890, advises the warm bath for infants suffering from intestinal colic.

The writer says that he was led to try this remedy in a case of colic, accompanied by extreme restlessness and pain and considerable diarrhœa, because of the failure of all usual treatment. The trouble had continued several weeks, and the child had become much emaciated. Morphia had been tried without success.

At length, fearing that the child might go into convulsions, the doctor ordered a tub half-full of water, at a temperature of ninety degrees Fahrenheit. While the child was immersed in this, its head was kept cool with cloths wrung out of cold water. The doctor says:

"The effect was magical. Within ten or fifteen minutes the child quieted down, and on being taken from the bath fell into a quiet, healthful sleep, which lasted several hours. The little patient from that time began to get well. The mother and nurse, having learned the value of the tepid bath, resorted to it afterward, whenever the child was threatened with one of its colic spells. Within a week or two it had entirely recovered."

Another writer adds his experience in a still worse case,—that of true cholera infantum,—the child, when the physician was called, lying in a comatose state. The treatment was the same as already described, with the addition of a mustard plaster applied to the back of the neck.

Says the writer: "I am now fully convinced that the tepid bath is a most efficient sedative, particularly when there is cerebral irritation; and that it is at least as efficient as any of our ordinary anodyne remedies in the control of abdominal pain in young children, after the bowels have been thoroughly opened so as to remove offending causes, such as partly digested food."

HEROIC POVERTY.

Though the common people of England are often very poor, and public relief is frequent enough, there are no people who are more proud of perfect individual independence than the English working classes. A case has recently been reported in the English journals, which affords an excellent example of honest independence for working people everywhere.

Five years ago the poor-law guardians of Huddersfield, England, gave relief to the extent of nearly two hundred and fifty dollars to Matthew Messenger, a deserving laboring man. He had a daughter who was opposed to his receiving assistance, and wished herself to provide entirely for him.

Presently Messenger died. His daughter had employment as a charwoman, or worker at small jobs. The largest amount that she ever earned was eight shillings, or about two dollars, a week.

Out of this amount she not only supported herself but, by rigidly denying herself all "luxuries"—which with many people would have passed for the barest necessities—she managed in time to save the whole sum of fifty pounds, which her father had received from the authorities.

She then went to the guardians, and insisted upon paying the amount back to them, for the purpose of "maintaining the honest independence of her family."

The guardians were much opposed to receiving the money, which represented every penny of the poor woman's savings. They assured her that illness would leave her badly off, and tried to persuade her to keep the money.

But she was so much in earnest in wishing to remove the taint of pauperism from her family that the guardians at last decided to take the money and invest it in the name of the chairman, treasurer and clerk of the Huddersfield poor-law union, to be used for Miss Messenger's benefit in case of her necessity, and at her death the balance to be paid into the funds of the union, as she had no known relative.

FIGHT WITH A COUGAR.

The cougar secures its prey by creeping stealthily behind it, until near enough to spring upon and strike it down. It will attack a man in the daytime if it can approach him unseen, and is hungry. In an article contributed to "The Big Game of North America," Mr. W. A. Perry describes a terrible fight between a Swedish sailor and a cougar, which took place near the house of the writer's father.

The sailor, Joseph Jorgenson, ran away from a British man-of-war, anchored in a harbor of British Columbia, and made his way to Washington, where he took up a quarter-section of government land. One morning he began clearing a spot whereon to build a house. He was vigorously wielding a spade, when suddenly his arm was seized by a cougar's jaws.

Joe was very strong, and by a kick in the stomach he forced the beast to fall to the ground. The cougar sprang at the man's throat. With his left arm Joe warded off its jaws, while with his right he dealt it a blow in the ribs that again felled it to the ground.

Quick as a flash the beast seized Joe's left hand. With his right fist and heavy boots Joe beat and kicked the animal until it released his hand. Retreating a short distance, it sprang on his breast and knocked him against a tree. Again he cuffed and kicked it until it let go and retreated.

Joe then happened to see the spade he had been using, lying at his feet. He snatched it, and warded off the cougar's spring by a timely thrust. The brute fell at the man's feet, but instantly rose and seized him by the thigh. Concentrating his strength, Joe drove the sharp blade of the spade into the beast's head, and it fell dead at his feet.

Bitten and scratched, the blood streaming from a dozen wounds, he reeled home. It was many weeks before he recovered, and when he grew strong he had lost all desire for farming. He shipped on an American coaster as a sailor, saying that he had less fear of the sharks than of the "Big Kitties."

DEFINED.

German commentators are said to find in Shakespeare's plays many things which the author never dreamed of putting there. And if German scholars may do this, why not an English schoolboy?

The late Major Barttelot was educated at Rugby, and is still remembered there as the hero of a funny blunder.

"What is the meaning of the word 'adage'?" asked the master.

Various wild guesses were hazarded by different members of the class, and then it came young Barttelot's turn. Without hesitation he replied:

"A place to put cats into."

Every one laughed, and the master, who was as much mystified as his pupils by the strange answer, called the boy up at the end of the lesson and asked what had put such an idea into his head.

"Why, sir," said Barttelot, "doesn't it say in Shakespeare, 'Like the poor cat in the adage'?"

A LARGE ORDER.

Artists sometimes find that persons who are abundantly able to buy pictures are not so well able to appreciate the possibilities and the aims of art.

The artist Hoppner related that a wealthy stock-broker, with his wife and five sons and seven daughters, once called upon him. The gentleman said: "Well, Mr. Painter, here we are, a baker's dozen. How much will you demand for painting the whole lot of us, prompt payment for discount?"

"Why, that will depend," replied the artist, "upon the dimensions, style, composition, and —"

"Oh, that's all settled," replied this person, who evidently followed the excellent plan of knowing exactly what he wanted when he went shopping, "we are all to be touched off in one piece, as large as life, all seated upon our lawn at Clapham, and all singing, 'God Save the Queen.'"

AGAINST HER WILL.

Almost every one knows the distress occasioned by a sudden tendency to cry at a time when one wishes to appear particularly unmoved and even stoical.

Marjorie never cries when any little mishap befalls her, and has been known to sustain, without shedding a tear, severe bumps that have rapidly acquired a black and blue aspect. But the other day, Araminta, her dearly loved and tenderly cherished doll, fell into the open grate, and received a contusion of the nose which was most unpleasant to contemplate.

Marjorie winked very hard for a few minutes, and then, running with her injured Araminta to her mother, she buried her head in her mother's lap, sobbing, "Oh, mamma, I don't *want* to cry, but my tears have all come unfastened!"

A FOUR-FOOTED GENTLEMAN.

To be well-educated, to have good manners, and to be used to good society, are certainly strong claims to being considered a gentleman, and if a gentleman may sometimes be called a donkey, why may not a donkey sometimes be called a gentleman? Something like this may have been the reasoning of the man who framed a novel advertisement which appeared in a London paper.

"For sale, a donkey, well-educated, of gentle manners, good-looking, and a good goer. Has been driven and cared for by gentlewomen, and is a gentleman. Only parted with because no further use for him. Price 50*s*. No more, no less."

It is one of the paradoxes of life that a man of small caliber is often a great bore.

No wonder the name of Burnett is so well known; ask for the best Flavoring Extracts in any part of the world, and Burnett's are handed you. At last the foreigners are finding this out. [*Adv.*

PEG.

It was not a "pitch dark" night, though there was neither moon nor stars. The road lay white and glimmering, as roads will lie even on such nights. Perhaps the moon was somewhere behind the clouds.

Peg, the toll-keeper at the gate, had often seen the pike appear just so; and so had Jim Wagner, plodding along the road.

One might keep safely along, or might instead, by accident or a sudden tightening of the reins, turn square down the Silver Thread, thinking it was the pike—especially if one were dreaming.

But Jim had passed the Silver Thread safely. In soothing tones he was beseeching Black Fan to "go it keerful, and not to clank her hoofs, as if she couldn't make enough noise."

For answer, Black Fan in a senseless and provoking manner clanked her hoofs louder than before, and lifted her head and whinnied.

There was no light in the toll-house nor sound of life about the place; everything was quiet and dark as it should be at almost twelve o'clock at night. But as Black Fan clanked her hoofs almost in front of the little porch, the door of the house flew open and Peg came out to take the toll.

It was the rule of the pike that, after nine o'clock at night, the gate could be left for herself if she chose, might keep a few coppers that came.

untended, or the keeper,

"I b'lieve she'd set up watchin' for a feller till mornin'," grumbled Jim, as Black Fan rattled on toward home. "She's the stingiest woman in these parts."

Bill Walsh, Peg's husband, had his blacksmith shop close by the toll-gate. If, by years before, he had not gone to the Eastern Shore and brought back the chills and fever, he would have got on well enough. But the chills and fever and the blacksmith's trade were never meant to go together.

"He'll set and shake day after day, nothe for weeks at a time, and then not be over it," said Josh Hersel, explaining this curious disease to a neighbor; "an' his face about the color of them there aales."

There were four children at the toll-house.

One was a little girl who had a way of leaning out at the garret window and shaking her fist at people who, she imagined, were planning to keep her mother waiting after dark. She was such a very pretty little girl that people only laughed when they saw her shaking her fist.

Then were the two boys who went to school whenever they were sent; and then the bad little boy who generally sat on the porch in fine weather, wearing his Sunday shoes every day. He was his mother's pet.

None of Peg's children were sent to school regularly. They went when their clothes were new; and when these garments were old, faded and patched, the children stayed at home.

Fur Peg was proud. Her neighbors were aware of it, and shunned her accordingly. Poverty was, in their minds, something sent by the Lord, and nothing to be ashamed of. Sickness was a trial sent from heaven; but pride was a crime which they could not forgive.

Peg did not love her neighbors any more than they loved her. Perhaps there was a little jealousy intermixed with the feeling she bore them. Most of them were not nearly so poor as she. Some were farmers, with well-cultivated acres. There were Mr. Jones, the drover, and Ed Coon, who had set up a rival blacksmith shop on the other side of the creek, and got plenty of work.

"If Bill wasn't sickly, we might ha' a house like his'n," Peg had often thought, as she sat alone in the dark with a bitter feeling creeping about her heart.

If Peg had sent the children to school in old clothes as well as new; if she had allowed Bill to buy on credit just a bit down at the store, to show he could be trusted; if she had sometimes let people slip through the gate in the evening without paying the coppers that made the pike so richer; and above all, if it hadn't been reported that she'd said, "if her or any o' hern was sick, she didn't want 'em to come with their custards and their gelatine," things might have been different.

When Bill found her, daring his otherwise unhappy sojourn on the Eastern Shore, he saw, under her tilted-back sunbonnet, the biggest of black eyes, the reddest of cheeks, and the daintiest of dark brown curls. Bill had bragged about "up our way" until it had seemed to her imagination a paradise; and she had come back with him, his wife.

How they helped Peg.

But "up our way" Bill had seen her harden until the black eyes had no laughter in them; he'd seen the red cheeks deeper dyed with anger and indignation and jealousy; had seen her grow into a sharp, quick, grasping little woman, whom the Turnpike Company was glad to have at the toll-gate.

"If Bill warn't sickly, we might buy yonder corner of John Lawrence's field, and build a house with red trimmin's," ran Peg's thoughts again. "I reckon like as not some other body'll get it before I've got the money. If I'm ever to have a house and a home, I'll have to get it myself."

So she slung and snap it up before our eyes, and Bill took a-doctrin' a pin. If them Browns kept the lot and puts up their fancy bullin's on 't, I'm a-goin' to leave. The shop won't be much trouble for to carry away."

Then she started up and said "Oh!" and clasped her hands together and laughed, as she might have done when she was a girl down on the "Easte'n Shor'." She tipped softly out through the narrow passageway and up the steep little steps to where the bad little boy lay asleep in his Sunday shoes; for he would not take them off for all his mother's begging.

She knelt beside him, and began to untie the strings. She had forgotten that she felt sick and tired and most worn-out." Her black eyes were laughing still, as she stooped over and kissed her pet.

But when she kissed him, the laughter died out of her eyes, and there came an anxious look instead. She put her little, hard brown hand on his forehead, and then on his cheek, and then on his chubby wrist; and as she listened to the irregular breathing, John Wynn drove past, and wriggled with delight to think that he had cheated the toll for the second time.

The drivers were not kept waiting the next day. Dan Toomey's fast mare was obliged to pause an instant. John Wynn tried it again and was trapped; but Peg's pet did not sit on the doorstep until Tuesday and swing his Sabbath-shod feet as if there were nothing in the world so fine.

"Has Walsh's children stopped a-goin' to school altogether?" inquired Mrs. Coon, as Mary and Belle came bouncing in with their satchels.

"Some 'n's sick, I s'pose," said Belle; "I seen the doctor's horse tied to the tree, a-pawin' like he'd been there a long time."

"Hum! Now I wonder of custards and gelatines wouldn't come into account?" said the rival blacksmith's wife, with a shrug of her shoulders.

"They's sick at the toll-gate." The news spread swiftly. "Down with the measles or somethin'." Very soon the word came, "They's down with scarlet fever!"

Then Mrs. Coon forgot and forgave, and sent Mary over with a dish of jelly, covered with her finest napkin; but the napkin and the dish both returned with Mary, and the jelly, too.

A little white coffin was carried out from the toll-house one day, and old Mrs. Lisle fell to crying and sobbing as the sad burden was carried past the store. "An' never so much as a cracker," she moaned, "an' no milk nor nothin'!"

"The proudest woman in these parts," cried Josh Hersel, thrusting his hands deep into his trousers's pockets, and vehemently peeing the floor.

"By George!" exclaimed Colonel Green, puffing and blowing. "Bill Walsh is down himself; taken in the night, and raving like a loon. I say something must be done."

There was a light in the toll-house now; it seemed as if it had been there a long time—a steady, mellow light, that fell across the road and lost itself in the grassy field.

But the door flew open as usual when Will Smith's wagon drove up, and Peg came out for the toll.

Thinking of the unhappiness and poverty within, Will timidly held out a silver quarter.

"Three cents," said Peg, sharply, and handed him back the change.

The humming-birds whizzed away suddenly from the great clustering honeysuckle at the end of Colonel Green's front porch. They had dipped their bills' sublustured into the sweetness of its honey, though the Colonel's voice came big and blustering out through the open sitting-room window.

But this disturbance was more than a voice; it was a girl who came rushing to the bench under the vine and threw her arms on the railing, with her head in her arms, and began to weep.

First she sobbed vehemently, as if she had been keeping back the tears and could do so no longer. Then she wept more softly, and at last stopped altogether, and fell to wondering a little indignantly why her grandfather and the rest of the people did not stop talking and set to work to do something instead.

"If I were only a man," said Hetty Green, hopelessly, "I should think of some way."

She pressed her face deeper among the fresh leaves and sighed, thinking. Then she began to wonder what she would think of if she really were a man.

As she puzzled her brain she stood so silently that the birds came whizzing about again, only to be started off on another tour as she jumped up and ran back into the house.

If they had remained and peeped in at the window, they might have seen Hetty performing an ecstatic dance across the sitting-room floor to where the worn-out Colonel rested in his leather chair. They might have seen her fling herself upon the arm, and whisper in the Colonel's ear exactly what he and all the other people must go and do.

But the birds must have been sorely puzzled, for why should a whisper from a girl who was always whispering make such an impression upon a gray-haired, sensible man like the Colonel?

He did not wait until she was done whispering before he was tapping his feet on the floor and nodding his head, and exclaiming, "By George!" in approval. Whether or not she was really done they could not have known, for the Colonel suddenly put on his hat and left the room.

All around the country for miles and miles drove Hetty's grandfather, the Colonel, pausing for an instant at every house on the way, rushing in and out of Dillon's livery stable, and exclaiming and gesticulating to every man he met.

When Colonel Green reached home that night he was ready for bed; but he did not go to it. He ate his supper in a desperate hurry, and ordered out his tired horse.

John Wagner and Will Smith did an outrageous thing. Bill Walsh, as everybody knew, was down with the scarlet fever, and three children lying ill in the next room; but these two young fellows drove through without paying, right under Peg's nose.

She did not call angrily to them, as she would have done a week before. She turned about in the doorway and put her hands over her face.

Some one upstairs tossed and moaned, and a child's voice screamed for water. She let her hands fall, and ran up as fast as she could.

The beautiful day had been good to her sick ones, but what had it brought to her? What had the doctor been saying? That the invalids positively must have wine and lemons, beef-tea and chickens, grapes and oranges.

Peg clenched her little hard fists, and pressed her lips tightly together. Wine and lemons, beef-tea and chickens, grapes and oranges!

It was not that they ought to have these things—not that it would be well for them to have them, but that they must have them.

"They must, they must, they must," said poor Peg, under her breath.

She went to the window and glanced quickly down the road in the gathering dusk.

No one was coming, but to Peg's excited fancy there was some one hurrying along, this way and that way, up and down and around.

It was the beauty of Peach Blow—that little village down on the Eastern Shore—begging, "up our way." Not for bread; that any one who is hungry may beg for; but for wine and lemons, beef-tea and chickens, grapes and oranges!

A singular sick and giddy feeling came over her. She knew she must do this. God had punished her sin of pride, surely.

"I must, I must!" muttered Peg. Then she darted down the stairs, quick as a flash, and stood at the gate waiting for her own and the Company's money.

John Wagner cried out, "We're caught," and Will shouted, "Run it fast!" but it was no use. Peg took the money—hers and the Company's.

The old clock inside the door struck nine. What was that down the dim roadway? Another buggy.

She stood and waited for her money this time.

Why, there was a double team coming, and another! Was there a party somewhere? She had not heard.

One after another carriages came pouring in,

Digitized by Google

and one-horse wagons, two-horse wagons, six-horse teams and eight-horse teams; there were little limping ponies, whose trotting days had long been over; and carts and sulkies and horsemen, and mules, donkeys and goats.

Peg dropped her money from her hand to her apron, and stood there holding it up. The lamps from a livery-stable carriage threw their light upon her face, showing the great, wondering black eyes, and the kinks of the brown hair.

Some laughed softly as they jingled the toll into the apron; some reproached her for sitting up so late to catch a party; some declared vehemently that they weren't going to pay at this time in the night, but they paid just the same.

One voice—an old man's—near the end of the cavalcade cried out triumphantly, "By George!" and the last of the train passed through.

"Did you catch 'em, Peg?"

Thin and weak came the voice from the bed, with just a tremor of humor in it. Peg looked at him. She could see that he was much better.

Peg held open her apron so that he might see that it was full. Then she went down on her knees beside the bed.

"They done it a-purpose, Bill!" she said, and could say no more. LOUISE R. BAKER.

THE BLEXLEY FEUD.

In Two Chapters.—Chapter II.

How it Ended.

"Whoop! There you be, young man; an' your Aunt Dorothy's lookin' for you with all her eyes."

Uncle Billy, grown old, but still brisk, drew up the old tarpaulin-covered stage-coach at the Pierson homestead one morning, the summer after old Mrs. Pierson's death.

"Thank you, sir," said a bright-faced boy, as he jumped lightly to the ground. Then he turned to raise his hat to a girl who occupied the back seat of the coach.

"Good-by," he said to her. "I shall be sure to meet you again, though, if you stay here in Weston."

"Yes, of course," she answered pleasantly, as Uncle Billy took up the reins and drove away from the place where the boy still stood.

"Blest if he does meet you again, though, if you stay in Weston," the old driver muttered, as the boy disappeared among the lilac-bushes.

"What do you mean?" she asked. "Weston doesn't look like so large a place that you might not meet everybody in the course of a day."

She laughed merrily as she spoke.

"'Taint the size that's got to do with it. Look here; aint you old Mis' Blexley's granddaughter Clare?"

"Yes, sir."

"Well, that boy's Miss Pierson's gran'nevy Oliver!"

"Really, is he?"

"He is, reely."

"Well, I don't see what that has to do with my not meeting him again."

"You don't?"

Uncle Billy squared himself around upon the seat and regarded her curiously. "A Blexley not know she haint nothin' to do with a Pierson, root nor branch! Why, the two haint geed together fer twenty-five years."

Clare was curious in her turn. "Tell me why," she said.

"Dunno's I orter," he mused; "but she'll hear it fast enough, and blest if I dunno *but* I orter. Now I rec'lect, your pa'd got out of Weston, an' wa'n't in it," he ended, turning to her.

So, before Clare Blexley had been driven the length of the one maple-lined street of the town, she was in possession of the story of the feud, as impartially told as any one could ever tell it.

"You see," Uncle Billy said, as he pulled up at the Blexley place, "I've kep' as neutral as ary person could. I've had to run stage, an' I've b'longed to which an' t'other side—it jest depended on what rinktum was kicked up where I took sides. Both sides is to blame in most any fuss, I say; one dog alone can't quirril."

Dorothy Pierson's grand-nephew Oliver was almost as soon made aware of the dreadful and impassable barrier to further acquaintance with the pleasant companion of that twelve-mile ride; though his information came from a decidedly one-sided authority.

"As long as that!" the astonished boy asked, when he was told how the quarrel began. "Why, Aunt Doll, I shouldn't think you could hold a grudge so long. No; pa never spoke of it. I guess it had died out with his father."

"Stockton wa'n't here to feel it as we've felt it," Dorothy sighed, slightly aggrieved that he should show so little partisanship.

"Dear me!" Oliver echoed the sigh. "And I thought it was going to be so pleasant."

"Oh, it'll be pleasant enough. There are plenty of Piersons here," Dorothy quickly answered, adding proudly, "We aint friendless; you'll meet them all soon."

Oliver found it true; but wherever he turned he was confronted and saddened by the old trouble. He was a genial, open-hearted boy, and was attracted by many a face that was averted because he was a Pierson; while his better nature caused him to revolt inwardly against faces that were boldly familiar and patronizing because of the same reason.

"My! what an awful mess this Blexley trouble has got us all into!" he mused aloud, as he stopped at the town pump one morning on his way to his uncle's store.

"Perfectly awful!" a voice replied emphatically. To his confusion, his companion of the stage-coach stepped upon the platform, holding her little brother by the hand.

"Dare I offer you a drink of water?"

Oliver's eyes twinkled as he held out the dipper.

"Dare I accept it?" she replied, as roguishly. "Yes, I dare, and I must say I think it would be too ridiculous to think of—such an absurd beginning as this trouble had—if the results weren't so very serious."

"Yes," gravely returned Oliver; "Aunt Doll says the tavern across there is in full blast, night and day."

"And this old church has been closed for five years. Just think of people living in such a way!"

"The best people on both sides don't like such a condition of affairs, but they will not unite to put anything down or up," said Oliver. "But where is it going to end? Or will it ever end? No one will take a step toward ending it."

"Let us take the step, then," exclaimed Clare, impulsively. "We can at least stop it's going any further our way."

"That's so! It is foolish for people to carry on a fuss because of the troubles of their ancestors. Here's my hand. We'll do what we can."

"I've said what I could already," said Clare, as the two shook hands, "but grandma says any one who speaks of reconciliation between the two families is an apostate."

"And Aunt Doll declares that only a rank traitor could have any forgiveness for a Blexley. Well, we've taken one step, if no more are ever taken. But we can't expect to undo the work of so many years in a day."

Oliver raised his cap as he turned to go. "I see the Pierson crowd has possession of the tavern to-day," he remarked, with a glance opposite.

Several men were talking very loudly about the door of the bar-room.

"Yes, and I'll not go back that way," said Clare. "You run on alone, Bennie, and get your candy."

The two were not aware how potent is any first step for good, nor how much evil may be undone in a day. Their meeting and parting had not been unobserved by the crowd on the stone-flagged piazza opposite. As Oliver passed on his way to the store, he heard the words, somewhat incoherently spoken:

"We'll have to celebrate that meeting, sure. When a Pierson drinks with a Blexley, a Blexley's got to drink with a Pierson."

"And here's yer chance," a rough fellow cried out as four-year-old Bennie toddled happily by.

"Say, sonnie, we're going to treat you!"

A reckless man caught up the astonished child, swung him to his shoulder, and bore him to the bar-room.

"A milk-punch for a Blexley!" shouted one in the crowd.

Amidst loud laughter a mixture was handed out.

"Here's yer peppermint, sonnie."

"Dare I offer you a drink?"

A rough hand poured some of the liquor down the frightened child's throat.

He gave a loud, shuddering, gasping scream as he swallowed it. Oliver, glancing back, had noticed the child's disappearance. The laughter and the sudden scream brought back the jeering words just flung after himself. In a second he bounded back over the stones.

"Give that child to me!" he called, in a tone of firm command, forcing his way in at the door.

Mrs Blexley yields.

"A Pierson taking sides for a Blexley!" tauntingly said one.

"Yes, any side that is right. What a shame to treat a baby like this!"

A coarse laugh greeted this as the child stretched out its arms instinctively to him from its seat on the counter; but just as Oliver reached him, the little boy gave a convulsive shudder and fell backward.

"You brutes!" Oliver's eyes flashed as he caught the child. "Get out of my way!"

"We didn't aim to hurt him," muttered one, sobered by the sight of the child's limp form, which Oliver bore past them.

"Aunt Doll! Aunt Doll!"

Into the big house down the street he dashed with his light burden.

"Aunt Doll, those drunken rowdies in the bar-room forced this baby to drink some of their poison stuff!"

"Mercy on me! Killed?" cried Dorothy Pierson, horrified at sight of the white, still face. "Quick, give him to me—if he is a Blexley." She unconsciously drew aside her skirts as she took him. "Go for the doctor, and a stomach-pump and Uncle Nate, and—Land sakes! Has it come to murd'rin'?" She uttered the last words in an awed undertone, as she bent over the child.

Before Oliver could return, a warm mustard emetic and vigorous chafing had done their work, and Bennie was sitting up on her lap, pale and weak.

As Oliver entered the front door with the doctor, steps were heard in the side entry, and a tremulous old voice called out:

"I'm a-comin' in, Dorothy Pierson, if you turn me out the next minute."

Old Mrs. Blexley appeared in the back doorway with Clare at her side.

"He's alive!" she cried, at sight of the child. "And you saved him!"

"I want you to know," began Dorothy, stiffly, letting the child slip from her lap as she rose, "that I aint approvin' of nobody's murderous doin's. My nephew brought the boy here and I—"

"I heard on't," interrupted old Mrs. Blexley, quickly, "an' it's enough to know 'twas a Pierson; but—Dorothy—" she quavered, hesitatingly, as she sank into a chair and clasped the child—"if he'd ben hurt, we'd both ben to blame!"

Her cap-strings shook with her agitation. "Yes," she went on, "I've got my eyes open to see what we've come to; and all fer a couple of shillin's worth of butter—"

"'Twa'n't—" Dorothy began hotly, but was cut short by Mrs. Blexley.

"A little butter I'd lost the reck'nin' on, jest because I'd kiln-dried that new butter-tub 'bout to death in my old butt'ry, till it had to run short in weight."

"And you don't think I took that butter?" demanded Dorothy.

"I never thought you did! I was worrited over it, and I asked you as I'd no business to, and you was like a flash, and there it was, and here it is; and I'm sorry enough. But I never could say so 'fore to-day—things had gone so fur."

"Yes, they've gone too fur," Dorothy grimly answered.

"That's jest why it's got to stop," the old lady went on, tremulously. "Dorothy Pierson, haint you and me seen death and ruin followin' every step of this fer years? I tell you, I stood it till Clare come and talked and talked about it, and then this to-day—Clare, child, ask her to forgive an old woman—fer the sake o'—o' Jim, if nothin' else!" she faltered out.

The two women never knew just how it was done—Clare and Oliver could have told—but the two hands were quickly placed within each other, and two worn, gray-haired women suddenly broke down and sobbed upon each other's shoulder.

"To think what sinners we've ben!" said Mrs. Blexley, brokenly; "and to think we thought we folks here could get along without each other's help. No,"—wiping her eyes,—"folks can't stand apart an' prosper."

"We'll try to bring 'em together now," whispered Dorothy, humbly.

"So we're goin' to begin meetin's to-morrow," Uncle Billy observed, as, a few weeks later, with Clare and Oliver again for passengers, he drew up for Jason Starks's weekly consignment of tubs. "The end 's come for good, then, to the old Blexley fuss."

"Yes, yes," returned Jason; "the tighter the hoop, the sooner 'twill bu'st, you know. The whole thing had about got to the limit when that one give 'way at the tavern."

"Wal," remarked the stage-driver, turning to his passengers as he reseated himself, "if you hadn't took a hand in the cooperin' 'fore the rest on 'em bu'sted, nary body under the canopy could 'a' set up this old town ag'in. You young folks done a mighty purty job, you did!"

SARAH BIERCE SCARBOROUGH.

The End.

COMPENSATION.

The dew that never wets the flinty mountain
Falls in the valley free;
Bright verdure fringes the small desert fountain,
But barren sand the sea.

PAINTED BOY.

Rip, rip, through the silence of the forest came a sudden, remarkable sound. There were sharp crackings of something breaking, almost as loud as pistol-shots. Then followed a great crash and splash; and the next sound worth listening to was an intensely excited exclamation:

"Ugh! Heap Paint!"

No river brought up as Elk Fork had been could be expected to run straight, or to keep to the same channel longer than from one freshet to another. Moreover, the outer edge of any of its new bends was pretty sure to eat into its bank, and to undermine the holding of any tree standing close upon it.

So down had toppled a tall sycamore, its landward roots tearing and snapping as they let go, leaving behind them a hole in the earth so large that a horse and wagon might have hidden in it.

No one was trying to hide there, as yet; but perched upon the brink of the hole was the lithe, slender form of an almost naked, dark-skinned, half-grown boy. In one hand he carried a bow and some arrows, but he was not now looking after game; he was staring at a wonderful streak of earth which had been uncovered by the fall of the tree.

It was precisely the sort of earth that accounts for this country's having so many Vermilions, Colorados and other Red Rivers; but never before had the boy seen ochre of so brilliant a color.

"Ugh!" he said again. "Nish-nish-gah—heap paint."

As he spoke he sneezed sharply. Then he darted down, and in a moment more had gathered a ball of the brilliant, greasy, beautiful blood-red clay, half as large as his head.

He seemed to be filled with some idea that made his eyes glisten and dance; that made him laugh aloud; that even made him sneeze, now and then, and speak of himself approvingly as that very happy Cheyenne boy, "Nish-nish-gah."

He did not, however, turn his name into English and call himself "Heap Sneezer."

In another moment he was out of the pit, and started off. He was evidently in a great hurry. For a boy of his age he travelled rapidly, although he was on foot instead of on the pony's back where he lived when he was at home. He did not pause for a moment; not even when he came to a spot where he seemed to have good reason to stand still and again say something about "heap paint." It was about half a mile back from the bank of the river, an open glade among woods; and around it were scattered heaps of ashes where there had been camp-fires.

Beyond it was a long, steep bluff in the side of which were some seams of very white ochre, and others of rather dull colors.

There was plenty of pretty good charcoal that could be picked out of those ash-heaps, but Nish-nish-gah had a more daring purpose in his mind than mere charcoal-hunting. He went straight to an aged, stumpy tree and thrust his arm through an opening in its decaying side.

"Ugh!" he exclaimed, as he pulled out something which appeared to be part of a weather-whitened buffalo skull.

Whoever had half-filled that hollow bone with grease had supposed it safely hidden, to be found

Digitized by Google

when needed; and Nish-nish-gah did but help himself to a good handful, and then put back the rest into the tree-hollow.

After that he gave himself up to art, as art might be understood by a Cheyenne boy of fourteen, with red and white and black paint enough to cover several boys.

It was a little awkward to have to paint himself, and there was a large spot on his back, between the shoulders, which preserved its native dusky color because he could not reach it; but it did not render him any the less a startling object.

Two miles and more beyond the top of the bluff, at that very hour,—it was early on a summer morning,—was another and more important scene. There was another open space, and upon it were scattered lodges and camp-fires—camp-fires which had not gone out.

At a central point among them was an uncommon assembly. It contained all the important chiefs, sub-chiefs and warriors of a large band of Cheyennes; and the council they were holding had to deal with two momentous questions.

The first question was dead, for they had settled it unanimously, and so had all the squaws and boys and girls who were watching them. Not one of them had failed to declare, in some emphatic form:

"We will not obey the Great Father at Washington and be corralled and cooped up at an agency. We will not hoe corn. We will not live in cow-pen lodges, like pale-faces. We will be free to come and go. We will be as our fathers were. We will keep all our lands. The pale-faces shall not have our hunting-grounds."

That question was settled; but the other was terribly unsettled, for it was, "What shall we do next?"

Or, put in another form, "How shall we dodge the blue-coats, when they come to capture us, and drive us to the reservation?"

Some of those warriors had better, perhaps, have been out scouting, if they feared the arrival of blue-coats. As for Nish-nish-gah, he was out painting; and he was doing wonderfully. Red, white, black in streaks, patches, stars, circles, half-circles, crosses, dots, arrow-heads all over him, wherever he could reach!

It was a great pity that he hadn't a full-length mirror in which to see himself. Even without one, he knew enough of how he must look, and of how splendidly he must shine, to be almost too proud to walk.

He was a little stiff, as well, from the fast drying paint. But he was walking, for he was on his way back to the fallen sycamore for more bright red, to carry to camp with him.

He reached the precious hollow, went down into it, and was busily rolling another nice red ball, when he heard something which almost made him drop it.

In an instant he was cowering beneath a broken root, under the landward brink of the hollow, and was listening intently.

Trample, trample, trample—it was the noise made by many horses when they walk rapidly along together. There were a great many of them, and voices of men and jinglings of metal mingled with the sounds of the hoofs.

Several mounted men in uniform halted, as if for a talk, within a few yards of the hole, for the evidently recent falling of the tree had suggested something to them.

"Burnt Foot's band is right in the fork. We must get above them."

"The river is rising, as this fallen tree shows. By to-morrow they can't ford it. Perhaps by to-night."

"There's a freshet coming down the other fork, too. We'll have them caught in a trap. They don't want to fight, and they can't run away."

Nish-nish-gah heard, and understood. He knew they had even laughed at the great chief, Burnt Foot, the head of his band, as being too fat to travel fast or far; and he felt furiously indignant.

He kept very still, however. A squirrel scolded loudly on the branch by his side, and his heart beat so violently that he feared it would betray him. He was terrified by the thought that, if he was seen, his band might be caught in this trap.

He was also so terrified by the thought of being caught and carried with all his people to an agency, that he forgot how beautiful he had made himself. He waited only until the thud of the horses' feet seemed safely distant, and then crept swiftly out of his hiding-place.

Nearly a mile from the river bank, beyond the ridge of the long bluff and some distance from the camp and council of Burnt Foot's band, was a wide prairie of rich grass, upon which several droves of horses and ponies were feeding. Here and there among them were a few such braves as were not needed at the council, and were good enough to watch ponies in peace-time.

Peace-time? There came a moment when every one of these braves began to rush about and try to catch a pony.

Out from the bushes on one side of the prairie had darted one of the strangest figures ever seen in the Cheyenne hunting-grounds. It was not the manitou of the chipmunks, as the Indians might have guessed if they had been of an imaginative turn of mind, for it ran to the nearest pony, and caught and mounted him.

It was not a manitou of any sort, for as soon as it was mounted it began to screech and yell on its own account. The braves could hear something about "Blue-coats come! Run ponies to the camp! Heap run!"

Red—white—black! What a work of art was Nish-nish-gah, as he urged his frightened pony hither and thither, trying to frighten all the other quadrupeds and bipeds into a stampede for the camp!

He stampeded them, at first, in every other direction than that of the camp, for his gorgeous coat of paint frightened the ponies almost out of their wits.

He succeeded at last in starting them toward the camp; but he was the first to get away, and reached the goal before them all.

That was well enough, if he had been able then to pull in his pony; but there was neither bit nor bridle to interfere with that panicky animal's headlong rush, and it carried him straight into the middle of the dignified circle of the council of chiefs and warriors.

It was a horrible breach of Indian etiquette and decorum, but the pony did it; and not a brave among them all could guess what it might be that was now gesticulating and shouting upon the pony's back.

"Heap painted boy! Ugh!"

It was the deep, guttural voice of the fat chief himself, as he recovered from his astonishment at being interrupted in the middle of a great speech against the tyranny of the pale-faces.

He was a chief, however, and the news which Nish-nish-gah hastened to tell him called for instant action, dignity or no dignity.

"Ugh!" he said in his own tongue. "Where did you get the red paint?"

Nish-nish-gah, either from his constitutional cold in the head or from excitement, sneezed severely; but he told where he had found the ochre, and that strengthened his assertion that Elk Fork was rising.

"The big sycamore has fallen," said the chief. "Then the other fork will soon be up."

Burnt Foot understood the trap. The cavalry had managed to get above him. They meant to close in around him and wait for higher water.

"Trap heap good!" he said, and then seemed inclined to laugh.

"Heap good trap, but it won't catch Burnt Foot!"

The ponies and horses had already been brought to camp, although many of them had gone through, or past it.

Down came the lodges. There was rapid work in packing, in which, for once, the warriors actually helped the squaws.

The sun was still high when a long procession set out, headed straight for a point upon the bank of Elk Fork. At the head rode the fat chief, and beside him the proudest, the most wonderfully painted Cheyenne boy that ever sat upon a pony.

"Look!" said he, as they reached the bank. "There is the tree-hole!"

The chief merely glanced into the cavity made by the falling sycamore and at its gay, brilliant streak of rosy mud. Then he urged his horse down the river-bank, and Nish-nish-gah followed him.

It was a good place to cross—wide and shallow, with a gravelly bottom most of the way; but every pony discovered that the river was rising fast, and running swiftly.

It was changing color, too, as well as rising; and as Nish-nish-gah was leaning over his pony's neck to note the increasing flush in the muddy ripples, he felt a sharp jerk on his arm.

The next he knew he was under water. Then up he came, swimming like a fish, and in that way made the rest of his crossing, guiding his pony as he swam.

He climbed the opposite bank, but the chief was there before him.

"Ugh!" said he, with a grim, stern, scowling face. "Where is all the paint gone? Where did the boy lose his heap paint?"

"Ugh!" replied Nish-nish-gah. He was glad that just then he was compelled to sneeze.

Rapid indeed was the crossing of Elk Fork by Burnt Foot's band of Cheyennes, and rapid, too,—even more so than the cavalry commander had expected,—was the rising of the treacherous current upon which he had depended for his trap.

"It is what they call a red rise," he remarked to one of his officers, as they rode along the river, about sunset.

"Yes, General," said the officer, "as red as blood. It is rising fast. Neither Cheyennes nor cavalry could ford this fork or the other, just now. We've got them; we've trapped them perfectly!"

"Hullo!" exclaimed the General. "What's that?"

In one minute the opposite bank of Elk Fork seemed suddenly lined with wild horsemen, careering hither and thither, whooping, yelling, gesticulating and pointing at the swollen, roaring, reddening torrent.

Directly opposite the spot where the General had halted was an exceedingly queer object. Other hands than his own had done Nish-nish-gah's art-work for him this time, and had done it remarkably well. The white had gone on first, then red, black and yellow, in the most startling way; and there the boy sat upon his pony, duly embellished by the tribe in honor of the fact that he had brought to camp the news which saved the band for that time from the dreaded reservation.

"There they are," said the General. "They've slipped out! We are trapped instead of old Burnt Foot. But what can that mean? I thought I knew all the Indian sign-language,—every sign they had,—but that Painted Boy beats me."

So said old Burnt Foot, and so said all his band, as they went on their way, while the red rise in Elk Fork prevented the cavalry from pursuing them.

AN ANACONDA ON BOARD.

Some years ago my health required that I should seek the climate of the tropics during the winter months. I went with my wife to the genial Windward Islands—that fringe of rocky, half-submerged mountains that guards the Caribbean Sea from the assaults of the Atlantic.

A New York editor, knowing that I was in the neighborhood, cabled instructions to me to go up the Orinoco River to find out what were the real facts about the alleged encroachments of the English upon Venezuela territory, in the region where gold and silver discoveries had been made.

I left my wife at the comfortable American Hotel at Bridgetown, Barbados. I went thence to Port of Spain, Trinidad, and hired a little steam-yacht that was about the size of one of the torpedo-boats now being built for our new navy.

I was master of the craft, as soon as the charter was made; but I had a Captain, and the rest of the crew consisted of a mate, three deck-hands, an engineer and his two helpers and the cook, who was steward, waiter and general man-of-all-work besides.

Thus, you will see, we were ten souls in all, on board.

The passage across the Gulf of Paria was accomplished safely, and in two days after leaving Trinidad we were ascending the broad current of the Orinoco; steaming all day, and tying up to the shores at night.

That great river, while not so long as the Mississippi or the Missouri, is much wider than either of those rivers between its banks; and the force of its current is greater, because the mountains from which it gathers its moisture are much nearer than the mountain ranges of the great rivers of this northern part of our hemisphere.

Of all the animal life that the tropics luxuriate in, the snake is the most characteristic; and I hate a snake as thoroughly as ever did any descendant of Mother Eve. I really believe that the wide range of the Orinoco Valley produces more snakes to the square mile than any other region on earth.

Toward the close of our first day's run up the Orinoco, the Captain told me it was about time to look for a good place to tie up. He explained that it was unsafe to navigate the river in darkness.

The method of tying up was this: The Captain steamed out into the stream about one hundred and twenty feet, and dropped a stream anchor. Then, keeping a line on board, he steamed ashore, where a stout cable was fastened securely to one of the feet of a huge mahogany-tree.

Then the shore cable was payed out until the anchoring place was reached; and when the other line was hauled on board, the little craft swung close by the anchor with the shore cable pulled almost taut by the strength of the current.

During the night of our third day's trip up the river, we tied up near a little village, and swung our hammocks under the awnings that were spread over the gangways alongside the deck-house.

About half-past three in the morning, while it was still dark, all hands were awakened by the shouts of the deck-hand on watch, who excitedly shouted:

"Wake up! Wake up! Dey's a big snake comin' right on board!"

The negro's cry wakened me thoroughly. I saw, in the dim light cast by our lanterns, a huge anaconda creeping along the shore cable, and nearing the side of the craft.

A Bridge for an Anaconda.

All my mates were awake by this time, and they, like me, went at once inside the deck-house, and hauled in and fastened the wooden shutters that were fitted to keep the sea from breaking the glass in heavy weather.

Something must have incensed the reptile. It may have been his disgust at finding that we had all secreted ourselves. At any rate he proceeded at once to make as much of a disturbance as possible.

He swept down along the starboard gangway to the stern, and then along the port-side back to the bow; and then we heard him thrust his head up through the lashings of the awnings to the roof of the deck-house.

As he went past the little wheelhouse forward, Captain Thomas opened out the wooden shutter, and fired his revolver at our pirate.

The bullet did not hit, but the noise of the explosion of the pistol apparently hurt the snake's feelings, for he proceeded at once to thresh about the deck violently.

Happening to come in contact with the shore line, he took a couple of turns around that, and another about the "bitts" to which the "home" end was fastened.

In his contortions he twisted the rope squarely loose from its hold, so that the yacht swung straight out into the stream from the anchor.

When my readers remember that the winter months under the equator are about the same in temperature as July and August in the middle zone of the United States, they may realize what it was for us to be packed closely within the deck-house of this little steamer, and just over the boiler, too, in which there was still a good deal of hot water.

Meantime, the anaconda was careering about the deck in absolute command. Captain Thomas and I took chances and fired shot after shot at the intruder.

A dozen pistol-shots had been fired without apparent success, except further to enrage the huge snake, when at last Thomas muttered:

"Pistol bullets won't settle that fellow; I'm going to give him a dose of buck-shot. Half of these bullets must have gone through him, but he only gets more furious with each shot."

Thomas got my Remington breech-loader, and slipped in a couple of buck-shot cartridges. Then, opening the shutter a little, he waited until the reptile came forward again in his circuit around the craft.

I stood close by his side to aid, if need be, in closing and fastening the shutter.

We heard the rasp-like sound of the reptile crawling along the deck just outside.

Captain Thomas stood close by the little window with the barrels of the gun just protruding outside, when suddenly the great head of the snake appeared in the opening, and made us both start back.

The head came inside a few inches, but Captain Thomas recovered himself at once, and fired both barrels.

Both charges of shot took full effect in the neck, as we found out afterward; but the creature plunged forward and landed inside the wheelhouse, right among us, for his death struggle. As he came in, I confess I was more thoroughly frightened than I had ever been in my life.

When all was over, the little place looked as if a cyclone had visited it. The wheel was wrenched from its fastenings, and the stool the pilot used was splintered to kindling-wood. Captain Thomas had a broken arm, and I had been thrown down into the hold through the narrow door behind, and bruised so that I was lame for more than a week.

When we recovered from the scare and began to clear up, the intruder was hauled outside; and then we measured him. He was more than fifteen feet long, was sixteen inches in circumference at his greatest girth, and ten inches around the throat.

We found that the last two shots of Captain Thomas had torn the reptile's head and throat almost to shreds; but we found, too, that most of our pistol-shots had taken effect, though they had made no difference with the creature's vigor.

ANIMAL RESTORATIONS.

To many persons it seems marvellous that a naturalist can build up a complete animal upon the framework of a single bone or even a tooth. But to the student of animal anatomy it is not so difficult as it seems.

The teeth and bones of animals now living on the earth are adapted, each to a particular type of form and mode of life; and it is fair to assume that the framework of creatures of forms now extinct was equally adapted to their needs.

Moreover, it may be assumed with some confidence, that the bones of extinct species were not only adapted, but were adapted in the same way as the bones of existing creatures. So that it may be said that this animal lived upon grass and vegetables, that one upon flesh; this animal was lithe and swift, that one was clumsy and sluggish; this animal climbed trees, that one lived in a cave.

The bone suggests, then, by its form, not only the part of the animal from which it was taken, but the type of the animal and his size. These are only the general points of knowledge suggested to him; but his careful study of familiar forms, both of living animals and of fossil remains, united to a power of keen observation, teach him many a minor fact, just as the trained senses of the Indian show him many things on the trail which a person ignorant in woodcraft would never see.

The construction or building up of extinct creatures is called a restoration; and scientific men have become so expert in it that they undoubtedly produce forms which vary but little in appearance from the actual animal represented.

The most remarkable restorations of modern times are those at the Crystal Palace at Sydenham, a few miles from London, where an attempt was made, not only to restore some of the gigantic animals of a past age, but to reproduce their

Digitized by Google

surroundings; for it must be remembered that in past ages the vegetation was as different from that of to-day as were the forms of animals.

The geologist who undertook this was perfectly familiar, through special study, with the huge creatures of the cretaceous or chalk age; and by comparing the bones found in England and other countries with those of existing forms, he was enabled to reclothe them in apparent flesh.

In a Shark's Mouth.

It was easily demonstrated that the gigantic iguanodon, the bones of which were discovered in England, was an ally of the South American iguana—one of the lizards. So the skeleton was rehabilitated with the allowances due to the difference of structure.

In this way this mighty lizard was restored. First a model was made in clay and then enlarged; and the actual life-size model was produced by using hundreds of pounds of mortar, lime, brick and stone, not to speak of columns of iron.

The iguanodon was a gigantic lizard. Resting upon the ground, it could reach twenty or thirty feet into the air, and must have been one of the most wonderful creatures of a past age.

In this collection is the megatherium, found to be an ally of the sloth. The latter, now indigenous to South America, is a small animal found clinging to trees; yet here was an ancestor that weighed perhaps ten thousand pounds when it inhabited the earth.

It rested upon legs colossal in size—more like columns of support than limbs for locomotion—and standing on its hind legs, tore down tall trees upon which it fed.

The Crystal Palace restorations were made by Mr. Waterhouse Hawkins, who some years ago endeavored to introduce the huge restorations at the Central Park Garden in New York. This was during the reign of the famous Tweed Ring.

The geologist met with no little antagonism in this endeavor. One morning an order finally came to stop work; and as a result, all the casts were broken up and the stone monsters buried beneath the turf near the present arsenal building.

Some day perhaps they will be exhumed, and the finders will wonder what the strange objects mean.

Some years ago the report came from Charleston, S. C., that extraordinary teeth were being found at that place, some of which were as large as the human hand, if not larger.

The geologist immediately recognized them as sharks' teeth. The largest were almost identical in form with the teeth of an existing shark known as the white shark or carcharodon. This monster is found in various seas, the largest individual ever caught being thirty-five feet in length.

The teeth of this giant were not more than one inch in length—pigmies when compared with the enormous plates of dentine from the Ashley and Cooper Rivers. To the makers of restorations, the difference in size and the similarity in the teeth is suggestive.

If the carcharodon with the small teeth was thirty-five feet in length, what must have been the length of the shark with the teeth as large as a man's hand?

To determine this question, I once took the jaw of a modern shark, and placed the large teeth in the same position in which they were found in the small jaws. The result was a shark from one hundred to one hundred and twenty-five feet in length, whose enormous mouth could have encompassed a dozen men. Indeed, in a moderate-sized fish of this species, a man might have rested on the lower jaw, using the upper as a protection.

Imagine a man-eating shark as large as the largest whale, and some idea can be conveyed of its appearance.

In the day when this creature lived, as now, this fish was the scavenger of the sea, preying upon all other animals—upon the gigantic turtles and other strange forms of the time which happened to fall in its path.

So huge a creature would hardly have noticed a man, a dozen or twenty being but a sop to its rapacious appetite. What a spectacle must have been presented when its enormous mouth opened, and eight or nine rows of gleaming teeth in each jaw rose up as so many knives to sever the victim!

The teeth of this shark are beautiful objects. They are as brilliant to-day as they were untold ages ago, when the huge shark roamed up and down the Atlantic, which then encroached upon the land much more than it does at present.

The teeth are found by thousands in what is now Charleston. They have been dredged in the deep sea, and taken from the exposed slopes of big mountains in Southern California.

Some years ago a palæontologist discovered the bones, or some of the bones, of a fish in a certain deposit, and from them made, for his own amusement, perhaps, a restoration or outline of the fish, showing it to be a curious eel-like creature.

Time went on, and finally came the report that this fish was not extinct, but still lived in the waters of Australia, and this was found to be a fact.

The fish, known as the ceratodus, had outlived its age, and now stood as proof of the correctness of the restoration made from its supposed fossil remains.

Thus the ancient inhabitants of the earth can be restored with more or less accuracy, often the smallest bone telling a remarkable story. The splint-bone in the present horse is an interesting example, as by it the evolutionist traces back the lineage of this domestic animal to a time when it was not larger than a fox, and had three or four toes.

THE TROUBLES OF HAITI.

An attempt to murder President Hyppolite of Haiti was recently made by the adherents of his predecessor, Légitime. The movement against the government seems to have had the support of many residents of the capital, Port-au-Prince.

Hyppolite, after suppressing the rising, ordered many military executions, some of which were stayed by the foreign diplomatic corps. This interposition was resented with some insolence by the dictator, who afterward yielded with apologies to the consuls.

Though peace has been restored, civil war may break out at any time. Hyppolite is opposed, not only by the friends of Légitime, but by the partisans of other men who aspire to the presidency.

The situation is, in its main features, one that has often recurred in the politics of Haiti, where, as the United States Consul remarked three years ago, politicians are so deeply rooted in the habit of fostering intrigue and rebellion that a reported movement against the authorities in any district is looked upon philosophically by the people.

It is not easy to believe that the Haitians can, without some exterior aid, soon get into the habit of passing authority regularly from one fairly elected President to another.

The American Consul at Port-au-Prince in 1887 remarked that Salomon, reëlected in 1886, after one term of seven years, had apparently succeeded in ending the long series of disturbances and revolutions. Salomon was soon afterward forced into exile by the adherents of Télémaque, Légitime and Hyppolite.

Scarcely had Télémaque been installed President before he was killed by Légitime, who, in August, 1887, declared himself "unanimously elected."

In January, 1889, Hyppolite forced Légitime to fly for his life, and assumed the presidency in October of that year. Thus there have been four chiefs of State in four years, two self-elected, and three violently deposed.

Since 1804, when Dessalines, one of the liberators of his country from French rule, proclaimed Haiti independent, the country has had twelve short-lived constitutions.

Dessalines fell before a league of his generals, without whose consent he had declared himself Emperor. Christophe, the first duly elected President, resenting constitutional restrictions on his authority, retired to the north, and waged war almost incessantly till 1819 against Pétion and Boyer, successively elected at Port-au-Prince. The geographical separation of parties, then begun, has continued to this day.

Boyer, an able and good man, retained power till 1843, when he abdicated soon after an insurrection had been begun by Herard-Rivière, who was in his turn deposed within four months. The turmoil thus started has lasted, with few notable intermissions of quiet, till now.

If no country of white men had ever afforded a long spectacle of civil strife often exaggerated to civil war, the troubles of the Haitians might be attributed to the color of the Haitian skin. Their broils are really due, in large part, to the arbitrary conduct of France in 1825.

A French fleet then compelled President Boyer to consent that Haiti should acknowledge a claim of about thirty million dollars as compensation for the losses of French citizens who had fled during or after the War of Independence. Boyer's enforced submission destroyed his popularity and produced the downfall, not of himself only, but of his system also.

The impressionable Haitians, seeing their Administration humbled, conceived for it a contempt which has assisted the promoters of disorder until the tendency to revolution has become a political disease.

Nevertheless, the fact that Boyer gave Haiti fairly good government for twenty-five years, at a time when the people were less instructed than now, forbids belief that they are a race entirely incapable of maintaining law and order. But it is manifest that they need a firm enforcement of the letter and spirit of their liberal constitution for a time so long that a generation of law-abiders may replace those politicians accustomed to plot against every government which they cannot control.

WHILE IT RAINS.

All germs within the sod
Strive upward to their God
While it rains.
Can I do less than they?
(My soul's encased in clay.)
I fold my hands and say:
"Hope remains."

Harrisburg Telegraph. —*W. B. Way.*

THE BERING SEA AGREEMENT.

The governments of the United States and Great Britain have recently completed what is called, in the language of diplomacy, a *modus vivendi* bearing upon the much-mooted question of the seal fisheries in Bering Sea. The term *modus vivendi* is a comparatively new one, and means a living arrangement or way of "getting along" pending a more definite agreement upon points in dispute.

The use of the term in the title of the agreement which has been signed by the representatives of the United States and Great Britain in this matter of the seals implies that both countries expect that some more definite arrangement will be made; and this is indeed the fact.

It is known that the governments of the two countries are agreed in desiring an arbitration of the dispute with regard to Bering Sea; and the expectation of the arbitration is referred to in the *modus vivendi* which has now been signed.

To understand what is to be arbitrated upon, as well as to make clear the real meaning of the present "living arrangement," it is necessary to look a little into the facts as to the ownership of Bering Sea, and as to the sealing business there.

The waters of Bering Sea are inhabited by the fur seals of commerce in great numbers. These seals range the sea at certain times, but during the breeding season they resort to two small islands in the southern part of the sea, called the Pribylov Islands.

It is here that the best chance is afforded to take them; and this chance the United States Government has let for a yearly consideration to a corporation, rigidly restricting the number that the corporation may take, so that the seals shall not be, on the whole, lessened in number.

These Pribylov Islands belong entirely to the United States. The right of this country to control whatever is done upon them has not been questioned. But the vessels of unauthorized parties, particularly of subjects of Great Britain, have of late years been killing so many seals in the open waters of the sea that the value of the Pribylov Islands fisheries has been diminished, and the fact made apparent that within a few years the fur-bearing seals in the sea would be exterminated.

Partly by reason of the privileges which the United States acquired from Russia when it bought all Russian America and the Aleutian Islands in 1867, partly by reason of the common interest of all mankind in the preservation of this useful animal, the seal, partly by reason of the world's virtual admission, through a considerable period, of the United States' right to guard or "police" these seas, our government has undertaken to prevent the taking of seals in the open waters of Bering Sea, and has arrested masters of British sealing vessels, and seized their cargoes of skins.

Great Britain has denied this right. The dispute progressed; and at last, in order that the seals might not be exterminated, our government consented to an arbitration of the question what exclusive sealing rights in Bering Sea the United States possesses, and meantime proposed such a temporary arrangement as has now been agreed upon.

Under this agreement each government, that of Great Britain and that of the United States, undertakes to prevent seal-killing in Bering Sea east of the Russian line—that is, practically, in the whole of it—until the first of May next; except that the United States is to permit the killing of seven thousand five hundred seals for the sustenance of the natives of the islands.

The authorities of each nation may seize any vessel or arrest any person who violates the agreement, but as soon as possible these persons are to be turned over to the authorities of the nation to which they belong.

The agreement does not involve the surrender of any right which our government possesses in Bering Sea, nor prejudice its contention or claim upon any point at issue. It is simply for the purpose of promoting a friendly settlement of the points in dispute, and in the meantime of preventing the extermination of the seal species.

England has as great an interest in the preservation of the seals as the United States has, for the skins of those killed are taken to that country to be dressed, and give employment there to many persons.

VILLAGE GOSSIP.

The red flag fluttered over the door of Gillam's Emporium. The villagers were crowding the sidewalk, while from within came the sound of the auctioneer's nasal tones and the rap of his hammer. Mr. Whiffin, a merchant from the neighboring county town, stopped in a group of men outside.

"Ned Gillam sold out by the sheriff! What does that mean? I should have said that of all the young men in this village he was the one who would make his way. Has he taken to drink?"

"Not at all," said the squire. "He's sober enough."

"Ned understood his business," pursued Whiffin, still curious. "He was a salesman for me for two years, you know. I never had a more polite fellow to customers, nor one who could run off goods faster. I never had any damaged goods left on his counter. He sold them all at full price. He was almost too smart."

"You have hit the nail on the head, there!" said the squire. "Gillam is a pleasant, polite fellow, but tricky. When he opened the Emporium we all went there to buy. I took my custom from old David Longaker at the corner, thinking that we must have the 'fine table delicacies' which Ned promised.

"But presently I discovered that whenever he could palm off inferior goods for the best he did so. I never went back to him. David's goods were always just what he represented them to be. He's a crusty old fellow, but his word is to be taken."

"Our experience was the same," said the doctor. "My wife and daughters wanted to keep up with the fashion, and bought their hats and gowns which Ned declared were the style in New York.

"But when they found they were old auction goods which he had bought cheap and sold at high profit, they never went into his store again.

"That is the history of his dealings with most of the villagers. One after another dropped away until he had nobody left. Hence—the red flag and the sheriff!" waving his hand.

"Well! well! I always thought Ned Gillam would score a success in this world!" said Mr. Whiffin, as he climbed into his buggy and drove toward home. "Such a polite fellow and so agreeable to everybody!" he muttered, flicking his horse gently.

Young Gillam himself, as he watched the auctioneer and the buyers, wondered bitterly at his defeat. He had started with but little capital, but clear of debt. Now, he owed every one, and the assets would not cover his debts.

"I tried to be civil and pleasant!" he said. "I looked sharply after my own interest. I don't know where my mistake was!"

But every villager in the crowd knew.

The secret was a truth as old as the first trade which was made between the children of Adam; it repeats itself in every individual life to-day, and most readers who have seen this glimpse of village history can tell what it is.

GIRLS WHO THINK THEY CAN'T.

A kind of humility is sometimes encountered which makes the impatient incline to the belief that vanity is a virtue.

"I am fully in sympathy with you in the work," says one of these over-modest maidens to an ardent toiler in some public or charitable cause, "but I have so little executive ability! I am sure I should only make trouble for others if I tried to do anything. I am very sorry."

"Oh, it is of no use to come to me," exclaims another, holding up both hands in dismay; "I simply couldn't, you know. It is too great a responsibility. I should never dare!"

"You may have my name if you want it, for vice-president or something of that sort that doesn't mean I must do anything," says another, "but I cannot be an active member. I have no talent for persuading people, or convincing them, or managing them. And I haven't enough 'push' to beg, or get money out of people. And I don't at all understand matters of organization and parliamentary proceeding; and I couldn't possibly make a speech to explain my views to a committee; and the idea of making a report on anything sends cold shivers down my spinal column."

If the people who give such answers as these were really incapable, and their humility were a genuine and just acknowledgment of a natural defect, there would be no cause for complaint. But this is not usually the case.

As a rule, they are quite as capable as the average, and occasionally even more so. They simply wish to shirk responsibility, or they are lazy, or they dread possible disagreeable features in the work proposed. Their modesty is nothing but unreadiness.

To the willing worker, seeking help and baffled by refusals from people who think they cannot do anything, what a delight it is to come at last to one

Digitized by Google

of the opposite type—one eager to work, rejoicing to assist, ready to undertake new tasks, trusting in her own powers and still more in the power of an excellent cause and the good-will it should command from others.

Such a one is deterred by no false modesty; she is aware, sensibly and without conceit, that she is capable of good work, and she is not afraid to assume responsibility when a responsible person is required. She is always ready, and that alone would make her a power and an inspiration.

"Sometimes," said one of these helpful women the other day, half-laughing and half in earnest, "I am ashamed to think of the things I undertake to do; but I hate to refuse when I am asked to do a thing that I know ought to be done. I believe if I were invited to-morrow to assume the government of the Congo State, I should answer, 'Certainly,' with pleasure; just wait till I pack my toothbrush.'"

That is the spirit in which good workers do their best, and the spirit, too, which wrings labor from the lazy and kindles the indifferent to ardor.

LEARNED HACKMEN.

The race of drivers of public carriages has always been famous for its sharpness of wit. "Hackmen" are emphatically men of the world; they come in contact with all sorts of people, and become wonderfully acute in guessing the occupations and estimating the weaknesses of possible passengers.

They are sober and dignified with clergymen, and lively and slangy with gay men of the world. They make a complete and very worldly application to their business of the saying of Paul about being "made all things to all men."

Two young men who had somewhat the appearance of college professors arrived in Boston, one night, on a late train, and were asked to ride by several hackmen standing in a row. They were in doubt which one to choose, when one of the drivers called out:

"Learned men, it is proper that you should ride with a man of erudition. I am he. This way, please."

The two passengers, who were really instructors in a college, were so much astonished at this salutation that they gave themselves into the man's charge.

"Have you the metal disks which represent your impedimenta?" asked the driver.

They gave him their baggage-checks. He loaded the trunks upon the carriage, and they drove to a hotel. Before leaving him they engaged the man in conversation.

"Yes," said he, "I have driven many learned men. I have often had Edward Everett and Horace Mann in my carriage together. Alas! they are both gone now; *pulvis et umbra sumus*."

"You were acquainted with Horace, too, I see," said one of the passengers.

"Very well," said the man, with a sad smile; "I have frequently had him in my carriage, too, but not in perishable flesh. I am familiar with him in the immortal guise of ink and paper."

This learned hackman sustained his character much better than did a driver at Newport on the occasion of one of the great meetings of Friends which take place regularly at that city.

In order to attract the patronage of the visiting Friends, this man dressed himself in broad-brimmed hat and an old drab coat, and waited for passengers at the station or the steamboat wharf. Whenever a delegation of Friends arrived he called out:

"Will thee have a carriage? Will thee have a carriage?"

He had beguiled one Quaker into his conveyance, but presently, having gone away for a moment with the passenger's checks, he returned with a stormy look on his face and called out to the Quaker inside the carriage:

"Where in all git-out is thee's baggage?"

This unquakerly expression betrayed him as an impostor to the entire community of Friends, and he was favored with no more of their custom.

STEALING FROM CITIES.

The plundering of the City Treasury of Philadelphia by city officials, the facts in regard to which are gradually coming to the light, is the most deplorable scandal in this country within recent years.

It is no greater sin to steal a million dollars than to steal a hundred; and a low-bred, ignorant fellow may be as mean a thief as a man who has attained high office by his talents and the favor of his fellow-citizens.

But when it appears that men who have gained public confidence by their seeming fidelity have conspired together to rob the community, and that their apparent trustworthiness was worse than a sham, the shock which is given to the country by the discovery is a grievous calamity.

What are we to learn from it?

A recent article in one of our magazines, written months before the disclosure of wrong-doing in Philadelphia, puts a great truth into as few words as will convey the thought:

"The administration of a city government is purely a business, not a political matter."

Americans are very unwilling to learn this truth. They are persuaded not to believe it by the low politicians who would lose something of authority and power if the principle were accepted. Yet it is true.

Local government is instituted to secure good police, good roads, proper drainage, efficient schools. They are simply business matters.

Whenever and wherever politics are allowed to enter into local government, they are dragged in by men who have an object to accomplish, which is not better government but a chance for some one to feed at the "public crib." The opportunity for the wholesale robbery of Philadelphia was given by the hold which party politics has in the government of the city.

The spoils system has struck deep roots in our country. How soon will the American people learn that good government is the only reason for any government at all; and that the provision of places and offices for hungry politicians is a motive too degrading to actuate any right-thinking person in his conduct as a public man?

THE WONDERFUL KINETOGRAPH.

Mr. Edison's latest invention, the kinetograph,—from the Greek words *kinetos*, moveable, and *graphe*, writing, and meaning, therefore, an instrument that writes or pictures motion,—combined with the phonograph, furnishes a striking example of the marvellous and seemingly supernatural effects that can be produced by the ingenious use of the simple powers and forces that nature has placed at our disposal. Every one knows how a phonograph repeats the words and musical sounds that have been pronounced or sung in its presence. The kinetograph is just as simple.

It consists of a photographic camera so arranged that a strip of gelatine, which has been prepared so that photographs can be taken upon it, is made to pass over rollers behind a lens to which is attached a shutter capable of making forty-six successive exposures in one second.

If then the lens is focussed upon a stage containing a company of actors it produces upon the gelatine strip a series of photographs of the actors, each successive picture being separated by an interval of only one forty-sixth of a second.

Suppose that an actor has just raised his arm to make a gesture when the kinetograph is turned upon the stage; if the gesture occupies one second forty-six photographs will be produced, showing the actor's arm in just so many successive positions, and the intervals are so short that if the forty-six pictures are then caused to pass in quick succession before your eyes the actor's gesture will be reproduced as if the living man were actually swinging his arm in your presence.

The principle employed is the same as that of the optical toy called the zoëtrope.

At the same time a phonograph, combined with the kinetograph, records the words spoken by the actors while they are making the motions that have been photographed. It is only necessary then to cause the series of photographs to pass at a regulated speed through a magic lantern in order to present upon a screen not only a picture of the stage and the actors, but actually to show the latter moving about, smiling, frowning and gesticulating, just as they did in the real play, while at the same time the phonograph repeats the words that they uttered.

This invention has not yet been entirely perfected, but a working model of it has been exhibited by Mr. Edison, showing that the machine will certainly do the things we have described.

What would the old story-tellers of the Arabian Nights, with their magic perspective glasses and enchanted carpets, say if they could pay us a visit and behold in the broad daylight of this practical age these astonishing products of Yankee ingenuity?

LIMITED MONARCHY.

The system of responsible ministries, the introduction of which into our own government has been advocated by certain theorists, would make of the President of the United States much such a functionary as is a monarch in a constitutional country of Europe, so far as "influence with his own administration" is concerned. An amusing anecdote is told of Louis XVIII. of France.

This inoffensive monarch took breakfast one morning. Then his ministers called upon him.

"Well," said the King, "how are the public affairs?"

"Getting along very nicely, sire," said the ministers.

"Hum! In that case," said the King, "I think I will go and take a walk."

Next morning after breakfast the ministers called again. "Well, how do the public affairs get on to-day?" asked the King.

"Very badly indeed, sire," said the ministers.

"Hum!" exclaimed the King, "in that case, I think I will—go and take a walk!"

Next day no ministers called on the King.

"What has become of my ministry?" said the King, after breakfast.

"Sire," said the palace functionary who was in attendance, "parliament has turned out the ministry."

"Ah!" said the King; "then it's they who have taken a walk this time, eh?"

HIS FEE.

It is said that the celebrated German theologian Schleiermacher was rather inclined to save than to spend money, and a recent German periodical gives an illustration of his readiness to embrace any opportunity for doing this.

He was at one time quite ill, and sent for a renowned physician, Doctor Gräfe, who was court physician at the time, and whose son became the great oculist.

Schleiermacher recovered, and when fully restored to health, he sent a polite note to Doctor Gräfe, expressing his gratitude, and enclosing four louis d'or, begging the physician to accept this small sum as a token of his appreciation of the services which had been rendered him.

The following day he received his gold-pieces again, accompanied by the following laconic note from the great physician: "The poor I cure for nothing; the well-to-do pay me according to the regular 'medicine tax;' the rich reward me lavishly according as it suits their pleasure!"

Thereupon the clergyman sat down, and sent Doctor Gräfe this still more laconic answer:

"The four louis d'or are received back with gratitude. The poor Schleiermacher."

HISTORY REWRITTEN.

It used to be the fashion for orators as well as novelists to show their learning by indulging freely in quotations. They did not always succeed in impressing their hearers as in the following case, which all boys who are in their Roman history will appreciate:

A certain member of the Legislature, "from the rural districts," as the newspapers say, was discovered to be absent when his presence was sorely needed. An important measure was pending, and although this certain member could not speak he could vote, and in this juncture every vote was valuable.

Accordingly two other trusty members were deputized to hunt up the recreant. They went to his house and were informed that he was "somewheres around the farm." "Somewheres" proved to be a field where he was busily working.

"Well, is this what you're doing!" cried the searching members, reproachfully.

"Yes, here I am," said the rural member, cheerfully. "You find me, like another Cincinnatus, killing potato-bugs!"

Use "Brown's Camphorated Saponaceous Dentifrice" for the teeth. It has no equal. [*Adv.*

Premature Loss of the Hair, which is so common nowadays, may be entirely prevented by the use of *Burnett's Cocoaine*. It has been used in thousands of cases where the hair was coming out in handfuls, and has never failed to arrest its decay, and to promote a healthy and vigorous growth. It is at the same time unrivalled as a dressing for the hair. [*Adv.*

Stamp Collectors should read the story of "A Postage-Stamp Man" in the May 7th number of this paper.

SIGLAR'S SCHOOL, NEWBURGH, N. Y. The mistake in bringing up boys begins at eight. A pamphlet.

SCIENCE HILL. A WELLESLEY PREPARATORY. W. T. POYNTER, Shelbyville, Ky.

ILLINOIS MILITARY ACADEMY, MORGAN PARK, ILL. Fall term begins Wednesday, Sept. 16.

BRYANT & STRATTON COLLEGE, BUFFALO, N. Y., gives a thorough Business or Shorthand course by *mail*, at *student's home*. Low rates and perfect satisfaction. References and students from *every State*.

OHIO MILITARY INSTITUTE. COLLEGE HILL, OHIO. Fall term begins Sept. 15. Elegant new buildings with modern improvements. For illustrated catalogue address, J. H. MCKENZIE, A. M., President.

SUMMER CAMP AND SCHOOL FOR BOYS. Lake Quinsigamond: in connection with Worcester Natural History Society. 7th season. Send for prospectus and references to the PRESIDENT WORCESTER NATURAL HISTORY SOCIETY, WORCESTER, MASS.

SUMMER CAMP AND SCHOOL FOR GIRLS AND YOUNG WOMEN. Under same general management as above, but distinct and on opposite shore of lake; none received unaccompanied by mother or suitable chaperon. Send as above for separate circular.

ST. JOHN'S MILITARY SCHOOL, MANLIUS, N. Y. Under the Visitation of the War Department. Military under U. S. Army officer. Rt. Rev. F. D. HUNTINGTON, S. T. D., President. Apply to Lt. Col. WM. VERBECK, Supt.

RIVERVIEW ACADEMY, Poughkeepsie, N. Y. 56th Year. Prepares thoroughly for College, the Government, Academies, and Business. Military Organization. BISBEE & AMEN, Principals.

SUMMER SCHOOL OF THE METROPOLITAN COLLEGE OF MUSIC. (Formerly Metropolitan Conservatory.) A pleasant Home Department is open for the accommodation of ladies from a distance. This school has no equal for thoroughness of instruction and the absolute safety of its methods. Dudley Buck, President; H. W. Greene, Secretary and Treasurer. Send for circular. 19 and 21 East 14th St., New York.

New Process DOG BISCUIT

is entirely different from any other. Does not cause diarrhœa. Dogs eat it in preference to other brands, and it costs no more. It contains pound for pound twice the nutritive qualities of any other brand. Send for free book on management of dogs in health and disease. Retail price 10c. per lb. Samples sent by mail for 5 cents. ASSOCIATED FANCIERS, 400 N. Third St., Philadelphia, Pa.

LEAD PENCILS. DIXON'S "AMERICAN GRAPHITE" are the best. Send 16 cents for samples worth double the money. Send once only and then buy of your stationer. DIXON CRUCIBLE CO., Jersey City, N. J.

Not that the "Pittsburgh" Lamp is going to hurt electricity much. One lamp is equal to several—that's about all. Electric light is as soft as moonlight, and stronger. The "Pittsburgh" is equally soft and four or five times stronger than that.

Pittsburgh, Pa. PITTSBURGH BRASS CO.

IT WORKS EQUALLY well on OXEN AND MULES. Tell your neighbor that our Gall Powder does cure horses' sore shoulders and backs while in harness. 50 cents and $1.00, by mail. MOORE BROS., Vet. Surg's, Albany, N. Y.

BARGAINS IN NEW BICYCLES Easy Payments, with no extra charge.

Safe as Government Bonds. Also on hand 8% First Mortgages Tacoma Real Estate. Address THOMAS & CO., Tacoma, Washington.

HIRES ROOT BEER THE GREAT HEALTH DRINK. Package makes 5 gallons. Delicious, sparkling, and appetizing. Sold by all dealers. *FREE* a beautiful Picture Book and cards sent to any one addressing C. E. HIRES & CO., Philadelphia.

BOYS AND GIRLS Can earn from **$2** A DAY and upwards selling the **COMMON SENSE BROOM HOLDER.** A sample Holder sent for 15 cts. 14 for $1. *Prepaid.* Tidy, convenient, and keeps wet brooms from rotting; dry ones in shape. Every woman needs two or three; Hotels from a dozen up. Circulars *FREE* of this and other Household articles. AGENTS WANTED EVERYWHERE. Engle Spring Gun Co. (L. Box 542) Hazleton, Pa.

That Your Hair may retain its youthful color, fullness, and beauty, dress it daily with **Ayer's Hair Vigor** It cleanses the scalp, cures humors, and stimulates a new growth of hair. **Dr. J. C. Ayer & Co.** Lowell, Mass.

Alone. The ROYAL BAKING POWDER stands alone in purity in the world of leavening agents. It is the only baking powder free from all adulteration or admixture of injurious ingredients, and absolutely pure.

"The Royal is undoubtedly the purest and most reliable baking powder offered to the public."—Dr. H. A. MOTT, *U. S. Government Chemist.*

Vacation Prize Competition.

Each year shows an increasing interest in the art of Amateur Photography.

To further encourage the growth of this popular art we make the following generous offer:

To the boy or girl who sends us previous to Oct. 1, 1891, the best photograph we will present a **$35 Bicycle**; for the second best picture, a **$15 Photograph Outfit**; for the third best, a **$10 Photograph Outfit.**

The Photographs submitted for this Prize Competition must be made with the Harvard Outfit.

No person will be allowed to compete who has already taken a prize. The Photographs must reach us not later than Oct. 1, 1891. The selection of the subject will be left to the competitors.

Remember—the **Harvard** Camera has a French Lens and Tripod, and makes a picture 4 x 2½. In quality of work we **guarantee** the Harvard to equal a $15 outfit.

I am very much pleased with the work of the Harvard Camera. It is worth its weight in gold. Respectfully yours, J. A. FURFEY, Beverly, Mass.

The price of the Harvard Camera, with full Outfit, is only $1.75 by express; if sent by mail, 50 cents extra. Send **two cents in stamps** for a sample Photograph taken with the **Harvard.**

THE PLATE OF GOLD.

One day there fell in great Benares' temple-court
A wondrous plate of gold, whereon these words were writ:
"To him who loveth best, a gift from heaven."
Thereat,
The priests made proclamation: "At the mid-day hour,
Each day, let those assemble who for virtue deem
Their right to heaven's gift the best; and we will hear
The deeds of mercy done, and so adjudge."
The news
Ran swift as light, and soon from every quarter came
Nobles and munshis, hermits, scholars, holy men,
And all renowned for gracious or for splendid deeds.
Meanwhile the priests in solemn council sat, and heard
What each had done to merit best the gift of heaven.
So for a year the claimants came and went.
At last,
After a patient weighing of the worth of all,
The priests bestowed the plate of gold on one who seemed
The largest lover of the race—whose whole estate,
Within the year, had parted been among the poor.
This man, all trembling with his joy, advanced to take
The golden plate—when lo! at his first finger-touch
It changed to basest lead! All stood aghast; but when
The hapless claimant dropt it clanging on the floor,
Heaven's guerdon was again transformed to shining gold.

So for another twelvemonth sat the priests and judged.
Thrice they awarded—thrice did heaven refuse the gift.
Meanwhile a host of poor maimed beggars in the street
Lay all about the temple gate, in hope to move
That love whereby each claimant hoped to win the gift.
And well for them it was (if gold be charity),
For every pilgrim to the temple gate praised God
That love might thus approve itself before the test.
And so the coins rained freely in the outstretched hands;
But none of those who gave so much as turned to look
Into the poor sad eyes of them that begged.
And now
The second year had almost passed, but still the plate
Of gold, by whomsoever touched, was turned to lead.
At length there came a simple peasant—not aware
Of that strange contest for the gift of God—to pay
A vow within the temple. As he passed along
The line of shrivelled beggars, all his soul was moved
Within him to sweet pity, and the tears welled up
And trembled in his eyes.
Now by the temple gate
There lay a poor sore creature, blind, and shunned by all.
But when the peasant came, and saw the sightless face
And trembling, festered hands, he could not pass, but knelt,
And took both palms in his, and softly said,—"O thou,
My brother! bear thy trouble bravely. God is good."
Then he arose and walked straightway across the court,
And entered where they wrangled of their deeds of love
Before the priests.
Awhile he listened sadly; then
Had turned away; but something moved the priest who held
The plate of gold to beckon to the peasant. So
He came, not understanding, and obeyed, and stretched
His hand, and took the sacred vessel. Lo! it shone
With thrice its former lustre, and amazed them all!
"Son," cried the priest, "rejoice! The gift of God is thine.
Thou lovest best!" And all made answer, "It is well,"
And, one by one, departed. But the peasant knelt
And prayed, bowing his head above the golden plate;
While o'er his soul like morning streamed the love of God.

JAMES BUCKHAM.

For the Companion.

"HOW DULL!"

Elsie Holt sat in a hammock which was hung in the porch of her father's country house. The afternoon was warm; the shadows of the clouds drifted lazily over the fields. Elsie's bright face wore an expression of discontent, for the dress-maker had failed to send home her new gown, and the last pages were missing in the soiled paper novel which she held. She yawned drearily.

"How tiresome and dull the world is!" she said.

Overhead a pair of birds were twittering near their nest. They had just come from the far South. The story of their lives, their habits, their wanderings, their enemies was more curious than any novel ever written. Elsie knew nothing of it. Their calls, their love-songs, their cry of warning, their lullabys over their young had no more meaning to her than the rattle of dry sticks together.

The woods were full of these marvellous winged creatures, each with its history, which she might have read. She was blind to them all.

Close at hand grew countless great trees, each of which had its laws of life. There was not a weed or a blade of grass which had not some peculiar wonderful fact to tell, of interest and strange significance. To Elsie they were dumb.

Below the grass the great earth lay, with mystic meanings written on each stratum of clay and rock. The meanings were plain, so that he who ran might read. Elsie did not know one letter of their alphabet.

A common plant grew below the hammock; her foot crushed it as she swung to and fro. There was a powerful microscope in the house. If she had examined the plant through it, she would have seen upon each leaf a fairy forest of plumy growths and, creeping through it, tiny creatures which no eye had ever yet discovered, violet and red and golden. Here one shone with an emerald light; there another twinkled with opaline hues.

Elsie saw only a dingy weed.

As evening lowered, the great trees bent over her with a friendly calm. Behind the woods the lights of the village shone. In every one of its poor houses were human lives, some of them bare, strained, crushed lives, full of pathos and meaning, into which she could have brought hope and cheer.

Overhead the stars came out; Arcturus, which brought to Job its message from God, and the other distant orbs that have told to listening souls, in all ages since, the eternal truths of faith and love.

But Elsie saw and heard nothing.

Her new gown was not finished; the last page was lost from her cheap novel!

Therefore she sighed, "How dull and tiresome is this world!"

OUR COUNTRY.

It is possible, in the light of the census of 1890, to gain an idea of the way in which the population of the great United States of the future, which is certain to be the most populous and powerful nation in the world, is to be distributed over the vast area which it includes. The distribution is not yet complete, but the population of the country may be said to have laid itself out in a general way. We may judge approximately where the great masses of population are to be, and see what sort of a country, physically speaking, the people flock to. The geographers in the service of the government have divided the country into twenty-one different sections according to topographic or surface features—that is, according to the "lay of the land," and not at all with regard to State lines, means of communication or other artificial features.

The first slice of country which the geographers set off by itself is made up of the Coast Swamps of the Atlantic. Almost two million people live in this region, but they are mainly colored people, the country being unhealthy for the white race in general. Its population is increasing at a good rate.

Then comes the great Atlantic plain, with almost nine millions of people, now the most densely populated region, to the square mile, in the country; and then the delightful Piedmont or foot-of-the-mountains region, which goes from Maine to Alabama, and is second in density of population.

The New England hills—the Adirondacks of New York being included with them—are a section by themselves. The population is an important one, for though it is increasing at a slower rate than that of any other topographic division of the country, it has been a fruitful nursery for many sections more highly favored by nature.

Passing the long Appalachian mountain region, and the richly forested and mineral region of the Cumberland-Alleghany plateau, we come to a very populous district called the Interior Timbered Region, along the centre of which flows the Ohio River. There are more than eleven million people in this region, and it will always be well settled.

The imperial region of all adjoins this. It is called simply the Prairie Region; it sweeps from Western Indiana to the indefinite line of the Great Plains, and already has more people than any other topographic division of the country—more than thirteen millions.

This section is salubrious, highly productive, and has very little waste land; and it must always, it would seem, remain the most populous region of the country.

With less than one-third as many people to the square mile as the Atlantic Plain possesses, the Prairie Region already has one-half more people. What the relative importance of the two sections may be, when the Prairies are as well populated as the Atlantic Plain, would make an interesting computation.

The Alluvial Region of the Mississippi, lying below the mouth of the Ohio, is like the Atlantic Coast Swamps in two important respects. Its climate is unhealthy for most white people, and by far the larger proportion of its inhabitants are of the colored race. Its soil is the richest in the world.

The Great Plains, extending along the base of the Rocky Mountains to the Rio Grande, gained in population, between the years 1880 and 1890, more rapidly than any other part of the country—namely, two hundred and thirty-two per cent.

Though this section and other dry regions to the westward still have a small and sparse population, no one section of them as yet rising to a million of inhabitants, the very rapid proportion of increase, due to the irrigation of a rich soil, points to a future dense population.

There are, west of the Great Plains, all these geographical divisions: The North Rocky Mountains, the South Rocky Mountains, the Plateau Region, the Basin Region, the Columbian Mesas, the Sierra Nevada, the Pacific Valley, the Cascade Range and the Coast Range.

All these districts are as yet sparsely settled, but capable, with a system of irrigation, and in two or three of the regions without it, of supporting a great population.

LOST IN THE FOG.

Even old hunters, who have roamed the plains and mountains until they are familiar with every foot of the ground, are liable under peculiar circumstances to become bewildered. They are completely "turned around," as the common saying is. The streams all flow the wrong way, and the sun sets in the east. As soon as the experienced hunter realizes his condition, he makes a camp, lies down and goes to sleep. When he awakes, everything has come round right.

But more troublesome than such an attack is the coming of a fog. In a few minutes the peaks and headlands, the guides by which the traveller lays his course, are obscured and the sun is hidden. In an article contributed to "The Big Game of North America," the Rev. Joshua Cooke narrates his experience in a fog, while hunting with his son among the mountains of Oregon.

One morning, though there was every indication that a fog might roll down by noon, they started for a hunt. Several deer fell to their rifles, when the son came running, and exclaimed: "Father, the fog is coming. We must leave the deer; the sun is hidden, and we have not a compass. Hurry!"

They started on a run, but had not gone far before day was turned into night, and objects at two rods' distance were obscured. The son, a ranchman, familiar with the mountains, stopped, leaned on his rifle, and said:

"Father, we are in a bad fix. All depends on my keeping my head level. Please don't give me any counsel, or object to anything I say or do. It will only confuse me, and then we shall be lost. I will do my best."

"Before I take up silence," answered the father, "let me say this: We are now on an ascent; by keeping up it as long as it continues, we must come to some hill-top, which is our only chance for an outlook if the fog should break a little."

"It is a good thought, and may save us," replied the son, leading the way up into clearer ground, and then to the summit. It was barely noon, but the fog made it almost as dark as night. Even from the summit there was no outlook.

"I will climb that fir; perhaps I can see from above," said the son. He went up sixty feet—no outlook.

"May I speak, my son?"

"Yes, for I am all at sea."

"Well, just beyond the top of the fir is the faintest show of more light than elsewhere. If so, that is the sun, and that is south, for it is noon."

"Then," said the son, pointing his finger, "that is east, and there is our camp. Don't lose the direction, for I can't keep it up here."

He came down and took the direction. By keeping near objects directly ahead and moving carefully from one to another, the two men came within an hour to a black cattle-horse standing at his stake, his body dripping with the rain-like mist.

"Father, it's Jack," exclaimed the son, as the horse gave a faint neigh; "we are safe home! God bless you! You didn't bother me to-day."

Two other men of the company were lost that day in the fog, and wandered off west instead of going east. They were out all night, and were set right by some Indians. They had to travel forty miles to reach the cabin.

For the Companion.

LOST-LAND.

Where do the little maid's playthings go?—
Childish treasures dear to her heart,
Dropped and forgotten, unfound, and so
Making, perhaps, the big tears start.
She looks at me from her wistful eyes,
With faith as deep as they are blue;
"They must be gone to Lost-Land," she sighs,—
"Sometime I'll find 'em, I dess; don't you?"

Where do our happinesses go?—
Love and pity and faith God-willed,
The tender words that have moved us so,
Joys departed and fond hopes chilled;
Tears that were shed for us, smiles that shone,
All the sweetest things that we knew.
They have gone from us, somehow, surely gone·
I wonder are they in Lost-Land, too?

Dear little maid, if the faith I see
In your sweet blue eyes, in your sweet blue eyes,
Might only dwell in my heart with me,
I think that these clouds of care would rise.
If old joys wait, and old love endures
In the Lost-Land shadows whither they fare,
I will trust my hand, little maid, to yours:
We will go together and seek them there.

FRANK ROE BATCHELDER.

MADEMOISELLE FINETTE.

In the last days of his life, Lamartine, the French poet and statesman, lived in the Bois de Boulogne near Paris, in a little house given him by the nation. Though much tormented by creditors, he lived in comparative comfort, surrounded by five or six greyhounds, to which he was greatly attached, and cultivating roses, cabbages and a little literature. His favorite greyhound was a particularly slender and graceful one named Mademoiselle Finette. The care of her was the first duty of his servants, who were permitted to speak of and to her only in the formal third person.

One day, during a fearful rain-storm, Mademoiselle Finette was taken very ill. Lamartine called a maid, who happened to be a "green" young girl, fresh from Burgundy.

"Run and fetch a veterinary surgeon instantly," he commanded; "Mademoiselle Finette is very ill!"

The girl started off and began inquiring for the nearest doctor. She was referred to Doctor Ixe, a young physician who had lately established himself in the neighborhood. He had had eight patients, and four of the eight had quickly passed beyond the reach of medical attendance.

"Who wants me such a day as this?" said Doctor Ixe, sharply, as the girl rung his bell.

"Oh, it's Monsieur de Lamartine, sir," she said, "and you must come right off; Mademoiselle Finette is very ill!"

Lamartine! The young doctor was in a flurry. In spite of the weather, he put on his best frock-coat, his most resplendent necktie and his handsomest pair of gloves, and hastened to Lamartine's cottage. What an opportunity! Physician to the family of Lamartine; for—he said to himself—Mademoiselle Finette is evidently one of the great man's immediate family; a niece, perhaps.

Rushing up in a cab, the doctor found Lamartine's gate opened, and the poet himself standing near it, under a big umbrella.

"I have been waiting for you, sir," said the poet, "with cruel impatience. You have come none too soon. Mademoiselle Finette is very, very ill."

"How old is she?" asked the doctor, fidgetting timidly.

"Three years."

"Only three years! Do you think it is the croup, Monsieur de Lamartine?"

"The croup? Oh, I think not; but here we are."

Lamartine tiptoed into a darkened chamber, the young doctor following him, impressed and solemn, toward a curtained bed.

"Here is our little sufferer," said the great man, with a deep, poetic sigh. "You shall see if I had not ample cause to call you in haste."

He lifted the silk curtain, and there, curled up and shivering on a satin coverlet, lay the greyhound.

"What!" exclaimed the doctor, "it's a dog! Is Mademoiselle Finette a greyhound, sir?"

"Certainly," said Lamartine, "but what's the matter with you, sir?"

"I—I'm not a veterinary surgeon!" said Doctor Ixe.

"What are you, then?"

"I am a physician, Monsieur de Lamartine."

The poet was in fresh alarm, though he could not quite help laughing at the blunder. However, Doctor Ixe volunteered to do what he could for Mademoiselle Finette, and his services were accepted. He treated the dog faithfully, and she recovered.

From that time the young doctor had a powerful friend. He met people of distinction at the poet's house; and whenever any one was ill, Lamartine exclaimed:

"Why don't they try Doctor Ixe? He cured Finette!"

HEROISM BY PROXY.

An old seaman named Peters, stationed on one of the United States cruisers in the North Atlantic squadron, was a man of rough exterior, but of a warm heart. Its warmest corner was reserved for a certain young ensign on board the same ship, whom Peters worshipped with unswerving constancy.

Whether or not this was to be attributed to some kind act or speech of the young officer's is uncertain, but the adoration was a patent fact, and was the occasion of more than one laughing comment among the crew.

One day it happened that an unpractised landsman, while attending to some duty in the rigging, lost his footing and fell into the water. As he was unable to swim, he would probably have drowned before the ship could have been stopped in her course sufficiently to permit a boat to be lowered, had not an officer, standing on the gun-deck below, sprung after him and, at the risk of his own life, gallantly held him up until assistance came.

A letter from the Secretary of the Navy, commending in high terms this heroic action, was sent to the brave rescuer, and read before the assembled ship's company.

Old Peters viewed the whole proceeding with a feeling of jealousy, and after brooding over the matter for some days, he relieved himself in the following manner:

"Mr. Bradley," said he, sidling up to the object of his devotion, "that there letter what the Secretary wrote, that's a fine thing for a young man to have. You ought to have one, Mr. Bradley."

"Why, yes, Peters," said young Bradley, with his pleasant smile, "that letter is undoubtedly a thing for any fellow to be proud of, but I'm afraid I don't quite see my way to getting one like it."

"Mr. Bradley," answered Peters, in a hoarse tone inviting confidence, "ter-morrer night, sir, I'll be in the main chains, fussin' with somethin' or nuther. P'raps I'll axerdentally fall into the water. Sich things have happened, as yer know yerself, sir. Then, Mr. Bradley, what's to hinder ye from jumping arter me, like your messmate there? I guess ye'd have as good a chance as him for one o' them letters from the Secretary."

"There's only one difficulty about the plan, Peters," said Bradley, preserving a grave countenance, but inwardly much amused; "unfortunately, you see, I don't know how to swim."

"Sho! is that all, sir?" returned Peters, undismayed. "That aint nothin'. I'll hold you up till the boat comes."

FEEDING THE CAMELS.

The author of "A Ride through Asia Minor and Armenia" has, like the Turk, a great respect for the sagacity of the camel. It is not a cheerful beast, and yet its face is so pleasant and wise in expression that it forces the human observer to respect if not to admire. Wonderful stories are told of the animal's cleverness. All camel-drivers declare that when they take off and muffle the numerous bells with which the animals are adorned, in traversing a region infested by robbers, the creatures know why it is done, and step so lightly that they can pass unheard within a few yards of a concealed enemy.

One day, writes this author, we put up in a wretched little khan, but were lucky enough to get a small upper room, above the dirt and smell of the yard, and it was rather amusing to sit on the roof outside and observe the life below. The yard was crowded with camels, all wistfully watching two men—who were kneading cakes of dough that weighed about two pounds each—and showing their impatience by sundry grunts, or by spitefully biting at each other.

At last one of the men appeared with three or four of these cakes, and his two camels shuffled quickly after him to a comparatively quiet corner, where they knelt down in a surprising hurry, and remained with their mouths wide open, like young birds when the old ones are about to feed them.

The man thrust a cake well back in the mouth of the first camel, and then clapped a hand on each side of its big lips to prevent it, in munching, from dropping any out sidewise.

This he continued doing until the camel showed that all was swallowed, by opening its mouth for another cake.

Then the other camel was served; and so, going from one to the other, until he had given each four cakes. The poor beasts looked as if they would have enjoyed twice that number.

USELESS REMONSTRANCE.

Two of the best-known hunters of California are the two Aris, Ari Hopper, father and son, of the Sierras de San Rafael. The father stutters dreadfully, and the son is a giant, with a voice like a bull of Bashan, which, try as he will, he cannot modulate below a roar. Whenever the son bellows out a certain favorite story, the father marches up and down, exclaiming, as the climax is reached: "B-b-boy, you l-l-lie; you kn-kn-know you lie."

They were hunting in the San Rafael Mountains, and had driven two grizzlies down a steep, narrow path to a plateau that ended in a sheer precipice, on the edge of which stood a small tree. The bears were separated, and the son following one, drove him up the path, leaving the father to tackle his on the plateau.

After a chase, which ended in his grizzly getting away from him, Ari Hopper, Jr., returned to the plateau. As he came down the path, this is what he says he saw:

"Thar war the old man up a tree, and so taken up with the b'ar that he never even noticed his only son. He'd clum out on the limb of that tree over the precipice, and Mr. Grizzly was on the same limb, reaching carefully for him with his paw. Every time he stuck his fist out, the old man would jab at it with his bowie-knife, and say, 'G' back, g' back, you pesky fool; d-d-don't you see if you c-c-come any f-f-fu'ther, the l-l-limb 'll break and k-k-kill us both?'"

Right here the old man always explodes, and never gives his boy a chance to tell truthfully how he managed to control his laughter long enough to "pick off" the bear with his rifle.

ON THE BRIDE'S ARM.

Mrs. Gregg had one of the prettiest weddings that ever took place in the Massachusetts town in which she lives. But there was one odd incident of the occasion which a few of her friends, who are in the secret, recall with much amusement. Although a lady of quiet taste, Mrs. Gregg wore something which certainly no bride ever wore before.

Her wedding present from her old friend Doctor Jameson was an exquisite affair of lace, embroidery and white satin ribbon, which he had brought from Paris. It came just as the wedding party were starting for the church.

"What a lovely bag!" exclaimed the bride; "I am going to wear it. That will please dear Doctor Jameson;" and slipping the white satin strings over her arm, she thought no more of it until after the ceremony.

"That is a beautiful bag, and so odd." "I never saw a bag like it. The material is beautiful," commented some of her friends.

"I suppose the style is new," replied Mrs. Gregg. "Doctor Jameson brought it to me from Paris. I am delighted with it."

"Did you put anything in it?" asked Doctor Jameson, who had been listening to this conversation with a smile that was suspiciously near a laugh.

"No," replied Mrs. Gregg; "I'll put my handkerchief in. What—why—why, there's no bottom in it. What *is* it, Doctor Jameson?"

"Well," replied Doctor Jameson, "I bought it for a lamp-shade!"

And it was a lamp-shade, edged with lace and drawn up at the top with white satin ribbon.

LITTLE MISS PHYLLISY.

Little Miss Phyllisy wears a new gown,
Ruffled all up and ruffled all down,
She is sweet and dainty from toe to crown,
Little Miss Phyllisy darling!

She carries a basket of roses gay,
To strew in the path of the bride, to-day,
As she goes before her all the way,
Little Miss Phyllisy darling!

For the Companion.

FLY-FISHING.

Jimmy Leighton was a real little water-ousel for wading and splashing in the water.

The mountain water was cold, too, and the mountain wind chapped his bare, wet legs and feet so that they had to be rubbed with mutton-tallow every night, while Jimmy whimpered. Yet every morning, the first thing when they plunged out of bed, plump those same obstinate legs and feet would go in the irrigating ditch by the door.

So when he saw Uncle Jim getting his rod and flies ready to go a-fishing, Jimmy ran up and begged to go along.

"Oh, your legs are so short you could never stand in the swift water," said Uncle Jim, looking down at his small namesake. "And if you slipped and were swept down a big trout would snap you up for a fat bull-pout."

"I aint a bull-pout," said Jimmy. "And I wade in the irrigating ditch all the time. Let me go, too, Uncle Jim."

"No, you can't go this time," Uncle Jim said; "but I'll show you my flies."

Then Uncle Jim knelt and opened his fly-book, and spread out all his gay colored flies before Jimmy.

"Now, you must not touch," he said, "or you'll get a hook in your fingers, and then I'll have to shut up the book."

Jimmy sat on the doorstep and held his hands clasped tight behind him to keep from touching, for he felt just like a big trout ready to rise and take one with a snap, they looked so tempting.

"Oh, aint they pretty, Uncle Jim! What are they made out of?"

"Silk and feathers and tinsel," said Uncle Jim.

"I think this big red one is the prettiest," said Jimmy, and put his pudgy forefinger on what Uncle Jim called a "royal coachman."

But no sooner had he touched it, than Uncle Jim closed the fly-book and took up his rod and said, "I must be going. Good-by, Jimmy."

Jimmy ran after him to the yard gate and looked over and saw him wading, away down the creek, casting his flies.

Then, when he was clear out of sight, Jimmy ran in to where mamma was reading.

"O mamma, you make me a fish-pole and some flies, and I'll go fishing, too."

So mamma laid aside her book and went out to the thicket of mountain birch, and cut and peeled a nice slim fly-rod for her little boy. Then she tied on it a long length of cord for a line, and bent a piece of baling wire for a hook.

But still Jimmy wasn't satisfied. He ran to the chicken-house and came back with a glossy green rooster feather. "Now, mamma, you make a fly," he said.

Mamma laughed. But she snipped the feather with her scissors and tied it on the hook to please Jimmy. Then she said:

"Now run along and fish in the ditch, and bring me the first one you catch. But you mustn't wade. Try not to wade *this* one time, Jimmy, for your feet are so chapped."

"I won't wade this time, mamma," said Jimmy, stoutly.

And for once he didn't, but just walked along the bank and let the feather float before him.

But the trout didn't rise, and the sun was hot, and when he reached a little clump of willows growing by the ditch he sat down to rest in the shade.

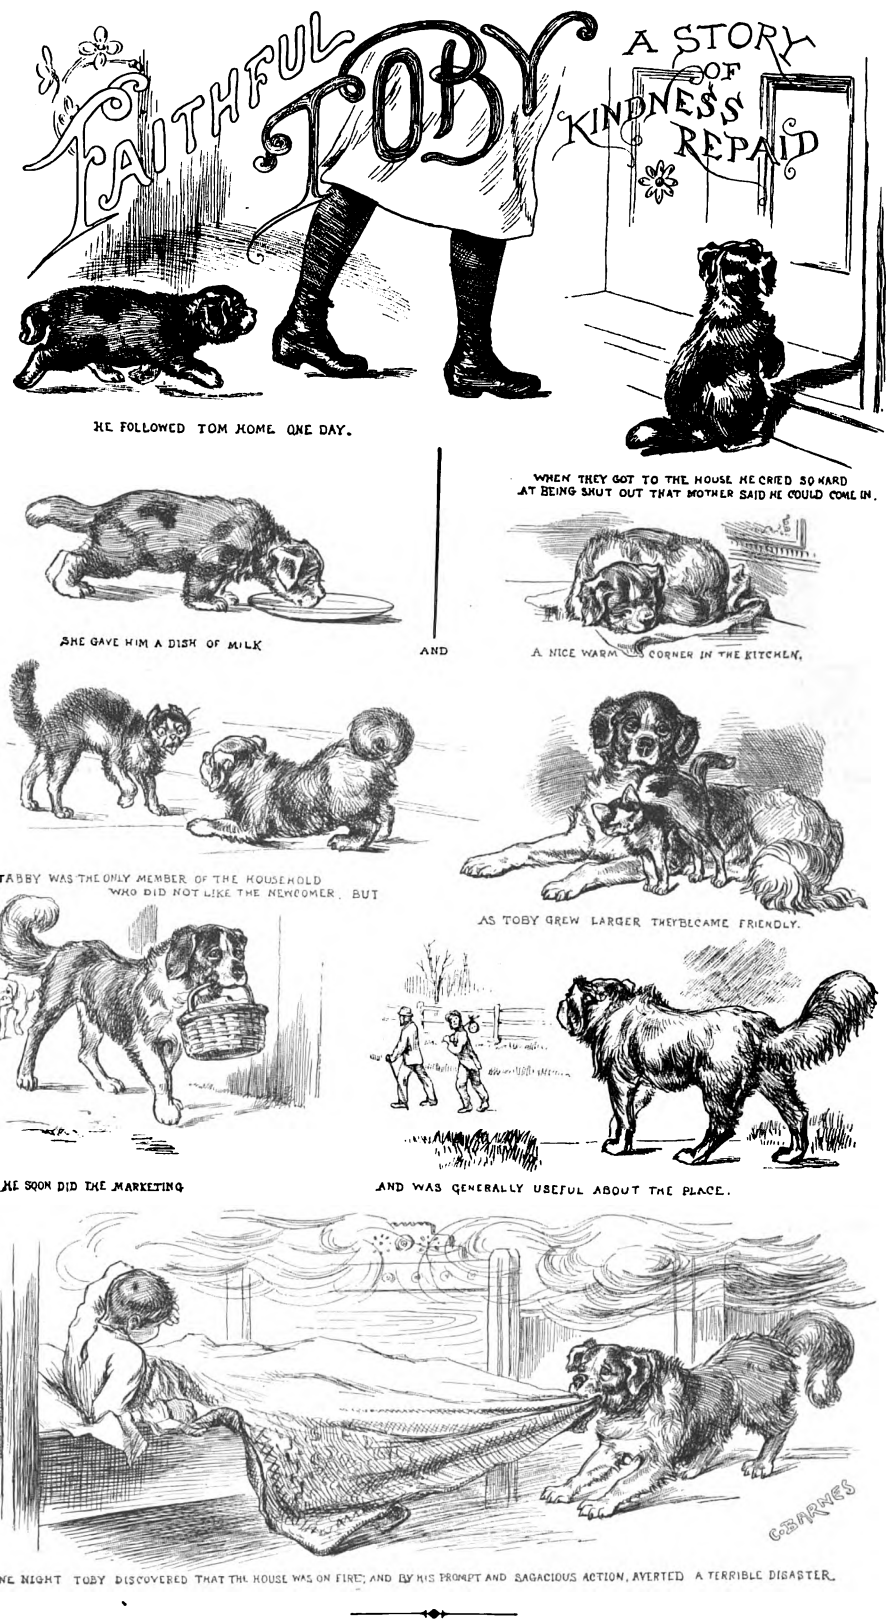
When Uncle Jim came along with his sack of trout, he found Jimmy still resting, for he was fast asleep, with his rod lying in the ditch and the feather floating in the water.

Uncle Jim looked at it and laughed. He took it up, and when he put it back in the water he laughed still more, only not so loud as to awaken Jimmy.

Then he went on to the house, and began to clean his fish.

Mamma was standing near him in the doorway when up came Jimmy. He was breathless and his eyes were very big, for he carried a great big fine speckled trout swung to his line.

"Oh, what a great big beauty!" cried mamma.



"I got him," said Jimmy. "I got him, and I didn't wade, neither."

"Let me see," said Uncle Jim. "Why, it's bigger than any I have here!"

And he and mamma laughed, and Uncle Jim said Jimmy could beat *him* fishing.

Then Uncle Jim cleaned it, and mamma fried it. And though it was a big trout, Jimmy ate it all himself, he was so hungry after going a-fishing.

STEWART was watching anxiously for the snow to go away. One day, when the sun was very bright, he came rushing into the house, shouting, "O Ma! *Dirt has come.*"

Enigmas, Charades, Puzzles, etc.

1.

CHARADE.

(Phonetic.)

My *first* is a tavern,
My *second*, a wheel,
My *third* is near by,
My *fourth* near the heel.
My *whole* you may think is not easily shown
When I say it is some one entirely unknown.

2.

ADDITION OF FRACTIONS.

Take one letter from each of the following months in the order here given; add them together to form the name of a celebrated English author, who died on July 26, 1834.

1. March. 2. October. 3. July. 4. February. 5. January. 6. April. 7. December. 8. August. 9. September.

Then take one letter from each of the following months in the order here given; add them together to form the name of a Spanish town taken on July 23, 1604.

1. August. 2. April. 3. February. 4. October. 5. May. 6. July. 7. September. 8. June. 9. November.

TRANSPOSITION AND CURTAILMENT.

Curtail a wild flower dressed in brilliant blue
And leave the aid which comes to me and you;
Transpose this aid and find a flower that blooms
Among the first to banish winter glooms.

5.

ENIGMA.

I am composed of 24 letters.
My 8, 5, 21, 13, 12 is a color.
My 16, 5, 2, 1, 4 is disgrace.
My 14, 6, 19, 13, 23 is speed.
My 13, 5, 7, 1, 12 is an aromatic plant.
My 16, 22, 2, 21, 11 is a slimy insect.
My 3, 10, 22, 15 are domestic animals.
My 24, 20, 17, 13 is closed.
My 13, 9, 15, 16, 10, 19 is a theme.
My 18, 15, 24, 13 is a cozy home.
My 19, 10, 16, 13, 21, 22, 15 is the name of a famous chapel.
My whole is a proverb that farmers try to obey.

6.

PUZZLE.

Behead a covering, and leave relatives.
Behead the cry of a dog, and leave a bird that flies at night.
Behead a precious stone, and leave an entrance.
Behead dismal, and leave the back part of anything.
Behead to unclose, and leave a coop.
Behead poverty, and leave an insect.
The beheaded letters spell your daily companion.

A. M. P.

7.

CHARADE.

My *first* and *second* make a stingy man. My *third* and *fourth* are talented. Whether the stingy man be talented or not, he is almost certain to be my *whole*.

Conundrums.

What common name for a beggar suggests the hopelessness of his case? Mend-i-cant.

When are "coming events" like fishes in debt? When fore-shadowed.

What trait is expressed in four-score? Forti-tude.

For the Companion.

"TOM'S FIT."

One day the children's pet cat, Tom, had some kind of a fit and ran up and down stairs and under the furniture, ending up with jumping through the open window and disappearing under the stable in the yard.

Mamma explained to the children that Tom had a fit, and would come back again when it was over.

Some time later, when the children were all in the kitchen, Tom suddenly leaped upon the table and from there to the cupboard, upsetting numerous cans and bottles in his way; from thence he jumped to the floor and made his way under the kitchen stove.

Little Ruby got down from her chair and stooped down and looked under the stove at Tom, when all of a sudden she ran to her mamma in the next room, shouting, "Mamma, mamma, come quick, come quick and see Tom; he has got another fit, and is eating it under the stove."

Investigation showed Tom to be devouring a fat mouse which had incautiously come out from the top of the cupboard.

LITTLE Charley was severely stung by a bee one day, and after he had been comforted and the pain relieved, he went into the door-yard, where he saw a bee on the clover, and called out to his mother, "Oh, say, mamma, here he is now out in the yard eating grass!"

The Youth's Companion is an illustrated weekly paper of eight pages. Its subscription price is $1.75 a year, payment in advance.

Twelve or sixteen pages are often given its subscribers in a single weekly issue of the paper. All additional pages over eight—which is the number given for $1.75—are a gift to the subscribers from the Publishers.

New Subscriptions can commence at any time during the year. The Companion does not employ agents to solicit renewals of subscriptions.

Payment for The Companion, when sent by mail, should be made in a Post-Office Money Order, Bank Check, or Draft, or an Express Money Order. WHEN NEITHER OF THESE CAN BE PROCURED, send the money in a Registered Letter. All postmasters are required to register letters whenever requested to do so.

Silver should never be sent through the mail. It is almost sure to wear a hole through the envelope and be lost, or else it is stolen. Persons who send silver to us in a letter must do it on their own responsibility.

Postal Notes are not a safe means of sending money. Any one can collect them at any Money-Order Post-Office, and, if lost or stolen, the money cannot be recovered, as no duplicates are issued. Subscribers who send us Postal Notes must do so at their own risk.

Renewals.—Three weeks are required after the receipt of money by us before the date opposite your name on your paper, which shows to what time your subscription is paid, can be changed.

Discontinuances.—Remember that the publishers must be notified by letter when a subscriber wishes his paper stopped. All arrearages must be paid.

Returning your paper will not enable us to discontinue it, as we cannot find your name on our books unless your Post-Office address is given.

Always give the name of the Post-Office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed and drafts made payable to

THE YOUTH'S COMPANION,
41 Temple Place, Boston, Mass.

For the Companion.

AFTER VACATION.

The principal benefits which city people derive from a summer sojourn in the country may be said to be four: 1, Rest of the brain. 2, A change of surroundings. 3, A change of air. 4, Life out-of-doors. In three of these respects dwellers among the hills may secure corresponding advantages from a visit to the sea-shore.

The vacation season has its own peculiar dangers. For some years it has been noticed by physicians that serious illness often attacks persons who have recently returned to their city homes. Typhoid fever is probably the commonest of such after-vacation diseases, and its prevalence under these circumstances is doubtless chargeable in great part to defective sewerage in country places, and especially in hastily equipped pleasure and health resorts.

While the visitor is kept in vigorous condition by his life in the fresh, bracing air, the germs of the disease may be digested and so rendered harmless. Then he returns to city life and the depressing atmosphere of the coast, and the reaction affords the germs remaining in his system exactly the opportunity they need for development.

Before concluding arrangements for board at any summer resort it is of the first importance to make sure of its proper hygienic conditions and the purity of its ice supply.

But the ill health which follows a return to city life after an absence in the country may arise from other causes.

1. A neglect thoroughly to flush the drains, let off the water which has been standing in the lead pipes, and ventilate the house. Carelessness in these respects is very dangerous.

2. The bracing air of the hills tends strongly to induce constipation. This tendency should be guarded against by a free use of fruit, vegetables and other suitable food. Otherwise the system may become saturated with its own poison, and the person may return home the worse for his outing.

3. The wholesome, natural life of the vacation season, with its freedom from care, its pleasant companionships and its out-of-door exercise, may stimulate the appetite and the digestion to twice their usual activity. This is well for the time. But it will not do for the man to keep up the same free habit of eating after his return home. For a few weeks at least he should be on his guard in this respect.

Persons who are especially susceptible to change of air and surroundings, and who are therefore peculiarly liable to suffer a reaction upon returning from the country to the city, may find it advisable to take a simple tonic for a while, under the advice of a physician.

THE MAIL-DOG.

The little daughter of a United States mail inspector tells of a favorite dog, a fox terrier, that seems to have been foreordained to travel in a postal car and sit on piles of mail-bags. His name is Ownie—probably because nobody owns him—and his home is on the mail trains and in the post-offices anywhere along the line of the Boston & Albany and the New London Northern Railroad.

He keeps watch of the mail-bags, and at whichever of the great termini of the roads he happens to be, he rides with the boys from the cars to the office and from the office to the cars. This is his business; during his four years of life he has never done any other. An idea of the kind of dog Ownie is may be gathered from this specimen incident:

One night, in Albany, after the unloading of the mail car, he started to ride, as usual, on the bags in the wagon, but when the post-office was reached he was not on board. This was strange, for no temptation had ever been strong enough to lure him from his post.

The sacks were delivered, and as the men called them over, one was found to be missing. The wagon-driver hurried back to look along the streets. After searching over a good part of his route he caught sight of Ownie in the gutter, wagging his stump of a tail and sneezing in his queer way to be recognized. The lost mail-bag was there, and he was sitting on it.

The treasury department seal of "Fidelity" is the picture of an iron safe and a watch-dog with his paw on the key. Somewhere in the post-office department there ought to be a picture of Ownie sitting on a mail-bag.

ON A BUFFALO.

The Chicago *Tribune* prints an exciting story, purporting to come from a Nebraska stockman. He had been out on a buffalo hunt, and was returning alone, with the hind-quarters of a bull on his shoulder, when he ran into the herd again, and almost before he knew it found himself surrounded. His dodging in and out seemed in danger of causing a stampede, and he knew that if such an event took place he would inevitably be trampled to death.

There was no time for consideration, and I determined upon a bold stroke.

I edged up to a shaggy young bull, grabbed the long hair on his fore-shoulder, and swung myself on his back. The bellow which followed made me wish I had been less venturesome. It was taken up by the entire herd, and soon we were flying along at a fearful rate over gulches and up hill and down.

I was blinded by the sand, but with eyes closed hung on for dear life. For half an hour or more the pace was kept up. My legs seemed crushed almost to jelly, and I began to think my hour had come.

I was so weak that I could hardly keep my seat. A few minutes more and I should certainly fall off. But just then I succeeded in partially clearing my eyes, and discovered that we were running parallel with the railroad track. The bank was high and steep. If I could reach it I should be safe.

By good luck the beast I was riding was closest to the track. I pulled myself together as best I could and prepared for a spring. It was made at just the right moment, for the motion of the bull's body sent me flying half-way up the embankment, and I was safe in the sand.

For five weeks afterward I was confined to my bed.

INTERNATIONAL HENS.

The advantages which people who live exactly on the line between two countries have in escaping the customs and other regulations of both countries have often been recounted. Probably the most picturesque and innocent instance of this kind of evasion comes from the far Western town of Nogales, which lies exactly on the boundary between Mexico and Arizona.

On the United States side of the line in this town eggs have been rendered dear by the new tariff upon eggs, inasmuch as the hens in that region are chiefly owned on the Mexican side of the line and fed by the peasants on cheap Mexican grain.

Recently, according to the Tombstone (Arizona) *Prospector*, a Maine Yankee arrived in Nogales, with an eye to business. He was convinced that his opportunity lay in the high price of eggs.

Accordingly he put up a long hen-house exactly across the boundary line. At the American end he provided nests; and at the other end he regularly fed his hens with low-priced Mexican grain.

The fowls ate their grain in Mexico and then walked across the line into the United States to lay their eggs. The transaction was perfectly honest, for of course the proprietor of the hennery smuggled neither grain nor eggs. But he availed himself of high prices on one side and low prices on the other.

HARD TO SWALLOW.

The teller of "tall stories" generally finds his rebuke awaiting him in an intelligent company. On one occasion, when several physicians had met, the conversation ran to the subject of the extraordinary things which a human being might swallow and still live.

The familiar stories about swallowing silver dollars, sets of false teeth, and so forth, had been related, when Doctor Longbow began to speak.

"Two years ago," he said, "I was called in great haste to attend a carpenter in my town, though the message said that the man was beyond doubt already dead, for he had, while holding a large gimlet in his mouth at his work, suddenly been taken with a fit of hiccoughs and swallowed the gimlet.

"But when I arrived at the man's house I found him very comfortable. The gimlet, gentlemen, gave him no trouble at all to digest."

There was silence for a moment. Presently one of the other doctors remarked:

"With you for his physician, Longbow, the man was lucky that it was only a gimlet that he undertook to swallow."

"What do you mean?"

"Why, if he had tried to swallow one of your stories it would have choked him to death."

KINDLY DONE.

It was a very cold morning in the month of March, in the great city of Chicago, writes a youthful contributor. A little old man stood on the corner of Clark and Randolph Streets selling newspapers.

He was very thinly clad and kept trotting up and down, trying hard to keep warm. His voice was hoarse from cold, and passers-by could hardly hear him shout.

Some rude boys jeered and laughed at him; but one, about thirteen years old, rather better dressed than the rest, after looking at him for a few moments walked up to him and said, "Shall I shout for you?"

The old man thought the boy was making fun of him and told him to "be off," but the boy began to call out, "*Morning News*, *Times* or *Herald*," in a clear, shrill voice, which attracted so many customers that in a little while the old man had sold all his stock.

He offered to divide the profits with his youthful partner, but the boy would take nothing, and went off with a smiling face.

ENCOURAGEMENT.

Disagreeable truths should not be spoken too bluntly, especially when the doing so might lessen the speaker's income.

"Do you think my daughter will ever become a musician?" asked a fond mother of the professor.

"I gant zay," answered the professor. "She may. She dell me she gome of a long-lived family."—*New York Weekly.*

Children often look pale and sick from no other cause than worms in the stomach and bowels. Give "*Brown's Vermifuge Comfits*," a simple remedy. [*Adv.*

LITTLE WATTS.

No matter how cold or stormy it was, Little Watts was always waiting for his papers, in front of the *Daily Leader* office, at half-past four in the morning.

It was often stormy and always cold at that hour, in the thriving and populous Rocky Mountain mining town in which the *Leader* was published; and Little Watts lived a mile from the office in a poor wooden house near one of the great mines.

I met him one morning hurrying down the stony, deserted, unlighted street. The wind was blowing keen and cold; the air was filled with fine, sleety snowflakes; and I thought, when I saw Little Watts, that the fates had not been kind to the boy, or he would have been warm and snug in bed at home at that hour.

But the *Leader* was published every morning, and Little Watts had regular customers at whose doors he left his papers before he hurried away to the early morning trains.

He was only twelve years old, and small for his years; and he would never be much larger or stronger. A great lump between his narrow shoulders told a sorrowful story of a fall down a long flight of tenement-house stairs, when he was only two years old.

It was often my duty to count out to the boys the papers as they came from the press. That is how I happened to know Little Watts.

His name was Clarence, but I never heard him called by any other name than Little Watts.

I remember when I saw the boy and heard his name for the first time. It was the first morning I gave the papers out to the boys. The *Leader* that morning contained one of the matters of important news that always increase the demand for the papers, and the moment the office door was open the newsboys came pushing and scrambling in, each eager to be first.

Suddenly the largest of the boys—a low-browed, thick-lipped, sticky fellow—began to beat the other boys back.

"Git back, fellers!" he shouted. "Git back, I tell ye; ye're scroogin' the life out o' Little Watts! Ye know he allus gits his papers first. Git back, now!"

The other boys fell back, and out from among them came Little Watts, bearing evidence of having been pretty severely "scrooged."

His hat had fallen off, and he limped as he struggled forward. The rough boy who had befriended him, in a way so surprising to me, found his hat and put it on the boy's head, while he said:

"Ain't hurt, are ye, Watts? No? Well, that's good. Git yer papers now, and light out, for they'll go like hot cakes this morning."

There stood, next to the house in which I boarded, a small house containing two or three rooms, which had not been occupied for several weeks.

One evening, as I went home, I saw cheap paper shades at the windows of this little tenement. Smoke was rising from the chimney, and on the step of the open door sat Little Watts, playing on a harmonica.

The door was within three feet of the street, and I stopped to say, "How do you do, Little Watts? Are you going to live here?"

"Yes, sir."

"Then we shall be neighbors. I live next door."

"I'm glad of it, sir," said Little Watts, politely.

"You must come in and see me some time," I said. "I have a good many books, and you may use any that you like to read."

A small, thin-faced woman came to the door, and looked inquiringly from me to Little Watts.

He rose and said, "Mother, this is Mr. Hart of the *Leader*. You've heard me speak about him."

"So I have," said Mrs. Watts, quickly. "The *Leader* folks are real good to my boy, sir. He tells me about it, and I'm very much obliged."

The window of my room looked out upon the house which the Watts family occupied. A day or two after their arrival I was sitting in my open window. The windows of the other house were also open, and through them came the sound of some one singing in a wonderfully clear and sweet voice. I laid down my book to listen. The words came distinct and beautiful:

They rolled his bed to the door.

Flow gently, Sweet Afton, among thy green braes,
Flow gently, I'll sing thee a song in thy praise.

Could it be Little Watts singing in such a voice? While I looked and listened, I saw Little Watts coming from a well at the back of the house with a pail of water.

I could not restrain my curiosity. As he came near my window I asked, "Who is that singing?"

"My sister Elise," he answered, eagerly, his face beaming.

"She has a wonderful voice," I said.

"Hasn't she though?" exclaimed Little Watts, with more enthusiasm than I had ever before seen in him.

"Did you ever hear any of those big singers?" he went on.

"Yes."

"Can they sing any better than she can?"

"Well, they are much older than your sister, and of course they are highly trained. How old is your sister?"

"Sixteen."

Before many days I and others in our neighborhood sat in the scantily furnished living-room of Mrs. Watts's house, and heard Elise sing.

Mrs. Watts was a widow, and Elise and Clarence were her only children. A small pension partly supplied their wants, and Mrs. Watts and Elise took in plain sewing when they could get it; but Little Watts's earnings from the sale of his papers were their chief source of income.

It seemed to me that they might live a little more comfortably; but one day Little Watts confided a secret to me.

"We're saving for Elise," he said. "She's going to be a big singer some day, after she's gone away and studied and had a chance. I'm saving up for that."

This was the reason why Little Watts wore such shabby clothes, and this was why their home was so poor and bare, and their table so scantily supplied. This was why Little Watts walked the streets in all kinds of weather, crying his papers at an hour when other boys slept.

One, two years passed. I was still in the *Leader* office. Little Watts still came before daylight for his papers, and was called Little Watts still, for he was not noticeably larger or stronger than when I saw him first. He still lived next door to my own home, and—Elise was going away.

She had been singing in church choirs and at concerts, and some ladies who had become interested in her, but who were unable to lend her money for her study, had given her a benefit concert, which the *Leader* had widely advertised without charge, on account of Little Watts.

But most of the money that was to pay for Elise's two years of study in the East had been or would be earned by Little Watts.

"But when I come back he shall work no more," Elise said to me, with the tears in her eyes. "I shall earn it then, and he shall go to New York to study drawing and engraving. He's so eager to learn it, you know, but he won't say much about it or even think about it until I begin to earn money."

Quite a little company of us went to the station to see Elise off. Of course Little Watts was there. His large eyes were shining through their tears, and his white face was wreathed in smiles, though I knew his heart ached with sorrow at the thought of two years without her.

But the boy cried his papers just as loudly and cheerily as ever next day—the *Leader* in the morning, when day was breaking, and the *Times* at night when the day was done.

I often met him hurrying around the corners of almost deserted streets, or paying a last visit to the hotels, where he hoped to sell another paper at an hour when all other newsboys had gone home.

Every paper he sold counted, not for himself, but for Elise. He and his mother lived upon the pension and her sewing.

Every month a draft to the amount of all of Little Watts's earnings went to New York to Elise, and every week she wrote encouraging letters of what her teachers said about her voice, and of her hopes for the future.

"I knew they'd have to say her voice wasn't anything common," Little Watts said proudly to me, when the first of her letters came. "I knew she'd astonish 'em!"

Twice the mountains changed from green to white and from white to green. They were changing to white again when Elise wrote the letter that told when she would start for home.

Little Watts brought me the letter to read.

"I shall reach home about the last day of October," she wrote, "You must send me all you are any more money—I am afraid you have sent me too much now. It is time for me to begin paying it back to you. You must be here next year, and I at home working and earning money for you. If I'm not too tired, I shall sing for you and mother the very night I come—I'm so anxious to show you how well your money has been spent!"

She was delayed a little, and came on the third day of November. It was on the afternoon of the first day of that month that the man whose duty it now was to give out the papers said to me:

"Little Watts didn't show up for his papers this morning. It's the first morning he's failed to come since I've been here. I wonder if he's sick."

"Not that I know of," I replied. "It was a terribly stormy morning, you know."

"The weather has never made any difference with him before. He's been on hand the first one many a morning worse than this. Poor little chap! How he's escaped pneumonia as long as he has is a wonder to me."

The sun had not shone for three days. First rain and then snow had fallen nearly all the time. A fierce, cold wind had swept down from the mountains. The barren town had never seemed so gloomy and cheerless and desolate to me as it did now.

At noon I went to see Little Watts. His mother came to the door and said, briefly and in a low tone, for Little Watts was in the next room and the door was open:

"He's real sick! The doctor is afraid it's going to be pneumonia. I've tried to keep him in the last three days, but he would go out. You see why."

Her eyes were full of tears as she pointed toward the corner of the room. There stood a shining upright piano, with a stool of crimson velvet before it.

"He made the first payment on them yesterday," Mrs. Watts said. "He was so anxious to have them here for Elise."

"Well, he's a perfect little hero, Mrs. Watts," I said, under my breath, but heartily. "I believe he will be able to fight off even the pneumonia for the sake of Elise."

I am sure he could have done so if his bodily strength had been as great as the love that filled his faithful heart for Elise.

He was worse the next day.

"He'll never be any better," said the doctor in the afternoon, when I met him coming out of the shabby little house.

In the evening Little Watts said in a whisper:

"Else'll be here in the morning, won't she?"

"At eight o'clock," I said.

"Then I'll hear her sing again," he answered.

The wind died away in the night. The skies cleared; all of the distant ranges, the nearer hills and the streets of the town were white with snow when the sun came out next morning.

Elise came at eight o'clock. Little Watts pulled himself up on his pillows to meet her and welcome her.

There was no sign in his eyes or face of sorrow in his heart at this ending of all his own hopes and plans for the future. He met Elise with a smile and with tearless eyes. For a moment she thought it must all have been a mistake about his being so ill.

"Now go and sing for me," he said, after a few minutes.

They rolled his bed to the door that he might see her at the new piano. Elise sat before it

Digitized by Google

with streaming eyes, and sang the little ballads and the old songs he had loved so well.

"There was one," he whispered, "about 'the shining shore,' and 'My Father hath many mansions;' won't you sing that, Elise?"

She sang it, with trembling voice; and while she was singing, Little Watts looked up with wide-open eyes, as if he were gazing at something wonderful that we could not see, and then sank back, his eyes closed forever.

J. L. HARBOUR.

WISE INDIFFERENCE.

Oh, that mine eye might closed be
To what concerns me not to see;
That deafness might possess mine ear
To what concerns me not to hear.

—*T. Ellwood.*

For the Companion.

AT MRS. MARTIN'S.

The rooms in Mrs. Martin's boarding-house, one by one as they became vacant, had been taken by young men, until finally the house sheltered young men only. This arrangement was satisfactory, not alone to them, but to Mrs. Martin as well. All such frail things as they found inconvenient she removed, and let her boarders have their own free and easy way.

One evening in December there was a typically gay assemblage in the back parlor. Simmons Gorham, as usual, was the controlling spirit. Where Sim was, liveliness and fun abounded.

His fun, it must be confessed, was of a rather shallow sort, and had the flavor of comic papers; but the company about him was not exacting; and when he said, "Never commit the folly of mistaking the hair-lotion for the maple-syrup," or, "Let us warble along on our bright, sunny way," the rest of the boys always laughed. Every one but Paul Metzger enjoyed his brisk talk to-night.

Paul understood only a word here and there, and sat silent with wistful look, watching the others. His eyes were blue, his mouth was pleasant, his curly red hair was becoming to him, and he was a very good-looking boy. The type of his round, fresh face revealed the German.

Now and then his cousin Ernst bent over and interpreted what was going on.

"Sim's doing 'Rienzi,' you see," said Ernst, his voice wheezy with laughter.

Sim, as the Last of the Tribunes, with the table-cover trailing from his shoulders, was stalking around and giving a grotesque rendering of a passage in the play, while Willard Brown, as Claudia, was swinging his legs from an end of the mantel—the balcony.

"Understand?" said Ernst.

"Yes," said Paul. That was one of the few English words he knew, and he used it often.

Paul was not in the least happy. He would have preferred to go to a German boarding-house, but his cousin had insisted upon his going to Mrs. Martin's. "Come," Ernst had said, "you want to learn English."

Ernst had been five years in New York, and Paul's coming to America was his plan. He had found for him a position as bookkeeper with a German firm, and kept a cousinly eye on him.

"'What aileth thee, Claudia?'" said Rienzi, anxiously; but he proceeded to drag Claudia off the balcony by the feet.

It was this Sim Gorham who somehow put the keen edge upon Paul's unhappiness. Paul admired him, he was so big and bright and high-spirited. He felt a sort of sympathy with him, and yet he thought himself repelled and slighted by him. Sim appeared too full of his fun-making to notice so quiet a fellow as Paul.

At home in Frankfort, Metzger had been a favorite everywhere. He was well educated; he knew a good deal about music; his family was well-to-do, and his American venture not a necessity.

But here in this New York boarding-house he was set aside and disregarded, merely because his tongue was not theirs, or else looked upon as a sort of amusing curiosity.

He wished he had given more attention to English at school. Sim Gorham, he knew, could speak a little German, but he did not put himself out to do so.

Mrs. Martin came in with lemonade, and was boisterously welcomed. Sim served it. The card-basket, inverted, was tilted over one eye, and the other shone with the gayety of youthful spirits. The gas-light shining upon Paul's hair had the ludicrous effect of turning its red to scarlet; and Sim's mirthfulness was at, perhaps, too high a pitch.

"Have some lemonade, Herr Lobster?" he asked, as he handed Paul a glass.

Nobody could help laughing. Perceiving that the joke was at his expense, Paul reddened; but he stayed till the party broke up.

After he had gone to bed, Ernst came in with a newspaper.

"Just happened to notice this," said Ernst. "See here! I rapped at Sim's door, but he's asleep already. You know how forgetful I am. I shall remember nothing of it by morning, so I want *you* to show it to him the first chance you get."

Ernst was excited. "Somebody advertises for the heirs of John Gorham, of Hinkley, Connecticut. That's where Sim comes from, I am quite sure, and he's a Gorham. You show it to him, or remind me. You can't tell what it may come to. It certainly means something."

Ernst reluctantly laid down the paper, and took himself and his defective memory to bed.

Whatever opportunity Paul may have had, the next morning, to carry out his cousin's injunction, he did not use it. Something rankled within him. He would ask Ernst nothing, but waited and sought out the good-natured American manager of the firm that employed him.

"Lopester—lopester;" he said, anxiously, "vat—vat ise dat?" He contrived to explain that somebody had said this to him.

The manager stared, and then laughed.

"It's your hair, you know," he said. He always talked to Paul very loudly and distinctly, as if his trouble were deafness. "It's red, you know."

With some help from the German office-boy he made his meaning, and Gorham's humorous allusion, clear.

Paul went at his work. The flush of anger which the explanation left gave way to a grim setting of his lips. Coming as a climax to what he had already resented, it was galling. Had he been alone he might have cried a little—his nature was sensitive—and have felt better for it. Instead, his bearing and his spirit hardened.

That day he worked after hours, rather than go home; and in the evening took his seat at the dinner-table without speaking.

None of the boarders noticed it. The room was, as usual, in a subdued uproar. Sim Gorham was talking fast, motioning with soup-spoon or salt-cellar, as it happened. Ernst undertook his customary translation.

"Gorham's going out to a friend's in Orange next week," he explained to Paul. "He says he'll have a grand good time; he's been before. If this weather keeps up they'll have sleighing and tobogganing. He's telling the fellows what kind of a new overcoat he's going to get."

Nobody ever resented Sim's egotism; it was so confiding and altogether harmless.

Paul answered not a word; he kept his eyes sullenly on his plate. It seemed to him that no one but Sim Gorham was to be thought of. *He* could behave like a clown, or talk loudly about nothing but himself, or insult people to their faces; it made no difference. The whole houseful stood agape at him.

Paul left the table before the others, and found his way to the piano in the dim parlor. Soon the rest followed noisily, and some one stumbled among the parlor chairs, whistling as he came.

"Say, want to go out with us fellows to-night, Metzger?" said Sim Gorham in his labored German. "Eh?"

"No, thank you," said Paul, sharply. This might be some new joke, thought he, and crashed among the keys.

He knew that Sim looked at him in surprise, but without a word more, he went out of the room.

Upstairs, where Ernst had left it, lay the paper with the advertisement. Ernst had forgotten it; but in Paul's memory it was distinct. To him it had seemed full of wonderful promise. But he let it lie there.

A feeling of rankling enmity is not an agreeable companion. All things began to look dark to Paul. He had greatly liked New York; he began to detest it. He had found his work easy enough; but now he chafed at it. He had had passing moments of slight homesickness; now he suffered sharp pangs.

Ernst failed to understand it. "You're not sick of it here already?" he said, anxiously, as he proposed some new amusement.

But every one else was gay and gayer. The holiday season was near, and all the city felt it. The people in the streets had doubled in number, and the shops were transformed. Ernst said it was as good as being at home to look into the various German supply-shops, with their gingerbread hearts and old-country confections, and hams and pigs' heads gaudily trimmed with colored papers.

At the boarding-house the customary liveliness rose to what Mrs. Martin, who was country-bred, called a "hullaballoo," for every one had holiday plans and every one announced them.

But Sim Gorham was still the conspicuous figure. His visit to Orange increased in brilliant importance as the time drew near. He gave details at every breakfast and dinner.

"Yes," he rattled on, serenely, "we're going to have a straw ride, sure, and tobogganing and skating of course; and by the way, I've decided not to have a cape overcoat!"

Paul felt that he hated him. He had added jealousy to his resentment till his heart was bitter toward Gorham. He, Paul, fell more and more into the shade; no one noticed him.

He was startled at the state of his own feelings. He had never before known such. He kept away from the parlors, and even did not want to be with Ernst. He would stand at his window of an evening and stare out at the star-spangled sky, and the vista of roofs with their chimneys and skylights and whipping clothes-lines.

He had never before been so lonely and wretched. In his depression, he told himself that he might have to give up and go home; but he knew in his heart that his trouble was not homesickness.

He had been looking for a letter, and a few days before Christmas it came. The American manager saw him take it from his desk and open it eagerly. Glancing at him an hour later he saw the boy sitting with his head in his hands, in what seemed a despondent mood.

"Bad news, Metzger?" he asked. Paul shook his head, smiling tremulously, and said nothing.

There was nothing but good news, set forth carefully by the mother who was Paul's best friend on earth. Further, there were counsels and loving good wishes. She hoped all was well with him. She had come to see that the American plan was probably best for him, and now her only concern was for his right-doing, happiness, and prosperity. Those words struck to Paul's heart with a sharp hurt. Right-doing—happiness?

He knew his mother as he knew himself; knew her standards of right, and what she would have him do. She had been to him always like a second conscience. He began now to look at himself as through her clear eyes.

Being proud of him, she had always trusted him and looked for nothing but the best from him. What would she think of his present condition? Paul smiled rather grimly.

He thought of it, and felt as if some rough, rebuking hand had turned him topsy-turvy and then left him. He suddenly despised himself and all his ways. Still he was happier; he felt more as he used to feel.

He was all at once anxious to get back to Mrs. Martin's—so much so that that day was a long trial to him. His work dragged, and the hours crawled along.

He twitched and turned on his stool and bit his pen and rubbed his hair back with a nervous hand. He hardly knew what had taken possession of him; but the light that had broken over him grew clear. He seemed to have wakened out of a bad dream.

The knowledge was strangely pleasing; he whistled softly to himself, and smiled when he met any one's eyes.

He reached home early. Snow was falling softly, and the great flakes sparkled in the light of the street-lamps. He ran up the icy steps as though an angry shadow were chasing him, dashed upstairs, searched a moment in a remembered corner, and hurried down to Sim Gorham's room.

He burst in without knocking. Sim was packing a valise, and his belongings strewed the room. As he worked with coat off, he whistled loudly, but work and tune stopped at Paul's entrance. Sim grew red and stared.

"Come in. How are you?" he stammered, half in German, half in English. "I'm packing up. Going out there to Orange to-morrow, you know. Have a chair!"

He covered his astonishment with brisk cordiality.

"I want to tell you something," Paul gasped. "But I don't know how to begin. It's a good while now that I've been feeling hard toward you, and for nothing, almost. I know why; I was jealous of you. They all like you and pay the most attention to you. I can't say anything nor understand anything; but that is not your fault. Then you called me Herr Lobster that night, and I found out what you meant, and that, with the rest—I think I've been hating you ever since."

Gorham attempted to make a frank apology, but Paul went on irresistibly:

"It has not been your fault, and it hasn't hurt you. It has hurt me. I've felt as I shall never feel again. Then to-day I got a letter from my mother—"

Paul faltered. He looked at Sim through tears, and could explain no further. He thought Sim would understand.

"But if that were all—" he continued, in sharp distress. "No, see here, what I have done! See this paper, and read that! Ernst told me to give it to you, because he would forget it; and I didn't—I wouldn't. I think you've come into a fortune, if it is not too late. I was mean enough not to tell you, and Ernst forgot it. I think I've almost committed a crime in keeping it back. Read it!"

Paul's hand shook. He was afraid to know how great a wilful wrong he had done. His face was heavy with apprehension.

Sim took the paper in a dazed way, and went through the paragraph.

"Pshaw, Metzger!" he cried, slapping the paper derisively. "Is this what your trouble is about? A great one Ernst is! Why, in the first place, the lawyer that put this in is some shark, probably, who is after some one's money; I've heard of such things. But if there's a billion in it, it wouldn't do me any good. I'm from New Hampshire, and from Higby, not Hinkley; and my grandfather wasn't John Gorham, but Simmons. There! Pshaw! What a rumpus about nothing at all!"

He had spoken as much English as German, but Paul understood. Sim clapped his knee and laughed. The stiffness of the interview was over.

"I don't see what made you say all that, Metzger," he said. And yet he did see; there was a like sincerity in his own nature that made him understand. "Why, come," Sim added. "You haven't been such a bad fellow as you make out.

"I know I'm a nuisance, Metzger," Sim continued with appealing good-nature; "a bore, and I know it. If I could help chattering and joking I would, now; but I can't. I like sensible, quiet fellows of your kind; do you know it? People respect you more. *I* haven't any dignity. I know I'm a clown and I suppose you've thought so. Why didn't you tell me so? It would have relieved you, and it might have done me good."

He laughed in his genial way.

The laugh alone was the embodiment of honest, careless good spirits.

"I'll tell you," said Sim, "I've wanted to get to know you, but my German is pretty bad, and then—what I said—you're more dignified than the rest of us. I didn't seem to know how to go to work. But I did intend to do one thing. The friends I'm going to see in Orange told me to ask one of my friends at the boarding-house to go out with me. I thought I'd ask you. I knew you couldn't help enjoying it if you couldn't talk much. I was going to invite you that night I asked you to go out with us; but you snapped me off, you know, and I didn't get up courage again."

"You were?" asked Paul. This was his sharpest moment.

"That's how it was," said Sim. "Say, I'm sorry I called you Lobster. Let that go, Metzger, and let's be friends. That invitation is open yet, you know; I haven't asked anybody else. Don't you think you can manage to get off?"

"I don't know," Paul said, slowly. "Yes, I can try to."

He was not thinking about Sim's proposition, bashfully made; he was thinking that he had had an experience and a lesson that ought to last him all his life.

For the Companion.

THE BARISAL GUN.

One of the most startling mysteries of nature is the phenomenon known in India as "the Barisal gun." In a part of the delta of the Ganges, detonations, that sound as if caused by the discharge of heavy artillery are heard booming through the air, at irregular intervals, rising from none can say where, and caused by none can say what.

They have been heard during at least four hundred years, as is proved by local history, and tradition does not reach a time when they were not heard. Nevertheless, they have never been explained.

Barisal is a little town on the western bank of the Barisal River, sixty-five miles north of the Bay of Bengal.

Although its name has been used as though the sounds were peculiar to the place, the noises are familiar to the people of Dacca, seventy-five miles northward. They sometimes occur at Chittagong, one hundred miles eastwardly, and occasionally startle folks at equally great distances away toward the west and the south. They have even been heard with great distinctness at Cherra Punji, which is nearly two hundred miles north of the Bay of Bengal.

At times they seem to come from the south or southwest; and again from the north or east. Wherever one hears them, they always seem to come from somewhere else. No one has ever been known to be near to them, but they are never so remote as to leave doubt in the minds of those who hear them that they are actually the sounds of cannonading.

The natives, ever ready to explain what they do not understand by giving it a supernatural origin, had two versions of the cause of the detonations: one, that they were the sound of the opening and shutting of the brazen gates of the mythical palace of Ravanna, on the island of Ceylon; the other, that aërial beings—Devatas—produced them by the firing of ghostly cannon in honor of Khanja Ali or Khan Jáhan, who was Tahsildar of Bagirhat four hundred years ago.

Of course, when matter-of-fact Englishmen got into the country they said "Pooh! pooh!" to all that, and straightway set to work to find scientific explanation for the sounds.

But they have to admit that they have not yet found it.

Lieutenant-Colonel Waterhouse made long and careful investigation into the subject, and published an exhaustive pamphlet, the conclusion of which was that "whence the sounds proceed there is nothing to show."

Colonel H. S. Olcott, after devoting much inquiry and study to the matter, averred that, so far as he could see, the ghostly artillerists of Indian story were as probable as anything that the most advanced modern science could suggest and maintain by way of explanation.

Now, during more than a year, the Asiatic Society of Bengal, after collecting and studying the facts, finds these mysterious aërial demonstrations as deep a puzzle as ever.

Fully to appreciate the strangeness of this phenomenon, it is necessary to understand something of the country in which it takes place, and the conditions under which it is heard.

The land in all the district mentioned is a flat, alluvial plain, intersected by a network of almost innumerable streams and channels of the sacred Ganges. That is the general character of at least fifty thousand square miles of the deltas of the Ganges and Brahmapootra Rivers.

The nearest hills are an hundred miles away from Barisal toward the east and nearly double that distance northwestwardly, so there is no basis for an "echo" hypothesis, if even it were

Digitized by Google

possible to find anything that might cause such echoes.

There are no military cantonments and no heavy guns in all that part of the delta where these noises occur, so they cannot be caused by real material guns.

The detonations are always heard at their best in the clearest and driest weather, and never during storms, so atmospheric electricity cannot reasonably be held responsible for them.

They have not been known to occur simultaneously with earthquakes.

The attempts at explanations are in many cases rather amusing than satisfactory. If certain things were true which are not true, more than one of these explanations might be thought not wholly improbable. But as the explanations are positively contradicted by facts, it is not worth while even to mention them.

All over the territory in which this phenomenon occurs, the Asiatic Society of Bengal has caused to be distributed printed lists of questions and blank forms, to be filled out with data which it is hoped will, when collated, sustain some hypothesis, or demolish by unquestionable evidence all that have been or may be advanced.

Hundreds of the most intelligent residents in the district are gathering the desired facts. Should the Society succeed in finding a physical cause for this acoustic marvel of the centuries, it will have solved one of the most puzzling problems ever propounded to scientific men.

OVER THE GRADE.

Half-way up a great California mountain, upon a shelf or level space called Johnson's Flat, a few sheds and cabins clustered about the shaft of the Monte Christo mine.

One of these cabins—the best of them all—was occupied by the superintendent of the mine. He was Doctor Green, and he had been a successful surgeon in an Eastern city. Ill health had compelled him to remove to these parts, and he had taken up the occupation of mining.

Down the mountain, to Gaylord's station on the Pacific Railroad twelve miles away, led a narrow cart-path, called a "grade" here. It was wide enough for only one wagon, except in two or three places where turn-outs had been cut into the side of the mountain.

In such places a wagon might wait for another to pass; and teams going up had the right of way. There was very little travel on the road.

The descent from the outer edge of this path was often almost perpendicular. One bend, where the road wound around a promontory, was called Dead Man's Point, because tradition had it that a man and a horse and wagon had gone over the grade here, and had been dashed to pieces on the rocks below.

There was employed about the mine a Mexican boy, called Pete. He was a faithful and hard-working boy, and had but one enemy in the world. That was "Old Lightning," an unusually large mule—heavy, bony, and extremely vicious.

This mule was used to haul the refuse from the mouth of the mine to the dump, and was generally attached to a heavy and very strong two-wheeled cart. Most of the men employed about the mine were much afraid of the animal, for he was always ready to use his teeth or his heels.

He seemed to bear a particular spite toward Pete, and had at one time, indeed, bitten and kicked him so severely that the boy's life was despaired of. Pete certainly would have been killed if Dennis McCarthy, the owner of the mule, had not interposed just in time to save his life.

As it was, Pete was badly hurt, and might not have recovered if Mrs. Green, the superintendent's wife, had not taken him to her cabin and nursed him back to life. The grateful boy had the deepest affection for Mrs. Green after this, and the deadliest fear of Old Lightning.

One day in May, when the supply wagon from Johnson's Flat returned from Gaylord's with a load, a telegram from the East was brought to Mrs. Green. It stated that her niece, an invalid, had been taken worse, and had been ordered to go to California immediately; and that she would arrive at Gaylord's on the following Monday.

Preparations were made at once to meet the invalid young lady at the station, and bring her up the mountain as comfortably as possible. The camp-wagon was stuffed with mattresses and pillows, and a safe team of mules provided.

Pete was to be taken as driver. He was an excellent driver, understood the use of the brake, knew the road perfectly, and was afraid of nothing except Old Lightning.

The train from the East was due at eleven o'clock in the forenoon, but it was seldom on time, and had lately been many hours late on account of a washout. Arrangements were made, therefore, for Mrs. Green and the invalid girl to remain at Gaylord's over night; and no one at Johnson's Flat expected them until Tuesday.

Dennis McCarthy worked all day on Monday at his usual occupation of hauling refuse to the dump with his big mule and cart; and though he was generally unwilling to admit that Lightning had faults, he was heard occasionally to grumble, and to make remarks indicating that the mule was more than usually fractious.

The day's work was nearly done. The sun was approaching the tops of the mountains across the deep gorge to the west of the camp, and the last load for the day was put into the cart to be hauled to the dump.

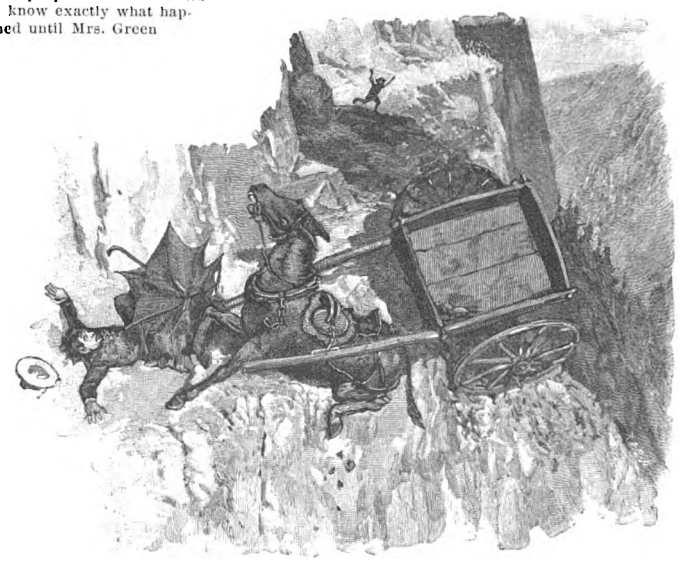
Just at this time one of the men, in passing, made a playful motion toward the old mule. Quick as a flash he sprang at the man, dragging the heavy cart; and before Dennis could reach him, he was going at full speed down the grade.

The man saved himself by quickly running up the hillside into a clump of bushes; but the mule had become frantic, and urged on by the loaded cart behind him and frightened by the noise it made, dashed furiously on down the grade, with Dennis in futile pursuit at an ever-widening distance behind.

The men, who were just leaving the mine, gathered at a place where the grade was plainly visible all the way to Dead Man's Point, nearly two miles below.

"Sure," said one of the miners, "I hope there's no one on the grade about now. 'Twould be a bad day for 'em to meet Old Lightning, with all that load of rock in the cart, too. They'd all go to the bottom of the cañon together."

"Never fear," said another, "there's nobody on it at this time. There'll be no danger to any one but Old Lightning, and I'm thinking he'll never cart any more tailings."



Among the others who stood looking down the grade was the superintendent, Doctor Green. The flying cart and mule were momentarily lost sight of at a slight curve, and most of the men were looking at the figure of Dennis far behind, but running as if his life depended upon it.

Suddenly the superintendent uttered an exclamation of horror, and he and several others rushed forward to the edge of the flat.

Just coming into view at Dead Man's Point, and turning the curve so that the precipice was at its very wheel, was the camp wagon. In it were Mrs. Green, the invalid girl, and Pete; and the mule and heavily loaded cart were almost upon them.

There was barely enough room for one wagon. They must go over the grade, fall the dreadful distance and be crushed below.

The people at the mine did not know exactly what happened until Mrs. Green

Over the Grade.

was able to tell her story; and this is what she said:

"As soon as we reached Gaylord's we learned that the Overland train had been telegraphed as on time, greatly to the surprise of every one; and at eleven o'clock it arrived with my niece, Alice, on board.

"We took dinner at Mrs. Atwood's, where we had arranged to stay over night; and as my niece was tired of travel, and as I knew that the accommodations we had prepared for her at home were better than she could obtain at Gaylord's, I made up my mind to push on up the mountain.

"As we were driving away, Mrs. Atwood called to us, and came running out with a large blue cotton umbrella.

"'You'd better take this,' she said; 'you are going just away from the sun, and it will shine in at the back of the wagon and make the poor girl uncomfortable if you don't have something to shade her.'

"We took it, although I hardly thought it would be necessary to spread it.

"The mules kept along at the rate of about three or four miles an hour, so that at five o'clock we were approaching Dead Man's Point.

"Alice, lying back upon her pillows, had been much charmed all the way by the scenery. So, as we came to Dead Man's Point, and stopped to allow the team to take breath, I called her attention to the grandeur of the view here.

"But she could hardly look at it, she was in such fear of the deep chasm of the cañon on our left hand, which we seemed almost to overhang.

"While we looked, and I assured her that there was not the slightest danger, I heard an exclamation from Pete. Looking up the grade, I saw, coming like a whirlwind around a little bend, Old Lightning, with his heavy cart bounding behind him.

"I saw it as one sees objects revealed by a flash of lightning in a dark night. Instantly I thought of our fate, for nothing could stop him, and when he struck us we must be hurled over the precipice.

"I was paralyzed with fear; everything turned black before me. I had a wild desire to escape, but I knew that escape was impossible. Even if I could have climbed from the wagon, it would have done no good; and what of the sick girl?

"While I looked, and while these thoughts flashed through my mind. I saw Pete throw all his weight on the lever of the brake, forcing it down to the last notch, and locking the wheels so that it was impossible for them to turn. Then he thrust the reins and whip into my hands.

"'Keep the team steady, ma'am,' he said, 'you *must* do it!'

"He seized something under the seat, and before I could speak, he was gone from the wagon like a flash.

"For one moment I basely supposed he was going to save himself by climbing the almost perpendicular side of the mountain, which no doubt he might have done—he is so quick and agile. But the next moment I saw him rushing toward the on-coming mule and cart, and wondered in a stupid way why he showed so little fear of his old enemy.

"While I looked, unable to turn away my eyes, and knowing that surely he must be killed, I saw him make a stand in the path, and suddenly spread the big blue umbrella directly in the face of the mule. I saw the mule as suddenly swerve a little toward the edge of the precipice.

"In that instant the off wheel of the heavy cart went over the grade, and amid a cloud of dust everything vanished from my sight, leaving only in view the winding mountain road, with poor Pete lying with torn clothing and bleeding face in the middle of it.

"Then I heard the awful crashing of the cart as it bounded from rock to rock to the bottom of the cañon.

"I was so frightened, so dazed that I did not know what to do. I did not dare to leave the wagon to go to Pete's assistance, for the mules were much excited, and I had hard work to keep them from trying to turn around.

"Fortunately, Alice had not realized the situation, for her view toward the front was obstructed; and when she anxiously asked what was the matter, I was able to quiet her, by assuring her that the danger was past.

"While I was trying to think how I could get to over the grade, they were astonished to see Old Lightning, only a short distance down the side of the cañon, wedged in between two fir-trees—the only ones to be seen far or near along the precipice.

The heavy shafts of the cart had broken off like pipestems, and the vehicle was smashed literally to kindling-wood at the bottom of the ravine.

A windlass and tackle were brought down from the camp, and with great difficulty Old Lightning was drawn up, groaning badly, but apparently not much injured.

Before long he was at work again on the dump.

JOHN F. BARNES.

For the Companion.

SLAVE-TRADING IN AFRICA.

My chief duty in Africa was to obtain news of Stanley and his long-silent Emin Pasha Relief Expedition, but I had also a mission to investigate the traffic in slaves in East Equatorial Africa. I looked into the abominable trade in "black ivory" from many points of view, as it exists in what is recognized as the headquarters of slave-dealing.

Zanzibar and Pemba are large, fertile islands, lying about thirty miles off the African coast, just south of the equator, in the Indian Ocean. The islands are covered with clove-plantations, and supply two-thirds of the world's consumption of cloves.

The population and industrial economy of these islands remind one of the South before the war. The Southern cotton-planter with his army of black slaves was a civilized and more cultured edition of the Zanzibar or Pemba Arab "clove-baron" and his gangs of half-civilized slaves, as they are seen to-day.

At present the English are endeavoring to persuade the Arabs that slave-labor is a mistake altogether. In an interview with the late Sultan of Zanzibar, Seyyid Khalifa-bin-Said, I assured His Highness that the Southern planters of America were now heartily glad that they had no slaves, and would oppose more strongly than any one else the reinstatement of the system.

"All very well," the Sultan replied, "but Arabs can never do without slaves; for centuries they have been used to owning them and depending on them, and they would be helpless without them."

I paid a visit to an Arab clove-plantation, and found there the happiest and laziest beings imaginable. The men did nothing but loaf about in the shade, and the young women, who were engaged in quarrying coral-slag for making lime, sang like larks as they "played at work." The children were gay, thoughtless and active.

We were looking on the brighter side of African slavery. By and by the scene changed.

I was leading an expedition into the interior along one of the routes traversed by the Arabs when bringing their raw slaves to the coast to be sold. Though the British and German men-of-war maintained a rigorous blockade against the exportation of slaves from the continent to Zanzibar, we met between Mombasa and Mount Kilimanjaro two gangs of women and children being driven coastward.

The gangs were walking Indian file, one slave behind another, along the footpaths that represent the only roads in Africa. Here and there along the line was an Arab with a gun.

One of the Arabs, I remember, was a mere youth of about thirteen years old, who carried a gun with a barrel much longer than himself. He was the son of one of the leading Arabs, and strutted along with a great air of importance.

After salaaming to us, he endeavored to "show off" to the white men, by brusquely ordering the women—some of whom were old enough to be his grandmother—ahead of him to move on faster. This boy had accompanied his father to learn the business of slave-dealing.

That young slaver would think no more of slashing a poor old famished and way-weary woman across the back with a stick than of beating an ass.

This gang was so near the coast and so far from home that its members would not think of running away, and accordingly the yokes had been removed from their necks. Although the Arabs are brutal and inhuman, they never forget that a healthy slave will bring more money in Zanzibar or Pemba than a sickly and emaciated one, and it is only to avoid losing them that they burden their captures, or purchases, with yokes.

The second gang was farther up country, and around each slave's neck was a yoke of several strands of iron wire, as thick as telegraph wire, to which was attached a stick about four feet long.

This yoke was not unlike the "poke" worn by breachy cattle on American farms as a precaution against jumping fences.

Each slave was permitted to relieve his neck from the weight of the stick by holding it ahead of him, or her, with the hand. This was what each of the poor wretches was doing when we came upon them; but the slave convoy was in confusion at the unexpected appearance of white men.

The custom is for an Arab to lead the foremost slave by his poke; this slave holds the poke of the one behind him, and so on down the line. The rear is brought up by one or two of the Arabs with their ever-handy guns.

The part of East Africa that I visited is not devastated by large gangs of Arabs and their slaves, as Tippoo Tib and other big slave-raiders despoil the country of the Upper Congo. They accomplish their purposes with diplomacy and intrigue rather than by fighting.

Their plans are to supply the native chiefs with guns and ammunition, and incite them to attack each other and capture women and children. The Arabs then buy the captives and march off with them to the coast.

At the court of every petty chief are found several villanous Arabs, or their mongrel African descendants, the Swahili, who intrigue to set tribe against tribe, in order that prisoners may be taken and brought to them to sell.

When I was on Mount Kilimanjaro, the Arabs

Digitized by Google

had persuaded the Chief of Machame that his neighbor and rival, Cena of Kibosho, was dead, and that now would be a grand opportunity to make a raid and capture a number of his people.

Machame greedily took the bait, and ordered a grand assembly of his warriors for the expedition. The Arabs sat and drank pombe with their ignorant and savage young dupe, while the Koodoo-horn trumpets blared among the banana groves, and the wild young warriors, flaunting spear and shield, hastened to the chief's boma.

A Slave Convoy.

They were ordered to go and "eat up" Kibosho, whilst the people there were in confusion over the death of their chief. The Arab intriguers chuckled in their sleeves as the warriors set out with loud acclaim.

Believing in the words of the Arabs, they attacked Kibosho; but to their astonishment they found the chief of that territory not dead, but very much alive, and thoroughly prepared to defend his country. For the same diabolical agency that had incited Machame to attack him, had been at the same time tampering with Cena.

He was told of the proposed invasion, and already were his forces mustered for retaliation and revenge.

The warriors of Machame were defeated, and two hundred of them slain. The war was carried into Machame; for three days houses were burned and banana plantations cut down, and many people captured.

There were Arabs at Cena's court, too; confederates of the intriguers at Machame, ready to buy every captive brought in.

By this crafty diplomacy it mattered little to the Arabs which side won the fight and captured slaves. They were at both ends of the line, ready to put into their yokes the necks of the unfortunate women and children of either country.

A peculiarly revolting side of these slave-raiding scenes is that the greater part of the captives are sure to be women with young children.

Whilst the men and the unencumbered of both sexes act immediately as self-preservation dictates, the first care of the mother is to save her babes and helpless young children. While endeavoring to drag them away with her, she and they fall an easy prey to the active warriors of the marauding party. Of the two convoys we encountered on their weary march to the coast, by far the greater number were women with babes.

In the Kilimanjaro country few, if any, full-grown men are captured. The men are all warriors, and fight to the death rather than be driven off to the coast and sold.

The most desirable captures are young boys and girls, of from twelve to sixteen years of age.

They are young enough to be thoroughly "broken in" to the work on the clove-plantations of Pemba, and soon forget their old life and associations. It is more difficult for the older people to accustom themselves to the complete change, and to reconcile themselves to the separation from friends and relations.

Many persons die on the way to the coast, and also from fevers after they reach their destination. It is estimated that one-fourth of the slaves driven from the Kilimanjaro States die of sickness on the road and after reaching the coast.

After they reach the coast the slaves are secreted until an opportunity presents for shipping them across to Zanzibar or Pemba in a dhow.

Nowadays, this is a risky part of the business for the Arab. English cruisers are patrolling the intervening channels for the very purpose of capturing dhows with slaves. The British Government pays five pounds prize money for every slave captured by the sailors. By a treaty made in 1873 between England and the Sultans of Zanzibar, all slaves thus captured are "forfeited to Her Majesty." The dhow is confiscated, and the captain and crew are fined and imprisoned.

It is often difficult to get the wild slaves to give evidence in court against the Arabs. On the march from the interior they have been made to believe that the white men are cannibals who will endeavor to capture them and eventually eat them. They are instructed just what to answer, in reply to questions, so as to aid the Arabs in evading responsibility and punishment if caught.

After they are captured, every kindness is shown them by the English officers, so as to gain their confidence, and destroy the belief that they have fallen into the hands of cannibals. If possible the people are returned to their homes in the interior, but nine-tenths of them are turned over to the care of the missionaries.

A railway from the east coast to the Victoria Nyanza would stop the slave-trade from the interior. In Zanzibar itself it has recently been abolished by the Sultan. THOMAS STEVENS.

THE DIVINE IN NATURE.

Earth's crammed with heaven,
And every common bush afire with God,
But only he who sees takes off his shoes.
—*Mrs. Browning.*

THE BRITISH CENSUS.

The census of Great Britain and Ireland is taken, as it is in this country, once in ten years. Our census was taken last year, but that of the United Kingdom was taken during the spring just passed, and its broad general results were announced in June.

The British census is by no means as thorough as the American. It does not go minutely into the industrial, economic and social condition of the people, as is the case with us. Its principal feature is merely the ascertainment of the numbers of the population.

The results of the British census just completed are interesting and suggestive; they are more especially so in relation to Ireland.

It appears that during ten years the population both of England and of Scotland has increased, while that of Ireland shows a very considerable diminution.

England, densely crowded ten years ago, has become yet more dense in population. The increase is between four and five millions, and the present population of the kingdom is now between twenty-nine and thirty millions.

The northern kingdom of Scotland has added something like a million to its inhabitants; and the simultaneous increase in Scotland and decrease in Ireland have brought the populations of these two countries near together.

A marked feature of the British census returns is the proof they give that the country people have been flocking steadily to the large cities and towns, thus causing a decline in agriculture. While the rural population has decreased, that of the cities and towns has grown rapidly.

The census of Ireland shows results at once melancholy and instructive. The population of the island is actually less than it was in the first year of the present century. It was then somewhat over five millions. To-day it is, in the exact figures returned, four million seven hundred and six thousand one hundred and sixty-two.

Ireland reached its high-water mark of population in 1841, just fifty years ago. The number of its people was then a little over eight millions. In the next ten years the number decreased no less than twenty per cent. It kept on decreasing the succeeding three decades, by eight, twelve and four and a half per cent. respectively.

In 1881 the population was a little over five millions—just about what it was at the beginning of the century. The loss during the past ten years, therefore, has been nearly half a million.

The chief cause of this decline in the population of Ireland has been the large emigration of the Irish from their own land to new homes across seas. Had there been no emigration for the past ten years, the census would have shown an increase of over a quarter of a million. But during that period more than three-quarters of a million have emigrated.

A lesser cause is found in the decrease in the average size of Irish families; the average number of persons in a family having become slightly less.

The Irish, too, are found to have been deserting the country for the towns. The decrease has taken place almost wholly in the country districts, especially in those of the provinces of Connaught and Munster.

Dublin, on the other hand, increased its population two per cent. in the ten years; while Belfast has increased twenty-three per cent., and Londonderry ten per cent. Agricultural pursuits, therefore, have diminished in Ireland as they have in the sister kingdoms.

The decline of the Irish population, directly due to emigration, is indirectly owing to the bad land system and oppressive government, under which Ireland has suffered for many generations. It is to be hoped that, with an improvement in both respects, the showing of the next Irish census may be a far brighter one.

DISMISSED.

We leave behind,
As, chartered by some unknown powers,
We stem across the sea of life by night,
The joys which were not for our use designed,
The friends to whom we had no natural right,
The homes that were not destined to be ours.
—*Matthew Arnold.*

THE SUMMER VACATION.

The idea of a vacation in the country is as old as the Christian era. The rich Romans in the time of Augustus used to make such holiday visits to their country-seats at Baiae, Pompeii, and the northern hills. But this was a luxury of the wealthy.

In England, a century ago, it was much the same thing. When Parliament adjourned, well on in the summer, and the fashionable London season came to an end, the wealthy noblemen would travel off to their country estates for the shooting season of the autumn.

But until within a comparatively recent time the custom was confined strictly to the wealthiest class. Most of our readers, no doubt, will recollect how long it was after John Gilpin was married—and he was a citizen of credit and renown, and by no means poor—before his pleasure-loving but frugal-minded spouse persuaded him to take a holiday.

Still, as time went on, well-to-do tradesmen began to devote a part of the summer to rest, and the custom slowly but steadily became general.

The summer vacation in this country is quite a modern institution, but it has spread rapidly and may now be said to be well-nigh universal. It is, to be sure, many years since it became the custom for families that could afford it to remove to the country or the seaside or the mountains for a few weeks.

But the clerks in stores and in offices then had no definite period of rest. No longer than twenty-five years ago it was very much the exception when a business firm gave its employees a vacation in the summer, without stopping their salaries. To-day, the great majority of employers allow their clerks an annual vacation of two weeks, and the salaries are regularly paid during the time of absence.

The customs have changed in other respects. Those families which migrate from their usual homes for a general summer outing start earlier, go farther, and stay longer than they formerly did.

Thousands of people go to Canada or to the Pacific coast; hundreds of thousands cross to Europe. Great business firms, with agents all over the world, arrange summer tours at reduced rates, and often send couriers along to manage travelling parties.

Then, too, account must be taken of the hundreds of villages by the seaside, on the lake shores, among the mountains, and in the neighborhood of religious camp-grounds. The houses are for the most part constructed very cheaply,—they are hardly more than permanent camps,—and the people who live in them for a few weeks each year are in circumstances, as regards this world's goods, that would have been deemed a few years ago quite unequal to affording the luxury of a second home.

The vacation itself has grown longer. People leave their homes, very generally, early in June, and the majority of summer tourists do not return until October.

It is noticeable, too, that the tendency of Americans to take more frequent vacations is extending every year. In the last few years the custom of taking winter trips to the Southern States has grown remarkably popular. Some of the largest hotels in the world have been built on Chesapeake Bay, in Virginia, and in Florida, to provide for this business, and some of them make no effort to get summer visitors.

Within the last year or two, winter resorts in the North, on a dry and sandy soil, and sheltered from the harsh winds by pine forests, have grown immensely in public favor. The Americans, the hardest-working people in the world, are learning that it pays to look after rest and health.

European countries are slow to follow the example, partly, no doubt, because they take life more easily all the year round, and live in less trying climates, so that they have less need of the rest.

On the European continent the religious holidays partly supply the need. At Easter and at Christmas-time the whole population stop their active work, sometimes for several days at a time. But unless they are rich, the people seldom go far away from home for their vacations.

FOOLISH SUPERSTITIONS.

In a recent official report of the statistics of railways in France, it is stated that the number of travellers is diminished nearly twenty per cent. on the Fridays of each week owing, it is inferred, to the popular fear of beginning a journey on that day.

This superstition had taken so strong a hold of the sailors and longshoremen in Philadelphia a few years ago that certain shippers found that it interfered with their business.

They determined to combat it in a practical way. A vessel was built, of which the plan was drawn and the contracts signed on Friday. The keel was laid on Friday; she was launched on Friday, christened "Friday," and set sail on Friday.

But unfortunately for the good intentions of her owners, she ran aground on a bar in the bay before the day was over. The malcontent crew triumphantly threw the blame on the accursed day, though no one doubted that they had contrived the disaster.

She was rechristened the "Saturday."

So universal is this prejudice even among ourselves,—shrewd, practical Americans,—that few if any passenger steamers leave our ports on Friday.

Another recognition of an equally baseless and foolish superstition is found in the fact that some of our large hotels, it is said, do not contain any chamber numbered thirteen, as some travellers would decline to occupy it if so named.

The difficulty is avoided by skipping the hated number, or by naming the first thirteen chambers by letters, and commencing the numbering with fourteen.

So many educated people dislike to be one of thirteen guests at table that a club was formed in New York whose purpose was to ridicule and disprove the silly superstition. The club had thirteen members, who dined together on the thirteenth day of each month upon thirteen dishes. Several years have passed since the society was organized, and the original members still appear each month in unbroken health.

These old superstitions grew out of the fact that Friday is held to be accursed because it was the day on which Jesus was crucified; and the thirteenth guest is supposed to represent the traitor Judas at the Last Supper.

We may well question whether Christ, who gave His life in gentle ministries to men, can delight in sending misfortunes upon them throughout ages, to make the day on which He died a day of continued pain and sorrow; or that because a wicked man once was the thirteenth guest, God will sentence every man or woman or little child who happens to sit upon the thirteenth chair at table to a speedy death.

"If a ghost meet you, throttle it," says an old English proverb, and there are no ghosts which fade into nothingness at close quarters so soon as these popular superstitions.

THOROUGHNESS.

"Pray do not trouble yourself," a lady said to a young man who was trying to open the blind to an unused door; "I can just as well go out the front way."

The young man tapped his forehead and said smilingly, "But then something will give way here. All my troubles come from letting hard things balk me."

This seam is too long, let us slight it; this sum is too hard, let us skip it; this load is too heavy, you carry it.

"Poor peddling dilettanteism," as Carlyle says scornfully; do you not know that all things are difficult before they become easy? That just in proportion as a man or woman knows or does a thing thoroughly he is powerful?

"It is as easy to braid iron as to braid straw," says Emerson, "if you proceed step by step. Wherever there is failure some point has been omitted."

Have you not heard persons begin to tell an anecdote, and finally confess that they had forgotten the point? or attempt an explanation only to enter the mire themselves? On the contrary, whatever we learn thoroughly is of use, even though the acquiring it be a severe trial.

A schoolgirl once said, "My room-mate is a doctor's daughter, and she has picked up various terms which she likes to hurl at us. The ponderous name of the smallest bone in the ear is her favorite, and I have heard it scores of times. However, I never attempted it myself, and so yesterday when those boys were airing their physiology and I wanted to rival them, I could not think of that name. It was so exasperating. Why did I never master that bone? And yet who would have believed I could ever wish to use it."

The shepherd David learned to use his sling to the perfection of a hair's breadth; and by his accuracy he saved the armies of Israel.

Schiller's early life was spent at a military school—six years the most harassing and comfortless in his life; but to that training of misery he owed his marvellous power to delineate soldier life and character.

The early life of Dickens's Lizzie Hexam was spent, horribly to her, in rowing her father's filthy boat; but years afterward she cried, "Now merciful heaven be thanked for that old time, enabling me without a wasted moment to have got the boat afloat again, and to row back against the stream!" Her old bold life and habit instantly inspired her to save a human life, and that life her lover's.

In any profession of life there is nothing short of being absolutely evil which is so fatal as superficiality. The man or woman who wishes to succeed must not shrink or slight or neglect the details of his business.

Lord Wolseley covered the case when he declared, "Had I begun life as a tinker, my earnest endeavor would have been to make better pots and

Digitized by Google

pans than my neighbors, and I think I may venture to say without vanity, that with God's blessing I should have been successful."

Surely, Lord Wolseley; and the reward of that duty would have been the power to fulfil one that was higher. It is always so. Learning to do one thing thoroughly and well is the surest foundation for success in life.

A FAMOUS CLASS.

The class which graduated from Harvard College in 1829 became a famous one. Its members attained eminence in many professions—in law, medicine, theology, science, commerce and literature. One of its members, the late Rev. James Freeman Clarke, says, nevertheless, in his Autobiography, that the class did not promise much in college, and that few of its members took genuine interest in the college studies. Their want of interest was largely due to the fact that, with one or two exceptions, the professors and tutors did not teach, but heard recitations.

The late Professor Benjamin Pierce, the distinguished mathematician, was a member of the class. He was born with a genius for mathematics, and went far beyond the college course in that direction.

In taking out books from the college library, instead of selecting novels, poetry, history, biography or travels, as most of the students did, he carried away under his arm large quarto volumes of pure mathematics.

It was observed when the class recited in conic sections or the calculus, that the tutor never put any question to Pierce, but having set him going, let him talk as long as he chose without interruption. The class shrewdly suspected that the tutor did this from fear lest the examiner might become the examined.

The talents of another member of the class, Oliver Wendell Holmes, did not become known to most of his classmates until near the end of the college course.

Doctor Clarke, who passed many evenings with him, playing chess and enjoying his bright conversation, writes thus: "He said things then as witty as any that have since proceeded from his tongue and pen. One of his impromptus lingers in my memory. We were talking of metaphysics.

"'I'll tell you, James,' said he, 'what I think metaphysics is like. It is like a man splitting a log. When it is done he has two more to split.'"

His classmates could foresee the future eminence of Benjamin R. Curtis, who became so prominent at the bar and on the bench of the Supreme Court of the United States. His papers, read aloud to the professor of philosophy, were so logical, and such exhaustive discussions, that it seemed impossible to improve on them. His mind worked with the accuracy of a machine. It did its work as accurately in those college papers as it did when he argued at the bar or delivered opinions from the bench.

YOUNG VANDALS.

Along the borders of roadways, in Germany and other European countries—in the rural districts, on the village streets, and even in the street parterres of the larger towns—hand-some fruit-trees are often found growing. They are well cared for, and not only beautify the streets and afford shade, but yield a very considerable revenue both to abutting land-owners and to village corporations.

These street fruit-trees are respected by boys and men. Boys do not think of taking the fruit from these trees any more than they do of taking any other property not their own; or, we may add, more than they think of trampling down the grass or plucking flowers—things which American boys do habitually.

Though occasionally a boy may be caught stealing fruit in Europe, he is regarded as a thief and as nothing less than a thief.

In 1859 an enumeration of all the trees standing in the streets of Salem, Massachusetts, was made. There were then about twenty-six hundred street trees standing, of which the most were elms and maples; and there were one hundred and ten cherry-trees.

This year another examination of the Salem street trees was made, and it was found that the cherry-trees had totally disappeared.

"The foraging of boys made them a nuisance," the owners reported. The boys not only took all the fruit, but did it in such a way, breaking branches and causing uproar, that the owners of the trees cut them all down.

Private orchards frequently have suffered from the same cause. Boys and young men have intruded, to help themselves to fruit, and rather than maintain a constant defensive warfare the owners have cut down their trees.

It is a bad commentary on our institutions that in America, the freest of countries, the boys should be the most lawless, and should have least regard for the rights of public and private property.

The movement to increase the beauty of our villages is making progress. One of the first things to be done to make it successful is to teach boys and men that wantonly to break a twig, to steal a flower, or to disfigure a lawn, is an offence against the whole community.

DEEP INDEBTEDNESS.

Haydon, the English painter, was once made to realize his dependence upon the outer world of meat and drink in a forcible and amusing manner. Perhaps he had felt that genius was a spiritual flame, feeding on airs from heaven, he was to learn that it had its foundations in beef and mutton.

The butcher called, so Mr. Haydon reports, and was sent up into the painting-room, where the artist found him in great admiration of his "Alexander."

"Quite alive, sir," said he.

"I am glad you think so," replied Haydon.

"Yes, sir; but as I have often said to my sister, you could not have painted that picture, sir, if you had not eat my meat, sir."

"Very true."

"Ah, sir, I have a fancy for *genus*, sir. Mrs. Siddons, sir, has eat my meat, sir. Never was such a woman for chops, sir! Ah, sir, she was a wonderful crayture!"

"She was, indeed."

"Ah, sir, when she used to act that there character,—that there woman, sir, that murders a king between 'em!"

"Oh, Lady Macbeth?"

"Ah, sir, that's it, Lady Macbeth. I used to get up with the butler behind her carriage when she acted, and as I used to see her looking quite wild, and all the people quite frightened:

"'Ah, ha, my lady,' says I, 'if it was'n't for my meat, though, you wouldn't be able to do *that*.'"

"Why, you seem to be a man of feeling," interposed Haydon.

"You see, sir, I've fed Mrs. Siddons, sir, John Kemble, sir, Madame Catalani, sir, Morland the painter, and—I beg pardon, sir—and *you*, sir. Madame Catalani, sir, was a wonderful woman for sweetbreads, but Mrs. Siddons, sir, she liked chops!"

BALZAC AND BERTHET.

Balzac, the great French novelist, once received a lesson in good manners from a younger and less distinguished associate. The hint came with good grace from the younger man, Elie Berthet, because it was deserved, and because Berthet himself was a person of courteous manners and gentle and amiable disposition. Berthet had written some romances which became so popular, and had so distinguished himself in journalistic work as to become an assistant editor of the *Siècle*.

As the assistant of M. Desnoyers, the editor of the *Siècle*, he had been introduced to Balzac. But though Balzac had many interviews with M. Desnoyers, and was often in the office, he never paid the slightest attention to Berthet. He did not even speak or bow to the young novelist.

One day Balzac took some copy to the *Siècle* office, and was greatly disturbed because M. Desnoyers, whom he wished to see, was out.

Soon after he left the office he met Elie Berthet. He went up to the young man, and without touching his hat or otherwise saluting him, touched him on the arm with one finger, and said:

"Ah! you tell Desnoyers that I have left the copy at the office."

Without a second glance he turned away.

Berthet delivered the message, and the editor replied, "I am not likely to forget it. He has sent me word by three persons already."

Three days later Balzac and Berthet met at about the same place. Berthet did not take off his hat. He touched Balzac on the arm with one finger, and said:

"Ah! he says you have sent him word by three persons already."

Then he walked on.

PRESENCE OF MIND.

A newspaper correspondent sometimes has to undergo, in this prosaic age of the world, personal perils not unlike those which, in former times, the military spy was constantly falling into. Under such circumstances of peril he must have his wits about him.

The late Laurence Oliphant, a journalist and man of letters, was once the correspondent of the London *Times*, which, in France, was a hated paper. He attended a revolutionary meeting at Lyons, where the population had begun to commit desperate excesses.

He knew French so well, and had so cleverly assumed the guise of a workingman, that he was not suspected; but suddenly a rumor was announced to the meeting that an emissary of the brutal London *Times* was there.

At once the mob was in an uproar, and loud cries resounded of "*Cherchons-le! à la mort! à la rivière!*" (Let us find him! kill him! to the river with him!)

Oliphant jumped to his feet with a look of overwhelming indignation, shouting at the top of his voice, "*Cherchons-le! Cherchons-le! Moi, je le connais de vue.*" (Let's find him! I know him by sight!)

Under cover of this zeal, and hunting everywhere for the detested Englishman, he made his escape.

CONCEITED.

The Abbé Pradt, a rushlight of Napoleon's time, was a most conceited man. The Duke of Wellington was always delighted to tell a story of meeting him in Paris, at a dinner given in honor of himself. The Abbé made a long oration, chiefly on the state of political affairs, and concluded with the words: "We owe the salvation of Europe to one man alone."

"Before he gave me time to blush," said the Duke, "he put his hand on his heart, and continued:

"'To me!'"

When Napoleon was at Elba he read the Abbé Pradt's *Memoires*, and was vastly entertained by them. Indeed, he is said to have roared with laughter; and if the Abbé could so enliven the pining exile, he surely did not live in vain. It is stated in these memoirs that when Napoleon met the Abbé at an inn in Warsaw, after the French had retreated from Russia, the Emperor was much impressed by his personality. Indeed, he sat down at a table and took notes of the Abbé's conversation.

"Now," said Napoleon, on reading this, "always hear both sides. I was then writing Maret to say: 'Send that silly Pradt back to his diocese!'"

INLAND LAKES.

It is not generally realized that there are in this country literally millions of lakes which are available for water-farming; in size all the way from mere ponds to the great inland seas of fresh water. In Illinois alone there are ten of thousands of lakes, and hundreds of thousands more can be readily created.

There are in Illinois many extinct lakes, which can easily be transformed into sheets of water by the simplest means. All the enormous "Lake Plains," as it is known to geologists, comprising Wisconsin, Minnesota, and Michigan, north of the Ohio River, is dotted with countless sheets of water, conditions being favorable for creating many more by such inexpensive artifices as the damming of streams.

By damming at intervals, every creek and rivulet can be made to form artificial lakes. Even the vast arid region, the "Great Desert" of the West, is specked all over with multitudes of extinct lakes which can be filled once more and made to teem with life, as they once did.

To relieve cramp and pain in the stomach use "*Brown's Household Panacea.*" It is purely vegetable, and is excellent for both internal and external use. *Adv.*

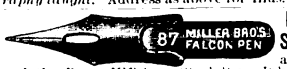
"**I will never** buy a cheap extract again," said a Mrs. Brown, when she found her child's life in danger from eating an ice cream flavored with an extract recommended for its cheapness. Buy Burnett's, and be sure.

SICLAR'S SCHOOL, NEWBURGH, N. Y. The mistake in bringing up boys begins at eight. A pamphlet.

SCIENCE HILL. A WELLESLEY PREPARATORY. W. T. POYNTER, Shelbyville, Ky.

NORMAL COLLEGE, CANFIELD, OHIO. 8 Courses. Expenses low. Superior advantages to students of limited means. Catalogue free. J. A. CUMMINS, A. M., Pres.

TRINITY SCHOOL. TIVOLI-ON-HUDSON, N. Y. Location and surroundings unsurpassed. Equipment complete. Gymnasium, drill hall, bowling alleys, etc. Thorough preparation for college, scientific schools or business. JAS. STARR CLARK, D. D., Rector.



NOTRE DAME OF MARYLAND. Collegiate Institute for Young Ladies and Preparatory School for Little Girls, conducted by the School Sisters of Notre Dame. EMBLA, P. O., near Baltimore, Md.

OHIO MILITARY INSTITUTE. COLLEGE HILL, OHIO. Fall term begins Sept. 15. Elegant new buildings with modern improvements. For illustrated catalogue address, J. H. McKENZIE, A. M., President.

SUMMER CAMP AND SCHOOL FOR BOYS. Lake Quinsigamond; in connection with Worcester Natural History Society. 7th season. Send for prospectus and references to the PRESIDENT WORCESTER NATURAL HISTORY SOCIETY, WORCESTER, MASS.

SUMMER CAMP AND SCHOOL FOR GIRLS AND YOUNG WOMEN. Under same general management as above, but distinct and on opposite shore of lake; none received unaccompanied by mother or suitable chaperon. Send as above for separate circular.

EASTMAN COLLEGE, POUGHKEEPSIE, N. Y., offers both sexes the best advantages for a **practical business education** at the lowest cost. Open all the year. Business houses supplied with competent assistants. No charge for situations furnished. *Stenography taught.* Address as above for Illus. Catalogue.

Miller Bros. STEEL PENS are American and the Best. M'f'r's of Steel Pens, Ink Erasers and Pocket Cutlery. *Miller Bros. Cutlery Co., Meriden, Conn.*

VALENTINE'S SCHOOL OF TELEGRAPHY **Teaches** its students a trade and then **starts them** in railroad service. Send for circulars. VALENTINE BROS., JANESVILLE, WIS.

50 DOLLARS for Life Scholarship. PALMS BUSINESS COLLEGE 1709 Chestnut St., Philadelphia. Position for Graduates. Time required 3 to 4 mos. Best Equipped. Best Course of Study. Circulars free if you name this paper.

LEAD PENCILS. DIXON'S "AMERICAN GRAPHITE" are the best. Send 16 cents for samples worth double the money. Send once only and then buy of your stationer. DIXON CRUCIBLE CO., Jersey City, N. J.

Business Writing, LEARNED AT HOME. By using PEN WRITTEN COPIES introduced. Complete set, with instruction book and terms to agents, $1.00. Specimen copies mailed to any address for three 2c. stamps. WILLIAMS & ROGERS, Rochester, N. Y.

RIVERVIEW ACADEMY, Poughkeepsie, N. Y. **56th Year.** Prepares thoroughly for College, the Government, Academies, and Business. Military Organization. BISBEE & AMEN, Principals.

NEW ENGLAND CONSERVATORY OF MUSIC FOUNDED BY Dr. EBEN TOURJEE. CARL FAELTEN, Director. **INSTRUCTION** IN PIANO, ORGAN, VOICE, VIOLIN, etc. Systematic Courses in class and private lessons. Tuition, $10 to $60 for 20 lessons, with many **free Classes, Lectures, Recitals, etc. Elocution, Oratory and Dramatic Action, Fine Arts, Literature, Languages, Piano and Organ Tuning. COMFORTABLE HOME for Lady Students.** Calendar Free. **Fall Term begins Sept. 10, 1891.** L. S. ANDERSON, Business Manager. Franklin Square, BOSTON, Mass.

The acme of art in Piano-making is reached in the Sounding Board. The number of pieces comprising the board; the direction of grain; the amount of sap the wood shall contain when felled; the compression of the fibres of the wood that makes crowning of the board; are all points where knowledge shows. The sounding board amplifies power of tone and gives best musical effects to the vibration of strings. The sounding boards in

The EVERETT PIANO

are of best spruce constructed to produce best results. If not for sale by your local dealer, address THE JOHN CHURCH CO., Cincinnati, Ohio.

"From Andante to Allegro," an illustrated pamphlet, will be sent free to any one who will mention where this advertisement was seen.

VACATION SONGS For Seashore and Country.

COLLEGE SONGS. New edition, with many new songs. Paper, 50c.; cloth gilt, $1.00.

COLLEGE SONGS FOR GIRLS. Handsome title in colors. 120 pages. Heavy paper, $1.00.

JUBILEE AND PLANTATION SONGS. An unrivalled collection of "before de war" songs, as sung at Hampton and Fisk Universities. Paper, 30c.

MINSTREL SONGS. Oldtime plantation melodies in new dress. Over 100 wonderfully pathetic songs. Heavy paper, $1.00; boards, $1.25; cloth gilt, $2.00.

COLLEGE SONGS FOR GUITAR.

COLLEGE SONGS FOR BANJO. Paper, $1.00; cloth, $1.50. 2 volumes of College Songs, arranged with brilliant, effective accompaniments. *Any book mailed free on receipt of price.*

Send postal-card for full Catalogue of War, University, Students', Barnabee, and Father Kemp and Merry-Making Song Books.

THE GIRL WITH A TASTE FOR MUSIC.

By Madame Emma Juch.

I have been asked repeatedly to give my views on the best methods to be followed by young singers, and have repeatedly declined, for the reason that I firmly believe that there are many roads to success, provided one has the quality of voice necessary for that success.

It is, in my opinion, as impossible for any person without the required quality of voice to become a great singer, as it is for a near-sighted person to become a wonderful rifle-shot, or a lame man a great pedestrian, a constitutionally weak person a great athlete, or a naturally vulgar person truly refined.

If one is possessed of the quality of voice, one may by many methods strengthen, purify and cultivate it to such an extent as to render it far more sweet, delicate and effective; but I am not certain that any particular method pursued by great teachers is absolutely necessary to success.

But of one thing I am sure, and that is that in order to become a great vocalist one must possess splendid bodily health, and be ambitious and industrious.

In order that the voice shall be always in good condition, one must rise early, take plenty of out-door exercise and frequent cold baths; in fact, one must practise diligently and persistently the most thorough course of physical training.

Long walks, in which a steady, easy stride must be maintained, the head thrown back and the mouth closed, and the breath taken in regularly through the nostrils, probably are more conducive to the strengthening and developing of the lungs than any other exercise. This may be followed by light dumb-bell or Indian-club exercises, which also have a tendency to expand the chest and strengthen the muscles brought into play by the use of the voice.

Daily contact with the open air, whether it be bright and clear or damp and foggy, is absolutely necessary to keep the throat and lungs in perfect condition.

If the singer is situated so that she is unable to take the above described exercise, she will find an almost immediately perceptible falling off of the strength and quality of the voice.

There are many other things than the mere strengthening of the voice, to be gained by this regularly apportioned system of exercise. It promotes the health, gives one an easy carriage, and is productive of a grace of movement that cannot be attained in any other way.

Plenty of open-air exercise is more conducive to grace and ease of manner than all the lessons in deportment that could possibly be crowded into a life-time.

The air bath is quite as important as the water bath, and should be taken just as regularly and persistently, and to these should be added the sun bath.

These three combined, accompanied by the necessary amount of exercise, are productive of a cheerfulness of disposition and a clearness of brain that enable one to pursue vocal and mental studies with a degree of pleasure in them and strength of purpose that almost invariably insure success.

The exercise must be taken under the advice of a competent physician, for there is danger of over-doing the matter; and to overdo it would weaken the student, and retard rather than promote vocal or mental culture.

After proper attention has been given to physical exercise, the next important matter to be taken up is vocal exercise and training. This must be divided into regular hours, and resumed each day with the same regularity that one should observe in all other matters.

The time to be devoted each day to vocal exercise should be determined by a competent master of vocal culture. The singer's voice requires as much care and attention, to be at its best, as do the digestive organs of the dyspeptic. It cannot be abused or neglected.

Let any singer mark attentively the difference between the quality and strength of the voice when it is exercised regularly and systematically and its quality and strength when it is only occasionally used, and I am positive that she will be surprised at the marked falling off or improvement of condition, as the case may be.

It is a well-established fact that proficiency in the performance on any instrument can only be attained by diligent and unremittent practice. This is probably more applicable to the voice than to anything else.

I do not believe in the system of muffling-up that is practised by nearly all foreign singers who visit this country. They pass their lives in heated apartments, carefully excluding every draught of fresh air for fear they may take cold and be unable to sing.

My physicians advise the frequent bathing of the throat and chest with cold water as the best preventive of colds, and I have pursued this plan while travelling about the country for the past few years, with the best results.

I have never been unable to take part in an opera or concert on account of a cold, even in the Northern part of this country during the most severe winter, and fully believe that this is due more to my physical and vocal exercise, the liberal use of cold water, and the perfect state of bodily health that these ensure, than to any other cause.

I consider a cheerful and healthy mental condition absolutely necessary to success; and this I manage to secure by a liberal indulgence in out-of-door sports whenever opportunity permits.

If I had an opportunity to hear the pupils of a female seminary or college sing, I should fully expect to find the voices of the tennis-playing girls far superior in strength and quality to those of the young ladies who seldom engage in health-giving exercise and pleasure.

Angling and shooting are capital sports for those who have the physical ability for them. I am sorry that our American girls so rarely engage in these splendid pastimes. I think they would do well to pattern after their English cousins in this respect.

I advocate such sports and exercises because I believe them to be absolutely necessary to physical health, and without that one is not likely to possess the amount of energy and ambition to succeed in any walk in life.

Proficiency in the arts and sciences, music more particularly than any other, is only acquired by the most diligent attention. Work, work, practise, practise, if you would become great, and no matter how great you become, work and practise if you would retain your greatness.

In the words of the old master to his pupil who had mastered successfully every stage of tuition until he had become so proficient that in his opinion there was nothing more to learn, "When you have nothing better to do, practise the scale."

For the Companion.

IN SKELETON POOL.

Due north is the general direction of the Brazeau River, but it takes one very sharp turn to the west, and in the angle is "The Devil's Elbow," which is so much a terror to raftsmen that none but the boldest will hire for the Brazeau drive.

Beneath the surges of its great eddy, Skeleton Pool, the bones of many drowned men are supposed to drift endlessly around; and he is a past master of river-craft who can boast truly of having safely run the Elbow twice or thrice.

It is difficult to convey in words a picture of so complicated a phenomenon as the Elbow. Unless the reader can be made to realize the configuration of the ground, the surge of the river against the precipice, the fury with which it turns to roar away on its western course, the impulse with which it hurls off the eddy toward Tower Island, and the remorselessness of that whirlpool's grasp and assault on such timber cribs as enter it, he will not quite understand Duncan Stewart's adventure.

Running out of a low-lying, timbered country, the Brazeau's course is intercepted by the face of a plateau some three hundred feet higher. Into this bluff, which elsewhere descends less precipitously, the torrent, by many ages of persistence, has cut such an angle as a huge carpenter's square might fit. Three pines, bunched just at the apex of this angle, and conspicuous as the only trees on the upper level, swing their long arms out over the sheer cliff, there sliced straight down as a stick is by a hay-knife. Almost incessantly these long arms seem to gesticulate in the current of air rushing up out of the chasm.

Opposite this, some four hundred feet distant, the face of Tower Island rises straight about one hundred feet; and on every side, but one, shoots up as suddenly. It divides the Brazeau into rapids of nearly equal descent; but the north or Devil's Elbow Channel has the "draw," and takes most of the water.

The trick of running a crib of logs safely through is to gain the south channel, which, unless the crib gets into the mild eddy at the foot of Tower Island, quickly hurries the timber into the calm reach a mile below.

Here high spring wagons wait, at a tavern kept by the Widow Black, to carry the raftsmen back to the head.

Sometimes, at long intervals, a wagon laden with men rattles by without a cheery song. In such a case, it is a fair inference that some gang, failing to catch the south channel, and having missed the turn at the dreadful angle, are being whirled away dead down the river, or rolled among the vexed bones in the depths of Skeleton Pool.

Not that the Elbow is certain death. Probably five cribs out of six get safely through, or lose but one or two men. I believe this to be oftenest the result of sudden changes in the river's action, though raftsmen insist that all depends on the judgment, strength and nerve of a crew.

For this run each crib carries four men and eight sweeps—four at each end. If carried into the Elbow channel, all hands, when near the angle, take to the sweeps at the rear.

Just as the crib's front seems likely to crash against the precipice the stern begins to wheel down, and the men assist this action of the current. If they miss here, and are borne sidewise away instead of stern down, the crib does not get close enough ashore, and the thrust from the precipice commonly carries them into the raving edge of the whirlpool.

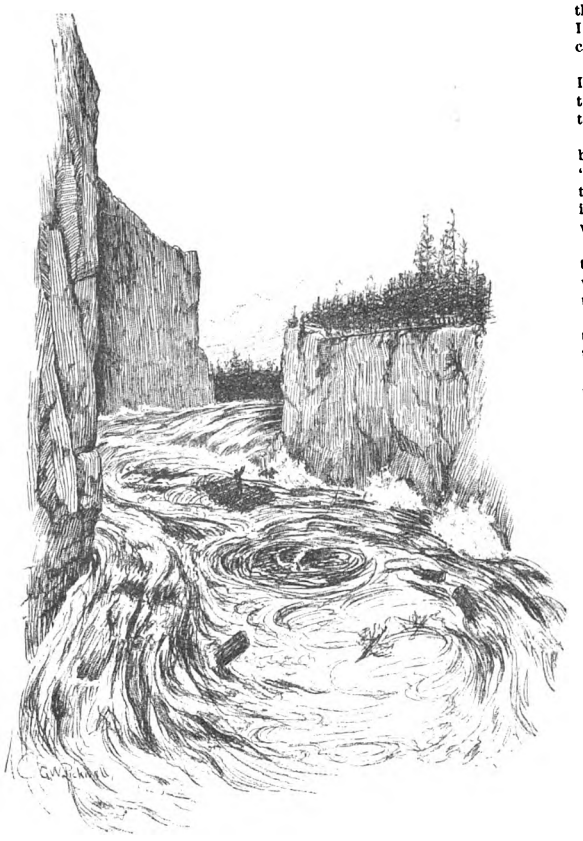
There the crib usually is wrenched instantly to pieces or plunged so deep that the men are swept off. In this case they are wholly beyond rescue, and are drowned.

Well-made cribs have been known to wheel, tossed like corks in the pool, for ten days before breaking up; but never, perhaps, except once, did one of these sad derelicts carry a living man.

In the summer of 1868, at the beginning of my apprenticeship to a surveyor, I was sent up the Brazeau. Duncan Stewart was my chief.

"A better fellow than Stewart never lived," my master had said. "Years ago he was given to drink, but now he's quite reformed. He hasn't touched a drop for two years."

"I'm giving him this job," my master went on, "partly because he'll do it well, partly because he'll do it cheaply, and partly because I want to help a lame dog over a stile.



"But mind, you're my apprentice, and while you give due obedience to Mr. Stewart, it's your duty to let me know promptly if anything goes wrong. After all's said, it is impossible to place perfect confidence in a man who was long lost in drink."

I liked Stewart from the start. He was kind and friendly; he took pains to teach me, and often entrusted me with the transit, taking the chain himself.

"I mean to make a surveyor of you before this job's done," he would say.

Everything went well until we camped at the Widow Black's. Next morning we were driven up to "the head." Some of the men, though they were not drunk, had obtained whiskey at the tavern. Stewart seemed out of sorts. No doubt he was tortured by the smell of and craving for liquor.

That afternoon, after starting the new line, Stewart left me to run it, saying that he would see the camp put in shape for the long stay which we had to make there. When I came back at night he was sleeping. He slept while I took supper; and when I turned in beside him he made no stir.

Skeleton Pool.

The men were whispering, and I thought them "up to something," but my fatigue was greater than my curiosity, and, in spite of the mosquitoes, I was soon sound asleep.

"Ned! Mr. Ned! wake up! rouse, rouse, there's trouble breeding!"

I sat up to find old John Shouldice shaking me.

"What's up, John?"

"They're all drunk except me."

"Drunk?"

"Drunk as fools! The surveyor, too."

"Mr. Stewart? Impossible!"

"Yes, Mr. Stewart himself. Burns and Fletcher put six bottles into their packs this morning. The surveyor had some. Now it's all gone, and they're wild for more."

"Well, they can't get any; that's one good thing."

"They're going back to the widow's."

"But they can't in the state they're in. It's five miles after they cross."

"They're going to run down in the bateau."

"What?" I started to my feet. "The Devil's Elbow will get every man of them!"

"Not if they catch the south channel. Burns knows the river well; but he's too drunk."

Hurrying out, I found the ten men grouped, with Stewart staggering among them.

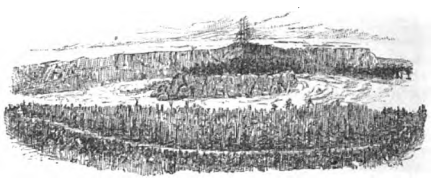
"Yes, sir, I can run ye over all right, sir," Burns was saying.

"What does this mean?" I asked.

"It's all ri'," said Stewart; "you go back to bed."

"Better go yourself," I said, "and the rest of you. Come, I'm not going to stand any nonsense."

"We're takin' our orders from the surveyor," said Burns, "an' I'd be pleased to know who set *you* over us. Hi! We're going where there's whiskey, so we are. Come on, boys!"



They staggered down to the big red boat.

"Shouldice, there's no stopping them. The Elbow will have them as sure as fate."

"We'll have to go with them," said brave old John. "I know the water. I've been over it fifty times. You take the bow. We'll get over all right enough. Some of them aint too drunk to do the rowing. But for the humanity of it, I should feel a sight more like letting the brutes go than risk our skins for 'em."

Nevertheless, that was what we did.

The run was a wild adventure, but we gained the

south channel, left the Elbow shrieking far behind, and reached the Widow Black's at one o'clock in the morning.

When we awoke the sun was well up. Most of our men were lying about the sheds in a state of deep intoxication. Stewart was nowhere to be seen.

"He went up with the first gang at daylight," said the widow. "He's run the south channel once already, and now he's back wild to run the Elbow. Last I heerd, he was offering twenty dollars to any gang that 'ud try it, an' the boys was laughin' at him. Oh, he's far gone with his liquor."

"Give me some breakfast, quick," said I. "I'll follow him. And look you, woman, if you give our men another drop, there'll be trouble for you. You can depend on that."

I knew she had no license to sell liquor.

"Bah!" she cried, snapping her fingers in my face. "I don't fear you, not a bit. The boys would take care of you, or any one else that interfered with my business. But there's no more drink for that crowd. I'll tell you that to please you. Not a cent of money has one of them left."

While I hastily ate my pork and beans, I heard the noise of men coming up to the wagons. Stewart was not among them.

"We left him layin' on the raft," mumbled the gigantic foreman, Tom Benson. "None of the boys would fetch him this trip. He swears he'll go over the Elbow if he has to swim for it. But the cook'll watch him."

I leaped into a wagon, and went up to the head of the rapids. Shouldice went with us, but he was too old to render much service.

When we reached the raft, there stood the men who had preceded us, bunched together and gazing down the river.

Far away, and drifting into the Elbow channel, went a crib with one man upon it, who danced and waved his hat, then stood looking ahead into the fearful angle, then flung up his arms and leaped to and fro as if in delirium.

"It's Mr. Stewart!" said the cook. "When I wasn't thinking of him he sneaked down to the lower cribs, knocked away the bands, and was off!"

"You've seen the last of him," said Tom Benson, now thoroughly sobered, "unless the timber goes through all right. Even then he'll surely be swept off. But there's a rope on that crib. Maybe he'll know enough to hang on."

"I'll go down with you, Tom. We must save him, somehow," said I. In a few moments our men were rowing hard to pull out of "the Devil's draw," as Tom called it.

"Look, Ned! Not *you*, boys! Pull—pull for your lives! Let into it. But *you*, Ned—look!"

At that moment we could see Stewart's crib slanting up like a roof, and apparently just at the angle. He was on his knees, clutching something.

"It's the rope he's got!" said Tom.

Then his crib began to swing round. Next moment the cliff of Tower Island hid man and timber.

"If we don't see him pass down ahead of us, we'll haul over into the eddy at the foot of the island," said Benson, as we passed into the south channel.

That is what we did. Soon we landed and began the ascent of the Tower, for it was impossible to see into Skeleton Pool from the low rocks at the island's foot.

"But it's too late, I fear," said Tom. "He's gone long ago, and we can't save the timber. But, anyhow, let us see it flying round!"

When we stood above the pool, there was the crib almost beneath our feet, racing up the eddy. From below, had there been standing room, we might have reached it with a pike-pole.

But a hundred men with pike-poles could not have held it for a moment. The forces of the pool carried it away with incredible speed, and flung it about like a chip. But Stewart was there, and alive.

He was even safe for the time. Sobered by the wetting and the horror, he had contrived to take several turns around a loading stick with the half-inch rope he found aboard. These turns lay spirally along the stick and formed loose bands. Through one of these he had thrust his legs up to the thighs, through another he had pushed his head and shoulders.

Lying face down, he clutched the loading stick. Up the Skeleton Pool flew the crib, till so near the mighty shoulder of the downward torrent that we expected it to overwhelm Stewart.

At the plunge a roller broke over him. He was whirled out toward the Elbow, then swiftly down, and around the dreadful oval again, hurrying so

Digitized by Google

close to the sheer wall below our feet that Benson dropped a pebble beyond the crib as it passed.

Sometimes the crib was carried into the centre of the pool, where it floated with little tossing, slowly turning in a small round for many minutes. Then the outer forces called for another struggle to tear asunder the crib, and drew it out and threw themselves upon it, and offered it to the demons of the angle, and hurled and oscillated it again.

"It's terrible with him so close, and we can't help him any more than if we were babies," said Benson.

"If we could only make him see us!" I suggested.

"What good? He'd feel all the worse. You see he's got to die. If he saw us he'd have hope, and that would keep the life in him longer, and he'd suffer more in the end."

"No! He'd feel helped; he'd die easier if he knew we were by him," I insisted.

Benson threw a small stone at the crib. Then we threw handfuls. But a wind came up out of the chasm, and a gale went with its waters, and our efforts were vain.

If any pebble struck Stewart he made no sign.

Benson climbed a pine, and cut off a large branch with his knife. "This is the thing," said he, and waited.

When the crib, racing upward, was within thirty feet of our cliff, he dropped the branch. It wavered down with the sway of a parachute, then turned over and over with the up current, and fell far behind the timber.

But we dropped branch after branch, and at last one was blown by the wind so that it fell lightly upon Stewart himself.

He turned on his side and looked up; but he did not see us until the crib was running down the outer current.

Then he kicked himself nearly free, sat up, and waved his hand.

Just then a roller struck the crib, rushed straight at him, and threw his body off the loading stick.

But his feet were still held by the rope. He recovered his position, passed the band again over his shoulders, and turned his head curiously from side to side as he flew round, gazing at his tumultuous prison.

"I've got it. We'll save him!" cried big Tom. "Stay here, till I get back, Ned."

He was off without another word.

Two hours passed before he returned with a "bunch" of men, and all that time I silently watched Stewart. The crib had begun to sag, I thought, when on the crests of the steeper rollers.

"It'll break up soon," said Tom, the moment he returned. "Now boys, down with that tree—put in your best strokes. Fell it straight out."

Four axemen attacked a huge white pine, some seventy feet inland, while the others cut away the underbrush and small trees for its fall. The top, when it crashed down, projected forty feet beyond the cliff, and the branches that broke away fell in a green shower about Stewart's crib.

In ten minutes, big Tom, lying out on the tree like a sailor, cut away such branches as would interfere with the rope, and passed a cable over the outermost crotch that was sufficiently strong.

When the rope began to descend of its own weight, he crawled back to us.

"We can do no more," said he, shaking as with an ague. "Now we'll see if the surveyor can save himself!"

When Stewart passed under the rope for the first time, he sat up and raised his hand, but could not touch the noose. Then he made the surveyor's signal of "down."

We lowered till the noose touched the water and was snatched along by the fierce stream. Then we drew it up till it seemed to hang about five feet above the sluice-like stream.

The second time Stewart came under us, he stood up stoopingly, braced himself, held to his rope by one hand, and prepared to run his free arm and his head into the noose.

The rope suddenly swung out beyond his reach. We staggered and shook, tumbling backward from the edge and against one another, uttering meaningless cries, with the shock and reaction of that disappointment.

"If that happens again, some of us may fall over," said Tom. Taking a new hitch with the rope, he brought us the shore end to hold on by.

The crib was now very plainly sagging as it rose and fell.

Once more Stewart rose, and tried to put his arm through the noose. The rope struck him on the head; he lost his grasp of his own rope and fell down, but saved himself, and crawled back to his bands in time to get within them before passing into the breakers.

But at the shoulder of the rapids the crib began to break up. One side-stick whirled loose, then another. Both were thrust up from the pool's outer edge soon afterward. They shot half out of water before falling.

The fourth attempt was long delayed, for the crib moved into the middle of the pool and whirled gently around the inner circle. There Stewart loosed himself, stood up, looked at us for a moment, gazed round the shrieking waters, waved his hand toward the now descending sun, looked up to us again, raised his arms above his head and dropped them to his side with a strange gesture of utter despair.

"It's a sign!" cried Tom. "He's praying for help! I must save him! Boys, I'll go down and grab him!"

Just then the crib began to run again. It was moving down stream, and would be under the rope again within two minutes.

We were sure this would be Stewart's last chance, for the crib could never hold together through another plunge into the rapid's shoulder.

"Come back. You've no time to go down!" I cried to Benson.

But he had swung himself off already, and now hurried down the rope, hand over hand.

We leaned over with horror. If Benson should succeed in grasping him, could he hold on while we hauled both men up? And could we lift both up and back into safety, after raising them to the crotch of the pine? It was impossible.

What madness had possessed the foreman! To save himself he would have to drop Stewart from the tree after grasping him.

Benson was now within the noose. Only then had we eyes for Stewart and the crib.

We looked; the crib was not where we expected to see it. We looked over the whole surface of Skeleton Pool. Neither the crib nor Stewart could be seen.

Tom dangled down there alone. With the oscillation of the current, its higher billows dragged at his legs.

The men began to haul Benson up. We might save him, anyway.

I looked down into his upturned face. It was positively gleeful! Holding to the turning rope by one hand, he pointed with the outstretched forefinger of the other, as his face turned down stream.

I followed the direction. There was Stewart's crib, a quarter of a mile down the rapid. It had been quietly let go by the eddy, and we knew the surveyor would be saved at the widow's place.

Benson easily lifted himself into the tree and came ashore. No one could ever persuade him that Stewart's sign or prayer for help had not been miraculously answered, though old John Shouldice declared that cribs had once or twice before gone out of the rapids in the same way.

Stewart was taken ashore at the tavern, in a fainting condition. He did not throw away the chance afforded him. Solemnly he vowed, when he had recovered from the delirium in which his fearful adventure and exposure left him, that he would never touch liquor again.

I have known him years now, and know how much it has cost him to keep his vow. Wherever he went he ran the risk of seeing liquor, and whenever he saw it or smelled it, his craving awoke.

But at the same time the remembrance of the Elbow also awoke; and though the constant temptation to drink might well have broken the resolution of a stronger man, he had undergone an experience the lasting memory of whose terrors he could call to his aid with good effect.

E. W. THOMSON.

For the Companion.

THE GRAND CAÑON.

I had read several interesting accounts of visits to the Grand Cañon of the Colorado River in Arizona, but none describing the experience of a descent into the chasm. I was filled with a desire to have this experience.

At Flagstaff, Arizona, I procured a two-horse team in an easy buckboard, a driver, and provisions for six days. As we drove around the base of the San Francisco mountains, I felt an almost irresistible desire to climb the highest peak of these; but I postponed this attempt until my return.

Two days of uneventful but not uninteresting driving brought us to the rim of the cañon.

I had spent the summer amid the magnificent scenery of New Mexico. I had lived two months under the brow of Ta-al-yal-lo-ne, that majestic *mesa* in front of Zuñi, which rises with almost vertical walls more than one thousand feet above the plain; I had climbed to the summit of those old landmarks, the Zuñi Buttes; I had crossed the Wingate Mountains, and seen those gigantic and unimpeachable evidences of erosion in the valley of the Rio Puerco; and, above all, I had visited the unique little Cañon de Chelly in northeastern Arizona, only three hundred feet wide, with its walls of vertical red sandstone nine hundred feet high, and so crooked that I could not see up the cañon the distance of its own width.

These I had seen and described in my journal. But to describe what I saw on the rim of the Grand Cañon is not within my power. As I sat looking at the scene, the only record I could make in my journal was, "I see at one glance all the grand things I have seen this summer." There was Ta-al-yal-lo-ne, there were the Zuñi Buttes, there was Cañon de Chelly; it seemed that everything had its counterpart in that grand and awful chasm.

I was told that to make possible a descent to the river, the services of a guide would be necessary; but, deeming the price which the local guides asked beyond my means, I resolved to go alone.

I asked Mr. John Hance, who lives in a cabin near the rim of the cañon:

"How far is it from the rim to the river?"

"Seven miles," he answered.

"Has any white man besides yourself ever gone down there alone?"

"Yes, one or two. Many start, but few ever reach the river."

"How long a time is required to go down and back?"

"I can do it in one day, but it is a hard climb, and most persons take two or three days for it."

"Has any one ever gone down and back in one day without a guide?"

"No, not that I know of."

"Are there any ropes or rope ladders to descend?"

"Yes, five or six."

"Are they sound?"

"I don't know. A man and his wife broke one last week."

I assured him that I was going down and back the same day; and in spite of his warning that I could not do it, I set out early next morning, taking with me a little boiled ham, a loaf of bread, and a small can of grape-butter, all deposited in a small muslin bag. My driver accompanied me to the rim of the cañon.

On the way we stopped at the Hance cabin, and I paid the regular toll for the use of the trail—fifty cents.

As I stood on the rim of the cañon, ready to begin the descent, I must confess that I felt a little uncertain of the wisdom of my course, but I had no notion of turning back.

Mr. Hance told me that the distance from the rim of the cañon to the river was seven miles; the vertical depth more than six thousand six hundred feet; the distance from the rim to a cabin on the trail, three miles; vertical depth to the cabin, four thousand feet; length of longest rope, fifty feet.

With neither coat nor waistcoat, carrying only my journal and my lunch, I was ready for the descent. I noted the time, which was just seven o'clock and forty minutes; and bade good-by to my driver, requesting that if I should not return by the afternoon of the next day he should come down to seek me.

The trail is so steep that one can scarcely keep on his feet. I walked, ran, slid and rolled down the three miles to the cabin in just an hour and two minutes.

The scenery all the way was exceedingly interesting. Looking down, one would see a prominent ledge or bench of rock, perhaps a thousand feet below, from which would rise a magnificent butte. A quarter of an hour's travel would bring him to a level with this base; and in the next quarter of an hour he would see it rise a thousand feet above his head.

That I found an exceedingly interesting thing to do; to pick out prominent points, both at a level with me and far below, and then stop occasionally and see how we had changed position. In fact, I think that is about the only way one can gain an idea, inadequate though it be, of the great descent he is making.

At the cabin I found a beautiful stream of clear, cool water, which was very refreshing. Here I divided my lunch, leaving some for my return. After half an hour's rest I pushed on.

The cañon here, which is merely a side cañon leading down to the river, was perhaps five hundred feet wide, with walls nearly vertical, a thousand feet high. On every hand the scenery was indescribably grand. The cañon was narrowing, the walls were getting higher; the whole scene was becoming more impressive and majestic.

The indications of the trail were growing exceedingly faint. I had gone perhaps three miles from the cabin. The cañon had narrowed to about twenty-five feet, with its walls sloping at an angle of over eighty degrees.

I had descended through the sandstone and shale, and was already several hundred feet into the granite, when I came to the first rope ladder. I was glad to see it, for it assured me that I was on the right trail, although it brought visibly before my mind the fact that the dangerous part of my journey had yet to be accomplished.

The ladder was about ten feet long. I tested its fastenings, and easily descended.

A few steps beyond, a single rope hung over a ledge of vertical rock fifteen feet high. As I had no means of examining the fastening, I hesitated for a moment, for I knew the hardest strain would come upon the rope just as I should round the top of the ledge and be farthest from the rock below. I ascended safely, and then soon had to descend a gentle slope, clinging to a rope about forty feet long.

When I had gone about one hundred feet, the cañon had narrowed in one place to a width of about five feet, and at the bottom was a pool of water about eighteen inches deep. The walls were so smooth and round that it was impossible to pass the pool without getting wet. Removing shoes and stockings, I got over nicely, and, as I expected to meet even a worse case in a moment or two, I proceeded with bare feet on the smooth granite.

Turning a sharp angle in the cañon I had scarcely gone forty feet when I heard the roar of a heavy fall of water, and found myself hemmed in on both sides by steep walls, with a waterfall about fifteen feet high in front of me. On the level of the rock below the falls I saw a bunch of rope lying against the wall of the cañon, as if it had been washed there.

I at once supposed that I had reached the end of my journey, and that the rope which I saw had at one time been used to get over the falls, but was now out of reach. Nevertheless, I decided to see what I could do toward climbing around the place.

The granite was very smooth; and being barefoot, I found climbing rather a simple matter. I was getting along nicely and congratulating myself that I had got safely around the falls, when, to my horror, upon turning my head to the left, I saw below what at first appeared to be a descent without bottom.

Climbing to the edge of the precipice and looking down, I concluded that this must be the great waterfall of which I had heard Mr. Hance speak, and that the rope I had noticed from the precipice now behind me had not fallen down from that, but was intended for this next descent.

Making sure that the end of the rope was well fastened, I cast it over the falls. It hung straight in the midst of a cascade of water four feet wide and six inches deep. The rope appeared to be strong, and I determined to try it.

The height was said to be fifty feet, but I think it was not so much. As I did not wish to have my watch and my journal ruined, I hid those articles with my trousers. As I was concealing them, it occurred to me that no one was within at least six miles. As I have thought of it since, I have wondered if we have not become so accustomed to hide anything thus left that we might be said to do it almost instinctively.

Below the falls there was a spot about ten feet square, perfectly dry. Down upon this I tossed shoes, stockings, shirt and lunch. My underwear I retained, to protect myself in some measure against the rocky wall. The descent through the falls was pleasant enough, the water having about the right temperature to produce an exhilarating reaction without chilling; and as I passed down the rope I was delighted as well as surprised to find the wall covered near its base with beautiful moss and maiden-hair ferns.

Removing my wet apparel, I put on what dry clothing I had, and went on. I had gone about two hundred feet when I came to a place that troubled me. It was a slope, somewhat steep, but quite smooth, and no rope was in sight.

Examining the place carefully, I decided that the best means of descent was the one I had used years ago on my grandfather's farm in descending straw-stacks. Only one objection presented itself—the part of my costume that was missing is the one usually most relied upon on such occasions. Nevertheless, I conformed to the inevitable, and slid down without serious injury. Only one who has experienced it can realize the excitement of danger in such a descent.

Only one short rope remained for me, and almost leaping with joy, I found myself on the bank of the Colorado.

The river was an angry, muddy torrent, with rapids at short intervals, flowing between rugged granite walls that rose almost perpendicularly from the water's edge. It seemed impossible to pass more than one hundred feet up or down the stream; and as I sat in the shadow of a mighty boulder, and enjoyed my battered lunch, I thought of Major Powell and his party, who passed through here in 1869. My wonder was, not that two members of the expedition had been lost, but that any should have escaped.

Having looked upon the scene until it became deeply impressed upon my memory, I gathered a few pebbles to carry with me, and started on my return. The sliding place or "shoot" was soon passed; such places being on the whole more easy of ascent than of descent.

When I reached the base of the high falls a problem presented itself. My clothing was now all dry, and I wished to keep it so; for, if I should not attempt to go beyond the cabin that night, I did not wish to sleep in wet clothing; and if I should attempt to climb the trail, wet clothing would be an additional burden.

In a few moments a plan suggested itself. I had brought with me from the river the little muslin bag in which I had carried my lunch. Removing all my clothing, even to shoes and stockings, I thrust everything, except my belt, into the bag. Fastening the belt to the bag, I buckled it around my neck. Then stepping into the midst of the falls, with my face turned upwards, so that my nose should serve as a water-shed, the bag hanging under my head, I ascended the rope and reached the top with my clothing only slightly wet.

The things I had hidden I found all right; and as I stopped for a little rest I wrote up my journal.

I reached the cabin at four o'clock. I called to mind that I had been told that the ascent from there would require at least three hours. At that time of the year it is dark at half-past seven; so I concluded that if I started I must climb the whole distance in the time mentioned. I determined to go on, and not to look at my watch until I had reached the top.

The distance is three miles; the elevation is said to be four thousand feet; and it was just half-past four when I started.

In the first mile I do not think I ascended more than five hundred feet. That was covered with ease, and then I pressed on to the steeper part. After climbing hard for a while I sat down to rest.

As I sat there, I remember looking up at some turret-like projections of rock on the rim, several thousand feet above me, and saying:

"Well, I guess about four such pulls as this will bring me out."

I struggled on. Each interval between my rests was growing shorter, both as to space and time. The number of rests was nearer forty-four than four; and by the time I had reached the top I was so completely worn out that a pull of a few yards was enough to bring me to a halt.

A dark shower which was raging on the rim had deceived me somewhat as to the hour; I supposed that it was later than it really was. As I threw myself on the ground under a piñon tree on the rim, my heart beating at the highest speed, and my flesh aglow, I looked at my watch. It was just twenty minutes past six. I had come from the cabin to the rim in just one hour and fifty minutes.

As I dragged myself to the door of Mr. Hance's cabin, the old man met me. He was unwilling, at first, to believe that I had reached the river. I told him of my experience on the ropes, and he was convinced. It is unnecessary to mention that I slept well that night.

The next forenoon I spent along the rim of the cañon, contemplating its grand and ever-changing scenery.

I have mentioned that I was very desirous of climbing the San Francisco peaks. On our return to Flagstaff we reached the base of the peaks at two o'clock in the afternoon, and, leaving my driver with his team, I began the ascent.

The elevation of the plateau from which the peaks rise is nearly eight thousand feet, and the elevation of the higher peak, the one I ascended, is nearly thirteen thousand feet. A hard but persistent climb brought me to the summit.

As I ascended it was interesting to note the difference between the timber zones through which I was passing. After the last shrub and lichen were passed, the journey was upon pure lava; and on the north side of the peak the trail was covered with snow, although it was the second day of September.

The day was beautifully clear. Not a cloud hung on the horizon. The air was pure, even for Arizona, for frequent showers during the last month had removed all the dust. I was on the summit of the highest peak in Arizona, and before me lay the most extensive view I had ever looked upon.

To the north the Grand Cañon, sixty miles distant, the scene of my labors two days before, was clearly traceable, the river flowing south through Marble Cañon, and then turning west through the Grand Cañon proper. The course of the Little Colorado, emptying into the Colorado at the elbow, so to speak, was clearly seen for forty miles towards the northeast. Far in the distant east were the Moqui Buttes. To the southwest was Bill Williams Mountain, and directly west was Kendrick's Peak.

To the west and south of my position, looking like a mighty oasis in a still mightier desert, was the great piñon forest, stretching north and south for ninety miles. It was a bird's-eye view I shall never forget; and as I descended the peak I felt I had seen nature's grandest scenery.

SUGGESTIONS

HOW PLANTS CLIMB.

Do all vines twine around their supports in the same direction?

How do some vines climb smooth walls?

Find a plant climbing by its leaves.

How does a grape-vine or woodbine cling to a support?

Notice the hooks at the ends of tendrils.

What vines have small, tendril-like branches?

For the Companion.

AMONG THE FLOWERS.

Not with the eagle's flight, who sees below him
A village gleam, a pine grove sleep in sand,
A blue lake smile, a river's liquid poem
Run its slim thread-light through the prose of land.

Nor where the sailor steers by southern islands,
Sighting some distant Thuld of the sea
Through deserts of alternate sound and silence,
And wilds of wonder, let my roaming be.

I would walk humbly where no glass between us
Must show me Nature's countenance, and come
In days whose evening star is always Venus
To sport with dew-drops, like a bee, at home.

'Tis Eden everywhere to hearts that listen
And watch the life of woods and meadows grow;
Each tiniest blade Love's holiest kisses christen,
And Beauty asks not where to bud and blow.

There is no music for the joy of thinking
Like Flora's hymn in smiles and odors played,
No mood like that when sense and soul are drinking
The red and yellow honey that God made.

The blooming wilds His gardens are; some cheering
Earth's ugliest waste has felt that flowers bequeath,
And all the winds o'er summer hills careering
Sound softer for the sweetness that they breathe.

Down lonely glens, in beds unshaped, unspaded,
The snowdrop letters of Joy's earliest word
Whiten the sod, and pink stars shine, fern-shaded,
Where old creation's curse was never heard.

Peace, Freedom, Purity her blossomed sample
Guards each in fields and forests evermore,
And the lost glories of the world's green temple
Show still some flakes of splendor on its floor.

These are my school-books, and I study in them
A voice, a bliss of strange forgotten days
That brings me near the Love that could begin them,
And makes each petalled sweet a song of praise.

For the Companion.

LITTLE BY LITTLE.

Louise Parr, a young girl of sixteen, offered to take a class in the mission-school, and was given seven ragged, unkempt boys of ten or twelve years of age. She began eagerly to teach them to spell, and continued to do this for two or three Sabbaths. After studying the alphabet she would read to them a chapter of the Bible and try to explain it. But one Sunday Doctor Storrs, the old pastor, saw that the boys were whispering and scuffling, while Louise sat indifferent, silent and despondent. As she walked home he joined her.

"What was the matter?" he asked.

"They know nothing. I know little more. When I thought of the months, possibly the years, it would take to teach them to read the Bible, and of all the doctrines and wisdom and divine meaning in it which I do not understand, I concluded to give it up. It is of no use to try! It is the learned doctors and great saints who must help the world. I am nothing but a stupid, weak child."

"Yes," said the old minister, thoughtfully, "God has put a great store of truth here in the world to feed our souls; in the Bible, in nature, in the thoughts and lives of men.

"Suppose," he said, suddenly, "that you should see piled up here on the field all the bread and meat which you will eat in the course of your life. It would appall you. You would turn from it in horror. But you gladly receive it, a mouthful at a time, and it gives strength and nourishment to your blood and brain.

"Your soul will be fed by God in the same way. You are weak and feel your need of greater knowledge. He does not expect you to become as wise and holy as an apostle or martyr in an hour, but slowly—as the body grows.

"Human beings do not reach mountain heights by one mighty leap, but foot by foot, tramp, tramp, through the thorny brush and over rocks, and through pleasant places, too; by hard labor and happy rests. But they reach it at last, and stand in the sunshine above the clouds."

"I can understand that," said Louise. "But it certainly seems to be folly for me to try to help these boys. They are so ignorant, so indifferent, and so vicious. And they are but two or three out of the hundreds like them in our town. And our town is one out of millions in the world, with ignorance and vice in all. There does not seem to be any use in trying."

The old pastor was silent for a long time, as they walked along the path through the fields. He said at last, "What a terrible drought we have had this summer! The ground has been baked with the heat, and the vegetation scorched from the Atlantic to the Mississippi.

"When the rain came last week, suppose each little drop of water, as it left the cloud, could have thought and said:

"'Why should *I* fall upon that vast, arid plain? What good could *I* do? It needs countless drops to freshen the ground and bring it to life again.'

"But the rain-drop did not know what God knows, that one drop may wet the earth above a buried acorn, and help it to become a great tree which shall give shade and comfort to men for centuries."

Louise made no answer to the doctor's parables, but when she reached her home she held out her hand, saying:

"I suppose all teachers sometimes get discouraged. I will try again."

DAKOTA DANCES AND FEASTS.

The Dakota Indian, in the days when tribal organization prevailed and white supremacy was yet a thing of the future, began all his notable enterprises with dancing or feasting. He danced before going on the war-path. If victorious, he danced for joy on his return. If defeated, he danced in propitiation of the angry deities. He danced to make the grass grow, as well as to get rid of an objectionable wife. He danced when receiving into the blood brotherhood of his secret order a fellow-member of the tribe. He feasted and danced in homage to the sun and moon, and when his larder was full and his "heart was good" he called in his friends and neighbors to share with him his prosperity and happiness.

Preliminary to a hostile expedition, the whole tribe to which the braves destined for the foray belonged, partook of a sacred feast styled Makawakiya. Numerous mystic ceremonies were practised, and the warriors carried blankets filled with pulverized earth into the great teepee of the chief medicine man.

Of this earth were built little hills, similar in shape to those formed by gophers, and over them incantations were performed.

The observances connected with this feast being at an end, the young men who were to face the enemy for the first time retired and took part in the armor banquet, termed by them Wotawewohanpi.

Gathered about a great fire, they ate raw flesh, and besought the god of war, in shrill accents, to make them valiant and to deliver the foes of the tribe into their hands.

"Give us brave hearts, O Wakantanka," they cried, "and if we must fall, let it be like good men and true. But rather, O father of battles, let victory crown our efforts. Then shall the Crows fly to the hills, yea, even to the mountains, and with faces painted black, bewail the day they met the sons of the Dakota. But to us shall be the greeting of the conqueror. The maidens of the tribe shall hail us, bind up our wounds and bring us food.

"The sun shall smile on us by day, and the moon make light our path by night. The wise men and the warriors of renown shall call us brothers, and with the horses of the enemy shall we purchase wives to guard our teepees and rear our sons. Hear, oh hear us, Wakantanka, fierce and mighty one."

If the invasion proved successful, and scalps were taken, the home-coming was celebrated with the Iwakacipi, or scalp-dance.

In this a circle was formed, one-half composed of braves who appeared with their bodies painted, and wearing on their heads magnificent war-bonnets of feathers. In their hands they held drums and rattles.

The other half of the circle consisted of young women carrying the scalps stretched on hoops. To the beating of the tom-tom and the monotonous "hi, hi, hi" of the men, the females danced until exhausted.

Then their places were filled by others, and thus the festival was kept up, often for weeks, the custom being, if scalps were taken in winter, to dance until the leaves grew; if in summer, until the leaves fell. When either of these periods arrived the ghastly trophies were buried.

It may be noted in this connection, however, that the earnest efforts of noble Christian missionaries long since caused the abandonment of the hideous custom of scalp-taking.

It is asserted by those well acquainted with the tribes of the Dakotas, and also by several of the head chiefs, that no member of the nation has "lifted hair," as they term it, for twenty years. Abstention from the ancient practice was particularly noticeable during the last great outbreak, which was rendered memorable by the death of Custer.

THE "MAGIC" OF LEARNING.

Nothing is more astonishing to barbarous or primitive people than the use of figures, diagrams and mathematical formulæ by engineers and architects. There appears, we will say, among the people of some mountain region of Northern Mexico an American civil engineer. He makes surveys and drawings and computations. Then he goes away, leaving his drawings and calculations with others. Men with picks and shovels go to work in his track constructing a railway. Tunnels are cut through mountains from opposite sides, and meet, inch for inch, in the centre. Great embankments are laid, and to make them there is just enough earth brought. The surface of the grade follows an even line as far as the eye can reach—a wonderful thing to these untravelled natives.

All the while the men who build the railway consult the drawings and calculations of the civil engineer. Everything is done according to them. Is it any wonder that the simple lookers-on regard this wonderful paper, which opens the mountains and spans the valleys, as a bit of sorcery, a magician's touchstone?

An African Prince, visiting Paris during the great exhibition, sees the Eiffel Tower, a thousand feet high, slenderly built of iron in such a way that every foot of the material contributes to the strength of the structure or to the architect's scheme of decoration. Nothing is superfluous. When the African Prince returns to his people, he can only give them this account of the matter:

"These white men are wonderful magicians. None of our fetish men can do such things as we have seen. They have there a school of necromancy where men are taught to make lines and figures in such a way that great palaces of iron are built.

"It is thus that a white man of Paris has built a tower which seems to pierce the clouds, and which at night is lighted with fires of many colors. And all that, as it was told to us, by means of lines, and rules of numbers and figures.

"But when the white men sought to explain these lines and designs, we understood nothing of what they told us. No doubt they meant that we should not understand the secret. For if we knew their magic, their power would be lost."

But the "magic" of the civilization of the white men is no secret. It is simply the magic of patient research and industrious application. Nor is its possession limited to those who are able to go to college.

Every student in the public schools may treasure up scientific knowledge which will be of the utmost practical value to him when he goes out into the world. Here is an illustration:

Not long ago, in a New England public school, there was a boy who took a decided interest in natural philosophy. He said he was going to be a plumber, and he wanted to understand the facts that lay at the bottom of his future occupation.

His father was a poor workingman, and could not afford to send the boy to college. But he permitted him to finish the course at the high school. The boy never ceased to pay particular attention to natural philosophy.

After he left school, he went to work for a plumber. When he had been at work about a year, there arose a great deal of trouble about certain valves that belonged to an important and costly apparatus which had been supplied to many people. No one could make these valves work after they had been in use a short time.

As there was a great deal of value at stake one practical plumber after another was employed, but quite vainly, to remedy the defect.

Meantime, the high-school lad had gone to work on his own account to experiment with the valves. He recalled some facts, which he had learned in his natural philosophy at school, about a peculiar corroding effect of water upon certain metals; and he was able, through this knowledge, to find the exact spot in the costly apparatus where the fault lay.

The discovery proved so valuable to the manufacturers of the apparatus that the boy was taken into their employ. From this beginning he rose to a leading and profitable position. He attributes his success to the excellent grounding in the "magic" of natural science which he received at school.

For the Companion.

MOONRISE ON MISSIONARY RIDGE.

A peaceful valley, stretching far below,
Wherein the night-veiled city seemed an under-sky,
With constellations strange to practised eye,
And milky-way made by the pale, faint gleam,
Where wound the Tennessee's broad, silvery stream;
Dream-like, and mystic in its far-off flow.

Along the eastward, loomed a dark, broad height
Of hills, which seemed, like ominous clouds, to lie
Between the lower, and the upper sky;
Or jagged reefs, midway two star-lit seas,
Fanned by a soft, magnolia-scented breeze,
That made more perfect yet the Southern night.

Beyond the hills, uprose the ruddy shield
Of the full moon, while from its blood-stained face
I read the past, in this last, lingering trace;
When camp-fires gleamed, where now the hearth-stone's light
Sent cheering rays into the deepening night,
And "Mission Ridge," lay one vast battle-field.

HENRY CLEVELAND WOOD.

HEARD AND TOLD.

A reporter for the New York *Tribune* chronicles what he calls a "one-sided conversation" which he overheard recently in a railway car. The moral of the tale lies so upon the surface that it would be an impertinence to enlarge upon it. A mother and her little girl occupied one of the seats, and the mother was absorbed in a book.

"Mamma," the child began, "you didn't speak to Mrs. Brown when we got on." Her mother did not hear her.

"She's sitting right in front of us"—this in a loud whisper.

"Aren't you ever going to speak to her again?"

"No, dear," said the mother, not lifting her eyes.

"Not if she takes back what she said about the choir?"

"No, dear."

Some of the neighbors begin to smile, and general conversation is all at once suspended.

"And I can't go to her house again?"

"No, dear."

"Has she got it on?"

There is no answer to this question, which is followed by a louder whisper:

"Mamma, is that the bonnet you told papa about?"

"Yes, darling."

"And those the feathers?"

"Yes, dear."

"What made you say she looked like a fright in it?"

No answer.

"You told papa so."

"Yes, dear."

"Mamma,"—in a louder whisper,—"she's looking at you." Some one titters.

"Yes, dear."

"She looks angry."

The brakeman slams the door, and the mother looks up from her book just in time to hear the child go on:

"I guess she heard what you said about the bonnet."

"What bonnet, dear?"

"Mrs. Brown's. You said —"

"Stop your chattering," said the mother, sternly, while a blush steals up from her throat to her forehead. "Don't open your mouth again."

Then she returns to her book, but somehow she forgets to turn the leaves, and the blush lingers on her cheek till the train draws into the station and the passengers push their way out of the car.

DANGEROUS MOOSE.

Stories are told of killing moose with an axe, after running them down in the deep snow. "This may have been done in Maine or Canada," writes the author of an article on "Moose-Hunting in the Rocky Mountains," contributed to "The Big Game of North America," "but, if so, it proves to my mind that the moose there do not possess the same wild, savage, pugnacious natures as those found in the Rocky Mountains. No sane man would dare to attack one of our vicious mountain moose, single-handed, with any weapon short of a repeating rifle." The writer tells this story to support his assertion:

A party of river-men wounded a large moose near the bank of Clear Water River, in Idaho, and it took to the water. The eager, but unskilled, hunters rushed upon the wounded animal with a bateau. It was a large boat, and was manned by six strong and fearless men. They were either without a gun, or scorned to use it, and determined to kill the moose with axes, cant-hooks, and other woodsman's implements.

They bore down by the side of the swimming moose, which was kept in the current by walls of rocks, and dealt him a blow. He turned to fight. The men rushed to the battle with shouts of defiance.

The moose struck the boat with his antlers, raised it clear out of the water, and turned it upside down so quickly that the men were all frightened, and two of them were either killed or drowned. The other four were rescued by their companions on shore, after the moose had been shot several times.

The writer himself once narrowly escaped being killed by a moose he had shot and thought dead. He had chased, on snow-shoes and down a decline, two large moose, and, at thirty feet above them, fired at the larger bull. He staggered, and kept on; but a ghastly line of blood on the trail told of the deadly effect of the shot.

The second shot was aimed at the smaller moose. He fell at the crack of the rifle; but the other struggled on, bleeding, snorting from a deadly shot through the lungs. Four shots were fired into him before he fell and buried himself in the snow.

The hunter, standing exhausted above the fallen moose, gave no thought to the animal that he supposed to be lying dead three or four rods back. Suddenly he heard a loud snort and felt a rush from behind. As he dodged to one side, the moose he had thought dead charged upon him and buried him in the snow.

His rush carried the moose past the fallen hunter, but he turned to charge again before the man could shoot. His broken shoulder failed him, however, and he tumbled downhill. Again he rose and charged again; but the hunter, having recovered himself, placed a bullet between his eyes. Although the snow was seven feet deep, and the moose had a broken shoulder, it was more good fortune than any advantage the hunter had, that saved him from being cut to pieces by the enraged animal's feet.

HE TOOK TOO MUCH.

One day a smart young fellow with shiny shoes, a new hat and checker-board trousers boarded a street-car in a Western city, and stepped to the front platform. He pulled out a twist of paper and lighted it, and began puffing a concentrated essence of vile odors into the faces of those who were obliged to ride upon the platform if they rode at all. One, a plain old farmer, couldn't stand it, and stepped off to wait for the next car.

When he reached the station, the young fellow was there before him, and it happened that the two met at the restaurant counter.

"Got any sandwiches?" called the young man to the waiter. "Here, gimme one," and he tossed out a nickel, and then proceeded to pick up and pull apart every one of the half-dozen sandwiches on the plate before he found one to suit him.

The farmer, who had been awaiting for his turn, drew back in disgust. Finally, he found something which the fingers of another had not fouled, and presently followed the loud young man to the car. He found every seat occupied, including the half of one on which were plied the young man's grip-sack and overcoat.

"Is this seat taken?" he ventured to inquire.

"Seat's engaged," was the curt answer, with a look meant to squelch the old farmer, who went into the smoking car.

That afternoon the same young man walked into the office of the Governor of the State, armed with recommendations and endorsements, an applicant for a position under the State government. He was confronted by the same plain old farmer, who recognized his travelling companion of the morning without any trouble.

Glancing over his papers, the Governor said, "Hu—m, yes; you want me to appoint you to so-and-so. If I should, I guess I might as well write my own resignation at the same time."

"Wh—why so?" stammered the young fellow.

"Because I saw you pay for a street-car ride this morning, and you took the platform of the car. You bought a sandwich and spoiled the plateful. You paid for a seat in the train, and took mine, too, and if I should give you this place, how do I know that you would not take the whole administration?"

BEATING A DRUMMER.

Jasper Hedge had a great reputation for being careful in his statements, and was anxious to preserve it. He had a dog, a homely black and brown creature of no great intelligence, to whom he was much attached. One day this dog strayed away from home, and Jasper, who never had any special business on hand to prevent his following his inclinations, presently strolled out in search of his missing comrade.

When he reached the village store he saw, seated on the steps in a contemplative attitude, a "drummer" who had evidently made up his mind to study nature while waiting for the storekeeper's decision as to the respective merits of different samples.

"Young man," drawled Jasper, coming to a halt, "hev you seen anythin' of a dog passin' by here, say an haour er an haour'n a half, er mebbe two haours ago, lopin' along at the rate of a mile er a mile'n a half, er mebbe two miles an haour?"

"Yes, I did see a dog go by," replied the drummer, with evident amusement.

"Wa-al, naow," said Jasper, with some anxiety, resting one foot on the lowest step, "could you jes' bring yer mind to the pertick'lers abaout him?"

"Let me see," said the young man, airily flicking specks of dirt off the steps with his cane; "he passed here an hour or an hour and a half or two hours ago, going at the rate of a mile or a mile and a half or two miles an hour, and he had a spot on his left side about as big as a dollar or a dollar and a half, or two dollars!"

As the speaker looked up to see if his witticism was appreciated, he noticed a somewhat unpleasant expression on Jasper's face, and also saw a large and hungry-looking dog "lopin'" rapidly toward him.

"You're powerful smart-spoken, stranger," drawled Jasper, "an' I aint seen all there is in the world yit, I calc'late, but I think my dog ken give yer my notion of spots of the size you made mention of, right on the legs of them spicketty-span pantaloons o' yourn, ef you'd hanker ter hev him! But laws," he added in a tone of sublime contempt, "me an' him aint really got time ter bother with ye; come along, Taowse!" and drawing off the dog, who looked as if he were being deprived of his rights, Jasper sauntered away.

READY FOR BUSINESS.

If a young man would prosper in business, let him make his employers' interests his own, and neglect no opportunity to advance them. The Washington *Post* tells how one man did this.

He had obtained a situation in a real-estate office, and not long afterward, being at an evening gathering, was invited to sing, whereupon he responded with "Home, Sweet Home."

His friends were a good deal surprised at his selection, but heartily applauded him at the close. At once he stepped forward and surprised them again.

"I am glad you liked the song," he said. "There is nothing like 'Home, Sweet Home,' and let me say that our company is selling them on terms to suit, and within twelve minutes' ride of the city. If you don't want to live there it's the chance of your life for an investment."

The *Post* omits to tell us how many sales resulted from this unexpected bit of eloquence.

INDIAN NAMES.

A station not very far from Pittsburgh, on the Baltimore and Ohio Railroad, has the good old English name of Soho. In announcing it there is no opportunity for the brakeman to disguise the word, as he is too apt to do with the names of other places.

As a train neared the town not long ago the word was distinctly shouted, and a passenger was heard to say to the man sharing his seat:

"How many towns in this part of the country have Indian names! Just think of it—Soho, Monongahela and Duquesne, all near together."

I'M THINKING.

Papa says I must go to school,
To read and spell and write,
And then, maybe, to college, too,
If I study with all my might;
I am four years old, and I'm pretty tall,
But I'm thinking I never can learn it all!

Aunt Nell says I must learn to sew,
To overcast, stitch and fell,
And learn to play the piano, too,
And the violin, as well;
I am four years old, and I'm pretty tall,
But I'm thinking I *never* can learn it all!

Grandma says I must learn to knit,
And to crochet beautiful lace,
Aunt Nan says she shall teach me to draw,
And to copy the baby's face;
I am four years old, and I'm pretty tall,
But I'm thinking I NEVER can learn it all!

Mamma says I must learn to cook,
And to make nice bread and cake,
And puddings and salads and jellies, too,
And to broil and steam and bake;
I am four years old, and I'm pretty tall,
But I'm thinking I NEVER can learn it all!

A GARDEN PLOT.

"DO YOU think they will come up soon?" asked the gardener, stepping back and looking at his small and muddy patch of earth rather wistfully. "I planted them a long time ago and I've watered them a great deal, but nothing shows yet."

"What did you plant?" inquired the visitor.

"Well, you see I didn't have very much," said the gardener. "There was the moth-ball I picked up in the garret and the pieces of corn the parrot dropped and some rice. It would be splendid to have a rice-tree, wouldn't it?" he cried, turning a pair of bright and hopeful eyes up to the visitor's face.

"Splendid! Had—had the rice been boiled?"

"I'm not quite sure," answered the gardener, thoughtfully. "The corn had, I know. It was so soft. I thought it might sprout sooner, you know, if it was soft."

There was a pause in the conversation during which the gardener patted his garden with a loving little hand.

"Katie, you know, the cook," he continued, presently, "she says moth-balls won't grow. I thought I would try one, at any rate. They wouldn't smell so bad out in the air, would they?"

"Perhaps not," said the visitor. "Please show me where you planted the moth-ball."

"Right here by this stick, and the rice here and the corn here. Oh, I'd know in a minute which was which if they would only come up. Do you think they will *ever* grow?"

There was no evading this direct question, so the visitor said, "Well, perhaps they wouldn't all by themselves, but if a fairy, a good fairy, should come along —"

"Oh, but there are no fairies in the city," interrupted the gardener. "They only live in the country. Camille told me so. She read it out of a book."

"Do you know," said the visitor, in a comfortably reassuring tone, "I believe Camille is mistaken about that. There are *some* fairies in the city, not nice *little* ones like those that live in the woods, but very good fairies for all that."

"I don't know any, I never saw one," said the gardener, incredulously.

"But they may know you, don't you see, and that would make it all right."

The gardener shook his head. It was plain he did not expect much help from the city fairies. However, in a little while, he said, quite cheerfully:

"Maybe the rice will be sprouted to-morrow. I mean to get up very early and look. You had better come, too," he added, nodding and smiling at the visitor as the latter walked away.

"Well?" said the visitor, inquiringly. It was early morning, and she and the gardener had met again over the garden plot. The gardener's eyes were shining, and his cheeks were pink with excitement.

"They have all sprouted," he said, in a low voice, and stooping down, he pointed out three little groups of fresh green leaves.

"Why, the moth-ball has come up, too," cried the visitor. "What do you say to the city fairies now?"

The gardener looked serious for a minute. Then he said, very decidedly, like one who has made up his mind, "I don't believe the fairies did it at all. It was just because I watered them every day and took such good care of them."

"Yes, that was really the reason," said the visitor, smiling. "Still —" Then she stopped and looked at the happy little gardener, and did not finish her sentence.

The gardener had forgotten all about her. His curly head was bent low over his dear garden bed.

It was only the visitor's voice, saying, "Good-by," that made him look up with a smile and cry out, "Good-by, come out and see my garden again soon."

"Yes, I will, thank you," said the visitor, turning back. "Did you ever hear of such a thing as entertaining—well, fairies unawares?"

"No," answered the gardener. "I am nearly six years old, and never saw a fairy in my life."

"Oh, indeed," said the visitor, laughing this time, "good-by."

"Good-by," said the gardener.

A SMALL boy who was spending the summer in the country was much annoyed by the mosquitoes. One night he stood their bites as long as he was able, but at length wailed forth, "Oh, I wish I was a skeeter and the skeeter me, and then wouldn't I bite that skeeter!"

A POOR little mite of a boy came to the door, asking for work. "Haven't you a father?" I said. "Oh, yes," he replied, "but he can't do anything; he has brown kitties in his windpipe."

The Visitor.

THE BABY'S WELL.

"Papa, somebody 'pilled the water out my well."

"Oh, I guess it leaked out," papa said.

"But, it touldn't," insisted baby.

"The ground soaked it up," papa said.

Baby shook her head.

"F'ed 'pilled it out," she said.

Fred was her brother, and was a year older than herself. Whenever anything went wrong with baby, she blamed him. That wasn't quite fair, to be sure, but then she had some excuse for it.

"Where is your well?" papa asked.

"Yite out here," baby said, as she pointed to a near-by shed. "I dug it with a 'tick. Come and see it."

She led him to it, her chubby hand in his. It wasn't a bad sort of a well for a baby to make.

Papa was surprised to find that she had set an old fruit can into the hole. The can was water-tight, and she had a right to think somebody had spilled it.

"We'll fill up the well with water, and then watch it," papa said.

"The nex' one I'll dig, oh, ever so deep!" baby cried. "I'll put a yeal pump in it, so mamma can det water."

Early the next morning baby was standing by the open bedroom window. Papa was getting ready to go down to breakfast.

"Oh, look, papa! look!" baby cried, in great excitement. "Two nassy wobbins are 'pillin' the water in my well."

Papa walked to the window, looked out, and laughed. One of the robins was in baby's well, taking a bath.

"Those robins have a nest in the lilac bushes," papa said. "Do you know what they are thinking?"

"No, papa. What is the wobbins finking?"

"They are thinking, 'Oh, isn't this just grand! Baby put it here for us, and it was very nice in her, wasn't it?'"

Baby's face grew very thoughtful, and then a pleased smile spread over it.

"I'm glad they like my well," she exclaimed. "I dess I jus' made it for them without knowin' it."

Then she added: "Papa, F'ed didn't 'pill the water. I blamed him wrong that time, didn't I, papa?"

FRANK H. STAUFFER.

A TEACHER was impressing upon the scholars of the primary school the importance of perspiration. Having, as she thought, fully explained the matter, she asked, "Now, Johnnie, if the pores of the skin got filled up, what would happen?" Johnnie thought a moment, then answered, briskly, "We'd *bust*."

SADIE was teaching little Guy to make the numerals on his slate, and telling him what they each stood for, when she came to the cipher. "That," she said, "is nothing." The little eyes widened, and he looked at it some time before he remarked, thoughtfully, "'At doesn't *look* like nossin'!"

6. Bears a comparison.
7. To value.
8. Crawling.
9. A city in Italy.
10. Those who lament.
11. Prolonged.

The fourth row of letters will spell the name of a French revolutionist, who died on July 28, 1794.

The fifth row of letters will spell the name of the founder of one of the United States, who died on July 30, 1718.

CYRIL DEANE.

3.

LONGFELLOW ENIGMA.

I am composed of 50 letters.

1. This is the 7, 6, 19, 42, 5, 12, primeval.
2. Thy dress was like the 39, 2, 47, 22, 4, 26,
Thy heart as pure as they.
3. Maiden with the 32, 50, 10, 34, 46, 9, 36, 27, 31 eyes.
4. Between the 24, 16, 38, 34 and the daylight,
When the night is beginning to 17, 36, 27, 14, 19,
Comes a pause in the day's occupations
That is 34, 15, 36, 27, 23 as the children's hour.
5. Colder and louder blew the 27, 40, 31, 24,
A 8, 33, 1, 35 from the northeast,
The snow fell hissing on the 46, 38, 48, 23, 28,
And the billows frothed like yeast.
6. Though the mills of God grind slowly,
They grind exceeding 44, 21, 30, 18, 39.
7. The warrior took that banner proud,
It was his 13, 11, 19, 12, 22, 16, 47 cloak and shroud.
8. And in the wreck of noble lives
Something immortal still 44, 25, 9, 3, 48, 41, 20, 43.
9. When the hours of day are 23, 45, 49, 46, 14, 19, 4, 24,
And the 41, 6, 2, 29, 10, 26 of the night
Wake the better 5, 36, 37, 17 that slumbered
To a holy, 29, 33, 39, 49 delight.

My whole is a quotation from the Psalm of Life.

A. M. P.

CHARADE.

An evergreen tree or
A mild, timid beast,
The name of my *first* may declare.
Though humble its place,
The player of cards
Will have for my *second* a care.
In game or in tale,
The best of it all,
My *third* holds it there.

My *whole* has many pleasant ways,
And speaks in welcome words of praise.

POWER OF SONG.

An Englishwoman visiting in Colorado has sent to *Chambers's Journal* rather an exciting experience of her own with wild cattle, in one of the lovely mountain parks of that Western paradise. She says that in her quest for sketching ground it was her fashion to start off on long expeditions by herself, after having been once assured that no Indians were within thirty miles, that bears seldom came down from the mountains so early, and rattlesnakes were fast disappearing. But one morning, walking down a narrow part of the valley, she found her road disputed by some fifty mountain cattle, which had come down to graze, and were clearly puzzled at her appearance.

They formed in line, and for a few minutes we stared at each other. I had no weapon more formidable than a pencil-brush, so was rather more too frightened to run away. An inspiration came to me to sing to them. Sometimes, besides, I struck a stirring melody. The effect was delightful. The creatures listened attentively for a few minutes, and then one after another began to feed, grazing, while I walked through the midst of them, singing all the time.

A few days later I was returning to supper, when, about a mile from the ranch, I saw a large number of cattle coming down the road. I had to go, remembering my late experience, I marched along, shouting aloud, and when within easy hearing, struck up my song.

As before, the animals all faced about and gazed at me. Then, as I sang and approached, they came slowly towards me, like a moving wall. Louder and louder I sang, until, looking beyond and around me, I saw cattle everywhere, coming down in my direction, up the slope on the river, down the road behind me on my right, cattle slowly but surely closing me in.

They were not fierce in aspect, but still they came nearer and nearer, and I was in a terrible state of excitement at stop singing, as I was clearly my success was a charm, without which I was but an ordinary banan intruder, and to be treated as such. On the other hand, it was evident that the charm had to be continued for my safety.

Closer and closer they came, until I could feel their hot breath like a cloud about me, and then a gentle poke in the back or shoulder from their long horns.

At this moment I despaired, then, with some difficulty, from lack of space, I opened my parasol, whirled it round and round before me, with all the strange shouts I could invent, and charged straight at my nearest.

The very grateful surprise the bewildered animals gave way one by one, and fairly made a lane down which I rushed, brandishing my weapon. Then, as I looked back, I saw the whole herd peacefully staring after me in dull amazement, but not one moved a step in pursuit of me.

Some weeks later, when I heard me the story to a Nebraska farmer, he informed me that the cattle-thieves had been there only a week before, he and some other mounted men had barely rescued alive a new-comer who had incautiously strayed into a herd of cattle. Had he, on his part, been terribly driven by wounded men, the animals would have lost their respect for humanity on foot, and treat it with slight consideration.

BY THE NAME OF "X."

In France, where great care is taken that men shall have no other name than that to which they are lawfully entitled, and where every citizen's name, profession, social condition and history are carefully recorded and his goings and comings officially kept track of, some very curious incidents take place.

Not long ago a young man was arrested at Constantine, in Algeria, on a charge of stealing and embezzling in an establishment in which he was employed. When it was sought to make a record of his name, it was found that he had no name to record.

He had been "inscribed" at Bordeaux at the date of his birth, but his father and mother were not known, and the name of Lafon, under which he had been inscribed without authority, he had changed on coming of age, because it pertains to bear, because it was not rightfully his.

After having been forbidden the name of Lafon, he took that of Baron, and was in turn officially refused permission to bear that.

He was, therefore, without any exist, in some way, without any name at all; but when, having been accused of taking some money that had disappeared, and when the police were questioning him in some way, he was entered upon the lists of the court as "one X."

If he is convicted of the offence with which he is charged, he will go to prison as X, and if he ever comes out again will be known as one of the "good name," at least one letter of the alphabet toward some kind of name.

AN OBSTACLE.

A theological student who had preached one Sunday in a city at a considerable distance from the church where he attended, walked to take the early train back on Monday morning.

He succeeded in starting and had to stop on the way to get a check cashed, so that when he reached the upper end of the station, the train which had stopped at the other end had already started out.

He did not pass him, however; as he walked, and when the baggage-car came along he threw his bag on board, and with sensible precaution decided to wait for the last car before jumping on himself.

The by-standers watched the proceeding with interest, and when the last car came in sight came along. There, on the lower step of the last platform, stood a man who must have weighed two hundred pounds, and who put out his forearms to any attempt toward boarding the train.

The young man fell back and waited for the next train, while the obstacle continued in his position on the step quite unconscious of anything except the cigar he was smoking.

COULD NOT BE.

The simplest and most elementary truths may be stated in such a way as to possess something of the charm of novelty.

"Why," said Mrs. Bronson, as the clock struck, "it's only one o'clock. I thought it was two."

"No, mum," said Bridget, "it's never later than one at this time of day."—*Harper's Bazar.*

For the teeth use "Brown's Camphorated Saponaceous Dentifrice." This preparation gives the best results obtainable. SIGSBEE'S SEAMLESS SHIELDS. Make this your next 50 per cent. greater than 1890. Patented 1890.

One of the most troublesome parts of a lady's apparel is the shield. They are hot, causing perspiration and annoying odor, and are uncomfortable on account of the cumbersome attachment under the arm, and every lady who wears them has trouble to her stylish costume by ripping out. The Sigsbee Shield is entirely free from these difficulties. They are worn next to, or underneath, the corset cover, and in addition thus keeping the corset and corset cover sweet and clean, they are invisible, and the shape of the arm, do not wrinkle. Instantly adjusted. Invaluable to bicyclists and tennis players. Ask your dressmaker or corset dealer to show them to you. Sold by Dry Goods Dealers every where. Price, 50 cents per pair. SIGSBEE MANFG. CO., Lyn, Mass.

Highest of all in Leavening Power.—Latest U. S. Gov't Report. Royal Baking Powder ABSOLUTELY PURE

DISLOYAL WHISTLING.

Americans have little conception of what may constitute a treasonable offence in some of the countries of the Old World which are still despotic and extremely military. There recently occurred at Barr, in Alsace, a trial which must have been very amusing to an American who might have witnessed it, if a man's liberty had not been in jeopardy.

One day, not long ago, in the streets of Barr, a laborer, who was engaged in loading a wagon, whistled cheerfully at his work. As he was thus engaged, a gendarme or military policeman came within hearing. The workman, apparently preoccupied, kept on with his whistling.

"I arrest you," said the gendarme, coming up and putting his hand on the workman's shoulder.

"What for?" asked the man, astonished.

"For seditious whistling. You have been whistling the 'Marseillaise.'"

The "Marseillaise," being the French national air, and a revolutionary air besides, is forbidden in German Alsace.

But the workman exclaimed, "Oh no, you are mistaken! It isn't the 'Marseillaise' at all that I am whistling, but the 'March of the Brunswick Hussars.' I used to belong to the Brunswick Hussars, and that was our regimental tune!"

The gendarme, who was a German, and thought he knew one tune from another, took the workman under arrest; and in due time he was brought into court charged with disloyalty in whistling a seditious air in a public place.

Both the gendarme and the accused told their stories very confidently, and as the workman was reputed an honest and loyal man, the court was very much perplexed between the two men and the two tunes.

In this predicament, the court adjourned to the council-room adjoining, and calling in the accused and the accuser in turn, made the workman whistle the "March of the Brunswick Hussars" and the gendarme the "Marseillaise."

Each did his best; but the tunes proved, in the ear of the court, to be so much unlike that it was regarded as improbable that the gendarme could have been mistaken.

The accused was, therefore, sent to prison; but his general bearing, and above all, his excellent whistling, had affected the court so favorably that he was sentenced to only three days' imprisonment.

A ROUMANIAN CUSTOM.

A pretty custom, similar to that observed in England, Scotland and the United States on St. Valentine's Day, the Fourteenth of February, is in vogue in Roumania on the First of March. This is the day indicated in the State and Church Calendar as the official date for the beginning of spring.

The masculine portion of the population is not favored, as with valentines in this country, but the daughter, friend, sweetheart or bride may be quite sure of receiving her token of affectionate remembrance on that day. These little gifts are called *martisoires*, and are made of bronze, silver, or some cheaper material, in the shape of hearts, stars and medallions. These little amulets bear the date, March First, accompanied by that of the year, and any motto or inscription which may occur to the giver as appropriate.

The recipient of the martisoire wears it, held by a small chain, on her arm or hung around her neck, until in her walks abroad she sees a rose in bloom or hears the song of the nightingale. Then she takes it off, and hangs it on the next green bush to which she comes, as an offering to Mother Nature, for whom all Roumanians have a great love.

Whether these little medals are allowed to hang on the bushes and swing in the breezes all summer, or whether after a certain time they are stealthily gathered by a martisoire collector, to be melted for another season's use, is not stated by the recent German paper which tells of this pretty, if rather sentimental, custom.

AN INTRUDER IN THE BATH.

The true luxury of the bath is best appreciated by people of hot climates. The baths of Kingston, Jamaica, are described by a correspondent as delightful, being long enough and wide enough to allow one to flounder about, and even to take a couple of strokes. They are made of concrete and are filled with water at the temperature at which it comes from the mains—just right to make a plunge enjoyable. So clear is the water that one can scarcely realize it is three feet deep.

Once in a while, to be sure, there is something which may detract from its enjoyment by the stranger, if he has not become used to some of the other inhabitants of the land. For example, as I was about to take my first jump, I discovered something that looked a bit like a horseshoe crab down at the bottom. Calling to one of the black pickaninnies running about the yard, I asked him what it was.

"Oh, dat's a scorpium."

"Well, take him right out."

"Oh, he's dead, sah."

"Never mind! I prefer my bath without him in it."

A dead scorpion is bad enough, but that is preferable to having a live one drop from the rafters overhead on one's bare flesh, as once happened to a friend of mine.

PATRIOTIC.

Surely it is better to be mistaken in the bare facts regarding our heroes than to have no such divinities to worship.

"Well, Uncle Mose," said a lady, "I hear you have another pair of twins at your house."

"Yaas, missus, yes we has. Bress dey little hearts!"

"Have you named them yet?"

"Yes'm. Done named 'em aftah two ob de fust pres'dents ob dis country."

"Indeed! What two?"

"Ole Christofo C'lumbus an' Juleyous Cæsar, ma'am. We'se great on namin' de children fo' de pres'dents 't our house."—*Detroit Free Press.*

"WILLIE," said the visitor, "what is your ambition?" "I'd like," said the boy, putting down his yellow-covered story of the plains, "to have people tremble like leaves at the mere mention of my name."—*Harper's Young People.*

Itching Piles.

The Youth's Companion is an illustrated weekly paper of eight pages. Its subscription price is $1.75 a year, payment in advance.

Twelve or sixteen pages are often given its subscribers in a single weekly issue of the paper. All additional pages over eight—which is the number given for $1.75—are a gift to the subscribers from the Publishers.

New Subscriptions can commence at any time during the year. The Companion does not employ agents to solicit renewals of subscriptions.

Payment for The Companion, when sent by mail, should be made in a Post-Office Money Order, Bank Check, or Draft, or an Express Money Order. WHEN NEITHER OF THESE CAN BE PROCURED, send the money in a Registered Letter. All postmasters are required to register letters whenever requested to do so.

Silver should never be sent through the mail. It is almost sure to wear a hole through the envelope and be lost, or else it is stolen. Persons who send silver to us in a letter must do it on their own responsibility.

Postal Notes are not a safe means of sending money. Any one can collect them at any Money-Order Post-Office, and, if lost or stolen, the money cannot be recovered, as no duplicates are issued. Subscribers who send us Postal Notes must do so at their own risk.

Renewals.—Three weeks are required after the receipt of money by us before the date opposite your name on your paper, which shows to what time your subscription is paid, can be changed.

Discontinuances.—Remember that the publishers must be notified by letter when a subscriber wishes his paper stopped. All arrearages must be paid.

Returning your paper will not enable us to discontinue it, as we cannot find your name on our books unless your Post-Office address is given.

Always give the name of the Post-Office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed and drafts made payable to

THE YOUTH'S COMPANION,

For the Companion.

CONSTIPATION AND INSANITY.

It is now generally admitted that constipation is productive of serious disorders, that it aggravates other ailments, increases the susceptibility of the system to infectious diseases, and produces a state of general physical disturbance. The nervous system is especially affected, and it must be remembered that the nervous centres are in the brain.

The deleterious effects of constipation were formerly explained by the pressure of the hardened mass on the blood-vessels and nerves of the intestines. But a different view is now taken. It is believed that they are due to powerful poisons, which have been proved to be developed in the process of incipient decomposition.

There is reason to believe that extreme cases of constipation may result in insanity. The *Alienist and Neurologist*, a journal devoted to mental diseases, gives three marked cases which seem to confirm the view.

In the first case, a woman, without any nervous tendencies, hereditary or acquired, and every way healthy, began to suffer from constipation, with loss of appetite and general debility. After a while, she had attacks of fainting and vomiting. At length there were developed marked symptoms of insanity — restlessness, sleeplessness, incoherence, hallucinations, and delusions of a melancholy character. The skin was of a dirty brown and covered with branny scales.

It took ten daily injections to bring away the accumulated mass of hardened fæces. After this was done, the bowels began to act regularly, the mind became clear, and the patient entered on full convalescence.

The second case was that of a man with suicidal tendencies, who had refused food for months. He was restored to mental soundness, after being relieved of an immense quantity of accumulated fæces. The third case was that of a young man who had become morose, suspicious and quarrelsome. He was similarly treated and restored.

In some of the worst cases of constipation, there is a free passage through the compact mass, the latter adhering in thick layers to the walls of the intestines, while the patient has no suspicion of his real condition.

That grave diseases do not oftener result from constipation is due to the constant use of cathartics on the part of those affected. But such use is itself injurious. The true course is to establish habits that will effectually remove the tendency to constipation. The muscular vigor of the intestines needs to be increased by invigorating the muscular system generally with proper out-door exercise.

INTRUSIVE SNAKES.

The terrible cobra de capello, which is feared and venerated in India as a snake-god, is occasionally caught napping when he has encroached on the territory of others.

A resident in India says that he was one day much astonished by hearing a succession of reports, like the firing of a revolver, which issued from the "godown," or store-room. As he opened the door a strange sight met his gaze. A cobra had managed to get into the room, and had been attracted by an empty biscuit tin—in American parlance a tin cracker-box—about twelve inches by six, in which some crumbs were still remaining.

The cover had not been well opened, and the edges were jagged. The cobra had pressed his head inside to lick up the crumbs, but he could not get it out again. The more he tried, the more difficult did it become.

In his rage his hood expanded and was lacerated by the sharp edges of the tin, and upon this he began to lash about with his tail. Pop, pop, went bottles of champagne and beer; these were the reports which had been heard within, and they had given the signal which brought his executioners to the spot.

An old gentleman living in the same country said to his wife one morning:

"My dear, I have had a very strange dream. I dreamed I was sleeping on a cobra."

"What nonsense!" was her retort; "how could that be?"

"Well, my dear," he responded, meekly, "I did dream it, and I only hope it wasn't true."

The next night he had the same dream, and in the morning announced the fact, only to encounter his wife's ridicule on the score of his weak nerves. Nevertheless he had the same dream once more.

Thereupon the mattress was ripped open, and there, snugly coiled in its middle, was a cobra. He had entered one day through a rip in the cover, while the mattress was lying in the garden to air. Probably his luxurious writhings beneath the sleeper had given rise to the dream.

AN ENGLISH TOM THUMB.

A name quite as famous as Tom Thumb's is that of an English dwarf who lived in the last half of the seventeenth century, one Jeffery Hudson. It is said that when he was seven or eight years old and only eighteen inches in height he was presented to the Queen in a very novel manner.

The Queen was at dinner at Burleigh on the Hill, the seat of the Duke of Buckingham. A cold pie was brought on, and on its being opened, the little fellow stepped out of it and immediately was given over to the Queen, who retained him in her service.

He did not grow much until he was thirty years old. Then he shot up to three feet and nine inches. He served as Captain in the Royal army in the Civil War, and in 1644 attended the Queen into France. Here he fought a duel with pistols, and killed his opponent.

After the Restoration Jeffery returned to England, but was almost immediately thrown into prison on suspicion of conspiracy. Under this close confinement he died at the age of sixty-two.

BY MARRIAGE.

A traveller in Texas says that he was riding along a cattle trail near the New Mexico line, when he met a rather pompous-looking native of the region, who introduced himself as Colonel Higgins, of Devil's River.

"Were you a Colonel in the Confederate army?" I asked.

"No, sah."

"On the Union side, then?"

"No, sah, nevah was in no wah."

"Belong to the Texas Rangers?"

"No, sah, I do not."

"Ah, I see. You command one of the State militia regiments."

"No, sah, I don't. Don't know nothing about soldiering."

"Where, then, did you get the rank of Colonel?"

"I'se a Kunnel by marriage, sah."

"By marriage? How's that?"

"I married the widow of a Kunnel, sah; Kunnel Thompson, of Waco."

AFTER SOPHOCLES.

Mabel's dolls are all "live people" to her, and are invested with remarkable histories. A little while ago she visited an aunt in Boston who belongs to a club formed for the purpose of studying Greek plays, and brought home as a present from this aunt a monstrous "rag doll" which was a relic of her childhood.

"What have you named her?" asked Mabel's mother, as she surveyed the doll's somewhat expressionless features.

"She's a Greek," said Mabel, promptly, "and her name is Mary Tigone; she's named for a lady that a man by the name of Sofukuls wrote about, only *her* name was *Ann* Tigone; but I don't think Ann is a pretty name!"

TWO BABIES.

The grammarians who say that there are only three degrees of comparison have never sufficiently attended to the language of young mothers. Here, for example, is a dialogue from the New York *Weekly*:

Mrs. Newma—Oh, I wish you could see Mrs. Winkler's baby. It's perfectly lovely! Such a delicate, sweet little creature as it is! It's a perfect little cherub, with the loveliest eyes, the sweetest little mouth, and the cunningest little nose. It looks as if it had just dropped from heaven, and every tiny feature had been fashioned by the angels.

Mr. Newma—Is it as nice as our baby?

Mrs. Newma—Mercy! no, not half."

IT FELT SO.

An Irish servant-girl came to her mistress one morning begging permission to go to the dentist to have an aching "toot" filled; saying that it had been going "thumpity-thump, thumpity-thump!" all night.

When the girl returned her mistress asked:

"Well, Katie, did you have the tooth filled?"

"Oi did, mum."

"What did you have it filled with?"

"Oi don't know just phwat it was, mum, but from the way it fales Oi should t'ink it was t'under and loightning he'd put into it, mum."

EASILY ANSWERED.

A professor in a German medical college had one exasperating student, according to the *Illustrirte Welt*.

"You see, Herr Dumm," said the professor to this young man, one day, "the subject of this diagram limps, because one of his legs is a trifle shorter than the other. Now what should you do in such a case?"

"I should limp, too, I think, Herr Professor," replied the student, with an expression of perfect innocence on his stupid face.

WHAT AILED HIS FINGER.

For those who have eyes to see, the present always bears the impress of the past.

"Why do you stick out the middle finger of your left hand so straight while you are eating?" asked a lady of a tramp. "Was it ever broken?"

"No, madam; but during my halcyon days I wore a diamond ring on that finger, and old habits are hard to break."—*Continent.*

Lamp.

Ask my agents for W. L. Douglas Shoes. If not for sale in your place ask your dealer to send for catalogue, secure the agency, and get them for you.
TAKE NO SUBSTITUTE.

WHY IS THE
W. L. DOUGLAS
$3 SHOE FOR GENTLEMEN
THE BEST SHOE IN THE WORLD FOR THE MONEY?

It is a seamless shoe, with no tacks or wax thread to hurt the feet; made of the best fine calf, stylish and easy, and *because we make more shoes of this grade than any other manufacturer*, it equals hand-sewed shoes costing from $4.00 to $5.00.

$5.00 Genuine Hand-sewed, the finest calf shoe ever offered for $5.00; equals French imported shoes which cost from $8.00 to $12.00.

$4.00 Hand-Sewed Welt Shoe, fine calf, stylish, comfortable and durable. The best shoe ever offered at this price; same grade as custom-made shoes costing from $6.00 to $8.00.

$3.50 Police Shoe; Farmers, Railroad Men and Letter Carriers all wear them; fine calf, seamless, smooth inside, heavy three soles, extension edge. One pair will wear a year.

$2.50 fine calf; no better shoe ever offered at this price; one trial will convince those who want a shoe for comfort and service.

$2.25 and $2.00 Workingman's shoes are very strong and durable. Those who have given them a trial will wear no other make.

Boys' $2.00 and $1.75 school shoes are worn by the boys everywhere; they sell on their merits, as the increasing sales show.

Ladies $3.00 Hand-sewed shoe, best Dongola, very stylish; equals French imported shoes costing from $4.00 to $6.00.

Ladies' 2.50, $2.00 and $1.75 shoe for Misses are the best fine Dongola. Stylish and durable.

Caution.—See that W. L. Douglas' name and price are stamped on the bottom of each shoe.

INTERLOPERS.

In Eight Chapters.—Chapter I.

Dorothy's Affliction.

IT was a bright, warm May morning, and the windows of the schoolroom were all open. Through them came the faint smell of far-away lilacs, blooming beside the seminary fence, and the hum of near bees bumping against the seminary wall.

All this sweetness and light made the girl-students "wild to get out," as they would express it, but they had, perforce, to content themselves with glances into the open from behind book-covers.

From a recitation-room beyond came the monotonous sound of a voice explaining a problem in algebra, while from an apartment more distant still were heard the notes of a badly executed scale.

Here in Miss Lorimer's room all was comparatively still. The girls were supposed to be studying.

Suddenly the door opened and a strong draught of mild air sprung toward it from the windows, setting the loose rings of hair on the temples of the new-comer to flying as she stood for a second upon the doorsill before entering the room.

She seemed loath to close herself in again, by the shutting of that door, to the weary round of study that for a little while she had escaped.

At her appearance Miss Lorimer raised her eyes from the pages of a composition she was correcting, and looked at the girl.

"You have been gone a long time, Dorothy," she said, in a low tone of disapprobation. "When you asked for permission to leave the room I did not suppose you intended to remain away throughout the morning session. You will scarcely have time to study your Roman History lesson now before the noon intermission, but I shall take no excuse if you are not prepared."

Dorothy made no response, and threaded her way slowly along the aisles to her desk. There she began a determined attack upon the imprisoned Caius Marius, whose immediate doings formed the subject of the afternoon's lesson.

The lilacs wafted their scent to the winds; the bees hummed on, and the sun climbed slowly upward toward the zenith. Having gained this position, it gave direct vertical evidence thereof to the world at large and to the seminary in particular; whereupon Dennis the janitor sounded the gong, and the classes dispersed for recess.

As soon as Miss Lorimer had left the room the girls all crowded about Dorothy with anxious inquiries and excited demands.

"Did you really do it?"

"And got them through?"

"How dared you?"

"Were you scared?"

"Of course I did it. Do you think I'd back out at the last minute too? I got them safe through, though it was a squeeze, I tell you; and I almost got stuck myself."

"Why *did* you do it?"

"Why do people insist on putting a fascinating window just at the right height in the cloak-room, exactly where one can easily climb up and see into the hall? But why do they then insist on making it so small that it pinches one all over, black and blue, when she crawls through to skip out by the big front door and smuggle in cakes and pie?"

"Was the apple-woman there?"

"Yes! Do you know, girls, that woman is a seraph! She was just where I told her to be, and everything went on like clock-work. Wait till to-night, and we'll have a *time!* Four enormous pies—a little crushed from being bundled up together, but that's no matter—and a lot of cakes; spice and otherwise, as Miss Lorimer would say."

The girls received Dorothy's announcement of the delights to come with little sighs of appreciation, so expressive that one who was not acquainted with the bounteousness of the seminary table might have imagined that the institution starved its pupils.

As a matter of fact, the girls' sole motive was a mistaken notion of "fun," and the fascination of bringing in something from the outside world. Of course the doer of the doughty deed must be Dorothy. Whenever there was any mischief afloat it was always directly traceable to Dorothy.

It was a good trait in this girl that if she did mischief she never tried to shift the responsibility upon another. She took the blame of failure just as she enjoyed the triumph of success.

Dorothy's Letter from her Mother.

Miss Lorimer thought she ought by this time to show a more dignified disposition. She was fifteen now, and ought to begin to act like a lady. But, alas! Dorothy showed no tendency toward increasing seriousness.

Miss Lorimer often thought that she would write to Mrs. Day and ask her to remonstrate with her little daughter. But she refrained because none of Dorothy's fun was malicious, and because Mrs. Day was travelling abroad, and she thought it was not best to cause her distress while Dorothy did not transgress too far.

"You see," Miss Lorimer explained to Miss Duprée, the principal, "things always look so different on paper—so uncompromising and downright. Mrs. Day might imagine the child was doing some real evil, whereas she is only romping and full of mischief. If she had a father perhaps he could govern her; but the little tomboy is too much for her mother, I fancy."

Miss Lorimer shook her head regretfully as she turned down the corridor leading to her own room to read, undisturbed, some letters that had just come.

She had scarcely finished the first brief note when she heard a knock upon her door, and was informed that Miss Duprée would be obliged if Miss Lorimer could spare her a few moments, as she had just received a piece of news which she wished to communicate to her.

Miss Lorimer hastened to the principal's room, and was greeted by an amused laugh and a gesture of welcome.

"Do sit down and listen to this," said Miss Duprée. "A few moments ago you were lamenting Dorothy Day's fatherless condition. I have just received a letter from Mrs. Day announcing her marriage, and begging me to break the news to Dorothy, after which I may give her this little note that was enclosed in mine."

"What will the child do?"

"What shall I do? *I* can't talk to her; I see so little of her that I should not know how to handle her in this affair. You would be much better able to judge how she will accept it. Suppose you explain it to her. How do you think she will take it?"

"I think she will resent it bitterly. I am sorry. I wish it need not have been, and especially that I were not to be the one to tell her. She adores her mother and, I think, is very jealous of her love. Does Mrs. Day give any particulars, or tell you what are her plans?"

"No; nothing further than that she intends to return to America in June—just about Commencement time—and I suppose Dorothy will then be taken home and permitted to see how she likes her new father."

"She is high-spirited," said Miss Lorimer. "You have no occasion to envy me my task."

With the two letters from abroad in her hand, she passed out of the door. As she neared her own recitation-room she heard from within the sounds of light laughter and gay voices.

"Do it again, Dorothy. You do it beautifully."

"Go on! Hurry! If you don't the bell will ring."

"Once more, Dorothy. Be obliging, do."

Through the crack of the door Miss Lorimer witnessed a strange sight. Dorothy Day was dancing a spirited "clog" upon the top of her desk; her daintily-shod feet tapping the wood with so decided and yet so delicate a fall that while the sound was perfectly distinct, the polished surface of the cover was not marred.

As she danced, Dorothy snapped her fingers over her head instead of castanets, to keep time.

Miss Lorimer waited a moment, but only a moment, and then pushed open the door and stood upon the sill.

"Dorothy!"

The girls all turned away, and Dorothy stood upon her elevation alone, the color deserting her cheeks and the flashing light fading from her eyes, abashed.

"Dorothy," said the teacher, quietly, "will you be good enough to come to my room at once?"

She turned her back and was gone.

"Phew!" exclaimed one. "Now you're in for it!"

Dorothy, springing lightly from her pedestal, followed Miss Lorimer, and in a moment was standing before her, awaiting her doom.

But all Miss Lorimer said was: "Will you please close the door, Dorothy? I have something to tell you."

She made known to her, as gently as she could, the contents of her mother's letter.

Dorothy grew very white, even to the lips, and her chin trembled. Miss Lorimer made a pretense of seeing nothing but the letter she held in her hand, at which she looked with downcast eyes.

For a moment there was no sound in the little room but the ticking of the clock upon the mantle-shelf. Then Dorothy sprang suddenly to her feet, and in a choked voice, husky and trembling with indignation, cried:

"And she did it without telling me! I never knew—all this—time! Oh, it was—*mean*, it was—"

She gave a pitiful little gasp and then began to cry.

"Please let me go to my own room, Miss Lorimer;" she begged. "I can't go to recitation again—to-day. I don't care, I—want to—be alone."

Miss Lorimer rose and put both her arms about the girl's swaying figure.

"You shall be alone, dear," she said. "But before you go, I want to give you a letter your mother enclosed in this to Miss Duprée. It may contain some comforting words. And believe, my dear, there is nothing to grieve about. Your mother's love for her husband does not deprive you of one jot of her affection for you; and if she is happy—"

She paused and stroked the bent head tenderly with her hand.

The clang of a gong sounded through the building. Miss Lorimer thrust the envelope into Dorothy's hand, and pressing her lips to her forehead, whispered:

"Here is your letter, dear. Read it and try to be happy. Don't judge your mother—that is, don't misjudge her. Stay here if you like, and as soon as I can I will come to you. It will not be long."

When she was gone Dorothy dried her eyes with little savage thrusts of her handkerchief, and then tore open her letter and read.

There were some kind and tender passages in which her mother announced her marriage to Colonel Everest, and then this, which caused Dorothy's eyes to snap, and at last her hand to fling the letter across the room:

"He is *so* good and more than kind, and we are a very fortunate mamma and daughter, Dorothy, to have such a faithful friend to care for us always.

"And now for a piece of news that I did not write to Miss Duprée: Colonel Everest has a little daughter just about your age—a year older, perhaps—and just fancy! this poor child has never known a mother, for hers died when Helen

Edward D Dunfield Jan92

Digitized by Google

was born; and ever since her babyhood she has been separated from her father.

"So now she is so happy that she clings about my neck, kissing me and patting my cheek and calling me mamma, and now and then really crying at the thought of never being lonely any more.

"She follows her father and me about with her great wistful eyes that look as if they had grown big through longing for something to love, until I feel the tears come gushing up into my own at the remembrance of my Dorothy's 'bonny blue een,' and the thought of how different and how much happier and more fortunate has been her life.

"Helen has looked at your picture until she knows your face by heart, and is so anxious to see you that every day she says, 'Now it is nearer the time when we shall go to Dorothy.' What good mates you two little sisters will be!

"Be good and true and faithful and just, always, and remember that nothing can alter the devoted love of your affectionate mamma."

So it was even worse than she had expected! Not alone had this strange man come and stolen her mother from her, but he had thrust his daughter between them, too. It was cruel! cruel! Another girl clinging to her mother's neck, and calling ner mother, and taking her place in that mother's heart, while she, Dorothy, was alone among strangers!

Why did her mother say she loved her when she was willing to bring strange people between them—strange people whom Dorothy had never seen nor heard of before, and who were now at this moment taking the place that by right belonged to her?

Dorothy put her heel on the letter that had made her heart ache, and ground it down upon the floor.

She felt a fierce hatred toward these people, and a feeling of bitter resentment against the mother who, as she thought of it, could let herself be cajoled into deserting her own child in order to take into her heart a strange man and his strange daughter.

What could she do? If she were grown up, she would go away and earn her own living, somewhere in India, perhaps, as a missionary; and then her mother could have this Helen all to herself, and she would be out of the way. No doubt that would please these strange people immensely.

The poor child lashed herself with her own imaginings until she was choked and blinded with grief. Somewhere in her side she felt a dull ache. That was her heart.

Well, perhaps she would get heart disease! She fancied herself dead of a broken heart, and her mother hurrying across the ocean to look upon her for the last time. Then she would be sorry she ever married a strange man and his little girl, and wish she had never made her own child so unhappy!

She was so thoroughly miserable that she did not notice how the hours sped, and was surprised, in a dull, listless fashion when Miss Lorimer returned and found her still crying. She was proud enough to wish to hide her grief from an outsider, and loyal enough to desire to shield her mother from the censure of others.

So she made a great effort to control herself and appear composed, while her swollen eyes and the grievous droop of her mouth made her endeavor quite touching.

Miss Lorimer went to the child, and gently lifting her from the chair in which she sat, drew her upon her lap, waiting patiently for her to check the heavy sobs.

At last, when Dorothy's breathing had become more regular, Miss Lorimer began to talk to her in tones which soothed her into a condition of comparative quiet.

It did not surprise her—the child was too much worn out to feel much emotion of any sort just now—to find that Miss Lorimer took quite a different view of the case from that which she herself held.

Her teacher told her it was only natural and right that her mother should marry again, and that if Colonel Everest was a good man, as she was sure he was, it would prove a great blessing, instead of a misfortune, to his young step-daughter.

She said many things that Dorothy seemed to hear and still not appreciate at all, they were so foreign to her own way of thinking; but Dorothy said nothing in contradiction, and Miss Lorimer felt she had convinced her of the reasonableness of her view.

But when Dorothy had slept away the first weariness of her sorrowing, and could think of it all less drowsily, the old feelings of hatred and indignation sprang up in her breast again, and made her harden her heart against every softer sentiment.

She became pale and sallow, and all the old brightness was gone from her eyes. The lines about her mouth grew severe and set, and her laugh was not always good to hear.

Miss Duprée said openly that it must be a very wilful, unlovely spirit that would entertain an unworthy feeling of resentment so long. But Dorothy did not quite understand. She thought she had been injured, and was quite justified in feeling a righteous anger.

But, since she presently discovered that her resentment was making her very sour and not at all pretty to look at, she resolved to enjoy herself as much as possible, and try to forget that it was necessary to be wretched all the time.

JULIE M. LIPPMANN.

(To be continued.)

SULTRY STILLNESS.

The busy noise of man and brute
Is on a sudden lost and mute;
Even the brook that leaps along
Seems weary of its bubbling song,
And, so soft its waters creep,
Tired silence sinks in sounder sleep.
—*John Clare.*

For the Companion.

ONE OF THE "MAGNET" STAFF.

"Send Mr. Harding in."

The managing editor irritably dropped the speaking-tube, and exclaimed, half to himself, "Why in the world couldn't those bothersome Cresson operatives have taken some other time to air their grievances?"

The managing editor did not mean to be unreasonable, but he did wish that the employees of the great Cresson cotton-mills had not chosen for their strike a time when every news field was overcrowding the paper, and when an unusually active political campaign was beginning.

Millions of dollars were invested in the Cresson manufactories, and the mills had been compelled to shut down in a day. Hard as the situation was for the mill-owners, the managing editor felt that it was harder still for the newspaper to be compelled to send away one of its best men just at this time.

He drew his hand wearily across his forehead with the gesture of a man whose brain is overworked.

At this moment an alert and very young man, scarcely more than a boy, clear-eyed and frank in appearance, looked in at the door.

"Come in, Mr. Harding. I shall have to send you away on special work. Those everlasting spinners and weavers at Cresson have struck. I want you to reach the ground by the first train to-morrow morning. You know, upon such a matter, it won't do for the *Magnet* to be beaten, and I needn't tell you that the *Magnet* wants the whole truth about it. That's one reason why I send you."

"Thank you, sir. I shall be glad to go."

"I'll put some one else on that matter of Colonel Benson's candidacy in the tenth district. And, Harding —"

"Yes?"

"Return to-morrow night if you can. If you cannot, stay over; but see it through if it takes a month."

Harding was full of enthusiasm in his work. He exulted boyishly in the important assignment thus committed to him, for he knew that a good performance of such a duty would contribute to his advancement.

When the *Daily Magnet's* special correspondent alighted from the morning express in the city of Cresson the looms and spindles were idle; the mill yards were deserted save by the policemen detailed to guard the property there; agents and other officials were in close consultation in the offices and counting-rooms; angry and discontented operatives were gathered around the street corners.

All that day Harding went from place to place, winning the confidence of the mill managers by his frank and gentlemanly bearing, and that of the leaders of the strike by his evident fairness and desire to get at the exact truth.

He found that he could return on the evening express; and when he took the train at a quarter past seven, his report of the matter was already nearly completed.

Under the dim car-lights he scribbled on industriously, sure of a triumph. The other newspapers, he had found, were depending upon inefficient local correspondents for their accounts of the matter.

The train rushed through the gathering darkness. The sparks swept back from the throbbing engine in golden showers, like the tail of a comet, and the cinders rattled noisily against the windows. Harding worked on, concentrating all his energy upon the making of a graphic account of the strike.

The lights of the town of Benton were shining, only two or three miles distant, along a straight, level stretch of track just in advance, when the whistle sounded a wild, shrill note of alarm. Then came a shock, a crash, the splitting and shattering of timbers, the snapping of iron and steel, and above all other sounds the cries of human agony.

The express train with its burden of people, crushed, mangled, imprisoned, dead or dying, lay piled upon the track, a ghastly wreck in the summer night.

It was the old story. Some one had blundered, and the fruits of the blunder were reaped in human lives. The train had been carried by an improperly set switch upon a side track, and the express had been heaped, in fragments, upon a row of laden flat cars.

Tom Harding was stunned by a broken timber, but only for a moment. He roused himself with a half-dazed consciousness of disaster that left no room for an immediate sense of pain. He thought of his mother—then of his newspaper.

This thought roused him to a consciousness that he had work to do; and in the sudden awakening to the realities of the situation he became aware that his legs were so pinioned that he could not move, and that pains were darting through his body—unaccountable pains growing constantly more intense.

He moved slightly, and would have cried out, but that the piercing screams about him kept him still from very shame. His nervous grasp tightened on the note-book and pencil which he still held in his hand.

Men approached with lanterns. He called to them, and they came and relieved the pressure about his legs, waiting for him to climb out of the wreck.

"I don't know what's the matter," he said, painfully, "but I'm hurt somewhere. I can't move alone. Will you help me?"

He was raised and laid at one side upon the ground wet with dew. A flask was held to his lips, and a swallow from it revived his strength.

"Where are we?" he said. "Is there a telegraph office near?"

One of the men, who had remained for a minute beside him to see what care he might need, answered, "This is Benton near by."

"I must get a dispatch to the operator—quick. It is of the greatest importance."

"I'd make it short. He'll be busy enough to-night. Here!" the man called to a boy from a neighboring farm-house. "My boy, you can make yourself useful. Here's a man who's been hurt, and wants to send a telegram. There'll be other errands you can do in town. The men are all needed here."

The boy, his face white and his eyes big with horror at the scenes around him, came and stood by Tom, who had written the direction with difficulty, and was tearing the leaves from his note-book. Handing them to the boy he said:

"Tell the operator to send all he can of this before half-past two o'clock sure." Then he added, "Wait," and wrote hurriedly:

"The south-bound express leaving Cresson at a quarter-past seven struck a freight train just north of Benton this evening at nine o'clock, and was completely wrecked."

A physician approached and stopped to look at Harding.

"Are you badly hurt?" he asked.

"I don't seem to be hurt externally," said Harding, "but sharp pains keep shooting through my body, and I can't move."

The physician, grave and compassionate, knelt, and with quick, skilful touch examined the young man. He asked a few questions, and shook his head sadly. The eager, brave young face, drawn with pain, interested and touched him.

Meanwhile Tom had made a few rapid inquiries of the doctor about the disaster, jotting them down to fill in his dispatch. He then said, quietly:

"How is it with me, doctor?"

"Can you bear the truth?" asked the physician.

"Do you mean that I am going? Yes, I can bear it. How soon?"

"Very soon, I fear."

"Doctor, my name is Harding—Thomas Harding. I am a reporter for the *Daily Magnet*. I was on my way to the city with an account of the labor troubles at Cresson. It must be in the *Magnet* office before half-past two. Here I have scribbled a story of this accident. You've given me nearly everything but the names of the killed and wounded—I can't get those. Doctor, will you see that my paper has those names? Can I trouble you so much? I can't fail my paper now."

Doctor May knew that he had a night of anxious work before him, but he could not refuse the pleading look in the boy's white face. The request, conveyed in those words, wrung out of suffering, appearing so singular and extraordinary and spoken rapidly, as by one whose life was short and whose work was very important, moved him greatly.

"Yes," said the physician, "I will see that it is done."

"Oh, thank you, doctor!" Harding's voice had almost a ring of triumph in it. "Your name is —"

"May."

Tom added a few lines to his dispatch.

"Can't get list killed and wounded. Doctor May will send it. This is my last dispatch. Tell mother. Good-by.—HARDING."

As the boy took the finished dispatch, Harding said:

"Tell the operator I have left money with Doctor May to pay for rushing this through. The *Magnet* will give anything for these stories."

The doctor added a word to the boy, and hurried him off through the darkness.

"Doctor, you will find in my pocket-book money enough to meet all expenses. Take it and pay what should be paid. Never mind about me. Others need you more. I couldn't do anything else just now—I might as well do the best—I could—for my paper."

Harding's voice had sunk almost to a whisper, and he caught his breath painfully. Then his breath faltered, and died away altogether.

The work of caring for the wounded and dying went on around Tom's body, now left alone.

It was two o'clock in the morning in the office of the *Magnet*. The roll of the ponderous trucks overhead told that the first forms were being rushed down to the stereotyping room.

The telegraph operator waited at his key. The telegraph editor laid aside the last tiresome sheet of type-written tissue paper, and looking through the window between his own and the telegraph room, asked if nothing had been heard from Cresson—a question he had asked several times in the last hour.

The managing editor came in with a worried look on his face.

"Nothing from Cresson?" he said. "What can be the matter with Harding? If he were not coming back to-night he would have wired long ago; and if he were coming, he would have been here before now."

Just then the night city editor brought word that the "night local man" on his round had learned at the Brainard & Cresson station of a bad accident to the express due just before midnight.

"Send down at once for particulars," said the managing editor.

"I have sent," replied the night city editor.

"Hold the wire open till the last minute," was the managing editor's next order. "Harding will be heard from yet."

Just then came the office call on the telegraph instrument. The operator answered, and began to write. The managing editor leaned eagerly over his shoulder.

Dated at Benton? What did it mean? It appeared to be Harding's account of the Cresson strike.

Page after page came rapidly from under the operator's hand. The story was vivid, graphic and complete.

The three editors read it rapidly, sending it sheet by sheet to the composing room. At last the signature was reached.

"It will be a beat!" exclaimed the managing editor.

"Probably Tom was stopped by the accident, and had to send his story from Benton," suggested the city editor.

But the click of the instrument had begun again.

"BENTON, July 14.—The southward bound express, leaving Cresson at a quarter-past seven, struck a freight train just north of Benton and was completely wrecked this evening at nine o'clock."

Then followed the brief but vivid story of the accident, read eagerly and anxiously by the strong men who stood about the operator.

"Another beat!" exclaimed the telegraph editor—and then stopped, for the last page was reached.

The operator had grown white, and his hand twitched nervously as he laid down his pen and touched the key. The managing editor was the first to read the sheet, with the ink still wet on its brave words.

"Can't get list killed and wounded. Doctor May will send it. This is my last dispatch. Tell mother. Good-by.—HARDING."

The managing editor dropped the sheet and turned away.

The *Magnet* that morning contained two special dispatches which attracted extraordinary attention. Contrary to the usual custom of the paper, both of these bore signatures, and in each case the name signed was that of Thomas Harding.

Above the telegram telling the story of the disaster, first in the death-roll that was anxiously scanned by so many eyes, stood the name of Thomas Harding, reporter.

That was all; but the world soon learned the story.

BLUE SKY.

Every one admires and talks of the blue of the sky, but how many have observed not only that the sky is sometimes of a deeper or richer blue than at other times, but that its changes of tint occur in a more or less regular way?

Such is the conclusion of M. Crova, who has reported to the Paris Academy of Sciences the result of his systematic observations of sky color from December, 1889, to December, 1890.

He finds that the sky is most intensely blue in December, January, March and September, and paler in July, August and November. Observing the changes from hour to hour, he found that it was more deeply blue in the morning than during the heat of midday. This indicates that, since the deepest color is seen, generally speaking, in the coldest months and during the cooler part of the day, heat is an important element in determining the depth of the sky color.

This recalls one of the most brilliant of the many experiments with which Professor Tyndall used to illustrate his lectures. By projecting a beam of electric light into a cloud of invisible particles of vapor in a glass vessel he was able to imitate the finest azure tints of an Italian sky.

The point of the experiment was to show that the sky tint is caused by the reflection of the blue waves of light from minute particles floating high in the air. The waves of blue light are shorter than those of yellow or red, and consequently are more easily arrested and reflected back.

When the sun is blazing hot high in the heavens it dissolves the fine particles of vapor to a great extent, and leaves fewer of them to split up the

Digitized by Google

scattered daylight and send its blue beams back to the observer's eyes.

It will be easy and interesting for any person to observe for himself the variations in the color of the sky. Perhaps new facts may thus be discovered that men of science will be glad to learn.

VACATION LAND.

An island, friends; a cool green land,
Neither with bustle nor heat of the town:
In misty air the great trees stand,
Shading the grasses that wave on the strand,
Laughing with dew-drops golden and brown.

NEPIGON.

In Six Chapters.—Chapter I.

The Story of Septem.

"What if we try for it?"

"Nonsense! What chance should we have? It's too large a prize. Old and experienced writers will compete for those prizes—and get them."

"You can't be perfectly sure of that. We might possibly capture one, the smallest one, perhaps. I should be only too happy to get that. Two hundred and fifty dollars don't grow on every bush."

"But I shouldn't know what to write about."

"Well, I don't know that I should. Yet I think one might hit on something that would bear telling, and prove interesting, too."

"I don't believe there's one of us who could write a story that anybody would read five lines of! It's easy to read stories, but when you come to writing one, yourself, it's a different matter."

"Why make up a story?" said Alton. "There's that account given us by the old farmer, Mr. Silver, who lives there at the foot of the mountain, of the boy who was clearing land in the valley, a good many years ago.

"You know he said that this young man—Sim Andrews, I believe his name was—had set fires to burn off the brush and logs, and was attending to the fires and felling more trees on another lot near by. His way was to cut into a good many trees on one side only, and then to cut one down so that it fell against the next one in the line. That carried them all down in one rick, at once.

"But one afternoon the trees fell another way from the one he had planned, and one fell upon him, broke his leg, and pinned him down; and the fire spread through the woods and kept coming nearer and nearer to him.

"You remember that Mr. Silver told how he struggled to get free, but could not move; and how he shouted and prayed for help, for all the time the fire was nearing him. The smoke was rolling over him; he heard the fire crackling close by, and felt the heat.

"He had given up all hope of help, and lay back in great pain, exhausted and wondering how long it would take to burn to death, when he heard a girl's voice calling him.

"It was his cousin, Amanda Robbins, coming out to ask him to go to a corn-husking at her father's that night. He shouted to her. She came, got a strong pole, set a stone for a fulcrum, used the pole as a lever, and throwing her weight upon the end of it, raised the tree-trunk a little, so that Sim crept out.

"All the while Amanda was fixing the lever the fire was so near that both were scorched by the heat, and almost smothered by the smoke.

"Why wouldn't that make as good a story as any? It is true, too."

"Why, yes," said Dick; "and Alton ought to write it; he remembers it so well."

"Oh, I remember it all right," said Alton, "but getting it into a written story would be quite another thing."

"I could make a photograph of the rescue!" Lucia exclaimed. "We could go out in the woods, and the boys could fell a tree and let Alton crawl under it, in dishevelled garments. Then we could kindle a fire in a way to make a great deal of smoke. Thea could play the part of the rescuing Amanda, with her long lever, and I could take the picture."

"That's a brilliant idea!" cried Dick. "We'll do it to-morrow."

A Combination Story.

This conversation, in our old academy schoolroom at Rustfield, comes back to me very vividly as I write this. It was late one Friday afternoon of the fall term. All save one of our advanced class of five in English analysis sat waiting for "Professor William," as we familiarly spoke of our preceptor, who was delayed a little beyond the usual recitation hour by a Latin class in another room.

Lee Millett, our "odd little man," was absent that day, on account of one of his peculiar hereditary headaches, but there were Althea Harmon, the merry Lucia Graves, Alton Freeman and Richard Morrill. That was the order in which they sat on the form, from right to left in the room.

Professor William came in just as Dick was making that last observation, and with him "Teacher Sarah," as we commonly speak of his sister, who is associated with him in charge of the academy; and who, when she has finished with the classes in her room, often comes in to take a share in the English analysis recitation.

Professor William took his place at his table, and asked us to excuse him for being late.

"Oh, we don't mind, if you don't!" replied Thea, laughing. "Besides, we have been pleasantly employed, discussing a plan to write prize stories. We have taken a prize in anticipation—one of the prizes offered by a young people's paper for the best short story, the circular of which you showed us yesterday."

The teacher smiled. "You were content with nothing short of the first prize, I suppose?" he said.

"Oh, we have been very modest," Lucia answered. "We don't expect anything more than the lowest prize, but we want that very much."

"Well, that is good," remarked the preceptor.

"Would you correct the stories for us," asked Thea, "as you do our compositions?"

"And would each count as one composition?" added Lucia, warily.

"Yes, to both questions," said the preceptor, laughing.

"Perhaps you would kindly help us a little," Alton suggested.

"I'm not a story-writer," replied Professor William. "I fear my assistance would be hazardous to you; not that I should grudge it, however."

"I wonder how that would be," said Dick; "can two or three persons work on the same story, under the terms of the offer?"

"I should suppose so," said Professor William. "As the offer reads, I should say that it made no difference who writes the story, or how many write, provided it is original, and otherwise fulfils the requirements. But have you chosen the subject of your story?"

"Not fully," replied Dick; "but Alton has suggested the story which old Mr. Silver told us, the day we called at his house on our trip after minerals for our school cabinet. It is the incident, you know, of the young man upon whom a tree fell."

"That's a good subject," remarked Teacher Sarah; "you could hardly find a better one."

"But now the question arises, Who shall write the story?" said Lucia.

Teacher Sarah's Plan.

"I would suggest that each take the subject separately, and write the best story from it that you can," Teacher Sarah observed. "Let each of you make the most thrilling and interesting account of that poor fellow's adventure which you can compose. In fancy, put yourselves in his place, lying there in pain, with the fire creeping nearer, and write as exactly as you can what your own feelings would have been. You have two or three months yet in which to do it. When you have finished, we will meet some Saturday and read the five stories, and we ought to be able to get one out of the five that will read well."

"You mean to take the best from each, and thus make up one story?" said Professor William.

"Yes, it seems to me that might be done. My brother and I will choose, according to our best judgment, the parts in which each has excelled the others. In that way there can be no conflict of personal feeling on the subject. I think this plan may work exceedingly well."

"True, that might be worth trying," replied Professor William, thoughtfully. "Possibly the combined brilliance of the class in English analysis may be brought to a focus upon one subject. It may be worth trying. And now I think that we will get to work upon our exercises."

It was from this conversation that our attempt at prize-story writing dated. I do not think that, at the outset, Professor William had much faith in the result of our effort. Teacher Sarah believed in it, however, and encouraged us to persevere by frequent inquiries and suggestions.

Each began to write cautiously and in secret, at first; for if the task should prove too great, each seemed to think it well to leave a line of retreat open.

Comparing Notes.

Early in March the stories were finished, and we met in the schoolroom to compare them. No one wished to read his or her own story aloud; so Teacher Sarah read them all, one after another, beginning with Dick's.

After she had read them all she told us what she thought of them.

"I like them all," she said. "They surpass my expectations. Don't you think they are pretty good, William?" she added, turning to her brother.

"I do," he replied. "There are crudities in them, and some commonplace expressions, but there is also originality, true feeling and some very good description. There is merit in each and all of them. Really, I am proud of you!"

He rose suddenly and walked to the lower side of the room, as is his custom when he becomes a little excited. When we saw him make that little excursion, we knew that he really liked the stories and hoped that they would amount to something.

The two teachers took the stories home, and we saw no more of them until about the first of April, when they invited us to call and see the result of their labor in combining and "editing" them. They had expended a great deal of work upon the task, but it was a labor of love and good-will.

When the reading was finished each drew a long breath, and we accepted it without complaint, as a joint production. It was certainly much superior to any one of the five from which it had been compiled. Good judgment had been used in selecting the best parts from each of the five and blending these harmoniously together, for certain nice alterations had to be made to accomplish the blending process.

Next day the consolidated story was sent by mail, and its receipt at the office of the periodical offering the prizes was acknowledged. Then weeks grew into months, and nothing more was heard from it. We learned indirectly that several thousand stories had been contributed in competition for the prizes, and that the committee and judges had been reading and marking for ten weeks. Plainly there was nothing for us but to possess our souls in patience.

The story had been sent in Richard Morrill's name; but as a *pseudonym* was required to be sent, in addition to the writer's true name enclosed in a sealed envelope, we signed it "Septem," since seven persons had labored upon it.

The autumn term at the academy opened. Our class began to read Virgil, and we had algebra and history. For a recreation study we took geology and mineralogy twice a week, and generally made an excursion on Saturday, when the weather was good, to collect minerals. Professor William is very fond of such jaunts, and it was a pleasure to go with him to the mountains, hills and ledges about the village.

Mineralogy taken up in that way is the most delightful study one can imagine.

Meantime, the four silent partners in our literary enterprise frequently asked Dick if he had heard from "Sim," as we nicknamed our story. He grew tired of saying no, and requested us, as a great favor, not to ask again.

"I will let you know when I hear," he said.

Not "declined with thanks."

We had Virgil at two o'clock in the afternoon; and one day, just as we had finished a recitation from it and were about leaving the room, Dick said carelessly, as he was marking the number of lines which we were to take next time:

"I Heard from 'Sim' this Morning."

"You did!" we all exclaimed.

"Yes," replied Dick, carelessly.

"Sent back, I suppose," said Thea.

"'Unavailable'—with thanks," said Lucia.

"Well, no," he continued, turning the leaves of his Latin grammar, "not exactly that; but it didn't take the first prize."

"The first prize!" we all exclaimed. "Did it take *any* prize?"

"Why, yes," drawled Dick, looking up and laughing, "it took the lowest prize—two hundred and fifty dollars. They sent a cheque."

Then a shout went up; and Professor William was at once on his feet behind his table. He slapped his hand down on the Latin lexicon, and shouted, "Good enough! Hurrah!" in such a tone as we had never heard from him but once before, and that was when the academy caught fire in the basement. We danced and skipped about, and then ran down stairs pellmell, to carry the good news to Teacher Sarah.

It was evident that the prize should be common property among the seven who had contributed to the preparation of the story; for although Teacher Sarah and Professor William disclaimed any share in the profits, we knew that but for their kind offices there would have been no prize for any one.

We settled that point to begin with. The question then arose, What disposition should we make of the money? We held many friendly discussions as to the way to obtain from it the most pleasure and profit for all.

Lucia suggested that we wait till the summer vacation, and make a tour to Quebec, Niagara Falls, Saratoga and Lake George. Dick proposed putting more money with it and making a tour to the Yellowstone Park; but we found that this trip would require a great deal of additional money. Alton talked of a winter tour to Florida; but the same objection was made against this plan.

For a long time Professor William offered no suggestion. But one evening when the matter had again been mentioned, he remarked that there was one place to which he had long desired to go, camping, fishing and collecting minerals; and that was to Nepigon, and the north shore of Lake Superior.

"I should like to go to the amethyst ledges in Thunder Bay and all along the north shore," he said. "There is almost every kind of mineral about those shores, from iron to gold; and some of the amethyst specimens, I am told, are exquisite. By adding about fifty dollars apiece to our prize money, we could—now that the new Canadian Pacific Railway is completed—make the trip. But I would not urge my preference against the wish of the majority," he added.

This plan pleased every one in the class, from the outset; and the more we talked it over the better we liked it. It appeared in every sense an appropriate tour,—one from which we should get profit as well as pleasure.

Our parents, too, we were sure, would be at ease, since Professor William and Teacher Sarah were to go in charge of the party. So we decided to take the trip to Nepigon and the north shore during the following August; and during the remainder of the school year we spent many pleasant hours in anticipating and planning it.

Alton and Dick were especially delighted with the prospect of ascending the Nepigon—the most famous trout river in America.

Gradually a very good outfit was collected, consisting of two tents, waterproof covers, rubber blankets, rubber boots, rubber coats, and so on. Dick and Alton already owned guns, fishing rods and reels. Lee received a present of a fine rod from a relative; and even Thea and Lucia were able to secure each a rod and reel for the trip.

Lucia invested in a new and easily portable camera, of the snap-shot kind, intending to photograph scenes of interest.

C. A. STEPHENS.

(To be continued.)

For the Companion.

HOW ICEBERGS ARE FORMED.

Some three hundred years ago, when icebergs first became known in the more civilized parts of the world, through the return of navigators from their first visits to the cold regions where they are produced, philosophers began to speculate as to how such immense pieces of ice could have been made. They were immense pieces indeed, as the philosophers heard of them, for the superstitious and exaggerating sailors of those days did not hesitate to set any height upon them that they pleased.

Icebergs were said to be a mile or two in height; whereas, the top of the tallest iceberg that has ever been measured was but a little more than three hundred feet above the ocean level. It is safe to say that none more than five hundred feet tall has ever existed within the time when icebergs have been known.

The only way in which the philosophers could account for the mountains of ice floating in the deep oceans, was this: In the cold countries where they were formed, the philosophers reasoned, the temperature was below the freezing point during the greater part of the year. If a piece of ice were formed in the ocean in still, cold weather, the waves, dashing on it and freezing, and the mist and fog hanging over it, would gradually increase it in size. Thus in course of many, many years it would be built up into a great hill of ice, such as the navigators of the North had seen on their wondrous travels.

Of course such an ice-mountain might melt a little in the short summers of the Arctic, but as long as the crust which formed in winter and the cold nights of spring and autumn exceeded that which melted in the not very warm summer, the iceberg, of course, must grow; and it was a mere matter of time when it should become a mountain, even of the size the ancient sailors had reported.

This simple hypothesis received the high-sounding name of the "accretion theory of icebergs."

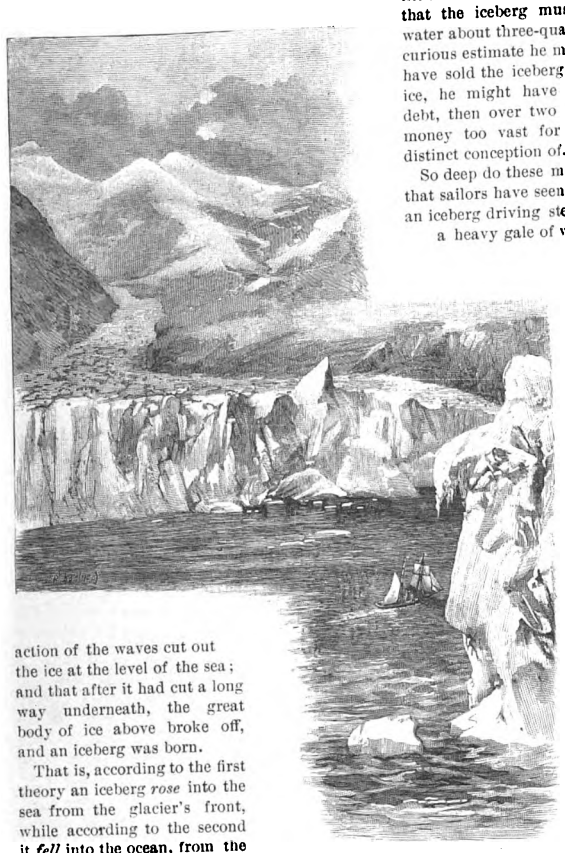
Afterward, some of the philosophers—for everybody must be considered a philosopher who inquires into the facts and reasons of things in nature which they do not understand—went into the Arctic regions to see for themselves about the many little understood things in that lone land.

Of course, if the ice of the "berg" had been formed by the salt water of the ocean dashing over it and then freezing, this ice must be salty to the taste, like the water from which it was made. So the first surprise of the philosophers came when they put some of this ice in their mouths, and found that it was fresh, and also when they found that the water from it was as clear and sweet as any from their purest springs at home.

They saw the great icebergs roll over, as one side melted more than any other, and they became unstable in the water. Then the wise men reasoned that they had tasted that part formed at the top by the fogs and mists. This would be fresh, while that below the water's level must be salt.

But as the great ice-mountains toppled over and over, and in turn presented every side, the ice was tasted and found to be fresh. Then the philosophers became more puzzled than ever.

At last they followed the icebergs until they became thicker and thicker. This led them to the land of the desolate Arctic coasts. Here they found great rivers of ice—*glaciers*, as they called them at home.



These rivers of ice not only came down to the level of the ocean, but projected into its waters great distances; and huge hills of ice, snapping off occasionally from this front, floated away into the deep ocean as icebergs.

Here, then, the mystery was explained: Icebergs were formed from the front of glaciers projecting into the sea. It was now easy to understand how they were formed from fresh water. Since the glaciers came from the land, they could not contain salt. Now that the close relations between the great mountains of ice,—the icebergs, and the great rivers of ice,—the glaciers, had been determined, the students of nature began to investigate the formation of icebergs from the front of glaciers; and now another serious dispute occurred among them. Some contended that inasmuch as the huge glacier projected far into the sea, and its fresh-water ice was lighter than the dense salt water of the ocean, the end of the glacier must

Digitized by Google

become buoyant, or try to rise, as would a cork or piece of wood which is lighter than the water. When it got so far into the water, they reasoned, that this tendency to rise to the top became too great for the brittle ice near the shore to resist, it must snap off, and float away as an iceberg.

Others insisted that the warm water and the

action of the waves cut out the ice at the level of the sea; and that after it had cut a long way underneath, the great body of ice above broke off, and an iceberg was born.

That is, according to the first theory an iceberg *rose* into the sea from the glacier's front, while according to the second it *fell* into the ocean, from the end of the river of ice. Or, to use an expression that has been employed, there were icebergs by buoyancy, in the first case, and icebergs by gravity in the latter.

As in the case of a great many disputes in this world, both parties were right. Wherever a warm ocean current flowed into the Arctic from lower latitudes, where it had been heated under a tropical sun, and then poured against the front of a glacier it cut out the ice very rapidly at the water's edge; and all the time great pieces of ice, like mountains, were falling into the sea and floating away. Wherever the currents of the sea into which the glacier protruded came from the north, and were thoroughly chilled by contact with ice fields, they could not make a sufficient impression on the front of the glacier to melt it, and it slowly crawled into the sea till its buoyancy broke off the end as already described.

It may be a curious thing indeed, to young readers, to learn that an immense, deep river, frozen to the very bottom,—for such, in fact, is a glacier,—should move at all; but such rivers do move. Of course they advance very much more slowly than does a river of water, since the solid ice takes a long time to make a short movement, even down the steepest incline.

The fastest rate I ever heard of a glacier making was only sixty feet a day. This is considered an unusually rapid flow, as the average is seldom much more than ten or twelve feet, while some glaciers are so slow that they do not advance as many inches.

This rapidly-moving glacier—it seems odd to speak of sixty feet a day as rapid movement—is on the western coast of Greenland—a great polar island that gives us the largest glaciers known.

One Greenland glacier, the Humboldt, is sixty miles in breadth across the front, many hundreds of feet in height above the level of the sea, and probably much deeper below the water. Thousands of icebergs must come from it every year; and to sail along its immense front would not be unlike sailing along a coast where high, precipitous cliffs of pure white formed the banks.

But to return to our talk about the formation of icebergs.

If you allow the end of a short, thick plank to rest in a tub of water, while holding the other end, it will sink but little; and in order to force it further into the water it is necessary to press the plank down with the hands, while the farther it is pressed the greater the force required.

Now if we imagine this thick board to be a piece of ice of a similar shape, we shall not be at all surprised, knowing how fragile and brittle ice is, to see the submerged part snap off and, rising to the surface, float in the tub of water.

This is exactly the way the iceberg is formed. The glacier can be called an immense board of ice, miles in width and many hundreds of feet in thickness, that is slowly but constantly being shoved into the sea by its own weight, which corresponds to the hand holding it down, until the immersed ice, in its tendency to float, breaks off near the shore.

Thus we have an iceberg, looming up one hundred to three hundred feet, and possibly a mile or two in length and width. As only one-seventh or one-eighth of the huge mountain of ice is above water, there must be a stupendous bulk below the water—a bulk that would appear perfectly appalling if it could only be seen. Doctor Hayes, who measured the height of an iceberg in Baffin's Bay and found it to be a little over three hundred feet high, estimated that the iceberg must have extended under water about three-quarters of a mile. Another curious estimate he made was that if he could have sold the iceberg at New York prices for ice, he might have paid our great national debt, then over two billion dollars—a sum of money too vast for most people to form a distinct conception of.

So deep do these monsters sink into the sea that sailors have seen the very curious sight of an iceberg driving steadily on its way against a heavy gale of wind and through fields of floating ice-packs and ice-floes. The explanation is that the surface current in such a case was shallow, while a deeper one, in which the lower portions of the iceberg were immersed and which it obeyed, flowed in the opposite direction.

Just when they are on the point of dropping or rising from the glacier's front, a very slight thing may start the icebergs into existence. Some Arctic explorers, landing on the coast of Spitzbergen in a small boat, once discharged a musket about a half a mile away from the front of a glacier, and were surprised to see, as a result of this slight shock, an iceberg tumble into the sea. It was so vast that the waves it sent curling into shore threw the small boat of the explorers nearly a hundred feet upon the land.

FREDERICK SCHWATKA.

RURAL STILLNESS.

To all there comes a country peace,
The quiet of a night
That is removed from out the world,
Far from the city's sight!

—*Kate A. Carrington.*

FAMINE RELIEF IN INDIA.

Early in July a report from Calcutta stated that ten million people in Madras, India, would probably suffer famine this year by a partial failure of the southwest monsoon. The danger of scarcity is not yet past, but the fear of so extensive a famine appears to have been greater than the facts warranted.

Ever since 1876-78, when India lost about five million people by starvation and its attendant diseases, correspondents have frequently founded alarming predictions on local or temporary failures of the monsoons.

A "failure of the monsoon" is simply a drought more or less general. The monsoons are winds which, carrying vapor from the Indian Ocean and Bay of Bengal, and blowing with much regularity for six months one way and the succeeding six in the contrary direction, deposit rain during their passage across India.

They usually drop enough for all agricultural purposes to the western coast lands and to part of the north, but Central and Southern India are dependent on artificial irrigation.

By storing water, the people of the Deccan and the Carnatic, in the wettest years, obtain little more than enough. In a dry season their stock and their crops are imperilled.

Their margin of production above subsistence is small, and scarcity of food among wretchedly poor people, crowded at the average rate of two hundred per mile, speedily becomes famine unless charity interferes.

When several successive monsoons fail in large degree, as happened in 1875-'76-'77, famine sweeps away millions despite all efforts at relief by governmental and private organizations.

In 1874 the Anglo-Indian Administration adopted as a permanent policy that of funding the total surplus of revenue in prosperous years for the mitigation of famine in bad seasons. During the following six years eighty-five million dollars of public money had been expended on starvation account, mostly in direct relief, partly in works of some permanent utility.

The Indian famine problem is, unfortunately, not wholly one of prevention by the adding of new irrigation works to the fourteen thousand miles of canals, the many artificial lakes, and the innumerable tanks by which some thirty million acres of land have been fertilized.

If all the financial resources of the world were available for East Indian irrigation the engineering problem of storing water enough where less than enough falls would still be insoluble. Upon irrigation works the Anglo-Indian Government have laid out some sixteen million dollars.

Still the question of famine relief remains mainly one of transportation and distribution of food. It is such as the problem of supplying all the armies of Europe would be if they were quickly collected in one district devoid of crops.

Even this comparison does not sufficiently signify the difficulty.

Conceive millions of the starving scattered among tens of millions almost at starvation point; few with enough physical strength, and a still smaller proportion with enough knowledge to aid powerfully in the labor of relieving those at death's door. Conceive the famine area surrounded by two hundred millions of people ill able to give charity at the best of times.

Though famine is seldom so widespread in India as it was fourteen years ago, a scarcity geographically local, according to the American scale of distances, afflicts great multitudes. Madras Presidency, for instance, though bnt the size of Illinois, Ohio and Indiana combined, has about three and one-half times their total population.

It is a tract peculiarly liable to famine. Imagine the three States mentioned suffering from a total failure of crops. In so hideous a case the whole Union of our wealthy and physically strong people, skilled in organization, would find great difficulty in supplying relief. Fancy, then, what a Madras famine implies.

For the Companion.

THE DAYSPRING.

We leave the dewy light of morn and go
Adown the long day's splendor till it dies
Behind us and the darkness fills the skies.
Then wrapped in sleep we float a space—and lo!
The dewy light again! So, circling, flow
The days and years. The morning light that flies,
Returns again. Will Youth's lost Light arise
With that far Dawn to which we circle slow?

With new worlds breaking on us strange and fair,
Will the same glory that we knew of old,
The Dayspring, the immortal Morning air
Breathing upon us o'er the hills of gold,
The Lights and Love of Long Ago be there
In that deep Dawn we journey to behold?

ANNA BOYNTON AVERILL.

SUMMER SCHOOLS.

The enlargement of the systems and opportunities of education is one of the most striking features of the time in this country.

The idea that education may be had outside as well as inside the walls of colleges and schools, and may be enjoyed by persons of all classes and all ages, in their own homes as well as in regular institutions of learning, has recently been pursued with broad results.

Among the devices for popular education and special improvement outside the immediate sphere of colleges and schools, may be mentioned the great Chautauqua system,—already described in *The Companion*,—the mechanics', teachers' and farmers' institutes, endowed courses of lectures, the "university extension" system adopted by many colleges, the female annexes, and the work of such societies as the Young Men's Christian Associations and Unions.

One of the most flourishing of these systems exterior to regular college and school work, is that of the "summer schools" which have been established in many parts of the country.

The summer school is similar to the Chautauqua assemblies, in that it affords the opportunity to study, during the hot months, in places chosen for their beauty and advantages for summer recreation.

The plan of the summer school, however, is less various than that of Chautauqua. It is usually confined to some special line of study in one particular field of knowledge.

Perhaps the first of our summer schools was that founded by the famous scientist, Louis Agassiz, eighteen years ago. This was established on Penikese Island, and the students there devoted themselves, amid picturesque scenes and cool breezes, to zoölogy and natural science.

Other schools on the same general plan were soon afterward founded for special study. Alexander Agassiz, the son of the founder of the Penikese school, established at Newport a seaside laboratory, and a similar laboratory was later maintained at Annisquam, Massachusetts; while a few years afterwards a biological laboratory was opened at Woods Holl.

The custom of summer schools spread rapidly, until now the young man or woman who desires to spend the vacation in the pursuit of special knowledge may find a summer school devoted to almost any branch of study he or she may wish to pursue.

Many of the universities and colleges in the East, the West and the South, have established summer courses outside of their regular curriculum. In them instruction may be had in natural sciences, the languages, physics, and various other branches of learning.

One of the most notable of recently established summer schools is that devoted to the study of ethics, at Plymouth, the home of the Pilgrim Fathers.

In England and Scotland the same plan of summer teaching has been adopted, and successful schools of this kind have been established by Oxford, Cambridge and Edinburgh Universities.

Thus it is that, in our age, the advantages of a more or less thorough education, obtained in a great variety of ways, are offered to all the people, rich or poor, old or young.

The teacher has ample opportunity, at slight cost, to pursue his special studies; and that in localities where, his studies each day completed, he may enjoy the beauties of nature in her summer garb, and the healthful out-of-door recreation proper to the season.

NOT TRIFLES.

A man applied to a Western farmer for work. The farmer looked at the applicant, asked him a few questions, and then told him to go to the pump and fetch a pitcher of water. The man did as he was directed, went to the old-fashioned chain pump, filled the pitcher, a narrow-mouthed one, and brought it to the farmer without spilling a drop of water.

"You'll do," the farmer said, "you can begin work for me to-morrow morning."

When the farmer was asked what filling the water-pitcher had to do with it he said:

"Why, it's a dry time, and if the fellow had pumped too hard he would have sent the water over the pitcher as well as into it, and if he hadn't pumped hard enough 'twould have been the same. But he pumped just right; and I judged that he'd work just right, not too hard at first to slack up afterward, and not too slow either."

The farmer was right in his estimation of the man, for he has not a better farm hand on his place.

A merchant refused to hire as a clerk a young man whose pantaloons, he noticed, were worn at the knees and seat, because he judged that a good clerk would not thus wear his clothing. In another case a merchant chose from twenty applicants a boy who stopped to wipe his muddy feet before entering his office, and whose finger-nails were clean.

"It is attention to little things that makes a good clerk," the merchant said.

It was a clever young man who, undecided which of two young women to choose for a wife, gave to each a skein of snarled silk. One of them threw the skein away as worthless, and the other picked out the snarl. The patience, desire to please, and prudence of the latter young woman left the young man no longer in doubt.

"How long have you been out of work?" asked a lady of a girl who came to apply for a position as chambermaid.

"Ten days," was the reply.

"And in that time you have not found opportunity to mend your frayed-out dress? I do not think you would suit me," the lady said.

"I was on the point of asking that lady to be my wife some twenty years ago," said one of New York's prominent lawyers, indicating a maiden lady of his acquaintance, "but she was needlessly late in keeping two appointments with me, and I didn't ask her. The woman who makes a friend wait will be liable to try her husband's patience too sorely for happiness."

"Why! you engaged that governess for your children without a recommendation," said a lady to a friend.

"Her neat, plain dress and pleasant manners were a better recommendation than any written one," the friend replied; "and then in the hour's conversation I had with her I weighed every word, every movement, and I am convinced that Miss Snow is a lady worthy to be entrusted with my children."

It is the little things which help us to make up our estimate of a person's character, and it is the trifles of every-day life by which our friends and acquaintances judge us.

MANNERS AND MANNERS.

In an American paper an American traveller lately sketched, contemptuously, the sort of Americans said to be most ridiculous and ridiculed in Europe. They are *nouveaux riches*, declared the correspondent—thus unconsciously agreeing with the old-world assumption that there is something discreditable in having made instead of inherited one's money.

The same writer criticised the woman as overdressed and in conversation as talking too much about herself—the man as effusive, careless in apparel, and free in expenditure.

While sneering at such Americans, the correspondent told how she herself publicly laughed at the anxious appearance of a lady searching for lost baggage, how this lady resented the ridicule, and how the correspondent "had half a mind to jump up and shake her till her aristocratic teeth chattered in her head."

On another occasion the correspondent, finding an Englishwoman as ignorant of America as Europeans usually are, told her "wonderful stories" of this country. After thus falsifying "for fun," the correspondent derided European ignorance of the United States!

The conduct of people who have what the French call the manners of a good heart is never really ridiculous, nor likely to be thought so in Europe or elsewhere.

New-rich as well as old-rich travellers, whether little or thoroughly acquainted with the best usages, may go through the world well liked and welcome in most agreeable quarters, even if overdressed, autobiographical and lavish of their own money.

Europeans of that sort are seldom ill received in America, and Americans of that sort have often been highly popular in distinguished circles in Europe.

The persons really despicable and despised in any foreign country are they who publicly ridicule fellow-travellers, show anger when snubbed, ostentatiously profess to be worthy of reception

Digitized by Google

anywhere, and devote a good deal of their time and wit to flippant comments on the manners of strangers, and ill-natured gibes at simple travelling-folks of their own native land.

BERRYER.

The great French orator, Berryer, never wrote his speeches. The substance of his legal arguments and of his addresses in the Chamber of Deputies was carefully studied, but his eloquence was spontaneous. He spoke as the heart dictated, and wit, grace, and force of expression seldom failed him.

Beside his recorded speeches, which are models of impassioned eloquence and forcible argument, many characteristic utterances are quoted by his biographers.

He was impatient of political insincerity. He was a Royalist, but he had nothing but scorn for those who were Royalist only when policy dictated their course.

A man who had renounced his Royalist principles under the Empire, said to him that he was "still true to the King at heart."

"To be true to the King, you must first be true to yourself," was Berryer's stern reply.

But Royalist though he was, when he defended one of Napoleon's generals after the restoration, he had the generous feeling and the courage to say:

"The King should not gather the dead from the battle-field to carry them to the scaffold."

After one of his speeches in the Chamber, a member who with a change of governments had changed his principles, exclaimed:

"There is nothing so hateful as the cynicism of a revolutionist!"

"There is something worse," was Berryer's instant and crushing reply; "it is the cynicism of an apostate!"

When he addressed the bar of Paris at the fête given in honor of the fiftieth year of his membership of that body, he was overcome with emotion, and tears rolled down his cheeks.

He did not find the situation awkward or embarrassing, but said, as soon as he could command his voice:

"My friend M. Favre advised me to put on paper the few words I intended to speak to-day. But notes would be of no use to me; I could not see to read them."

DISAPPOINTED.

What may be the result of a lack of calmness and dignity among legislators is illustrated by the following incident:

A lady of middle age, living in the Western Reserve of Ohio, went to Washington two or three years ago to see the sights. Before she had visited the Washington monument or the "place where they print the money"—the two places which are usually the objects of first interest to visitors in Washington—this lady insisted upon sitting through a session of the House of Representatives.

She had sat in the gallery, not very patiently, for some little time. The subject of international copyright was under discussion, and one or two members had been prosing along indefinitely, while the others wrote letters or fell asleep in their chairs.

Presently the lady from the Western Reserve began to fidget, and to look about as if she were ill-satisfied about something. She beckoned to one of the colored attendants.

"Look here!" she said. "This aint what I bargained for."

"What did you want, mum?"

"I want to hear 'em insult each other. When do they begin to do it?"

"You cain't gen'ally tell, mum. Dey's liable to mos' any time."

The lady waited impatiently another half-hour, but the debate on the copyright law went on wearily without any incidents. Then she rose and went out, tossing her head scornfully and remarking to the same attendant as she passed him:

"It's nothing but an imposition! There haint one on 'em blackguarded another one sence I come in here!"

"GOING IN SWIMMING."

The liking for bathing in the open air, in water deep enough for swimming, is so universal, so natural and so conducive to cleanliness and health, and the ability to swim is so useful a thing, that no boy can be blamed for a liking for it.

But the risk attending ordinary swimming is often great. Every interior town or village usually has a swimming-hole, where the boys go to swim after nightfall.

Very often this place is in a mill-pond, where reeds and grass grow from the muddy bottom to entangle swimmers' feet, or where there are dangerous water-wheels or race-ways near by.

Rough and disorderly boys or men, who delight in throwing small boys into the water or dragging under it, as a joke, those who cannot swim, often resort to these places. Altogether, it is not a matter for wonder that anxious parents often refuse their boys permission to learn to swim, or that boys are often drowned in trying to learn.

Certainly no other useful art is taught in such a haphazard, life-or-death way; nor is it necessary that swimming should be so taught.

With a little work in odd hours, the men of each community might easily provide a proper swimming-place.

Such a place would have water of varying depths, clear of obstructions and dangers. A very little public spirit and enterprise would clear the swimming-pool of each neighborhood of things dangerous to swimmers, and would surround it, in two or three years, with a thick screen of bushes and trees, so that swimming in daylight would be an offence to no one.

A little additional attention on the part of the public authorities or the older people would prevent boys who cannot swim from running any risk except when good swimmers and prudent persons, boys or men, were present.

It is always a pleasure to such persons to teach the young to swim; and under such circumstances there would be plenty of opportunity for all to learn to swim, and enjoy a bath and a plunge in cool, deep water with almost no risk at all to human life.

OLD SHOES.

Few persons know what becomes of old shoes or the method in which they are utilized. A few of the more respectable cast-off shoes are sometimes repaired and sold again for a nominal price to some person who is not fastidious; but as a general rule they are put to other uses.

In France children's shoes are cut from the larger pieces which are obtained by ripping up old boots; but in this country as well as abroad, the practice now is to convert the scraps into a leather pulp, which may be so treated as to produce a substitute for the real article, cheap and comparatively worthless, of course.

Of late the manufacture of an artificial leather wall-covering, selling under a high-sounding name, makes a market for all the worn-out boots and shoes of the American people, so that in its revised form the discarded foot-wear of the most wretched of earth's children may look down for years upon the scenes of splendor such as the forlorn wearer saw not even in dreams.

There are other uses as well, including the manufacture of buttons, combs, knife-handles and other articles which are interesting but of which the public know little. Carriage-makers, bookbinders and picture-frame-makers consume this artificial leather to a certain extent for their cheaper grades of work.

COURTEOUS.

Most of us are apt to omit toward those of our own family many of the outward tokens of respect that we habitually show to our less familiar friends and acquaintances. To this rule, as to all others, there are, of course, exceptions.

Those who pass a certain house in a town not far from Boston on their way to business in the morning, often see what is to all of them a most beautiful and touching sight. Down the front steps comes a gentleman about sixty-five years of age, but evidently hale and vigorous; in the big bay-window can be seen his wife, a feeble, sickly lady supported on her crutches, watching her husband on his way.

The old gentleman walks briskly on until he reaches the street corner some paces away; then he turns, glances back, with a smile for the loving face in the window, throws it a kiss, and raising his hat in the most ceremonious manner, bows low and passes around the corner out of sight.

Such things as this show that courtesy toward one's own household is not quite a thing of the past, that familiarity does not always breed contempt. Well would it be for us all to heed the lesson!

"WHEN."

Most people who read a paper would like to have it come to their hands without any typographical or editorial errors. This is quite possible, according to a contemporary, when all the following conditions come together:

1. When the contributor has written correctly.
2. When he has written the correct thing distinctly.
3. When the compositor has only the correct letters in the different cases.
4. When he does not take letters from a wrong case.
5. When he sets them correctly.
6. When the "reader" corrects every error.
7. When the compositor corrects the "rough proof" properly.
8. When the "reader" reads the corrected proof attentively.
9. When the compositor corrects the second proof properly.
10. When the revised proof is carefully "read."
11. When the "reader" has sufficient time to do this.
12. And when a dozen other circumstances work together for good.

TOO EMPHATIC.

During a session of the House of Commons the members wear their hats, which they remove when rising to speak or to make a motion. This custom is occasionally the cause of a comical scene, like the one reported in Sir William Fraser's "Disraeli and his Day."

William Ewart, the member for Liverpool, was making an effective speech, and on the bench just below him sat Joseph Hume, a Radical, whose aspect was that of intense solemnity. He wore a hat with a broad brim and a long nap, which apparently was too large for his large head.

Ewart, while emphasizing his last sentence, brought his right fist down with crushing violence upon Hume's hat, which instantly descended below Hume's chin, and obscured his heavy features.

The House, which had been listening with interest, roared with laughter, and the orator sat down abashed by the incident that had spoiled the effect of his speech.

NEWS FROM BOSTON.

The superior intelligence of Boston continues to excite the envy of other cities. One of our exchanges says that a little Boston boy, at whose house there was a new baby, was asked if it was a girl baby. The little fellow hesitated. "I have not made up my mind," he said, "whether it is proper to say a girl baby or a baby girl."

At another Boston residence an evening party was in progress, according to a New York paper, when a guest said to one of the family:

"Where are the Digby's?"

"Oh, we couldn't ask them. They're not on our list any longer."

"What's the trouble?"

"Why, didn't you hear? Helen Digby sent a sonnet to *The Atlantic* with twenty lines in it!"

SCOTCH LOGIC.

A Scotch minister was startled by the original views of a not very skilful plowman whom he had just hired. He noticed that the furrows were far from straight, and said:

"John, yer drills are no near straucht ava; that is no like Tammie's wark"—"Tammie" being the person who had previously plowed the glebe.

"Tammie didna ken his wark," observed the man, coolly, as he turned his team about; "ye see, when the drills is crookit, the sun gets in on a' sides, an' so ye get early tatties."

Burnett's Cocoaine allays irritation, removes all tendency to dandruff, and invigorates the action of the capillaries in the highest degree, thus promoting a vigorous and healthy growth of hair. [*Adv.*

Stamp Collectors should read the story of "A Postage-Stamp Man" in the May 7th number of this paper.

Send for circular. **19 and 21 East 14th St., New York.**

BABY'S PICTURE.

An Odd Way of Getting the Little One to Keep Quiet.

"Fix your eye on this spot, and look pleasant," never results in a good picture for the baby.

The Rev. M. R. Myer of Cawker City, Kansas, took an odd way of keeping his baby still, as is shown in the following cut.

The reverend gentleman said, according to a Western exchange, "The only way we obtained quiet, so as to secure a photograph of my baby boy Clarence, was by giving him a bowl of Lactated Food, which he dearly loves. He was so afraid it would be taken away, that he kept still until we got a good picture."

The engraving shows Master Clarence to be an ideal Lactated Food baby,—healthy, happy, bright and animated,—one of those children that are full of life and spirits, yet are so well and such little trouble, that everybody says, "What a good baby!"

Mothers in all parts of the land echo the sentiments of Mrs. B. F. Lambert of Hyannisport, Mass., who says, "I would not be without Lactated Food, for I believe it saved my baby's life. When five months old she was quite sick with bowel trouble, and my physician recommended Lactated Food. She commenced to improve at once, and is now the picture of health."

In this August weather, when the infantile death rate is so fearful, use this pure food, and save your baby for years of joy and health.

Lactated Food is sold by druggists, or mailed on receipt of price: 25 cts., 50 cts., $1.00. Interesting book of "Prize Babies" and handsome birthday card free to any mother sending baby's name. Wells, Richardson & Co., Burlington, Vt.

IT COSTS MORE to make Royal Baking Powder than any other, because its ingredients are more highly refined and expensive. But the Royal is correspondingly purer and higher in leavening strength, and of greater money value to the consumer. Attempts may be made to substitute other powders for the Royal by the grocer, because of the greater profit in them to him. Send them back.

The chemist of the department of Health of Brooklyn, after examining the various powders, said: "The Royal is superior to all baking powders with regard to leavening power, economy in use, and healthfulness."

This Safety Bicycle Free!

Boys' and Girls' Safety Bicycle.

This Bicycle will be given FREE to that boy or girl who shall send us the best photograph taken with the Harvard Outfit. For full particulars see page 409 of "The Youth's Companion."

NEXT WEEK

we will publish the names of the HARVARD ALBUM PRIZE-WINNERS. This competition has brought out the finest collection of photographs made with the Harvard Outfit that we have ever had the pleasure of examining.

Many of these photographs are gems of composition and beauty. It seems almost impossible that they could have been taken with a $1.75 Camera and Outfit. But these little gems are facts, and facts are stubborn obstacles to overcome.

Send us a two-cent stamp and receive by return mail a photograph that has been taken with this wonderful Camera.

The Harvard Photograph Outfit

is sold by us for only $1.75. We will send it by express at that price to any address, the charges to be paid by the purchaser; by mail, 50 cents additional must be enclosed.

We will give the Harvard Camera and Outfit to any subscriber to "The Companion" for one new subscriber and 50 cents additional. If the Outfit is to be sent by mail 50 cents for postage must also be enclosed.

THE YOUTH'S COMPANION, Boston, Mass.

For the Companion.

COLLEGE EDUCATION.

By President Seth Low, of Columbia.

A college education must always be thought of as a great opportunity.

It need not be said that to a large proportion of young men the advisability of availing of this opportunity never becomes a practical question. That this is the case makes clear the responsibility resting upon those who do enjoy it.

The considerations which should determine a young man as to whether or not he should go to college manifestly must differ in each individual case. It may fairly be assumed, however, that the determining factor ought to be, in the mind of a young man who can enjoy the opportunity, whether he feels himself likely to do justice, in the long run, to the responsibility which such an exceptional privilege implies.

The natural question, and so far as it goes the proper one, in the mind of such a young man will certainly be: What can the college education give to me?

In the thoughtful mind, there will certainly follow the other question alluded to: That is to say, If I have this education, what can I hope to do for my day and generation which otherwise I could not do?

This view of the matter brings to the front the general effect of college training. Undoubtedly there are many instances where the actual result does not conform to the expectation. On the other hand, the general experience is, unmistakably, that the college-bred man is introduced into a sympathetic acquaintance with literature quite unusual among those not so trained.

There is, besides, as a usual result, a general broadening of the mental powers in all directions.

It appears to be admitted that for the purposes of practising any of the learned professions, so-called, the collegiate education is a desirable, if not an essential, equipment. More doubt is expressed as to the value of the college education for a young man who proposes to pursue a scientific or a business calling.

In the School of Mines, the scientific department of Columbia College, the judgment is uniformly held by the men who have long been instructors there, that the college-trained men make the best specialists when they begin to specialize. The same argument appears to be equally forcible as to a business career.

In both cases the main argument against first seeking the general culture turns in the last statement upon the time required for the college course. Probably few who seek education at all would hesitate to take the college course, if it did not compel them to enter upon their business or their profession so much later in life.

The practical question is, in most cases: Can I afford the time?

That is a question which each must answer for himself. The aim of this paper is to lead young men rather to frame the question in this way: Why should I not afford the time?

Looked at merely from the point of view of what the college education can do for the man, it appears to be conceded that for many departments of life it is an equipment which is well-nigh essential. There is good reason to claim that, even in business, and in other spheres of activity where the service of the college education is less easily traceable, nevertheless it is of substantial value.

If now the question be shifted to the ground first indicated, the argument becomes stronger still. There can be little if any doubt that the college education puts into the armory of a thoughtful man weapons which he may make of utmost service to his fellows.

There comes out of it naturally a respect for the past which springs from the compelled recognition on the part of the student of the achievements of men in literature, in art, in philosophy and in many other departments of life, before our day. There comes into the mind a loyalty to truth for its own sake, a spirit of liberty also, which seems the vital air of a great university.

Therefore, with this respect for experience, this worthy reverence for the past, there is found also the counterbalancing principle of progress. Thus results the type, not often seen, to be sure, in its perfection, yet often enough to demonstrate its value, of the well-rounded man—a man full of the life of his own time, joyfully anticipating the triumphs of the future, yet genuinely reverencing the past as the foundation upon which both the present and the future, whatever their achievements, must rest.

Specialization may make a man bright and keen; its tendency inevitably is to make a man also narrow. Even Darwin wrote of himself that the result of his close attention to the subjects which he made his own had resulted in the atrophy, as it were, of those parts of his nature which had enabled him in earlier life to enjoy Shakespeare. The capacity for the enjoyment of Shakespeare he found in his later years he had lost altogether.

If this be the result of specializing in so great a man, it seems to make clear the importance of broadening the man at the beginning, as widely as possible, before the specializing be begun by him.

Undoubtedly service of the highest value to mankind has been rendered by the men of one idea, but that may not be the rule for the masses of men. The average man probably is happiest, at well as most useful, when he enters into the closest possible sympathy with his fellows.

This close relation is preëminently what the college education gives in the largest sense. Life must follow it, of course; experience must be added to reading and to study; but the college training gives at the start what no amount of experience is competent to supply.

Men of widest experience, as they have come through struggle and effort to occupy places of importance and influence among their fellows, have become the most sensible of the value of the college training which they themselves had lacked.

If these general considerations are sound, the two questions which a boy should ask himself who is considering whether or not to take the college course, would appear to be these: Can I afford the time? and am I competent to profit by the opportunity? If the answer to the second question is in the affirmative, one should hesitate long before answering the first in the negative.

"Charge!" shouted the Colonel.

For the Companion.

A NAVAL OFFICER IN SANTO DOMINGO.

By the Late Admiral D. D. Porter.

In the latter part of March, 1846, I was sent for by the Hon. George Bancroft, then Secretary of the Navy, who desired that I should report to him at the Navy Department. When I entered his room, Mr. Bancroft was walking rapidly up and down, dictating to an amanuensis. He turned short upon me and said:

"How long will it take you to get ready for an absence of four or five months? I am going to send you to Santo Domingo."

It has ever been my rule in life to be ready for anything, or at least to appear to be; so I promptly replied, "I can start in half an hour."

"That is good," said the Secretary. He immediately continued, in the generosity of his heart, "I will give you an hour. The train starts in about that time. You will proceed in it, get to Pensacola as soon as you can, and deliver despatches to the Captain of the *Mississippi*, who is there awaiting orders.

"The despatches should reach the Captain in the shortest time possible, as the Government desires to prevent the landing of General Santa Anna in Mexico. Here are your orders, after delivering the despatches, to proceed in the brig *Somers* to the City of Santo Domingo, in the Dominican Republic.

"The Dominicans have applied to the United States to have their government recognized; but before committing itself, the Government of the United States wishes to know more about these people. Therefore you are appointed Commissioner and will travel over the Dominican part of the Island and secure all the information possible in relation to the government, resources, climate, and everything else that may bear on the subject. You will communicate with me as often as possible during your absence."

That afternoon I proceeded, by way of Pittsburg, to Montgomery, Alabama. I rode thence on the mail bags in an open wagon to Mobile; chartered a pilot boat; proceeded to Pensacola, and delivered my despatches within five days, which, at that time, was considered good travelling.

Captain Gregory was senior officer at Pensacola, and as the *Somers* was not in port, he ordered me to proceed in the brig *Porpoise*, Lieutenant William E. Hunt commanding.

Lieutenant Hunt had orders to convey me to whatever part of Santo Domingo I might designate, and to bring me back to Pensacola on the conclusion of the duty assigned me.

We sailed from Pensacola about the Twenty-fifth of April, 1846, on May Fifth passed through the Mona Passage, and the morning of the Sixth anchored off the ancient city of Santo Domingo, famed in history as the place where Columbus formed his first settlement in the Western Hemisphere.

What a flood of memories is recalled by that short cruise in the *Porpoise!* Of all the officers who were then attached to the ship, not one is now living.

Raphael Semmes, who, during the late Civil War, proved himself one of the most energetic officers in the Confederate Navy, and destroyed over sixteen million dollars' worth of our commerce, was first lieutenant of the ship.

He was an amiable, engaging person of literary tastes who had the reputation of being somewhat of a "sea-lawyer," and had no great pretensions to professional ability, circumstances which brought him and his commanding officer into frequent collision.

Had any one at that time told me that Raphael Semmes would have become an energetic enemy of the United States, and would have swept our commerce from the seas, I should have laughed at the idea.

It shows that people should not be governed by appearances, for circumstances often make the man; and the circumstances of the Civil War made Semmes one of the most destructive sea-rovers that ever trod a deck.

The little *Porpoise* was lost in a hurricane in the China seas some years after, with every soul on board.

I was received with great warmth by the President of the Dominican Republic and his cabinet, all of whom seemed anxious to afford me every facility for my mission.

The Island of Santo Domingo is situated between eighteen degrees and twenty degrees north latitude, and sixty-eight degrees twenty minutes and seventy-four degrees thirty minutes west longitude. Its greatest length is four hundred miles, and its greatest breadth, one hundred and sixty miles.

This was the island over which I was to travel on horseback, go to every town and ascertain the number of its inhabitants, climb to the plateaux and ascertain their productiveness, and work my way across the great plains, and learn, by direct observation, everything in relation to their surroundings.

It seemed like a "tough job," but those were days when I did not mind fatigue. I was like iron, and could endure any hardship; in fact, I felt the better for it after it was over.

I succeeded in carrying out my mission, and never since have I regretted the privations I was forced to endure in crossing the mountains and rivers of what, perhaps, may be truthfully described as the most beautiful and productive island in the world.

But it is not my purpose here to descant upon its beauties. I merely wish to mention some of the incidents of travel which may amuse the reader.

On arriving in Santo Domingo I made my preparations, and started on the Ninth of May, taking with me eight horses, with a fair camp equipage, and a huge negro named Gomez, to take charge of the whole concern. I had an understanding with Gomez that he was to walk all the way, to save the horses, and travel as many miles a day as required.

The horses were not more than forty inches high and weighed not more than four hundred pounds apiece, but they were hardy little creatures, and could perform miracles in the way of travel. Three of the animals I reserved for my own use, and intended to ride five miles on each one before changing to another.

My intention was, after examining the western portion of the Republic, to proceed to Puerto Plata, on the northern coast, join the *Porpoise*, survey the great Bay of Samana and do all the rest of the work under sail.

There were one or two boats' crews and half of the officers of the *Porpoise* on shore to see me off, and while the Captain and I were at breakfast the animals were being loaded with travelling paraphernalia.

When I went to mount my horse I found that the sailors had fastened the saddle to his rump in a most ingenious manner. I said to the coxswain, "What does this mean? what kind of a way is that to fix a saddle?"

Said he, "Your honor, the natives told me that was the proper thing to do, and I thought your honor would like to travel as far aft on the quarter-deck as possible."

I did not stop to discuss the matter, as I was impatient to be off, but mounted my little Bucephalus and started on my travels.

That day we journeyed about twenty-five miles, over plains parched by the tropical sun, the road marked by the skeletons of cattle that had fallen by the wayside. We did not meet a human being. At about sundown we reached a negro hut and halted for the night.

The *padrone* came out, accompanied by his daughter and a dozen boar-dogs about as large as cats; and the burly Gomez took charge of the horses.

I was provided with cold tongue and bread and butter, and having made a hearty meal I slung my hammock inside the hut and ordered Gomez to have a nice chicken ready for my breakfast, which he promised to do.

By this time I had discovered that Mr. Gomez was not a valuable servant. He was constantly lagging behind and leaving me to lead, although I was not always certain which way to go. Once I caught him in the act of mounting one of the horses, and threatened to cudgel him if he attempted it again. Gomez was highly indignant at the idea of any one cudgelling him, and was so sulky that I thought my chances very poor for having a chicken for breakfast.

If I had known the rascal better, I should have been careful to be more deferential to him.

However, I slept soundly until four o'clock next morning, when I was awakened by an unearthly noise, and jumped up to see what was the matter. Looking through the reeds of the hut, I saw the *padrone* and Gomez engaged in killing a hen, which was making a loud clatter over the fate which awaited her. So I went back to my hammock to try to get a little more sleep.

When it was broad daylight Gomez appeared and announced breakfast. I made a hasty toilet and stepped into the next room to enjoy my substantial breakfast of chicken.

Gomez stood at the head of the table, on which was the hen, boiled with nearly all the feathers upon it. A single egg ornamented a plate beside the "chicken"—perhaps the last egg the fowl had laid.

"Sit down and eat," said Mr. Gomez, in a very patronizing manner. Then he drew up a chair to the table and commenced to devour the egg, which he had broken into a tin cup.

I was very angry. In those days we were not accustomed to argue with a colored man who offended us. I did not argue with Mr. Gomez. I acted.

The chicken was the handiest article with which to express my feelings towards him, and I used it for that purpose. Then Mr. Gomez was angry, but I had more skill in the use of my hands than he had, and the encounter ended in his defeat.

The *padrone*, hearing the noise, rushed in to see what was the matter; and seeing Gomez lying on his face, exclaimed, "Ah! I am glad you've killed that man; he is the terror of this island."

But Gomez was not dead. He jumped up, looked at me askant, and then walked out, collected his animals, loaded them and called to me that he was ready to start.

The *padrone* gave me a cup of coffee, and I eked out my breakfast with the scraps left from my supper.

That day we travelled some twenty-five miles, to Azua, in the district of Bani. Gomez kept far in the rear; and my cavalcade becoming much scattered, I tied the animals together, took them in tow, and went ahead myself.

On arriving at Azua I inquired for the headquarters of the Commandant of the town, Colonel Don Juan Hernandez. He received me with

Digitized by Google

urbanity, and furnished me with quarters in a large house built of reeds and covered with plantation leaves.

The Colonel was much surprised when I told him how my guide had behaved, but his surprise vanished when Gomez appeared soon after and took a seat upon the stone wall opposite my quarters without making any motion to take charge of the animals.

"Where did you pick up that villain?" exclaimed the Colonel. "He is the greatest scoundrel in Santo Domingo! He has killed one man in a brawl, and is suspected of having murdered another for his money. You may think yourself fortunate if he does you or your animals no harm. Here, corporal," he said, "go bring that fellow to me."

Gomez appeared, looking very sulky. "Go to work," said the Colonel, "and take care of these animals. If you don't do your duty by this gentleman, I will put a ball and chain to your leg."

Gomez thereupon took the horses to attend to their wants, and that was the last I saw of him for the day.

"This will not do," said the Commandant; "you must be rid of that fellow. You cannot travel over the island with him. He will murder you in some unfrequented spot, and make his escape with your effects into Haytien territory. I will find for you a good boy, on whom you can depend; and in the meanwhile keep your eye on Gomez."

The Colonel was a gentlemanly mulatto, and showed me every attention. The room he assigned me was about fifty feet long and thirty feet wide.

He had a beautiful farm at Azua, on which he raised guavas, exporting the jelly to the United States. The room had an earthen floor, and one end was filled with glass jars intended to contain the jelly. They were piled up nearly to the ceiling, to a depth of about thirty feet.

Adjoining this room were the barracks, occupied by a sergeant, corporal and eight privates, who constituted the military force for the defence of Azua. The Commandant occupied some apartments next beyond the barracks.

I considered myself fortunate in obtaining such quarters. I slung my hammock, and after a good supper, turned in at about nine o'clock.

The last observation the Colonel made to me was, "Keep your eye on that negro. Don't trust him; fasten your door, and if you want anything at night, call the corporal."

I lay down in my clothes, with a revolver by my side, although I did not really expect trouble. I could not fasten the door, for there was no way of doing so; and being very tired, I soon fell asleep.

It was a beautiful moonlight night, and I did not suppose that Gomez would go prowling around the guard-house at such a time, especially as the sergeant had orders to look after him.

About midnight I was awakened by a noise among the horses; and while I was listening the door of my room was pushed partly open, letting in a ray of moonlight. Then I saw what appeared to be a man's head close to the ground, looking into my apartment.

I cocked my revolver ready for action, and saw, stealing into my room, evidently a man crawling on all fours.

The door closed behind him; but even in the obscurity I could perceive that he was making his way toward my hammock.

My heart fluttered a little at the thought of this desperado being so near. I had no doubt that he carried a huge *machete*, but my nerve held fast.

I waited until the rascal had come directly under my hammock. Then I fired two shots in rapid succession, aimed right between his shoulders.

I never heard before or since such an appalling scream as followed the shots.

Then came the deluge! The house seemed to shake to its foundations, and the roof threatened to fall in, while the crash of glass resembled nothing that I ever heard before.

Amidst all this uproar the screams continued to resound. In the barracks there was a commotion, and presently in rushed the sergeant, with a flambeau in his hand, which threw some light upon what was going on.

The pile of glass jars was in a terrible state of upheaval, without any visible object to cause it. I supposed that Gomez, in his agony, had rushed among the jars, and was responsible for the confusion. The sergeant, however, was of a different opinion.

"*El diablo! Santa Maria guarda nos!*" he exclaimed. "Bring in the holy picture!"

In the meantime the jars were falling by the dozens, and smashing to pieces as they fell. Gomez was evidently dying hard, and trying to emulate Samson and involve himself and foes in common ruin.

The entire garrison was now on the scene with fixed bayonets, one man holding on high a religious picture to exorcise the evil one. The Commandant was in his night-shirt, with drawn sword, and I was waiting patiently in the hammock, anxious to get another shot at Gomez when he should emerge from the pile of broken glass.

"*Charge!*" shouted the Colonel to the soldiers; but at that moment a large hog made his appearance, streaming with blood, and dashed toward the door.

I had not yet relinquished the idea that Gomez was at the bottom of the whole business; and as the animal rushed by my hammock I gave him another shot, breaking his fore-shoulder, when he immediately rolled over upon the ground.

The screams and grunts soon satisfied everybody that the hog had caused all the mischief.

The poor Colonel was inconsolable. He saw the accumulations of the past year swept away in a moment,—his favorite hog, weighing five hundred pounds, on which he expected to take a prize at the county fair, lying in the agonies of death.

The guard slept no more that night, as was evidenced by their incessant talking. Nor did I again close my eyes, although I was the only contented man in the party, being well satisfied that I did not have the blood of Gomez on my conscience.

Next morning I was up early. Gomez had disappeared after injuring every horse I had by cutting a slit in the back of each, and filling it with something to make it sore. The prospects were that I should be detained at least a week.

"I should not be surprised," said the Colonel, "if Gomez drove the hog to your door for the purpose of making a stampede."

At the end of a week, after seeing all there was about Azua, a most beautiful country, I ascended the palisades of Maniel, mounted on a new horse, and continued my journey. The path was so narrow and crooked that it seemed as if a goat could hardly crawl along; but I performed the task with all my animals, now cured of their wounds, without any trouble.

I have given the reader the incidents of but two days' travel, and leave it to his imagination to guess what I went through during two months and a half of hard riding in that rough country, among an untamed and savage people.

Fortunately the Colonel had furnished me with a young man of good character, who was an excellent guide, and who accompanied me through the whole journey over the island.

As for the rascal Gomez, I never heard of him again.

Bolivar's Burro Develops Speed.

For the Companion.

BOLIVAR'S BURRO.

Camp Welcome, nestling in a picturesque valley in the heart of the Rocky Mountains, was one of the prettiest little mining towns in the far West.

Here lived Amos Liddie, a youth still, but one who knew as much about mines and mining as many who boasted of being forty-niners. He was book-keeper and general assistant to his father, who owned a controlling share in the largest mine in the region, the "Idaho."

When Mr. Liddie was absent from Camp Welcome, the affairs of the mine were left in the hands of Amos, who was so trustworthy that there was never a fear that things would go wrong under his management.

It was during the father's absence on one of his occasional visits to another mine in which he owned an interest, that Amos awoke one morning to find himself in trouble.

Bolivar's burro had disappeared during the night, and Bolivar was clamoring for satisfaction.

Bolivar was a big camp roustabout, of character so violent that he deserved the title of desperado; and his burro was the most vicious donkey in those parts. Together they made a most thoroughgoing pair of nuisances.

The "Idaho" mine was situated far up among the clouds on Little Cottonwood Mountain. To reach it the course was by a horse-tramway, a familiar construction among the mountain mines. A steam railroad was impracticable, owing to the steepness of the mountain; and the tramway took its place. Several burros—those comical but useful little animals, which look as if they were half jack-rabbits, half mules, and which are native to the Western ranges—were employed to draw the light cars up the mountain.

Bolivar made his living by hiring his burro to the "Idaho's" manager for use in this tramway. The living was like the donkey—pretty poor, perhaps, but still it was a living. The burro was a standing joke among the miners, and Bolivar's devotion to it was in proportion to his dependence upon it.

The animal was chronically troubled with inertia to an amazing degree; it was scrubby and flea-bitten as well as vicious, and altogether an extremely poor apology for a creature with claims to usefulness.

Mr. Liddie used the donkey only when circumstances made it necessary. He would have bought it outright, but Bolivar did not choose to sell, preferring to hire it with the privilege of haggling over the price of its service.

Naturally, Bolivar had an unduly high notion of the value of its labor, and he never neglected an opportunity to exhaust Mr. Liddie's patience when they came to a settlement.

During the night mentioned this burro had mysteriously disappeared from among its fellows in the Liddie stables, and, as was to be expected, Bolivar was in a high state of excitement.

"Somebody has stole thet beast!" the big rough declared, vehemently.

"I don't think so," answered Amos, calmly.

"Why don't you think so?"

"Well," said the boy, "it's not worth stealing. If anybody but a lunatic were going to steal a burro he would not take that animal."

Bolivar grated his teeth in rage.

"Thet thief showed he had good sense when he took my Solomon," he averred, stroking his straw-colored beard dramatically. "If he aint stole," he continued, "where is he? He was in your possession, an' tharfore you're responsible for 'im," Bolivar exclaimed, loudly. "An' you cain't pay me any too soon, nuther!"

"How much?" asked Amos, smiling in anticipation of the reply.

"Fifty dollars, ef a cent," said Bolivar. Then he went off into a long account of Solomon's virtues.

"Fifty cents would be nearer his value," said Amos; "and rather than pay you fifty dollars, I think we'd better look around a little and see if Solomon can't be found."

Bolivar was forced to acquiesce in this decision, though he was manifestly impatient for his money then and there.

Where was the burro? Either his hitch-strap had become untied, and he had strayed away, or else some one had taken him.

The truth of the matter was, some one had taken him; and the some one was Bolivar himself.

The wily rough, becoming a trifle more destitute than usual, had hit upon the plan of stealing Solomon, secreting him in the mountains, and then holding the Liddies responsible for his loss. The opportunity seemed especially favorable when Mr. Liddie was away, for he hoped to frighten Amos out of a large sum.

That day Amos devoted all the time that he could spare from his regular duties to searching for the missing burro. Bolivar searched also, or made a pretence of doing so.

But Solomon was not to be found.

Toward the close of the afternoon, Amos had occasion to go up the tramway to the mine, and having accomplished his errand, was starting on his return to the valley.

The mode of descent was not the same as that of going up. The burros that pulled the cars up were not needed in going down, and were sent back to the valley by way of the Wahsatch cañon; while the cars were allowed to shoot down the tramway by their own weight, restrained only by brakes.

The tramway was extremely narrow, and clung to the ledges and crags in what seemed—but only seemed—a very insecure manner. The track was covered nearly the whole way by a snow-shed, the roof of which inclined at an angle with the mountain's side, and in the sides of which were holes that let in light and air.

Amos had gone down on the cars many times, and understood thoroughly how to handle them. He arranged himself in a comfortable position and gently loosened the brakes.

The car was off with an easy roll. Far below, in the picturesque valley Amos saw a horseman who looked like a baby on a dog. The cabins of Camp Welcome looked like play-houses. It was a long distance to the bottom.

In a moment he was spinning along, the light car swinging swiftly around the sharp curves, and bits of white flashing past where the holes were cut for light. He deftly loosened or tightened the brakes as the grade rose or fell, and by this means went at a steady rate of speed.

He was about half-way down, and was shooting along at a swift rate, when, in a patch of light from one of the holes ahead, he saw, standing on the track—Solomon!

The tricky beast had escaped from the place where Bolivar had secreted him, and had returned to his familiar haunts. There he stood, exactly on the tramway, in all his glory.

But, needless to say, Solomon was not a welcome sight at that moment to the youth. His presence there meant perhaps a fatal collision. The danger was imminent and frightful.

Instantly Amos threw on the brakes with all his force; there was a grating of the wheels, followed by a slight shock and decreased speed.

Then there came a loud snap, and the car bounded ahead. One of the brakes had broken.

The boy remained cool. His face grew white and his eyes brilliant, but his nerves were steady. As he dashed down upon the burro he uttered a yell that sounded unearthly loud in that narrow shed. The beast was frightened, and started on a run down the tramway.

Amos yelled again and again, making the most hideous sound he was capable of. And now did the burro develop powers of speed that no one, not even Bolivar, could have imagined he possessed.

The faster Solomon ran, the louder and wilder the boy yelled, until the terrified animal was plunging ahead like a runaway locomotive.

The tram-car was close behind him, and creeping closer and closer to his heels.

Amos released entirely the brake which had snapped, and threw all his strength upon the other. The action decreased his speed somewhat, but he was still going at a perilous rate. As for stopping, that was out of the question.

It seemed to him only a matter of seconds until his car should come in contact with the body of the burro. He had no doubt that such a collision meant the most shocking injuries, if not instant death. He had more than once remarked, half in humor, that Bolivar's burro would "be the death of him yet!" and now the words seemed likely to prove terribly true.

Solomon's speed was marvellous. He seemed to realize the danger as much as did Amos, and, be it said to his credit, he was doing his best to avoid a mangling.

The race continued thus for several minutes, the car getting closer and closer to the speeding burro. Amos scarcely breathed.

All at once Solomon came opposite an opening of unusual size in the side of the shed, where some boards had been torn off for an unknown purpose. Here the animal conceived the idea that it would be a good place to side-track himself until the fast express had gone by. Accordingly he turned aside, and aimed his head at the opening.

In this praiseworthy purpose he was materially assisted by the car. Just as he was leaping from the track his hind legs were struck, and Amos had just time to see him go whirling end over end through the opening.

The car, for a wonder, kept the track, and dashed on down the mountain, while the boy mopped the cold perspiration from his face and gave a long sigh of relief.

Soon the level ground near the station was reached, and here the force of the single brake was enough to bring the car to a stop. Then Amos climbed back up the course to find the body of the unfortunate burro.

"He'll have to be paid for now; that's settled," thought the boy. "Well, perhaps it's best," he added. "I'm glad he's dead, and it's worth fifty dollars to me to have the satisfaction of causing his death."

Then his eyes fell on Solomon.

Injured? Not the least!

There he stood by the hole in the snow-shed, just where he had gathered himself together after the car had struck him, regarding Amos's approach with a mournful and reproachful look on his countenance.

For a moment Amos was stunned at the spectacle. Then he grasped Solomon by one of his long ears and led him down to Camp Welcome, finding him extremely meek and submissive.

One of the first men met was Bolivar.

"Bolivar," said Amos in a suppressed voice, "here's your burro."

Then and there Amos severed forever his business relations with "the twin brothers, Bolivar and Solomon." ARTHUR C. GRISSOM.

IN MIDSUMMER.

The low wind rustles in the grass,
A burly beetle blunders by,
And far away the white sails pass
In slow succession down the sky.

A robin from a shaded place,
Whistles his cheerful, ringing call,
And sparrows wing in merry chase
Along the low and tumbling wall.

A daisy swinging in the breeze,
Woos with its golden-centered star
A butterfly, whose restful ease
Shows wings that flame and silver bar.

I hear the mowers in the fields,
And meek-eyed cattle with the load
That harvest time to labor yields,
Go lingering down the dusty road.

The swallows flash athwart the green
Of hillside pastures, rising slow
From where the river's glinting sheen
Sweeps under willows bending low.

The crow sits idly in the pine,
That crowns the far and rocky height,
His sable plumage all ashine,
In this delicious flood of light.

And lazy from the fragrant heat,
The pollen-dusted honey-bee,
Booms slowly on from sweet to sweet,
Whereof the summer makes him free.

Ah, who would seek a wider sway,
Than thus to lie in dreamful ease
All through the cloudless August day,
Beneath the softly murmuring trees?

His are the distances that sweep
To where the wave-girt islands lie,
The subtle songs of plain and steep,
The mysteries of sea and sky:

His soul wins from the fruitful earth,
And blue serenity above,
The knowledge that these things have birth
In a benignant, boundless love.

SOLITARY CONFINEMENT.

To be shut up in one's own body, as in a prison—ah, is not that the worst form of solitary confinement?

It might come to any of us—it has come to one.

Colonel Blithe was a strong and active man, in the very prime of his faculties, when suddenly he was stricken with paralysis; and in a moment life—all that was real and active in life—was of the past. Hope died. Energy, activity, the struggle of a man among his fellows—all this was over for him forever.

He has lived for two years, literally without the possibility of expressing one thought or emotion. His sad eyes look out into the world in which he has no longer any share. What he feels, thinks, remembers, he has no power to say.

He cannot speak; he cannot write; he can scarcely move a muscle. The utmost he can ever do is sometimes, when a paint-brush is put into his hand, to make one mark with it for no, or two marks for yes—and even this he is not always able to manage.

There he sits, long day after long day, a prisoner within himself, as if a human soul were shut into a log of wood.

What does he think of, as the slow hours go by? He lives shut in with his own past. Memories glad and sad must come back to him. How he must read over and over all the thoughts and acts of his past life, written for his eyes, indelibly.

The record that God's recording angel keeps—what awful reading it must be for the very best of us! What a more than awful page for such as have loved evil rather than good!

Do you ever think, you whose active lives are but now beginning, that the present will by and by be the past—that you are creating, day by day, that inexorable companion from whom no struggle can set you free?

Wrong deeds may be repented of and forgiven, but the memory of them goes with you, as your shadow.

From what you have done you cannot escape. When the nights are long, the accusing presence of the sin you committed in a careless hour will watch beside you, a haunting shape, with pitiless, cold eyes.

Even the memory of your follies will assail you; the foolish vanity, the lack of courtesy, the thing you wish you had not said—they will all come, in melancholy array, to mock you.

The best of us have these unwelcome intruders upon our peace, but we are happy if we have only follies to confront, and not sins.

To live so that night has no terrors, so that one could be shut up in solitary confinement forever, with no dread of the accusing vision—that would be wisdom even if this world were all; for it might come to any one of us—this life in death—that leaves one with conscience and memory for sole companions.

But this world is not all. The life beyond this? Ah, what of that?

THE BUCKEYE.

A recent article in *The Companion* about the horse-chestnut-tree has led a correspondent to ask whether the American variety of the same tree, the buckeye, is equally well known to botanists and planters of trees. It was this tree which gave the great State of Ohio its "nickname"—the Buckeye State; but the tree is by no means the peculiar property of Ohio. It is found growing wild as far eastward as Pennsylvania and as far westward as Kansas. It grows in Michigan, in Indiana, in Kentucky, and in many of the Southern States, and has been planted in parks and gardens in the Eastern States.

It is a very interesting tree, being in some respects more beautiful than the horse-chestnut. Its partiality to a wet situation, however, and particularly to a river bank, will probably always prevent it from being a favorite shade tree for general uses.

The growth and habits of the buckeye remind one of the righteous man of the Psalms, who "shall be like a tree planted by the rivers of water, that bringeth forth his fruit in his season; his leaf also shall not wither." The leaf of the buckeye does wither if its roots do not have plenty of water; in that case they begin to fall off by the last of June.

The leaves are smaller and of a lighter green than those of the horse-chestnut, but they are very pretty, and the tree reaches a large size under favorable conditions.

The nuts of the buckeye would be pronounced "horse-chestnuts" at once by a boy of the Eastern States; but they are not exactly like horse-chestnuts. They are smaller, rounder, and darker in tint.

Sometimes the horse-chestnut is almost cherry-colored, and it is apt to be flat on one side. The buckeye is very hard, of a sort of irregular roundness, and dark mahogany in color, with a fine polish.

The flowers of the two varieties of trees are much alike in appearance, though the botanist finds certain characteristic differences.

The "buckeyes," though they are not good to eat, are as great favorites with boys as horse-chestnuts; and in their season—which is a little earlier than the horse-chestnut's—they are gathered by the pocketful. They have also the same fabulous efficiency in cases of rheumatism as the horse-chestnut. Their round shape and beautiful brown color, resembling the eye of the deer, undoubtedly gave them their name.

The Ohio buckeye is not the only tree which bears that name. Growing somewhat further southward, and not by river banks but in deep, rich woods, and especially upon the slopes of the Alleghany Mountains, is found the "sweet buckeye." This is a most beautiful tree. Its leaves are long and dark green.

The red buckeye is still another variety. It is a shrub rather than a tree, and grows only in the South. The corolla of the flower is of a bright red.

STORY OF A PIANO.

Probably the severest ordeal that genius can undergo is to be deprived of the exercise of its powers. M. de Pontmartin had a pathetic illustration of this in his acquaintance with one of the greatest pianists of the present century. He relates the strange story in "Les Souvenirs d'un Vieux Critique." Though not a player himself, M. de Pontmartin had a fine piano. One day the proprietor of the village hotel called to say that the evening before a gentleman, apparently a Hungarian or an Austrian, had arrived at his house, a person about M. Pontmartin's age, elegant of appearance and wearing an expression of touching melancholy.

In the morning, it seemed, the stranger would take no breakfast, but besought M. Pierron, the hotel-keeper, for a piano, saying that circumstances had prevented his touching one for a year.

A little later the stranger was seated at M. Pontmartin's piano, and it was soon manifest that he was not only a wonderful artist but an inventor of new methods, whose touch tripled the power and volume of the instrument. He played on and on. Shortly before midnight he seemed to put his whole soul into improvising a funeral march, which ended with a finale of wonderful tragic beauty just as the village clock struck twelve.

"Adieu and thanks," said the strange guest, not waiting to hear M. Pontmartin's exclamation. "It is I who thank you! My piano is sacred henceforth." The next morning he went away, begging M. Pierron not to ask his real name.

The following year, just after hearing Liszt, M. Pontmartin called on his friend Zimmermann. He was explaining to the incredulous musician that his admiration for the great Liszt was tempered by the memory of an incomparable genius whom he had heard at Avignon, when there was a knock at the door, and as the critic relates, "I heard a voice that thrilled me say, 'May I enter?' 'Sigismund Thalberg,' cried Zimmermann in joyful surprise.

"I recognized my mysterious visitor, but my delight was checked by the sadness in his face. He said to me, 'My dear sir, I owe you an explanation. On the Thirtieth of April I promised Catherine B——, a beautiful girl whom I loved, that I would not touch a piano until April Thirtieth of the next year; this as an evidence that my piano and my art were not first in my regard. At the end of the year she was to become my wife.

"'Well, you know the rest. I thought that terrible year would never end. I travelled constantly to distract my mind and to pass the time more endurably. I reached Avignon the Twenty-ninth of April.'

"He stopped. 'And Catherine?' I asked.

"'She died on the Thirtieth, at the very hour when I finished the funeral march, just as the clock in the belfry struck midnight.'"

TRUE COURTESY.

A pretty story is told of the Princess Louise, which has the merit of being true, and also of showing that the daughter of England's much-loved Queen has a kind heart, and none of that spirit of snobbishness which destroys the instincts of courtesy in so many people when they are brought in contact with those whom they consider their inferiors.

It was in a large store in Chicago, and an Eastern girl was shopping with an Irish lady whose home was in that city. Suddenly the lady's face lighted up. She touched her companion's arm and said, "There's the Princess Louise at the very next counter! How I wish I dared speak to her!"

"Are you *sure*?" asked the American girl, who had never had such a close sight of royalty before.

"Yes, indeed," replied the other; "I have seen her in London with our Queen, and I could not possibly be mistaken."

"You wait here, then," said her friend; and with the fearlessness and independence which are said to be characteristics of this nation, she walked straight up to the Princess, before the Irish lady had time to remonstrate.

"I beg your pardon," said the girl, blushing a little as the pleasant eyes looked somewhat inquiringly into her own, "but are you the Princess Louise?"

"Why do you ask?" said the other in a surprised, though gentle tone.

"Because," replied the girl, nothing daunted, "that lady over there says she is sure you are, and she is one of your mother's subjects, and she wanted dreadfully to speak to you, but didn't dare!"

"Which lady?" asked the Princess, smiling kindly on the girl; and when the timid but adoring "subject" was pointed out to her, she left her purchasing, went over to the next counter, and spoke for several minutes with great cordiality and sweetness to the delighted pair, winning a subject for herself for ever after, in the person of the young American.

A SONG OF CONTENT.

What if the wind rise up in might,
And gather blackness till day be night!
Till lightnings burn through the awful sky,
And the rain like a cursed wraith shrieks by!
The sun is my friend, and the hours run fast,
And a summer storm cannot always last;
Here in my heart white lilies blow,
As sweet as lilies can be, I trow,
And that is enough for me.

What if King Winter's mailèd hand
Lay waste our beautiful flower-filled land!
What if the wind come raging down,
To help the snow to bury the town!
The sun is my friend, and the days run fast,
And Winter's sway cannot always last;
Sweet Daphne, close to my side, lifts up
The breath of May in her rosy cup,
And that is enough for me.

What if my neighbor's robes outshine
These simple, plain little gowns of mine!
What if her coach roll up the street,
And leave me walking through mud and sleet!
Work is my friend, and the years run fast,
Grim poverty's reign may not always last;
And I have love, which is sweeter than gold,
Love—as much as my heart can hold!
And that is enough for me.

EMMA C. DOWD.

THOROUGHWORT TEA.

A writer in *The Healthy Home* tells a doleful story to illustrate the well-known fact that a considerable part of human diseases and cures have their seat in the imagination of the patients. John Simmons's wife was away from home on a visit, and he had been reading the evening paper. "Well, well," he said to himself, as he threw it down, "there seems to be an alarming prevalence of diphtheria. Two children on this street died last night, and my throat is very sore! I believe it is worse since supper-time."

"I don't see how Alice could leave home at this horrid season," he went on. "I shall probably die of the grip, or diphtheria, or pneumonia while she's away. Or she will, perhaps."

Business called him out, however, though the weather was bad, and about ten o'clock he returned laden with parcels, including beefsteak for breakfast, a package of thoroughwort, a paper of leather shoe-lacings, and sundry other articles.

On his way he passed the house of his afflicted neighbor, and as he saw the crape fluttering from the door-bell, a sharp pain in the back and something like a chill admonished him anew of his own condition.

On getting home he repaired to the kitchen. The faithful Bridget had left a kettle of boiling water on the stove, and he made haste to concoct a dish of thoroughwort tea, of which he drank liberally and then went off to bed.

In the morning he was perfectly well. As he sat down to his beefsteak he said:

"Bridget, there's nothing like thoroughwort tea for a bad cold. I took a bowlful last night, and here I am as good as new."

"Well, then," said Bridget, "you drank a bowl of tay that would kill a haythen."

"Why, of course," he replied, "it wasn't quite as sweet as a sugar pellet."

"Will ye plaze come down after breakfast and take the rest of it, or put it out of the way?" said the girl, as she shut the door.

When he had finished his beefsteak and coffee, therefore, he went down into the kitchen. The tin pail in which he had steeped the thoroughwort stood on the table, and certainly its contents did look remarkable.

"That's not thoroughwort," exclaimed Mr. Simmons.

"Then what else is it?" said Bridget.

"Where are the packages I brought?" asked he, after another look at the black, slimy mess.

Bridget opened the closet and handed him three or four parcels, with a manner indicative of some offence. The first one was the package of thoroughwort!

"Where are the shoestrings?" said Mr. Simmons.

"Boiled, then, is it?" said Bridget, with logical indirectness; "an' I thought thim was snakes or worms. An' ye drank that tea? an' it cured yer dipthery!"

It was indeed so. Shoestring tea had proved itself a sovereign remedy.

Mr. Simmons threw the stuff out-of-doors.

"If Mrs. Simmons remains away much longer," said he, "I shall probably poison myself some night. I wouldn't speak of it, Bridget."

It is possible that Bridget never did speak of it, but somehow the story got abroad.

LIFE-SAVING SOAP.

A cake of soap is said to have saved the lives of five men and a boy, off the coast of New Guinea. The story, as told in the smoking-room of a steamer going to Brisbane, by an old man, the owner of several vessels engaged in pearl-fishing, is reported in Mr. Nisbet's "Colonial Tramp."

"It all happened in a moment," said the old man. "The ship struck a part of the reef and went down like a thunderbolt, and we had only time to jump overboard and swim ashore.

"We were at the mouth of Cloudy Bay, which meant slow roasting alive as soon as the natives got a peep at us. We were wet, hungry and miserable, with nothing to stay the pangs of hunger.

"As daylight dawned I saw a case slowly drifting to shore. In a moment we were all wading and swimming to secure the treasure. We had it on shore in no time, and prying it open with our fingers found it filled with soap. We bemoaned our hard luck in emphatic language.

"'Close round the case, boys, they're coming!' I shouted, as I saw fifty mop-headed savages armed with spears, bows and arrows, rushing toward us. At fifteen yards' distance they paused, and their chief came out to talk with us. I grabbed an armful of the soap tablets and advanced to meet him. His eyes lightened as he saw the amber-like cakes on which the sun was shining. Novelties, when they take, mean success.

"Going straight up to this man-eater I offered him a cake. He took it, smelt it, and tasted it. Evidently he did not like its taste, for he scowled at me. By signs I showed him how to use it. The Papuan is fond of washing himself, and my pantomime took his fancy. Seeing a stream of fresh water, I led the chief to it. First washing my own hands, I gave him the tablet. He did as I had done, and was delighted.

"Then for the next ten minutes there was a scrubbing among those copper-skins. Their weapons were thrown down, and they lathered one another, and then tossed the water over their bodies.

"We were saved, and made on the spot medicine-men of the tribe. The pictorial advertisements of the soap-makers were used to decorate the idol-house. Two weeks afterward we were rescued by an English war-sloop."

WILD ZEBRAS.

The zebra when wild is a ferocious animal, and an unwary hunter is likely to suffer from its teeth and hoofs. The author of "Kloof and Karroo" says that a Boer in Cape Colony had once forced a zebra to the brink of a precipice, when the desperate creature turned upon him, attacked him with its teeth, and actually tore one of his feet from the leg.

Another author writes of a soldier who mounted a half-domesticated zebra. The creature, after making the most furious attempts to get rid of its rider, plunged over a steep bank into the river, and threw the soldier as it emerged.

While the man lay half-stunned upon the ground, the zebra quietly walked up to him and bit off one of his ears. Zebras can never be tamed, unless the process is begun while they are still very young. H. A. Bryden gives an instance of a tragic fate which befell one of them, captured when he was seven or eight years old.

He had joined a troop of horses belonging to one of the author's friends, and finally allowed himself to be driven with them into a kraal, or enclosure. It was then determined to keep him, and if possible to domesticate him.

For this purpose he was lassoed and tied to a tree; but so ferocious was he in the presence of man that the greatest precautions had to be observed in approaching him. All possible means were taken to induce him to feed. When captured he was in splendid condition, and his coat shone in the sun. Herbage was brought from the mountain-tops where he had been used to graze, and every conceivable food placed before him, but in vain; he steadily refused to eat.

Water he drank greedily, and would dispose of three bucketfuls at a time.

At length, after three weeks of vain endeavor to tame the noble creature, during which time he subsisted entirely on water, he died.

ON PICKET.

For getting a man out of a hard place a joke is sometimes better than a gun. A Yankee drummer boy was out on a little foraging expedition one evening, during the late Civil War, all by himself, and had scaled a bristling picket fence to get at a tree full of tempting, rosy apples. He had filled his haversack and his pockets when he was suddenly startled by a stentorian voice, "Drop them apples, boy, and git, er yer a dead Yank."

Crashing through the tall weeds came the owner of the apples, rifle in hand. The boy ran for dear life, but clung to as many of the apples as he could.

On reaching the fence, he grasped a post and tried to climb over, but the pickets seemed to have gained a foot in height and many degrees in sharpness since he entered the orchard, and as he scrambled over, one of them managed to insert itself between the small of his back and his leather belt in such a way as to hold him suspended, at the mercy of his on-coming foe.

"Git, I tell ye! Git, er I'll shoot!" roared the Confederate.

The boy looked over his shoulder, and despite the ugly rifle levelled at his head, called out, good-humoredly, "Oh, see here, now, don't shoot! Don't you see I'm on picket, and can't leave my post?"

The man lowered his gun, a broad smile came over his face, and he answered, "All right, sonny, stick to your post."

Then he turned and went away in the direction whence he had come, leaving the Yankee boy to get out of his predicament as best he could, which he finally did by cutting his belt with his pocket-knife.

AT A CHINESE BANQUET.

A wealthy Chinese merchant of San Francisco recently gave a banquet to some prominent New York gentlemen with whom he had business relations, and many are the wonders told of the feast. Delicacies which to the American palate were uneatable were mingled with the most delicious viands. Some of them were easily recognized, while others were as strange and unaccountable as the native tongue of the host.

Among the many sweets offered for dessert were oranges of which the skin had apparently not been broken, yet from which the pulp had somehow been mysteriously removed, half-a-dozen sorts of jelly having been made to take its place.

The guests were unable to understand how so delicate an operation had been accomplished, but their astonishment was increased when the next moment they were served with eggs of which the shells were apparently perfectly whole, yet turned out to be full of nuts and candies.

Then another course of eggs exactly similar in appearance was laid before them, and when they broke the shells tiny live birds came flying out and fluttered about the room.

"How in the world is this managed?" one of the guests cried in astonishment.

"Melican man heap smart," the host answered, with a laugh, "but Melican man no findee out allee t'ings in wo'ide, allee samee."

And that was the only satisfaction they could obtain.

A NEW BRANCH.

People who wish to call attention to their particular line of business, and hang out signs for this purpose, usually intend to make these so explicit as to avoid any possibility of being misunderstood. They sometimes signally fail.

An old gentleman from a distant town in the West was walking about a New England city celebrated for the number and variety of its educational institutions, when he happened to see the sign, "STAMMERING INSTITUTE. A FEW LESSONS SUFFICIENT."

"My stars!" exclaimed the elderly stranger, with sincere astonishment; "I knew they taught most everything in this extraordinary town, but who in land's name would want to learn stammerin'?"

For the Companion.

THE PUSSY THAT SLEPT IN THE HAY.

"Pussy, where have you been all day?"
"In the meadow, asleep in the hay."
"Pussy, you are a lazy cat,
If you have done no more than that!"

The moment the house door was opened in the early morning, out ran Pussy over the lawn, through the hedge and across the road.

Towzer, the big old dog, jumped out of the barn and barked at her. Oh, how it frightened her! Her tail swelled to the size of Towzer's; she ran as fast as her legs could carry her, and, though she didn't mean to, she frightened the hens almost out of their wits.

They were busy eating their breakfast when Puss came flying into their midst. Then such a scattering as there was!

They clucked and cackled; they flapped their wings and flew helter-skelter in every direction; the little chickens cried *peep! peep!* and ran about trying to find their mamma hens; the old roosters tried not to look startled, and strutted about in a dignified way, *ca-dacutting* in an angry voice, as much as to say, "You don't suppose *I'm* going to be afraid?" But, do you know, I think they were quite as frightened as the hens.

Pussy had no idea of the trouble she made. She ran past the hens and through the barn-yard, getting her feet so very muddy that she had to sit for a long time on the gate-post, carefully washing them before she felt like a tidy cat again.

When she was quite satisfied that not a single speck of mud was left between any of the toes, she curled her tail over her front paws, and gazed out over the world for a while.

What a pleasant world it was, to be sure! Puss closed her eyes dreamily—she was very comfortable on the broad gate-post.

The sun shone warmly upon her; a delicious odor, suggesting breakfast, arose from the pails of foaming milk that Seth and Ben were rapidly filling.

Puss felt very happy, when suddenly she felt something warm and moist touch her back. The old white cow that Seth had just finished milking, curious to know what was on the gate-post, had put her nose close to Pussy's back.

This was very alarming. Puss gave one leap from the gate-post, scampered down the stony lane, and ran over the wall into the meadow, where the mowers had been the day before.

The soft, sweet-smelling hay was piled up in heaps. Pussy jumped on one, and scratched at it with her claws, but it didn't quite suit her; then she smelt all round another, but that didn't suit her.

Then she went to a third, but the men had left a rake standing against it, and that didn't suit; so she went round from one to another,—she was such a difficult cat to please,—but at last she came to one that was neither too large nor too small, too hard nor too soft, in fact, it was just to her mind, with a lot of sweet clover in it. So she trod it down carefully and gently, first with one paw, then with another, turned round and round three times, curled herself up in a little heap, with her nose snuggled under her tail, and in exactly fifty-nine seconds was sound asleep.

In the house, all was commotion. Pussy's little mistress, Polly, had called her as soon as she woke, but no Pussy came. She called her before breakfast, but no Pussy came. She called her after breakfast, when the plate of meat cut in fine little pieces and the bowl of milk were put in their accustomed place, but no Pussy came.

Then little Polly was very sorrowful, and went to her mamma, crying, and said: "Oh, dear, where has my little kitty gone? I can't find her anywhere."

"Why, Polly," said her mamma, "you are just like 'Charlie Boy.' Perhaps you'll find your kitty in a basket as he did."

Polly went all over the house, searching in every basket she could find, from the big clothes-basket to papa's lunch-basket, and she even looked into the tiny basket that Cousin Ellen brought her, filled with daisies, on her birthday.

But of course she couldn't find Pussy. How could she, when Pussy was far away in the meadow, fast asleep on a haymow!

So Polly cried all day, and Pussy slept all day.

When the sun went down, and the dew began to fall, Pussy shivered and woke with a start. First she uncurled herself, rolled over on her side and stretched out all her paws. Then she stood up and humped her back into an arch. Then she stretched out her front paws as far as she could. Then she yawned, and by this time was quite wide awake.

Miaow, mia-a-a-ow! how hungry she felt! It did not take her many minutes to scamper home, and I cannot tell you which was the happier—Polly to have her dear Pussy once more in her arms, or Pussy to get home to her bowl of milk.

"O Pussy, where have you been all day?" said Polly.

"She has been sleeping on a haymow," said her mother.

"O mamma, how can you tell?" cried Polly.

"Do you not see the hay-seed and clover all through her fur?" answered the mother, "and she smells of the hay-fields, too."

Pussy winked, but said nothing, and mamma sang Polly to sleep that night with a little song:

"Pussy, where have you been all day?"
"In the meadow, asleep in the hay."
"Pussy, you are a lazy cat,
If you have done no more than that!"

FRANCES C. PRINCE.

"SEE how the frost has come out all around the top of that building," said Katie's father; "it looks quite like a decoration, doesn't it?" "Why, yes," said Katie, "it makes a perfect frieze."

For the Companion.

ANGELINA HOMESICK.

Seems as if you don't go to sleep very well to-night, Angelina. I 'most think you're just the least bit homesick. Some dollies are so hard to suit!

Don't you have lots of good times here in California? Don't you have all the oranges you can eat every day? Don't you have just bushels of flowers? Don't you go to the beach with me, and hunt shells?

And when you're tired of playing out-doors, you can sit by the window and watch the funny Chinamen go by, with their big blue shirts put on outside 'stead of coats, and their queer wooden shoes and long, black pigtails.

And you can look at the dark-colored men, and wonder whether they are Indians or Mexicans. And the real light-colored people—the whitest ones—they are the visitors that have just come.

Auntie says every one that stays here a good while gets brown. I s'pose you would get brown, Angelina, if you stayed here.

Never mind! We're going back home to grandma's in just two weeks more. I know you would be dreadfully homesick if we were here another month—and I do think even two weeks is a long time, Angelina.

I know well enough grandma can hardly wait to see us. And don't you tell, Angelina, but I'm 'most tired of oranges. I'd just like a few snowballs for a change. I promised to wash Tommy Carter's face, first big snow we had. What fun it used to be sliding down hill together.

Do you s'pose there's any way to have such fun where there's no snow? I don't. And Christmas didn't seem one bit natural this year.

Oh, you poor little thing! I know just how you feel. But don't cry, Angelina, don't! Oh dear!

E. S. B.

LITTLE Eleanor, three years old, has a new cloak with a breast-pocket in it. The other day, as she was going down town with mamma, she exclaimed, "O, mamma, I have a hole in my upstairs pocket!"

Enigmas, Charades, Puzzles, etc.

1.

CHARADE.

When you heard *my second*
Did you feel *my first*
To know the storm, that had taken form
In the heat of *my whole*, had burst?

E. S. B.

2.

TRANSFORMATION PUZZLE.

Change the first and last letters of the first word defined to form the second word defined.

Example: Change poverty to a stick. W-a-n-t, c-a-n-e.

When these changes have been rightly made, place the words one below the other in the order here given; the primals will spell a part of summer containing my finals.

Change the rainbow to parched with heat.
Change certain insects to a word indicating motion towards.
Change a pace of a horse to strong drink.
Change a river of Germany to having been accustomed.
Change manner of doing a thing to a chemical used in cooking.
Change to seize suddenly to a waiter.

3.

GRANDDAUGHTER OF A KING.

The grandchildren of Charles X., of France, the little Duke of Bordeaux and his sister, are described by their governess, Madame de Gontaut-Biron, as bright and winning little people. Their society must have been a welcome distraction to Charles X. during that trying time when it was becoming evident that he could not please the French people and must abdicate the throne.

An instance of the strange intuitions which children sometimes have, is the remark of the little princess when she was told that her uncle, Louis XVIII., was dead and that her grandfather was king. "Dear grandpapa is king," she murmured; "so much the worse for history."

She once overheard the king say to Madame de Gontaut, "Everywhere, especially in Paris, there are intrigues against my authority. I assure you I cannot endure it. I shall leave here and put the key under the door!"

This somewhat figurative expression had no sooner escaped the king, than the little girl asked the question which an older person would hardly have had the courage to put:

"And after that what shall we do, grandpapa?"

The king left the room without replying.

A few minutes later a crowd gathered before the Tuileries, under the window of the king's room. They were looking at a placard which the little princess had written and hung out. With some difficulty they made out the childish handwriting, and read:

HOUSE TO LET.

The king had been taken at his word. The king was amused by the wit of his little grandchild. It was not long before the royal family was compelled to flee from the palace.

On one of the last days of July the palace of St. Cloud was filled with soldiers, wounded and dying of hunger. In reply to the addresses of the Duke of Angoulême they cried, "Give us bread. We have had no bread for three days."

The little Duke of Bordeaux and the princess took a leg of mutton from their table and went down among the soldiers. "Take this, friends," they said, "it is our dinner; take it all, even the side dishes."

The next evening the royal family had taken refuge at Rambouillet. The little princess could not sleep for hunger, Madame de Gontaut having been able to find her only a fragment of bread to eat.

On the next day Charles X. abdicated the throne.

DISHONEST AND HONEST.

Sixty years ago there were in the Long Room of the London Custom-house twelve officers styled cocket-writers, because they wrote certificates that goods had been duly entered and the duties paid. They were also known as patent officers, because appointed for life by letters-patent from the Crown. Their salaries were nominal, sixty pounds a year, but they were permitted to remunerate themselves by extorting fees from the merchants, fees which in some cases amounted to a thousand pounds a year.

In 1831 the Treasury determined to abolish patent offices, and called upon the twelve cocket-writers to furnish a statement of their emoluments. The officers, ignorant of the Treasury's purpose, imagined that the government intended to impose an income tax. Ten of the writers, therefore, returned a statement which understated their fees by several hundred pounds. The other two furnished an honest statement.

In a few days, ten clerks were surprised and disgusted, and two clerks were astonished but pleased. The Treasury notified the cocket-writers that their offices would be abolished, and that they would be compensated by pensions rated according to the returns they had themselves furnished.

There were gnashing of teeth and broad smiles in the Long Room. One of the two honest cocket-writers enjoyed his pension for fifty-two years, during which time the Treasury paid him fifty-two thousand dollars.

VON MOLTKE'S MOTTOES.

It was said of Von Moltke that no man ever had a keener appreciation than he for maxims and proverbs. He had an idea that every person should choose one and be careful to let it govern him in all things.

Von Moltke followed this plan himself; and his favorite motto furnished a key to all his conduct. It was "*Erst wägen, dann wagen*," which means, "First weigh, then dare." The familiar English proverb which comes nearest to the significance of this is "Look before you leap;" but the German saying means more than this.

In the "Gedenkbuch" or memorial volume in the German Museum at Nuremberg, Von Moltke wrote the following words:

Allezeit
Treu, bereit
Für des Reiches Herrlichkeit.

This is a patriotic motto, which may be thus very freely translated:

Always true,
Ready, too,
For country glorious deeds to do.

AN EX-PRESIDENT.

A young Englishman, a reporter on a New York paper, relates one of his early experiences. "I was sent up to interview a fellow by the name of Hayes, don't you know, who was stopping at an uptown hotel," he says.

"The slip I was given by the city editor read: "'See ex-President Hayes at the —— hotel, and get something about his plans in New York.'

"I found the hotel and sent up my card. I was received quite nicely by Mr. Hayes. He told me what he was going to do, and then as I wanted to make my story complete I asked him what he was ex-President of.

"He told me he was ex-President of the United States. It was awfully confusing, don't you know," concludes the young Englishman, plaintively, "but there are so many ex-Presidents over here."

"HE is making grass while the wind blows," said a Russian, who was desirous of speaking idiomatic English.

SNAILS.

If you wish to examine a snail, says a writer in *Longman's Magazine*, place him on a piece of glass. He is a cold-blooded animal, and contact with a warm hand probably induces in him the feeling which would result in us from placing the hand or body on the top of the kitchen range. The coolness of the glass will be agreeable to his snailship, and he will travel peaceably along, rapidly expanding and contracting his broad, sucker-like foot.

His horns are protruded in an inquiring manner, and if a finger is placed in front of him, he will probably walk on until these feelers come in contact with it. Then the tentacles are withdrawn and waved about in the effort to see the obstruction more clearly, for each feeler contains at its end a small, imperfect, but still discernible eye, which is capable of distinguishing between light and darkness.

A snail's manner of withdrawing his horns is very curious. He does not pull them back, bodily, into their receptacle, but turns them inside out, just as one turns the fingers of a glove in drawing it off backwards.

The little creature has a sense of smell, and also a fairly well developed ear, which lies close to the roots of his horns. His breathing apparatus is of the simplest description. Looking carefully at his right side, one may see that a distinct hole occasionally appears there, remains open a few moments, and then closes again. This is simply a cavity in the creature's body, into which he allows a certain quantity of air to enter, "whenever he thinks of it," as one might say.

When air has thus found its way into his interior, he keeps it there until its oxygen is exhausted by his vital processes; what remains, laden with carbonic acid, is allowed to escape by re-opening the little trap-door, and the receptacle is filled by another supply of pure air.

Its mouth is armed with a saw-like tongue, which resembles a long, narrow ribbon, coiled up in such a manner that only a part of it comes into use at once. Distributed over the surface of this ribbon are tiny teeth, one animal sometimes having as many as thirty thousand.

As one set of teeth becomes worn away by leaf-cutting, another section of ribbon is uncoiled, and the teeth which before were wrapped up at the back of the mouth, come forward to take their turn in pressing the food against the horny upper surface of the mouth, and thus cutting it in clean incisions.

The snail's shell is a horny covering which serves to protect him against his numerous foes. Slugs are simply snails which live a retired life, and consequently need no covering at all. The shell of the snail is built up from lime in the plants on which it feeds, and the creatures are never found on soil which produces no lime.

LOST HIS GAME.

Benjamin Hammond, one of the early settlers of Paris, Maine, used to tell a story of the times when wolves were common in that neighborhood. One winter they were especially numerous and troublesome. He set traps and caught five of the brutes. The pelts brought a fair price, and there was also a small bounty paid.

One winter afternoon I went out to inspect my traps, and found the fifth wolf caught in them. He was a big fellow and ugly enough. He showed his teeth and leaped fiercely at me, coming within three inches of my face. I procured a club, and after a struggle, succeeded in laying the old fellow out. I had hurt my right hand in the scrimmage, and decided to lug the carcass home and let my boy assist in the skinning.

I seized the animal by the hind legs, swung him to my shoulder and started. I had gone about half a mile when I heard a wolf snarl behind me. I looked around, but couldn't see anything, and went on again. Pretty soon I heard the same snarling noise close behind me. I jumped, and turned quickly, for I was certain there was a wolf close at my heels!

I looked and looked, but there wasn't a thing to be seen or heard. I was puzzled. But the next moment the wolf on my back, which I had supposed dead, began to squirm and snarl in a way to leave no doubt where the other noises had come from.

I was taken completely unawares, and before I could manage to get a firmer hold, the creature had squirmed right out of my hands to the ground. I turned and tried to grab him, but he was too quick for me, and I had the pleasure of seeing my dead wolf make a clean run for freedom.

SUMMARY EXECUTION.

A despotic government has its advantages, and among them is the easy collection of a debt, provided the ruler is friendly to the creditor. Ahmed Vefyk Pasha, a Turkish statesman, was once Governor of Broussa, and this story is told of his paternal rule:

A rich man had judgment pronounced against him in favor of a poor man. The latter, owing to the bribes of the rich man, could not obtain execution, and complained to Ahmed Vefyk. After hearing the case, Ahmed saw the debtor riding up to the Konak upon a beautiful Arab horse. He ordered the creditor to sit down, called a messenger, and whispered to him.

The debtor entered the room, and was surprised at the exceptional cordiality of the pasha, who invited him to sit down, to take coffee, and to converse. Presently, when he rose to leave, the pasha pressed him to remain, and kept him more than an hour, until, indeed, a messenger entered the room and placed a small bag on the table before Ahmed.

When the debtor next rose, Ahmed took the bag from the table and gave it to him, stating, "This is yours. You owed so much to this poor man, I have sold your horse, paid him, and this is the balance belonging to you."

IRISH PUNS.

Charles Lamb made some famous puns, and, according to the London *Truth*, his mantle seems to have fallen upon his namesake, Mr. Charles Lamb Kenney.

The popular journalist just mentioned was dining at the house of a friend, and by chance swallowed a bit of cork with his wine, which gave him a severe coughing fit.

"Take care, my friend," said his next neighbor, with a very brilliant attempt at a witticism; "that's not the way for cork."

"No," gasped the sufferer, "it's the way to kill Kenney."

Decayed Teeth will cause an offensive breath. To sweeten the breath and cleanse the teeth use "*Brown's Camphorated Saponaceous Dentifrice.*" [*Adv.*

Teething Made Easy.

Increased flow of saliva, sore gums, dry mouth, diarrhœa, unusual redness of cheeks, eruptions, ulcerations, itching of the nose, twitching of the muscles, dilation of the pupils, fretfulness, restless sleep or wakefulness, thirst, and loss of appetite, all are symptoms of Teething. Although painful, Teething is not in itself dangerous. It is not disputed, however, that during the teething period the greatest number of deaths occur. A cold, an indigestion or an eruptive fever, coming at this time, acts upon a system less able than usual to resist injurious influences.

"Tooth-Food"

will prevent or cure all teething pains and carry the child comfortably through a period of unusual irritation and danger.

Children who are late in cutting teeth, slow to walk and whose bone formation is defective, should be given "Tooth-Food." The use of this remedy will prevent rickets, convulsions, spasms of the glottis, St. Vitus dance, retention of the urine, etc. "Tooth-Food" is the best anti-scrofula remedy known.

This remedy is made of the nutrient elements necessary to bone growth, supplying material lacking in most natural and all artificial food. It is absolutely harmless and pleasant to the taste. Around each bottle is wrapped a circular with full description of "Tooth-Food" and directions for its use. A bottle will be sent, expressage free, to any address, on receipt of one dollar.
THE REYNOLDS M'F'G. CO., CINCINNATI, O.
Your druggist should have "Tooth-Food" and before sending to us you had better ask him for it.

Digitized by Google

The Youth's Companion is an illustrated weekly paper of eight pages. Its subscription price is $1.75 a year, payment in advance.

Twelve or sixteen pages are often given its subscribers in a single weekly issue of the paper. All additional pages over eight—which is the number given for $1.75—are a gift to the subscribers from the Publishers.

New Subscriptions can commence at any time during the year. The Companion does not employ agents to solicit renewals of subscriptions.

Payment for The Companion, when sent by mail, should be made in a Post-Office Money Order, Bank Check, or Draft, or an Express Money Order. WHEN NEITHER OF THESE CAN BE PROCURED, send the money in a Registered Letter. All postmasters are required to register letters whenever requested to do so.

Silver should never be sent through the mail. It is almost sure to wear a hole through the envelope and be lost, or else it is stolen. Persons who send silver to us in a letter must do it on their own responsibility.

Postal Notes are not a safe means of sending money. Any one can collect them at any Money-Order Post-Office, and, if lost or stolen, the money cannot be recovered, as no duplicates are issued. Subscribers who send us Postal Notes must do so at their own risk.

Renewals.—Three weeks are required after the receipt of money by us before the date opposite your name on your paper, which shows to what time your subscription is paid, can be changed.

Discontinuances.—Remember that the publishers must be notified by letter when a subscriber wishes his paper stopped. All arrearages must be paid.

Returning your paper will not enable us to discontinue it, as we cannot find your name on our books unless your Post-Office address is given.

Always give the name of the Post-Office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed and drafts made payable to

THE YOUTH'S COMPANION,
41 Temple Place, Boston, Mass.

For the Companion.

MODERN SURGERY.

The extent to which the body can be mutilated without a fatal result is beyond what most people think. Of course, the removal of the largest limb is a familiar fact; and indeed, the successive removal of all the limbs would result in nothing worse than inconvenience. But in the same way internal organs may be extirpated. This is facilitated by their duality.

One eye may be taken out, and the sight remain practically unimpaired. One kidney may be removed, and the other will make up the loss by doing double work. The case is essentially the same when disease has destroyed the functional activity of a kidney; and, therefore, a person in that condition need not be without hope.

In like manner, disease may have rendered one lung solid, like liver, and thus functionally useless, and yet the person may live in good health to old age. Could the half-consumed lung of the consumptive only heal up the walls of its great ulcer, and the microbes cease to extend their ravages, the patient might, with care, enjoy a long, useful and happy life.

Large portions of the brain may be removed with no injury to life or intellect. Persons have lived for years, and been well with bullets in the brain. The liver has been cut in two by tight lacing—the pressure causing an atrophy of the part below—without ending either the life or the folly of the fashionable devotee.

A portion of the intestines has been cut out and the severed ends sewed together, and their normal action and function have not been in the least interfered with. And what seems more amazing, dogs have had their entire stomachs extirpated without impairing digestion.

Recently a man, fifty-seven years old, had a large portion of his stomach cut out, in consequence of a tumor. The piece was nearly a foot square. The dissevered parts were sewed together, and the patient ate a dinner of hash twelve days after the operation, and was dismissed cured at the end of three weeks. Five months later he was presented before the medical society—the Royal Society of Physicians of Vienna—wholly well, with no trace of the return of the cancerous disease, and with digestion perfectly performed.

Some experts are led to think that the stomach plays but a secondary part as a digestive organ, its chief service, according to this view, being that of a temporary receptacle.

For the Companion.

WHALES IN PRISON.

The whales that live in Northern waters in winter have often to scour the seas through the wildest storms in search of food.

Sometimes they visit still regions at the bottom of the deep, and if they fail to find there cod, herring, haddock or the other fishes upon which they prey, they start for some arm of the sea or bay where they are pretty sure of finding at least a meal of herring.

When a gale blows very hard whales get under the lee of some high cliff where the water is calm, and frequently take shelter by the edge of some great iceberg or piece of heavy ice-floe.

Sometimes a large body of ice moves landward, driving them before it, and filling every nook along the coast.

When this happens, the whales are unable to rise to the surface to breathe, for a northern ice-floe is so thick that a thousand legions of men might move upon it with safety. The creature therefore drowns in a few minutes.

These facts bear upon something that happened on the coast of Cape Breton. One morning early in April a fragment of polar ice floe came in sight, and the wind brought it rapidly toward the shore. Some people watching it were surprised to see in a great hollow on the inner edge, two huge black objects.

As the ice drew nearer these were made out to be whales. They were evidently dead, for neither of them made any movement. The ice was wedged firmly around them, and they lay side by side, the tail of one being partly covered with ice. There was scarcely water enough in their icy prison to float them, and evidently not enough for them to live in even had they been able to get food there.

When the floe touched the jutting point of headland it broke in two between the monsters, one part swinging outward around the point and moving seaward, the other pushing into a small, deep cove and carrying one of the whales along.

The fishermen launched their boats, mounted the floe and fastened grapnels and stout hooks into the blubber of the whale. The carcass was frozen hard as the ice itself, and must have been in its prison for a considerable time. The ice remained pressed close to the shore for several days, during which time the fishermen were enabled to strip off the fat with axes and sharp spades.

How were the whales thus imprisoned? My own opinion is that in some part of Baffin's Bay they had taken shelter on the leeward side of an ice-floe which was probably aground. During the storm the floe became broken and the detached part swung round and imprisoned them. The mass afterwards froze together, and when the current began to set strongly towards the south in March, the ice and its captives drifted off, at last reaching the Cape Breton coast. E. C.

THEIR WAY.

Concerning the manners and customs of the savages of Mount Sylvia, Formosa, Mr. E. Colborne Baber related the following incident before the Royal Geographical Society:

A party of English officers from a man-of-war landed on the island, and meeting a company of natives armed with matchlocks, challenged them to a trial of skill in shooting.

Affixing a mark to a tree about a hundred yards distant, the officers made what they considered pretty fair practice, without, however, astonishing the natives, who, when it came their turn to fire, disappeared in the jungle like one man, and crawled on their bellies through the undergrowth to a point about three yards from the target, which, of course, they all hit exactly in the centre.

When the Englishmen protested that such a method of conducting the competition was hardly fair, the natives replied:

"We do not understand what you mean by 'fair,' but, anyhow, that is the way we shoot Chinamen."

SEEMED LIKE AMOS.

Silas Rodes was a strong, hard-working farmer; his brother Amos was a confirmed invalid who, three or four times a year, had "spells" of expecting to die, but, nevertheless, always managed to live. Still, he was really ill, and many thought him to be in considerable danger.

But, while Amos was sick and expecting to die, it chanced that the strong Silas did actually die very suddenly. A messenger carried the sad news to his sister Elvira, a grim spinster, who lived in a distant part of the town.

She heard the message with some incredulity.

"'Taint Silas ye mean; it's Amos," she said in reply.

"Why, no," answered the messenger. "I mean Silas. Amos is all right. It's Silas that is dead."

"Wal, p'r'aps it's so," was the reluctant rejoinder, "but I wouldn't ha' b'leeved it o' Silas; 't seems a good deal more like Amos."

RECIPROCITY.

A little girl in my school, writes a *Companion* correspondent, recently came to me in tears, regretting the fact that her father's illness made it necessary for her to "leave and go to work."

I bade her good-by, and with a schoolmarm's hankering to keep a creditable pupil added, "When your father is well come back to me."

Then, obeying a sudden impulse to take advantage of what I knew to be, in all probability, my last chance to influence the precious waif for good, I said, "But if I never see you again I hope you will try to do your duty wherever you may be. Whatever work you may have to do, try to do it well. I hope you will be an honest, honorable woman."

"Thank you, ma'm," she replied, putting up her mouth to be kissed. "I wish you the same."

The dear child! I know now what St. Paul meant by the "foolishness of preaching."

RAVAGES OF TIME.

Stephen Day was very fond of making high-sounding speeches, sometimes with laughable results.

While calling one day upon a neighbor, he was shown a scratched and battered stone pestle which had lately been found in the garden. As it was passed from one to another, some facetious remarks were made in regard to its defaced appearance.

One person ventured to suggest that probably the dogs had chewed it. "Uncle" Stephen looked stern; such language applied to this venerable relic seemed to him almost an offence.

Patting the pestle reverently with his big right hand, he said, solemnly:

"Sir, those are the ravages of the tooth of time."

TRANSLATION.

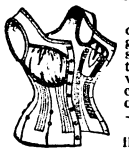
The danger of attempting to translate from one language into another, unless one is reasonably familiar with the language he is using, was illustrated by a mistake recently made by a young Frenchwoman.

She had come from Paris, and wished to establish herself in this country as a teacher of the French language. She accordingly inserted the following advertisement in one of the papers:

"A young Parisian lady desires to show her tongue to classes of American ladies. Address, etc."

"AND who is this?" asked Aunt Clara, pointing to the picture of a chubby child in skirts. "That," said Robby, who had been wearing trousers for some time, "is me when I was a girl."

"Brown's Vermifuge Comfits" will expel worms without injury to the system. 25 cents a box.



FREE TO THE YOUTH'S COMPANION **Readers** for stamp. (See our large advertisement in COMPANION last week on page 424.) **Our New Illustrated Catalogue,** No. 47, with our **special offers** in **Outing, Sporting** and **Athletic Goods.** *Rare Bargains* in these lines. INTERLOPERS.

In Eight Chapters.—Chapter II.

On the Lake at Night.

"I suppose you know, Dorothy, that you didn't come to our feast that night. It was the day you heard about your step-father, and you didn't feel like larking, I suppose. But all the same you owe us a spree. What are you going to do? We're dying for some fun, and it's the last chance we'll have before vacation."

Dorothy was sitting on the floor beside her narrow white bed, entertaining her roomful of visitors, who occupied all her chairs and most of her bed.

Her room was a favorite place of resort with the girls. She was not as "old maidish" as Kate Van Voorhies about her counterpane, not as stingy as Fanny Bergen about her boxes, and much braver than Della Carpenter about preceptresses.

Dorothy did not reply to the question at once.

"Well," said another girl, "a step-father is enough to take away any one's appetite. I knew a girl once, and her mother married an awful man. He used to behave dreadfully and beat her till she was most dead, and then he beat the girl."

"But my step-father isn't at all like that," responded Dorothy. "He is a Colonel, and was in the army, and did all sorts of brave things in the war, and is a gentleman. When the war ended they made him brigadier-general, and he could call himself that if he chose; but he doesn't because all his men call him Colonel, and they love him and he likes it."

Dorothy, in her eagerness to be loyal to this man who was her mother's husband, hurried on so fast in her defence of him that toward the end she grew quite breathless and confused.

"Oh my! Hear her stand up for him, when we all know she hates him so she can hardly keep her eyes dry," taunted Della Carpenter.

"That's what I call hypocritical," said Sadie Dunn, promptly. "It isn't a bit like you to be hypocritical, Dorothy."

"I don't mean to be hypocritical," said Dorothy, slowly. "I'm not glad my mother married him, and I don't say I am; but he's a good man—my mother says he's a good man, and told me lots about him—and I don't think, because I don't like him, I have any right to sit by and just kind of keep still and act *yes* when folks talk about beating and all that sort of thing."

"Good for you, Dorothy!" cried Marie Pollock, bending down over the side of the bed to pat her on the head; "good for you, little girl!"

"Well, I don't know," remarked Fanny Bergen. "It seems to me I'd rather be right down on a person all over than only half-way. If your step-father is a good man, why do you hate him?"

"Because he is a—a—an—an in —"

Dorothy did not seem to be quite sure of the word she wished to use.

"I know—interloper," said Marie Pollock. "We had it in our etymology. 'Interloper: one who intrudes upon a property, a station or an office; one who interferes wrongfully.'"

"Lend me your memory some day, Marry?" inquired Kate Van Voorhies, spitefully. "It 'd help out the whole class if you would. Now it doesn't do the rest of us a bit of good."

"I wish I could, Kate," returned Marie, promptly, "for then you might not forget your manners, and might remember to pronounce my name right."

"But no one seems to be thinking about the spree," interrupted one girl. "It ought to be something to remember. Do let's think of something."

"What are you going to do this vacation?" inquired Marie of Dorothy, disregarding all previous subjects.

"Oh, I don't know," replied Dorothy, carelessly. "It depends on the —"

"Interlopers?" mocked some one from a corner.

"On the way mamma feels. Sometimes she likes the sea and sometimes she likes the mountains; and last year we stayed all summer in the hills. She always decides."

"Well, I guess she won't decide now. It'll be your step-father who will do all that, after this," announced some one else.

Dorothy winced, but seemed to take no notice of the interruptions. She was thinking that in a week she should see her mother.

When her mother went away, Dorothy had thought that the day of their meeting would be the happiest of her life; but now it was very different. She almost dreaded the coming home.

"Oh, dear! If you're going to sit there staring at the wall, I suppose we might as well decamp. You're not very entertaining just now, Dorothy; that's a fact."

Dorothy gave a quick little start.

"Oh, excuse me, Pauline," she said, laughing suddenly. "I didn't mean to be rude. I was thinking; and you ought to consider what a remarkable thing that is for me to be doing, and not find fault. What was it you asked?"

"I asked you, What was our spree to be? Can't you think of something we never did before? Let it be something splendid!"

"Give me time. I'll 'dream over it,' as mamma used to say, and—" Dorothy almost always choked a little nowadays when she mentioned her mother.

"Let it be something worth doing. I'm tired of these mild larks. Can't you tell us something your brother used to do at college, Marie? My cousin Dick always says, 'Well, have you children been regaling yourselves again in the night hours on bad cakes, and imagining that you are having a spree?' I wish we could do something to make him open his eyes," exclaimed Pauline.

Dorothy gave a sudden little scream, and jumped to her feet.

"Girls! I have it!" she exclaimed, in an excited whisper. "What do you say to sliding out, one of these nights, and taking a turn on the lake? No one would know. We could slip out in the dark before the moon rises—it doesn't come up till late now—and wait till it gets decently shiny, and then off we'll go in the boat!"

"It is the Steamer."

"But think of the danger! We might tip over!"

"In a flat-bottomed boat?"

At last some one made a suggestion.

"The First Regiment is going to camp out at the end of the lake. I heard Miss Stuart telling about it this morning. They're coming up to-night on the late boat—just as they did last year. Perhaps we'll see them. That would be something like!"

Dorothy had never thought of this. She was younger by two years than any of the rest of her class, and though constant intercourse with older girls had made her appear in many ways as old as they, she was not their equal in experience. In short, she was still a child, while the rest were almost young ladies.

When Fanny Bergen suggested the possibility of encountering the soldiers, on their "spree," she was thoroughly surprised, though too proud to say so.

"Pooh!" she exclaimed, "I don't see where the fun of *that* comes in. We've seen men before, haven't we? Where's the good in trying to meet them?"

But the rest were excited over the thought. It was decided that they should make a stealthy escape from their rooms as soon as the lights were extinguished. It was necessary to scramble through the windows to the broad piazza roof, then back to the slanting shed, and thence to the ground.

Each of the little company of conspirators went about her own duties with as much zeal as her divided interest would permit. While they were studying their geography they were dreaming of the lake, and when they were called to their astronomy lesson they were wondering just at what hour the moon rose.

It seemed a remarkable coincidence that all the girls of Miss Lorimer's room should be attacked by the same singular drowsiness and the desire to retire precisely on time that evening.

Generally they hung back and pleaded for a few minutes' grace—they were "so staring wide-awake." But to-night they needed no urging to go to their rooms at the stroke of the gong, and by half-past nine o'clock the only lights burning in the building were those in the principal's room in the tower. Even these were extinguished by ten. Perhaps if Miss Duprée had not yielded to her inclination to sleep, and had chosen, instead, to take a quiet survey of the premises, she might have seen six dark figures slip like ghosts past her window along the broad piazza roof, and then, sliding down the inclined plane of the shed, fall upon the soft turf below.

These spectres seemed to be of anything but a fearless nature, and the descent from the shed to the ground was attended by low, stifled exclamations which were quickly and peremptorily silenced by a spirit below who seemed to have the command of the band.

At last the phantoms, six in all, were assembled in the shadow of the shed. Then the leader spoke.

"Now we're safe on terra-cotta," she whispered, "the most dangerous part of the journey is over. All we've got to do now is to run to the boat-house, and if any one makes a noise, why, it's all up with us."

In a few moments they had unlocked the boat-house and, three on a side, were lifting the rather heavy boat from the little wooden wharf and shoving it into the water. Then one after another they crept into their places, and rowed the boat into the wider water.

They floated on until some one suggested that it must be going to rain; the moon was not coming out.

"Rain! Pooh! Look at the stars—as thick as spatter," declared Dorothy. "The moon is all right. It isn't late enough yet. Has any one a watch?"

No one had, and again silence reigned, while a fleeting doubt crossed the minds of the girls if it was so much "fun" after all. But no one dared suggest her doubts to another.

But at last, after what seemed hours of darkness and quiet, some one exclaimed joyously, "Look, girls! There's the moon coming out. Isn't that splendid? And—O girls! isn't that the steamer? that little red light up there?"

With breathless interest all eyes were turned from the first faint gleam of the rising moon to the tiny speck of light that quivered and shook and rose and fell amid the inky blackness beyond. It trembled, paled and shone, then glimmered more steadily than before.

"It *is* the steamer!"

Soon they began to hear the dull pant of the engines and the slapping of the paddle-wheels; and then the steamer loomed above them.

Upon the decks were the gaily uniformed members of Company A, of the First Regiment.

Most of them were very young men indeed. They were leaning over the railing or sauntering leisurely back and forth, all in very good spirits.

"Hullo!" exclaimed one to his companion, straining his eyes to look below. "Say, Chester,

Digitized by Google

isn't that a boat there? It looks as if there were girls in it! There's a female seminary somewhere around this region, if I'm not mistaken."

Just then the girls at the oars sent the little craft straight into the glittering path of the moon, and the light shone on them with direct radiance.

A boyish voice from the steamer's deck called out: "Hello, girls! You came out to welcome us, didn't you? That's nice!"

By this time the railing was crowded with the young cadets, all pushing to the side of the steamer overlooking the little boat, and jostling one another to get a better view of its occupants.

Then there was laughter and shouting from the deck, and calls which the girls would rather not have heard. The older girls turned their backs, but Dorothy looked straight toward the steamer, with the light of the moon shining full upon her face.

The steamer pushed past them, and plowed its way down the lake, leaving the little boat far behind.

After the last bantering voice had died away in the distance, the girls rowed back toward the shore. They dared not chatter about their adventure for fear of being heard; but their minds were full of it, and they scarcely noticed what they were doing as they stowed the boat away in its place.

Then came the serious business of getting back to their rooms without rousing the house. It proved to be much more difficult to ascend the shed roof than it had been to descend, and there were many smothered screams and whispered rebukes as the girls clambered up to grasp the overhanging eaves, upheld by friendly hands from below.

At last all were up but Dorothy. Then came the question how she should contrive to gain a hold above, with no one to push her from below.

"Sh! I'll manage somehow. You go on ahead and slip in and clear the track," she whispered, breathlessly. The girls, only too glad to obey, left her to manage as best she might.

They were more successful in their efforts than she, for they were safe within the seminary walls before she had even discovered the barrel upon which she finally stood, and which enabled her to grasp the uneven shingles and begin her slow ascent of the shed roof.

But her progress met with a sudden check; and try as she would, she could not proceed farther. She felt that the hindrance came from her skirt. It was as if some strong hand detained her.

She turned her head and looked behind; but she was alone in the night, with only the stars and moon above her. She gave several energetic tugs to free herself, but to no avail.

"It is my horrid skirt," she thought. "Now if I can't get away, I'll be in a pretty pickle. The embroidery has caught in a shingle, and here I am fast and tight, and can't get loose. Come off, you old thing!"

She gave a quick and strong upward pull.

Certainly! Now the thing was done. A great white fragment of her flounce had torn away, and hung fluttering in the moonlight.

"That will tell the whole story to-morrow morning," thought Dorothy. "If Miss Lorimer happens to look out of her window she'll see it, and then—oh, I must get it!"

She made a clutch behind her at the flapping cloth. Of course she could not reach it, and in the midst of her endeavors she heard a sound at the window above.

It frightened her, and she frantically clutched at the fragment just beyond her reach.

Another sound came from above.

Dorothy waited until all was quiet again. Then she hitched herself back toward the object of her quest, and succeeded in reaching it. She grasped it firmly and gave it a sudden wrench.

Alas! it gave way all too easily. Dorothy's arm twisted beneath her, and a pang like the piercing of a sharp blade shot through her wrist to her elbow.

For a moment she was dumb with pain, and then she uttered a little sob.

"Oh! what shall I do?" she gasped. "What *is* this dreadful ache? It makes me sick to move my arm! How can I get up now? If only the girls had stayed to help me! But they're all in bed by this time."

The poor child was writhing in agony, but she made no sound, bravely smothering her desire to cry, and trying to crawl up the incline by the help of her uninjured arm.

She never knew how long a time it took to scramble up to the piazza roof, but she was so faint and weak when she reached it that she could scarcely stand, and had to crouch down for a moment to gain strength to go on.

The pain in her arm grew severer each moment, and she assured herself that if she did not get to her room at once she would never be able to reach it without assistance. So she dragged herself to the window and climbed through, setting her teeth, and with great beads of agony rising on her forehead.

At last, after noiselessly closing the sash, she made her way down the dark corridor and to her own room. Once there she flung herself upon her bed and, burying her face in the pillow, cried as if her heart would break.

Oh, the pain! the pain! It was so sharp! She could think of nothing but her agony. No thought of her disobedience of the rules crossed her mind. She had no room for regret of any sort yet in her heart, except for her hurt.

Then with a sudden shock came the thought, How could she account for her injury in the morning?

JULIE M. LIPPMANN.

For the Companion.

THE DUCKING OF MR. DICK.

A stranger, looking on from the background, would have been greatly amused to see the expressions on the faces of the boys and girls of the Rose Lane school when they saw for the first time the new teacher, Mr. Timothy Dick, approaching.

It was almost nine o'clock before he came, and some of the larger boys had been saying that they "guessed he had been scared out."

"Mebbe he won't be so slow going away as he is getting here," said Nat Brace, a surly-looking, untidy boy about seventeen years old.

It was a neat little new country schoolhouse in the first freshness and spotlessness of snowy white paint. The blinds were painted grass green, and there were green paper shades at the windows—an unusual thing in a country schoolhouse in that neighborhood.

The luxury of blinds in the windows of a schoolhouse was sharply ridiculed by several slow-going people in the district.

"Next thing you know they'll be puttin' down flowered carpets and sofies for them to lop down on that gits too lazy to set up," said old Mrs. Joyce.

"Laws-a-massy!" said Mrs. Jasper, who had visited the new schoolhouse with Mrs. Joyce to see how the tax money was being squandered. "Ain't you heerd what all this style is being put on for?"

"Of course I've heerd, Sally Jasper, and it's all nonsense, as you'll see 'fore you're six months older. Now the idear, Sally Jasper, the very *idear*, that the scholars air goin' to behave any better in a schoolhouse all finified up like that than they would in the old house! Jest as if white paint and green shetters and fancy school furniture, and all that, had anything to do with a boy's moral nature!"

"It's all Wesley Redding's doings," replied Mrs. Jasper. "He sticks up for it that the scholars air going to act accordin' to their surroundin's, and if they have to set in a dirty, tumble-down old schoolhouse, with the plasterin' half off'n the walls, the stove all rusted out, and with old benches for seats and no place to put a cap or a shawl, exceptin' to set on 'em—he says, Wesley Redding does, that boys and girls air bound to be slipshod and even sassy theirselves! From the day he was 'lected d'rector of the deestrict, he fit for a new house; and now we'll see how his theory works."

Wesley Redding, school director, did believe that children were influenced much by their surroundings; and he had long declared that the dreary, dirty, tumble-down old schoolhouse was in part, at least, the cause of the bad reputation the school had earned.

The new house stood on a gentle rise at one end of the long Rose Lane, a grassy rural thoroughfare, sweet with the scent and bright with the delicate pink of wild roses blooming in almost every fence corner in their season.

But the roses had fallen, and the yellow leaves of the bushes betokened frost and snow when young Mr. Timothy Dick walked up Rose Lane for the first time, one bright but slightly chilly October day.

Little Pliny Perkins had climbed to the top of a partly leafless tree, and was the first to see the new teacher turn from the main highway into the lane.

"He's a-comin'! he's a-comin'!" shrieked Pliny.

When the teacher left the Lane and walked up the well-worn path toward the schoolhouse, the curious eyes of the forty or more boys and girls, of all sizes and ages, beheld for the first time a slightly built, smooth-faced and very trim young man, who came walking lightly up the path, and greeted them cordially.

"Good-morning," he said, with a smile. "I have almost set you a bad example by being late myself on the first day of school, but I have walked all the way from my home in Wayne, which you know is nearly six miles from here, and Mr. Redding detained me for several minutes when I was passing his house. But there are still three or four minutes before nine o'clock; so no one can really say that I am late. Can he, my little man?"

He put his hand lightly on the tangled red curls of little Sammy Pike's head as he spoke. Sammy, quite overcome by this unexpected attention, blushed scarlet and lisped out:

"No, thir."

"I am here just in time to open the school," the teacher went on, "and we will go right in and get to work."

He stepped to the door of the schoolroom, as he spoke, and said, in a pleasant tone:

"Well, well! What a bright, pretty schoolroom! We ought to make famous progress in such a room as this. And we must keep it just as tidy as it is now. Who brought that handsome bouquet of autumn flowers for my desk?"

"Thally Redding, thir," volunteered Sammy.

"You were very kind and thoughtful, Sally, although I do not yet know which one of you is Sally Redding."

"That girl in the red dreth and her hair in curlth ith Thally," said Sammy.

Mr. Dick was a marked exception to many of the former teachers of the school in the exceeding tidiness of his appearance.

Nat Brace glanced contemptuously toward some of his companions and whispered, "He's a reg'lar dude!"

When Mr. Dick took out his handkerchief, and lightly brushed the dust from his polished boots and from the bottom of his trousers before entering the house, Nat whispered behind his hand to Bryan Thayer, "Just look at Miss Nancy!"

"Miss Nancy's" sense of hearing was acute. He heard Nat's whisper, but did not show in any sign that he had heard it.

Mr. Dick surprised the school by making no threats, and laying down no law to the school in his opening talk. This was an unheard of thing in the Rose Lane school. The surly, ignorant man who had taught the school during the previous winter had brought with him on the first day a long, keen rod cut from a hickory sapling. Marching defiantly into the old schoolhouse, this teacher had given the desk several resounding whacks with the rod, and had said:

"Now that's what you'll all get if you don't mind your books and be good! No whispering, no sticking pins into each other, nothing but to study and behave yourselves! Mind that, or you'll get this rod on your backs!"

A new order of things seemed to be coming in with the new schoolhouse and this trim, gentle-voiced young teacher.

"I know his game," said Bryan Thayer to several of the other large boys during the first recess. "He's going to try the soft-soldering game on us."

"His nice little meachin', cityfied ways may work with the girls and the small boys, but they won't go down with me," said Nat Brace. "It takes muscle to fetch me to terms."

"Muscle!" said Phineas Joyce, derisively. "All the muscle *he's* got wouldn't hurt a fly."

"Well, he'd better get some up before the first snow comes, or some of the ten-year-old boys will wash his face for him," said Nat.

"Yes, and you might get your own face washed about that time, Nat Brace," said Sally Redding. "You boys will see what you'll get yet. He isn't afraid of you, and I know it. Anyway, you ought to be ashamed of yourselves if you go to making trouble after the gentlemanly way he's treated us, and when we have such a lovely new schoolhouse."

A shout of derision greeted this speech.

"I tell you what I'm going to do, boys," said Nat Brace; "I'm going to find out what he's good for. I'll haul out my jackknife and go to whittlin' the new desk right in school, and see what he does!"

Ten minutes after the school was called to order, Mr. Dick, who was sitting at his desk with a first reader class before him, tapped the floor lightly with his foot and said, pleasantly:

"This won't do, this won't do at all! Whittling these new desks! That cannot be permitted. What's your name, sir?"

His hand was extended toward Nat Brace. There was no anger in his tones.

"Nat Brace!" the boy called out, doggedly.

The teacher stopped at Nat's desk, and held out his hand.

"Well, Nat," he said, "you may give me your knife for the present, and you may pay the school committee for the damage you have done to the property of the district."

Never in all his unruly, rebellious career had Nat Brace been approached in this cool manner. Never had a teacher taken up one of Nat's gauntlets with a smile, and no trace of furious anger; and Mr. Dick's smile won from Nat a half-dazed, half-ashamed sort of an obedience before the boy really knew that he was obeying.

The large boys attended school irregularly at first. Farm duties kept them at home; but by the first of December all had begun to come every day.

By this time Mr. Dick had won the respect and even the affection of the other pupils. It had also been proved that Mr. Redding's theory was not groundless. Visitors to the school not only remarked the neat appearance of the room, the desks and the pupils, but perceived a decided improvement in the children's manners.

There was hardly a sign of rebellion on the part of the pupils until Phineas Joyce, Nat Brace, Bryan Thayer and Hiram Beal began to attend regularly. These four large boys had had the unenviable honor of barring out, ducking and in other ways defying and maltreating half of the teachers who had tried to teach the Rose Lane school during the past four years.

Their rude and brutal tendencies were fostered by their home associations and surroundings, and a lack of anything like training. They were not to be easily won over to the new order of things in the school.

Like Nat Brace, they wanted to see an exhibition of young Mr. Dick's "muscle," and they had a profound contempt for his apparent lack of it.

These four boys walked to school together one frosty morning in November. They intended to go to school regularly now, and it was the first day they had all been in attendance.

They felt that it was a fitting time to "let little Miss Nancy know who was boss."

Various methods of imparting this information to Mr. Dick were discussed. Just as they came to Lowrie's Pond, Nat Brace struck the palms of his hands together, and said, gleefully:

"I have it, boys; let's give him a ducking! The water's ice-cold now, and I tell you it would take the starch right out of him to souse him under a few times."

"Yes, and it'd stop all this talk about their having got a teacher at last who could keep us in tow," said Hiram Beal. "I'm in for the ducking."

"Well, I guess I am, too," said Phin Joyce; "only I thought we'd kind o' cut up a few of our little didos first, and sort o' rasp him up 'fore we barred him out or ducked him, or tried anything like that."

"Oh, let's do it to-day!" cried Nat Brace. "Strike while the iron's hot, says I."

"While the water's cold, you'd bett[illegible] say," said Phineas. "He'll want something hot after on."

"Let's grab him at recess time this morning, and walk him over here to the pond and pitch him in."

"All right—say we do!"

The pond, which was a large one, was not more than three or four hundred yards from the schoolhouse. The water was six feet deep at the very bank of a point nearest the house, and this was the place chosen by the boys for the ducking of the poor, unsuspecting Mr. Dick.

His surprise was all the greater because he had no suspicion of what was in store for him until the boys approached him.

They had, in accordance with a previous agreement, been meek and obedient all the morning. Mr. Dick had been pleased with their conduct, and glad to note that all was so calm in a quarter from which he had reason to expect rebellion.

He was standing on the platform watching some of the small boys playing leap-frog, when Bryan Thayer stepped up and said, with a leer:

"We want you, Mister!"

"You want me?"

"Yes, we do. You come along with us."

Mr. Dick's face flushed at the boy's insolent tone and manner, but his voice was steady as he asked, "What do you want of me?"

"You come along and you'll find out," said Bryan, and Nat Brace called out, jeeringly:

"We might as well tell you right now that we're going to duck you!"

"Duck me?"

"Yes, sir; we're going to pitch you into Lowrie's Pond, yonder."

"Oh, you are?" said Mr. Dick. He was pale instead of crimson now, and his eyes shone, but his voice was steady.

"Yes, we air!" said Phineas Joyce. "And if you don't come along peaceably, we'll fetch you. We mean business!"

Mr. Dick glanced at the boys in silence for a moment. The other pupils had gathered around, breathless with excitement. Some of the girls began to cry. Little Sammy Pike, who had just been saying that he "jutht loved Mithter Dick," ran and hid in the woodshed, weeping.

Sally Redding was aflame with indignation.

"*Shame on you!*" she cried, pointing her finger scornfully at the four boys. "You're a pack of great cowardly bullies—that's what you are! You're four to one, and you've waited until there were four of you, because you didn't dare touch the teacher single-handed. Don't you go a step, Mr. Dick. We girls will fight for you!"

She interposed her small, slender self between the teacher and his assailants, and stood there with clenched fists and flashing eyes.

The boys sneered and jeered, although some of them had the grace to wince and flush at Sally's truthful words. But Mr. Dick laid his hand lightly on Sally's shoulder and said, with a smile:

"You are a real little Trojan maiden, but I cannot have you waging war for me. I think it best to yield gracefully, if I must yield. Now I will go with you, boys, but don't you lay a hand on me to force me into going. I will go quietly along without giving you that trouble."

He started forward.

"Don't ye try to run away," said Phineas Joyce, "for we can outrun ye any day."

"I run away from you!" said the teacher, in a voice and with a look that made Phineas turn scarlet and hang back to escape that strange, contemptuous, searching look in the teacher's eyes. The cowardly boy would have fled had he been alone.

With the exception of Sammy Pike who, peeping from between the cracks in the woodshed, wept aloud, the whole school followed the teacher and the boys to the pond, many of the smaller children trembling and sobbing.

"You will kindly allow me to take off my coat, that I may have at least one dry garment to put on when I come out?" said Mr. Dick, when they stood on the very edge of the bank of the pond.

"Off with it, then," said Hiram Beal.

The other pupils had fallen back, and the teacher and the four boys stood alone on the bank.

"Thank you," said Mr. Dick, gently, as he threw off the coat, took a long breath, stood erect, and added:

"Now I am ready."

A strange thing happened then. The children saw it with staring, wondering eyes and speechless lips.

Bryan Thayer and Nat Brace had been standing directly in front of Mr. Dick. Now, with the word "ready," came two dull, striking sounds, and Nat and Bryan went reeling and yelling backward into the water!

Hiram Beal stood at the teacher's right. Mr. Dick turned suddenly; his right arm shot out swiftly in his white shirt-sleeve, and the admiring small boys saw the muscle swell and rise as Hiram fell to the ground and was dragged to the pond and rolled in by the teacher.

Phineas Joyce turned to run away, but Sally Redding clung to his coat-tail as he passed her, and held him back.

He would have struck her, but Mr. Dick had him by the collar and dragged him back, while he cried:

"Oh, please don't, teacher! It's all Nat Brace's fault! He put us up to it. I—I—o-o-h!"

In went Phineas with a mighty splash.

Nat and Bryan were climbing up the steep bank, six feet high here, with chattering teeth, but Mr. Dick sent them both back into the water. Then he said:

"Now, boys, I have heard that you have said that it would take 'muscle' to rule you. Very well; here is muscle for you."

He bared his white arms to the shoulder as he spoke, clenched his fists, and bent his arms back and forth at the elbow. There was muscle indeed for them, and trained muscle at that.

"Now," said Mr. Dick, as he rolled down his sleeves, "I sincerely hope that this is the last exhibition I shall have to make of my muscular ability in any way. You boys may come out of that water and go home and get some dry clothes."

The memory of this lesson, coupled with something Phineas Joyce read a day or two afterward in a Wayne paper and told to his comrades, greatly increased their respect and admiration for Mr. Dick.

Phineas had read that at a certain athletic exhibition recently given in Wayne, Mr. Timothy Dick had carried off all of the honors, and that he had won the victory in a hotly contested boat-race.

It was not long before the boys came to admire

Digitized by Google

and respect Mr. Dick for other reasons than his unexpected and superior muscular powers. His coming to Rose Lane marked the beginning of a new and vastly better epoch in the history of that school.

NEPIGON.

In Six Chapters.—Chapter II.

Trouting on Big Lakes.

"Nepigon is the next station."

It was the third day of our journey by the new Canadian Pacific Railway; and all the morning the train had been skirting the north shore of Lake Superior; rounding the base of lofty cliffs, diving into tunnels and crossing rocky peninsulas, again to emerge upon the shore and fly over high viaducts and trestles.

At Coldwell we caught a glimpse, for a moment, between high crags, of the great lake dotted with the white sails of fishing-boats. At Jackfish there are startling trestles, and a little to the eastward of these the line threads its way around a stupendous precipice, or rather clings to the mid-height of it. So nearly perpendicular is it that a passenger may lean out from the car platform and look down into the green-tinted water, breaking in ocean-like waves on the rocks, hundreds of feet below.

"Nepigon!"

The train rumbled out upon a lofty iron bridge, beneath which we saw the azure and green water of a large, tumultuous river.

"The Nepigon River!" cried Dick. "Isn't it a noble stream? The greatest trout river in America, they all say!"

It is a pretty little station in the pine woods at which the train stopped a few moments later, with a small but comfortable hotel close at hand, where we established ourselves for the afternoon and night; that is, until we could engage guides, hire canoes of the Hudson Bay Company's agent at the trading post of Red Rock, half a mile below the station, and lay in supplies at the "general store" hard by for our camping-out trip up the river.

The Nepigon is the head-waters of the St. Lawrence River; that is to say, the northwesterly continuation of it beyond Lake Superior. Its clear waters are of the same green color as the Niagara and the upper St. Lawrence.

It is the outlet of Lake Nepigon, forty miles north of Lake Superior. Nepigon is, perhaps, entitled to be called the sixth of the "great lakes," for recent surveys make it nearly or quite six hundred miles in circumference.

Nepigon River abounds in rapids. The scenery along its banks is picturesque, even grand; and at four or five points the channel expands into little lakes which have been somewhat whimsically named "Helen," "Jessie," "Maria," "Emma" and "Hannah."

The famous trout pools lie at the foot of the river rapids, beginning at Nepigon Falls, where the river issues from Lake Nepigon.

Fortunately for us, several of the best of the fifteen or twenty guides had returned from a trip up the river the evening before. Among them were John Watt, a Canadian of Scotch descent; Wen-a-goosh, an Ojibway Indian who usually accompanies Watt; "Joe-Eskimo" and Wap-a-sheesh-wock-way-a,—Marten-In-the-Bush,—two other Ojibways.

The question arose whether we could make the trip in two canoes, or should be obliged to hire three, with two more boatmen. By taking large canoes and allowing a little extra time on the portages around the rapids, the guides believed that we should be able to go in two, provided the human freight for each did not exceed five hundred pounds.

By casting up our avoirdupois, and finding that Lee weighed only seventy-six pounds and three-quarters, we found that this was practicable.

While engaged in settling the question of weight and purchasing pork, hardtack, flour and other supplies, including "silver doctors," "grizzly kings," "green drakes," "fairies," "coachmen," "yellow hackles" and other flies which the Nepigon trout are supposed to affect, another and less agreeable discovery was made—nothing less, in fact, than that every fisherman on the Nepigon must have a "permit to angle" from the Canadian Fishery Overseer, and that the fee is five dollars.

"Seven times five are thirty-five!" muttered Alton. "Why, we can't stand that!"

He and Dick went hastily to consult with Professor William. It was a serious matter, for our guides, canoes and supplies would cost us a good deal.

However, the fishery overseer made no charge for the ladies or for Lee, and our fishing privilege cost us only fifteen dollars.

We were called for an early breakfast at six o'clock next morning. At seven, John, Wen-a-goosh, and the two other guides had promised to have the canoes packed and ready for a start from the south end of Lake Helen, just above the railway bridge and rapids.

Thither we made our way, well laden with rods, guns and packs, just as the sun was looking over the tops of the pine woods. It was chilly, and grass, weeds and bushes were glistening with the dew. Thanks to a good outfit in wool and rubber, from toe to crown, we cared nothing for wet, and could withstand even winter cold.

Descending the path past the Protestant Mission to the canoe-landing on Lake Helen, we found both canoes waiting for us—genuine birch canoes, large and well-ribbed with cedar. From long experience these Nepigon guides have become justly famous for the skill and care with which they manage their canoes and transport their passengers.

Teacher Sarah, Lee, Alton and Dick embarked in the larger of the two canoes, in charge of John and Wen-a-goosh; while Professor William, Lucia and Thea took passage with Joe-Eskimo and Wap-a-sheesh-woch-way-a, a name which was soon shortened by us to Wap-a-sheesh.

Four miles above the point of embarkation, the river flows into the lake, on the left hand or west shore, through a vast bed of reeds. Entering the channel, we passed an Ojibway village, made up of lodges, log-cabins and a few frame houses. In front of the chief's house were two high dog-pens, in which the dogs, used for sledging in winter, are shut to keep them out of mischief.

These are the last habitations on the Nepigon. Beyond the Indian village all is wilderness.

At half-past eleven we came in sight of Alexander Portage, the first white-foaming rapid, twelve miles up the river. Here we had intended to camp for the remainder of the day, and fish in the pools while the guides carried the canoes and luggage about two miles across to Lake Jessie, above the rapids.

But another party was in advance of us. We saw four white tents on the low bluff along the right bank.

"I think we would do better to go on to Split Rock," John said. "We shall make it by five o'clock, if you're not too tired."

"We ought not to get tired if you do not, John," said Teacher Sarah, "since you have all the hard work to do."

But the portage occupied two hours. To expedite matters, Alton, Dick and Professor William each took a light pack, and even Teacher Sarah and the girls carried their own satchels.

Reëmbarking after a hasty lunch at the head of the portage, we paddled up Lake Jessie, five miles, and then three miles through Lake Maria.

The scenery grows finer and more grand as the head of this pretty lake is reached. The mountains and crags are loftier and wilder here, and two miles farther on, the river is seen to emerge, in another foaming rapid, through a great gorge, the enclosing walls of which are from eight hundred to a thousand feet in height.

"Only look at that huge perpendicular rock in the midst of the rapid!" Dick exclaimed. "It is seventy or eighty feet high, certainly, and looks like a solid block, with pines on the top."

"That is Split Rock," remarked John.

"Split Rock!" exclaimed Alton, "it is the river that is split by the rock."

"Well, Split Rock or Split River, it looks like good fishing," said Dick. "I hope to taste Nepigon trout for my dinner."

The canoes were paddled into the little bay on the left shore at the foot of the rapids.

"Ten minutes past five," said John. "Now all go fishing. We'll make camp and get dinner."

There was a hasty preparation of rods, reels and flies. The girls, as well as the boys, and even Teacher Sarah, seemed to be seized with a sudden and great desire to fish.

Joe-Eskimo set Professor William and Dick across the pool at the foot of the rapids, in one of the canoes. They had chosen to try their luck on the right of the Rock, where the greater body of water pours down; but Alton and the others selected the less tumultuous cascade on the left side.

There is a path along the rapid on this side, and for at least a quarter of a mile there are foaming pools within reach of the rod.

Standing on a favoring rock, Alton dropped a "yellow hackle" far out upon the swirling eddy. But none of the others stopped to watch him.

Thea and Lucia, each of whom had a light rod, had run along the path, eagerly looking for a good place to make a cast. Lee, too, his new rod in his hand, had put on a gay white and red fly, and was peering along the shore rocks for a good stand, when, more thoughtful than any of the others, he reflected that Teacher Sarah alone was without a rod.

Instantly the native generosity of our "little man" came out. Hurrying back along the path, he asked her, as a favor, to take the new rod and show him how to make the first cast.

Teacher Sarah, laughing, took the rod and gave the fly a rather clumsy swing out upon the pool. But at her second cast there was a sudden splash, followed by the whirr of the new reel. A trout had risen to the fly and hooked himself.

"Reel in! reel in!" cried Lee. Full of excitement, he ran down to the place where Alton stood to get the scoop-net. Alton came running back with him, net in hand, to assist at the capture.

The trout tugged at the rod, and darted alternately up and down the pool.

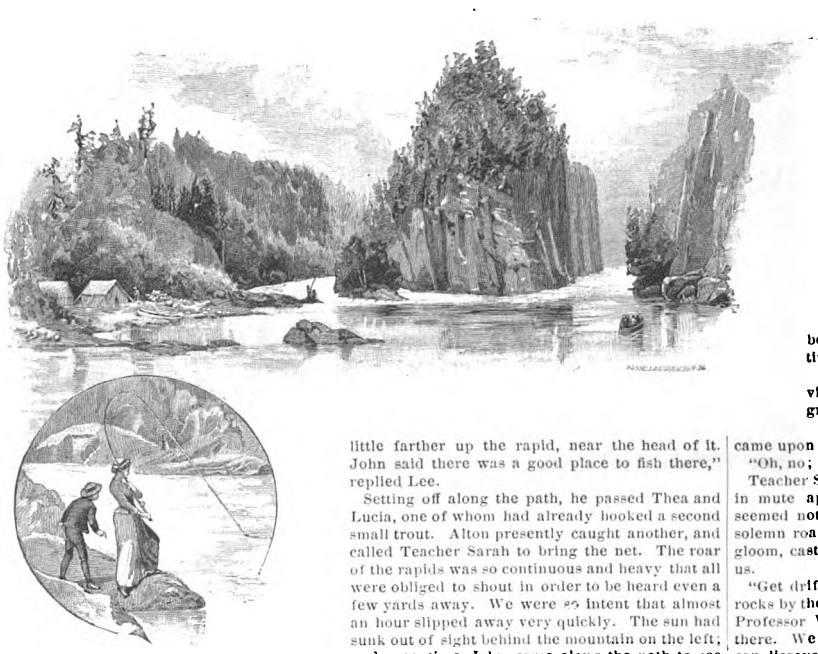
"Reel in every time he turns!" cried Alton. "Don't let him get all your line out. Does he pull hard?"

"Pretty hard," replied Teacher Sarah.

"He's a good one," said Alton. "Reel in! reel in!"

The trout made a good fight, but he was tired out, at last, and was gradually drawn into shoaler water, near the foot of the rocks. Then with a dextrous scoop of the net, Alton transferred the struggling trout from the water to the path.

"Good enough!" shouted Lee. "A two-pounder, sure! Who says that isn't a lucky rod?"



"It must be," replied Teacher Sarah, in a glow from the unwonted exercise and excitement. "A rod that I can catch a trout with must be lucky!"

Meantime, suppressed outcries were heard from Thea and Lucia a little way above. Thea had hooked a trout—a one-pounder—which, after a lively struggle, she landed without the net.

Alton, too, hooked one about as large; and almost at the same moment Lucia caught a somewhat smaller fish.

"Now, Lee, let's see what you can do," said Teacher Sarah.

"I think I shall keep on the same fly and go a little farther up the rapid, near the head of it. John said there was a good place to fish there," replied Lee.

Setting off along the path, he passed Thea and Lucia, one of whom had already hooked a second small trout. Alton presently caught another, and called Teacher Sarah to bring the net. The roar of the rapids was so continuous and heavy that all were obliged to shout in order to be heard even a few yards away. We were so intent that almost an hour slipped away very quickly. The sun had sunk out of sight behind the mountain on the left; and meantime John came along the path to see what had been caught for dinner.

"The pan is all hot," he said. "We will have these fried in ten minutes. So come down to camp pretty soon now. Joe has gone across after the others."

Interested to know what success Professor William and Dick had met with at the larger rapid, we soon followed John, and found him looking at a trout which Dick was in the act of taking from the canoe.

Joe and Wap-a-sheesh had pitched the tents in pretty situations, a little back from the water; and Wap-a-sheesh was busy cutting fir boughs for bedding, and unstrapping the rolls of blankets. John and Wen-a-goosh were frying trout; and Joe now set up a table of poles and bark, after the guides' custom.

With all the hunger of campers, we gathered around Joe's new table. Wen-a-goosh served potatoes and crisp bacon; and John cried, "Dinner's ready!"

Boxes and a convenient log served for seats. Not till we had sat down did some one say, "Where's Lee?"

"Why, sure enough, where is Lee?" said Teacher Sarah.

"Lee! Lee! where are you? Hurry up. Dinner's ready!" shouted Alton, without rising.

We all supposed that he was close at hand; and John was now dishing out such generous portions of brown trout upon our plates that we had eyes for little else.

"Oh!" murmured Lucia, after a few silent mouthfuls. "Isn't this delicious?"

"Immense!" mumbled Dick. "I tell you, this is worth coming a thousand miles for, isn't it?"

"But where is Lee?" said Teacher Sarah. "I don't like to begin dinner without him."

"Where can he be?" said Professor William, looking up from his platter.

"I saw him go along past us, just as I was catching my second trout," said Lucia.

"I remember his saying that he would go up a little farther, to the head of the rapid; for Joe or John had said there was good fishing up there. That was after I had caught my trout with his rod," said Teacher Sarah.

"Oh, he is up there fishing, then! It is just like him to go away by himself and stay till dark!" cried Alton, a little impatiently. "No use to shout for him, the rapids roar so. I will take a turn up the path and get him."

Setting down his plate rather reluctantly, Alton hurried out of sight.

"I hope he has caught a big trout," Teacher Sarah observed.

"If it were a very big one it might catch Lee," said Thea, laughing. Thereupon Dick began to tell of the struggle he had had with his three-pounder. "Why, at one time he had every foot of my line out; and there's fifty yards of it," said he.

A few minutes later Alton came back, out of breath and alone. "I cannot find him," he said. "He isn't up there. I went to the end of the carry-path, at the canoe-landing. No signs of him there; I called two or three times. He certainly isn't there."

"Didn't he go down the stream instead of up?" asked Professor William.

"No; he certainly went up past us," replied Thea. "I saw him going along the path."

"Has any one seen him since?" asked Professor William.

No one had.

"Could he have gone on farther up the river on this side, beyond the head of the rapids?" asked Professor William.

"Not very well," replied John. "The path ends there on the river. There are high rocks and thick brush above there."

Teacher Sarah had already set down her plate, from growing anxiety. "Oh, dear, I am afraid that he has fallen into the rapids!" she exclaimed. "Why did I let him go up there alone!"

"I thought he seemed to want to go alone," said Alton, "and try his luck by himself a little."

Of course there was now no further pleasure in dinner. The fear that Lee had slipped on the rocks and fallen into the foaming, roaring stream, rendered every one very uncomfortable. All rose and hurried along the path, Teacher Sarah and Thea casting anxious glances at the pools as they followed the others. It took but a minute to reach the end of the path, where the arrowy current bends around a projecting ledge, and goes foaming down to the first of the pools.

"Ah!" cried Professor William, "if he slipped off that ledge nothing could save him!"

Dick and Alton began to shout. Thea and Teacher Sarah climbed over rocks and amidst the thick cedar brush, along the margin of the rapids, scanning the swirling pools for some trace—his hat, or his rod.

Dusk had already fallen in the gorge; but for half an hour or more we searched in great anxiety.

Joe and Wen-a-goosh meantime had gone down the river, past the crag below our camp; but returning after a time, they joined us.

John, who at first had taken a light view of Lee's absence, began to look grave.

"It is not likely that a bear or wolves came upon Lee, is it?" Dick said to him.

"Oh, no; it's the river," replied John.

Teacher Sarah and the girls clasped their hands in mute appeal from our helplessness. There seemed nothing that we could do; and the deep, solemn roar of the mighty flood, in the gathering gloom, cast a chilling sense of hopelessness upon us.

"Get driftwood, John, and kindle a fire on the rocks by the great pool down near our camp," said Professor William. "Make all the light you can there. We will go out in the canoes and see if we can discover anything floating in the pool."

C. A. STEPHENS.

(To be continued.)

For the Companion.

THE GIANT OF CREATION.

I never was more utterly unprepared for a sight than when I once walked through the flapping entrance of a tent which covered the dead body of a mighty whale. I had many partially formed ideas as to what the creature would look like; but once under the canvas, these impressions gave way to genuine surprise as I viewed the mass before me.

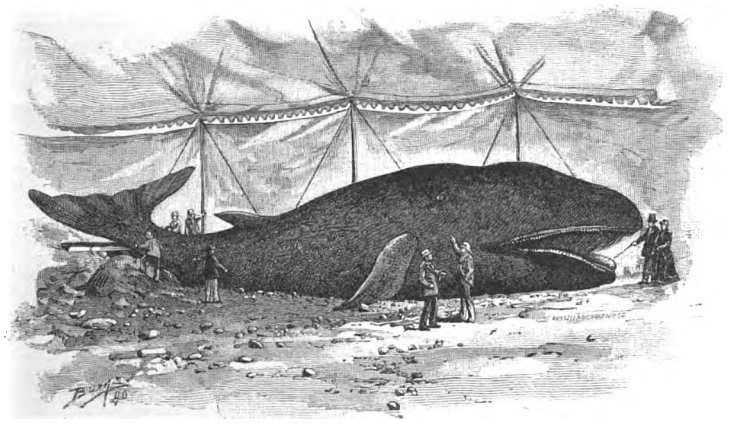
It looked like the old hulk of a wrecked pirate—black, dismal and ready to fall apart but for the strong wooden supports which kept the heavy timbers in place.

"So this is a whale, is it?" I said to myself, as I began, in a somewhat bewildered state of mind, to make a sketch of it.

Of one thing I was convinced: the part of the animal I was sketching was the head. Surely the cavern in front must be the mouth, for there was the immense tongue in it. There, too, were the ponderous lower jaws, and a third of the animal's length from his head.

From the rear of the immense flukes we had an excellent view of the animal. Here we could see the whole of the tail, with its truly graceful sweep—a combination of strength and beauty, twenty feet across and set transversely on the body, to move up and down instead of from side to side.

Still standing by the tail, and running my eye up along the back to the head, I marvelled at the graceful lines. In fact, I have rarely seen anything more beautiful in form. The clumsiness that seemed to characterize the front part was not to be seen here—nothing but long, graceful curves.



We went forward again to look at the mouth, stopping on the way to examine the ear, which was situated a little back of the eye, and was so small as to be almost imperceptible. It was not more than one-eighth of an inch in diameter.

Once more in front, the talkative old whaler explained the different parts of the head to me. The dolphin-like nose, he said, was called the "bonnet;" and depending from the long upper jaws I saw the whalebone or baleen, arranged in a series of more than six hundred plates, each ten or twelve feet in length. These were firm and compact at the point of insertion into the jaw, but were split into innumerable divisions toward the

Digitized by Google

extremities, and ended in a deep, rough fringe, giving to the whole a worn-out appearance.

This whalebone forms a natural sieve for the whale, as it is through these plates that the animal forces out the water which has been taken in with its food. The baleen is so finely put together that the jelly-fishes and mollusks cannot

A Whale Under Cover.

pass through the interstices, and so are retained in the mouth, to be swallowed at leisure.

The fact that the whale must live on little jelly-fishes seems very absurd when one looks at its enormous mouth, large enough to hold seven or eight men without crowding; but in most whales the throat is not more than two inches in width. "A penny loaf would choke it," the sailors say.

My attention was now given to the large, dull red tongue which almost filled the mouth. In form it was like a feather-bed, and it was almost as soft, as I realized when the old sailor jumped upon it; for he fairly sank down into the bulky mass.

It must have been nearly filled with oil, for I learned afterward that it yielded fifteen barrels.

Perhaps it is fortunate that such a smooth-tongued monster has no voice, though some naturalists aver that the whale does make a bellowing sound. But this is not well authenticated.

Very interesting were the movements of the lower jaws, and especially of the enormous lips. When feeding, the whale rushes through the water with tremendous velocity, lowering its lips; millions of jelly-fishes, shrimps, crabs, and other small marine creatures are thus collected in its gigantic mouth.

The whale does not confine itself to the surface of the waters for its food, but descends to the greatest depths in its search. If a piece of wood were sunk so deep, it would be so thoroughly saturated that it could not float. The whale must have an enormous motive power to descend to depths where the pressure is so great.

Such a power would not be surprising in the case of a fish; but the whale, it must be borne in mind, is a mammal, not a fish. As a mammal, it must breathe, and it would surely drown if it remained under water more than a certain length of time.

It is forced to come to the surface, where it makes several spoutings from the blow-holes or nostrils. These spoutings consist, for the most part, of vapor mixed with water, and they ascend to a considerable height. One whale which I saw at sea some years ago must have spouted to a height of twenty feet.

The blow-holes are at the top of the head, enabling the whale to breathe with very little exposure of its body. I could see only a long black mass on the water, almost sunken out of sight, and did not know what it was until the spouting began with great violence.

After a little time the whale shot upward into the air, and again plunging under, sent waves splashing in every direction. I saw what was apparently the same whale again, thirty minutes later.

Whales have been known to stay below nearly an hour, but thirty minutes is generally the limit.

They are enabled to remain under water so long by a method of respiration peculiar to themselves. In the interior of the chest is a large mass of vessels filled with arterial blood, forming a sort of reservoir. This blood is charged with oxygen during the brief period that is occupied in the spoutings, and so furnishes the animal with a continued fresh supply of blood for its circulation while under water.

As soon as the reservoir is exhausted, the animal returns to the surface; the blood is aërated once more, and the whale is ready to go on another expedition below.

As interesting as a stranded whale is, it gives one but little idea of the giant that goes plunging through the seas. To appreciate it thoroughly one must see it in its native element, roaming over the wild ocean on its many journeyings, now shooting gracefully through the air as if in play, now diving into the waves and with thunderous roar throwing the white fountains of foam upward.

One must see it in anger after it has been repeatedly wounded by harpoons, when, infuriated beyond all measure, it rushes upon men and boats, hurling them high into the air with a stroke of its powerful tail.

One must see it when the ocean is a blaze of phosphorescent fire, rushing through the liquid flame, scattering it into the most delightfully scintillated forms with its immense tail, and finally, when leaping high into the black night, attended by myriads of falling stars, producing a display truly meteoric in its splendor.

IRON-WEED.

Red-bronzing in the fierce and fervent heat
Of Western prairies, ruggedly it stands,
A harsh, crisp emblem of the lonely lands,
Where Echo and her sister Silence meet.

ERNEST MCGAFFEY.

GERMAN RULE IN ALSACE-LORRAINE.

About the middle of July M. Laur, a member of the French Chamber of Deputies, asked the Ministry to explain the German restrictions on travel between France and Alsace-Lorraine. The Ministry objected that they could serve no good purpose by complying.

Their journals said that French parliamentary discussion of the matter would probably cause the Germans to enforce their passport regulations more severely. Nevertheless, the Chamber voted to discuss the matter. It was thought the Ministry would resign. But the Deputies decided not to press M. Laur's question; they voted confidence in the Government, and the Ministers retained their places.

In 1888 the German authorities made a rule that no Frenchman should be allowed to enter Alsace-Lorraine without a passport from the French Government. This was because persons calling themselves French commercial travellers and tourists had been acting as spies on German fortifications, and distributing printed matter designed to fan French sentiment in the conquered territory. The Germans demanded passports that they might be enabled to hold the French Government more strictly to account for the proceedings of its travelling subjects.

Most of the persons whose acts were objectionable to the German officials were said to be agents of a Parisian association called the Patriotic League. This was formed for the special purpose of keeping seditious feeling alive in Alsace-Lorraine. In 1889 the League, having become a Boulangist organization, was suppressed by the Republican administration.

It is thought by some that the severity of certain German laws does more than all else to sustain French sentiment in the conquered territory. These laws have to do with education, the French language, and the conscription of men for the army.

All the children are compelled to attend schools from which teaching in French is nearly excluded. The lower classes in the common schools must take all their instruction in German. The higher are allowed to receive instruction in French for about half the list of subjects. Some years ago French could be taught as a subject in the lower classes six hours a week. The time was recently limited to two hours.

Not only have the fifteen deputies from Alsace-Lorraine been reasonably refused liberty to address the German Parliament in French, but the speaking in local assemblies and municipal councils must be in German.

All this is not so great a hardship as it seems at first. About one million four hundred thousand of the people are German-speaking, and only about two hundred and fifty thousand French-speaking. But to force the teaching of German does not seem the best way to make it popular.

The political sentiments of the people are not according to their language. They were and are deeply attached to France, with which they were connected for over two hundred years. In that time the French did not endeavor to force their language arbitrarily on the German-speaking inhabitants. They are, however, like the French, mostly Roman Catholics. That may explain why they prefer Catholic France to Protestant Germany.

Up to 1884 the army conscription was not enforced against French-speaking youths whose fathers had chosen to register themselves as French by nationality. But in that year a new German law ordered that every youth old enough for military duty should be expelled from Alsace-Lorraine unless his father should naturalize as a German, in which case the youth would be "drafted." This was bitterly resented as a violation of a previous law which had induced many French-speaking parents to remain in the provinces.

Up to 1887 the Germans hoped to conciliate the conquered German-speaking people quickly. Therefore, Prince Bismarck made his rule as liberal as he thought he might with safety to the empire. But the voters were not less French, but more so in 1887 than in 1879, when they received self-government in local affairs. This seems to have angered the Emperor William's advisers. They began a more repressive policy after the elections, and have gradually made it stricter till this day.

SORROW.

Sorrow came to him with a pleading face;
He would not rise and bid her enter in;
She seemed to claim in him too large a space,
And he was careless, full of mirth and sin.

So passed she onward. Then it chanced one day,
When Autumn winds in woods were making moan,
Again did gentle Sorrow fare that way,
And heard him mourning, for his love had flown.

So once again she sought him. Reckless, rude,
He bade her enter. Then, with stately mien
She passed, and took possession like a queen,
And seemed not sorrow, but a joy subdued:
Bringing a shadow, yet, as shadows are,
A blessing, cast from some great light afar.

—*The Spectator.*

GRAIN CROPS IN 1891.

In a nation like ours, whose business is largely agricultural, the amount of grain produced in one year is the surest element in the country's prosperity. It is for this reason that the growing crops of 1891 have been watched with peculiar interest.

Months ago it was evident that if the money disturbances of last November were followed by a failure in this season's harvest, the consequent distress would be far-reaching. It would touch every business interest in the land; for the produce of the earth is real wealth, and its failure means a loss to every one—to the people who raise it, to the people who buy it, and to all who do business with either of them.

Fortunately, the bounty of Providence has this year been very generous to us. The weather of the season in the great grain-producing region of the West has been almost exactly what the farmers hoped for. Sometimes too much rain will spoil a growing crop; sometimes a long spell of dry, sunny weather will scorch and burn it. This year the sunshine and the rain have alternated so as to make up almost an ideal season.

No insect pests have made their appearance throughout the grain region. The consequence is that an enormous grain harvest is almost ready for the market. The estimate of government experts and other experienced judges is that unless unforeseen and unexpected disasters prevent, the wheat crop of 1891 will be considerably larger than that of 1884, the largest ever yet gathered in this country, and at least one-fourth as large again as the deficient harvest of 1890.

The corn crop, though perhaps somewhat more in doubt, because later in growing, is likely to come close to that of 1889, the largest on record; and the yield of oats promises to surpass all previous years except the rich harvests of 1888 and 1889.

Several important results would follow such a plentiful harvest. For one thing, the farmers will be better paid for their season's labor than they have been in several years.

It is sometimes the case that even a bountiful harvest will not greatly benefit the farmer. If there is an immense yield of grain all over the world, the world's supply will often be equal to its demand, and so the price of grain will be low.

The farmer may then possibly receive no more money for his whole harvest than he obtained in a bad year, when the crop was small but grain prices unusually high.

This year, however, the wheat crop of Europe will certainly be small, while the fate of the harvest in Russia and India is doubtful. This probably means a heavy demand and good prices. If the farmers have a profitable season, their long discontent, which brought forth the startling Farmers' Alliance agitation, will begin to disappear, and the political results may be most important.

Then, too, when Europe is forced to buy our grain, it will have to pay for it in something that will make our country richer. Probably it will have to send us gold. It has taken from us this spring and summer an enormous amount of gold—not far from seventy million dollars.

Most of this gold was called for, because the European bankers were uneasy over their own financial outlook, and wished to get the hard cash into their safes, even if they had to pay handsomely to obtain it. Some of it went to France on the promise that it should be sent back whenever we should need it.

The result of this, and of our expected plentiful harvest, will be that the United States next winter will be actually the richest country in the world, with almost all the rest of the world in debt to it.

HEROISM.

Recently there died in France a General of the Army of the Republic who had made himself famous by bravery in battle, and by heroic endurance of suffering. He had been wounded in several engagements before he entered, at the head of his regiment,—for he was then a colonel,—the battle of Sedan.

A bomb-shell struck him, exploded, and tore off both his arms. He told the story of what followed in these simple words, without, it will be seen, any reference to his physical suffering:

"I was off my horse, and my arteries were cut. Our army was in retreat. Two soldiers passed and saw me. I was perfectly conscious, and I called the soldiers.

"'Boys,' said I to them, 'come and take my watch and my pocket-book. I should rather they'd go to my countrymen than to Prussians.'

"After they had done so, I asked them to brace me up against the hedge, with my face to the enemy, and then leave me.

"They objected, but I said, 'It will make, perhaps, ten minutes' difference in the length of my life. What does that amount to? Thank you, boys—now run along!'

"They seated me with my back against the hedge, and left me. I was growing weaker; my blood was flowing in abundance. However, the flesh, or the thickening of the blood, seemed presently to stop the arteries. I had no notion of fainting.

"Presently I heard footsteps behind me. It was my two soldiers come back again.

"'We can't leave you so, Colonel,' they said. 'There's an ambulance over there. We're going to carry you to it.'

"In spite of my refusals they picked me up, and finally left me in a little hut. The surgeon came, hastily dressed my wounds, and rode away at a gallop. Then I was forgotten for thirty-six hours; and I did not die. I was fearfully thirsty, and I could not keep off the swarming flies with my stumps.

"At last I was taken away in an ambulance, with six companions picked up on the road. All six of these died, but I did not. I was taken to Belgium, and lay for months in a hospital there, between life and death, and then came back to France."

This man, honored with the rank and title of general, lived more than twenty years amid the praise and admiration of his countrymen. His heroism had well earned them.

But there is another sort of heroism, which meets with no public recognition, and which has not the inspiration of valiant service in the field.

It is the sacrifice of the hopes and prospects of a life to a sense of duty to others. A simple case, which is no doubt paralleled by many others, may be cited.

A recent reunion of a class in one of our colleges was attended by many men who had won some prominence in the world. One or two had distinguished themselves in the Civil War, others in the world of letters or of science, and others in politics, while some had won enviable positions in the professions or in business.

Among the members of the class who attended the reunion was one man who had stood high at college, and had given proof there of excellent ability and of scholarly tastes. What distinction had he won in the thirty years since his graduation?

The distinction of living, most of that time, the life of a simple farmer, and taking care of his father and mother, now grown very aged.

For many years his parents had been dependent upon him, and did not wish to leave their old home. So the son had thrown away all hopes for a brilliant career, and had devoted himself to his parents, and to the hard toil of the farm.

Perhaps it was the knowledge of this fact which caused his classmates to welcome him as he might have been welcomed if he had been a military commander, and had won brilliant victories.

HOT DAY FANCIES.

"When we talk of heat," asked a young lady, suddenly, of a company well provided with palm-leaf fans and soothed by the influence of recent ice-cream, "what do you think of? What place? What time? What scene rises instantly before your fancy?"

Her friends roused themselves to respond to the question, and here are some of their replies:

"A new concrete sidewalk at noon, with the sun beating down on it, and one's heels sinking in, and the heat reflected into one's face, and the air pervaded by the smell of tar."

"The desert, with an exhausted caravan struggling to reach a mirage that hovers on the horizon, but doomed to perish of thirst, as the man and camel whose bleached bones they are passing perished before them. I think it is the remembrance of some picture I saw when I was a child."

"Washing dishes in the kitchen when the mercury stands at ninety out of doors and a hundred and something within, and your hands are all soapsudsy and greasy, so that you can't even lift them to your face to wipe away the perspiration, and you are so tired and cross and miserable that you would cry if you weren't ashamed to."

"The deck of a becalmed yacht, with a glassy sea, and a long, slow roll, and the brass work so hot that it burns the hands; the sun high, the sky cloudless, the sails hanging with not a breath to stir them; the victim prostrate, and deathly sea-sick with no consciousness in the present save of heat and nausea, and no expectation for the future but of probable sunstroke."

"Standing alone in the middle of a wide, hot field

Digitized by Google

flaming with scarlet lilies, and listening to the locusts in the grass."

"Walking along a country road between treeless, barren pastures, with no living thing in sight but an ox-team lurching slowly on its way in a cloud of yellow dust. The time, noon."

"A night in August, when coolness has not come with darkness, and one cannot sleep and can hardly breathe, and it seems as if morning would never break."

There are times when it is too hot to think of anything but the heat. The simple question answered above is one that may turn bring forth some curious replies, and affords a respite from disputes concerning the accuracy of differing thermometers or vain utterances upon the advantages of Arctic exploration.

AN ARTIST'S COSTUME.

Rosa Bonheur's practical but unusual style of dress sometimes surprises the great artist as an unintentional disguise, and leads to odd mistakes as to her identity. Her costume is perfectly suited to the work which is the absorbing interest of her life, and now and then the fact arises that it is not appropriate at all times.

She once returned, after painting all day in the country, to a new house, just as the movers were putting in the last pieces of furniture. Her baggage had already arrived, and wore her usual costume for painting out of doors, a blouse, trousers and stout shoes. The men were carrying something upstairs, and she sat down to wait until the way was clear.

One of the men looked up and saw, as they thought, a young man in workman's dress coolly watching their efforts, and cried:

"Only look at that lazy gentleman! Give him an easy chair! Here, move your feet, you gentleman of leisure, and lend a hand!"

Rosa laughed, and hastened to help them carry a heavy dressing-case. But her strength was not equal to her good-will.

"What an absurd boy! He hasn't the strength of a flea! Get out of the way, young man!" cried the movers in disgust.

When, a little later, they saw Mademoiselle Bonheur, her working clothes exchanged for a gown, giving orders in the room where they were at work, they realized the situation, and hastened to beg her pardon. The artist convinced them that she was not offended by giving them an extra fee.

One evening, in a fit of absent-mindedness, having paloted until the carriage which her friends sent for her was at the door, Mademoiselle Bonheur went to a public entertainment in a paint and oil-stained gown, and old slippers.

An elegantly dressed man who sat next her went to the manager to complain because such a common person was admitted to that part of the house.

"Your name, if you please?" said the manager.

"Why?"

"I will go to the lady, Mademoiselle Rosa Bonheur, and ask her in your name to leave the theatre or change her seat."

The exquisite waited long enough to beseech the manager to do nothing of the kind, and beat a mortified retreat.

NOT TO BE TAUGHT.

Many a man who has reached the topmost round in his profession finds himself absolutely unable to communicate the secret of greatness to another.

William Hunt, the celebrated artist, found it impossible to explain his manner of working so that others could benefit by his experience.

One day a lady who pointed fruit very successfully obtained an introduction to him for the purpose of asking his advice in regard to her work. She had no doubt that he could formulate some principle, or volunteer such scientific information as would be of use to her.

To her astonishment, Mr. Hunt told her that he could do nothing of the kind, adding quietly:

"The only thing you can do is to *forge it out.*"

She then asked if he knew Mr. ——, a successful artist.

"To be sure I do," said he. "Of course I do. Well, he has forged it out. We must all forge it out. There is no other way than forging it out."

He well knew the process of such independent effort, for he was one of the men who,

> While their companions slept,
> Were toiling upward in the night,

His own patience was almost boundless, and it would never have occurred to him that any lover of good work might shrink from making even a bit of seemingly unimportant detail over and over again.

OUR GRAND BUSINESS MEN.

Mr. James B. Colgate, of New York, gives his millions while he lives. He has for many years been the benefactor of the venerable little college at Hamilton, New York, which now calls itself Colgate University. This summer he has given it a round million of dollars.

This kind of munificence is increasing in our country. Not long ago, Mr. Clark founded Clark University in Worcester, Massachusetts, on the million scale. Later, Mr. Rockefeller, of New York, has given a million dollars to Chicago University.

Other of our business men have given smaller sums for like objects. These beneficences mark a new era in the resources of American education. The great English universities were founded in the early ages by immense grants and princely gifts. They had thus the means of always leading in the world's thought, and giving the best instruction any century could offer. But most of our American colleges have had a hard struggle against poverty and insufficient equipment in all their branches.

The donors to the European universities frequently gave all their fortunes, and then retired to the monastery. But these benefactions of whom we are proud can give sums which would have bewildered those old worthies; and after they bestow their millions stay in the world to acquire more, to be used to benefit those less favored than themselves.

These men feel that their great fortunes are a public trust. One man's power to gather a fortune may belong to the world as much as another's power to write an orchestra, or to invent a telephone. Never before could a dollar buy so much knowledge, culture and general happiness as to-day, and our successful business men have opportunities to brighten the world such as no other class possess.

MEETING THE QUEEN.

Weymouth, the old English watering-place, was for some years frequently visited by King George and Queen Charlotte. A German, Colonel Landmann, was summoned to the place one season, to plan the erection of a tower on the Lookout in accordance with the King's wishes. This gentleman gives an amusing account of his unconventional meeting with the Queen.

"I stood at the window of a caricature-shop, with several persons, when I heard from behind me a female voice, which I knew to be the Queen's, in earnest request to consult with renewed diligence throughout the caricature in the window for one of the Queen, to which I thought the value had alluded, but in which I was unsuccessful.

"I had not the slightest idea that I had unless I fancied I should be too late to see the Queen and the Princesses on their way to their bathing-machines. I moved on, keeping my eye fixed on the pictures, however, in search of the Queen.

"Suddenly I felt a touch on my arm with a hint, which, to save her and myself from falling, I encircled with my arms.

"On my immediately observing that the person whom I so embraced was a little old woman, with a small black silk bonnet, exactly similar to those worn by poor and aged females, and that she wore a short, plain, scarlet cloth coat, I exclaimed, 'Oh, Queen, I ask a thousand pardons!' and added, 'I'm an Irishman! I felt the old lady pinch me from her with energy and indignation, and I was seized by the collar behind, and whirled round, and held tightly by the arms and shoulders, whilst a tall, stout fellow in a scarlet livery stood close before my face, sharply striking the pavement with the heavy ferrule of a long golden-headed cane, his eyes flashing fire, and exclaiming:

"'The Queen, the Queen, the Queen, sir!'

"'Here! where? where?' I loudly retorted.

"'I'm the Queen!' sharply exclaimed the old lady.

The story is finished by a description of how the Colonel fell on his knees and humbly apologized, and the Queen said:

"'Rise, sir; you must be more careful; fery vell—fery fine, indeed; we forgife. There, you may go.'

Whereupon exit the gallant Colonel, loudly cheered by the mob.

DIPLOMATIC.

"A prophet is not without honor save in his own country" is the old saying, and it certainly is true in many instances. Mr. Wilkins thinks that "in his own family" would be just as true a statement of some cases, notably his. He has a great reputation for giving good advice on all sorts of matters, and there is scarcely a day that he is not consulted by some one about some matter of more or less importance, and his remarks always seem to give perfect satisfaction.

Mrs. Wilkins believes that the secret of his success lies in the fact that he allows himself to be apparently convinced of the sound judgment of the other party, and then says in a manner that people only want to be assured that what they have fully made up their minds to do is the best thing to do, her husband's "advice" is exceeding, sound and wise.

When one makes this statement to any one, and Mr. Wilkins, with a twinkle in his eye, demurs a little, she always says:

"Now, Henry, you just let me tell Mr. B—— the conversation I overheard at our door the day Farmer Gage called to consult you about the color he had better paint his new barn. Or rather, your part of the conversation, for I only listened to the latter part, and didn't catch much of what Farmer Gage said.

"This is what I heard, with right pause:

"'Mr. Gage, I—I—I—

For the Companion.

HOW TO CHOOSE A COLLEGE.

By Andrew D. White,

Formerly President of Cornell University.

First Paper.

Very striking indeed are the changes that have taken place in the system of advanced education thoughout the United States, more especially throughout our Northern States, during the last quarter of a century.

Twenty years ago, as a rule, the whole theory and practice of advanced education in our country had a narrowness and a lack of adaptation to the needs of the country from which many of our larger institutions have now freed themselves. The old theory was, that the object of a college course was simply what was called "discipline of the mind," and sometimes there was a little vague talk as to the advantages of "culture."

The outcome of this theory was one simple, single college course for all students alike, made up of a little Greek, a little Latin, a little Mathematics, a little Political Economy, and a little Moral Philosophy, with a few experiments, perhaps, to illustrate Chemistry and Physics.

There were very few lectures, and, as a rule, none before the senior year. Almost everything was done by so-called "recitations;" that is, an instructor, not unfrequently a superannuated clergyman or unfledged divinity student, sat in a box and heard students recite by rote from a text-book.

There was generally neither note nor comment by Professor or Instructor; his whole duty was to "mark the recitation" for the student. This was probably the most wretched substitute for education ever devised.

We have now changed all that;—at least in the dozen or twenty institutions in the United States which aim to make themselves Universities in the true sense of the word.

We have indeed studies for discipline and culture; in fact, these are made leading objects of instruction. But in order to make them so, they form a part of larger plans of study, framed with reference to the capacities, tastes, and aims of various individuals or groups of individuals.

The result is, that studies in every field, while they strengthen discipline and increase culture, are made much more thorough and extended than ever before.

The student who wishes earnestly to make himself a classical scholar is not held back through his whole course by a long train of students who care nothing for the Classics, and wear out the life of the Professor by giving absurd answers to grammatical questions and childish renderings from concealed translations.

The man who wishes to give himself to studies in any branch of Natural Science is not held back by a great body of men devoted to Literature, who vote instruction in Science an unmitigated bore.

To sum up: There is now, after the preliminary general courses for discipline, a division into various special courses, with reference to a man's training for life. These are indeed disciplinary, and all the more so from the fact that the student feels their importance and the necessity of putting his mind into them, because he can see that they bear directly upon his success after leaving college.

Whatever of preliminary discipline and culture, then, was given by the old courses, is given far better now; and there is added to this general discipline a special training for actual life, of which, under the old system, little or nothing was known.

With this prefatory statement I come to the question which this article is intended to answer: "How shall I choose a college?"

First, I would say, in choosing a college, Look at the Instructing Body: do you find in it the men you need, both for your general and special studies? If so, have you reason to believe that these men are chosen from those best fitted for the positions, without regard to anything but their fitness in attainments and character;—and are they doing good work?

Much light is thrown on this question by another, and this is: "How is the Instructing Body in the College chosen?" Is it restricted mainly to some one sect or denomination of Christians, or is it unrestricted by sectarian limits, and made from the whole range of eligible men with the sole purpose of securing in every case the best scholar, teacher, and man obtainable?

Strange as it may seem, in the vast majority of American colleges, even down to the present time, the question has not been, "How and where can we get the best teacher?" but "How can we get the best teacher who is a member of our sect?"

An experience of over twenty years in selecting Professors for an institution not trammeled by such rules has shown me that it is exceedingly difficult at any salary to get thoroughly fit men with the whole nation to choose from, even without any denominational restrictions; and I have often wondered how those Presidents of colleges who are obliged to choose Professors within the limits of the particular sect to which they belong can secure the sort of teachers they ought to have.

Therefore, I would say to the student, Look over the catalogues of the institutions which seem to you attractive, and see whether or not their professorships are made snug retiring nests for excellent clergymen who have proved unattractive in the pulpits of some one denomination, or whether its tutorships are made incubators for unfledged divinity students from some adjacent theological seminary.

I have the greatest interest in divinity students, and the most sincere respect for aged clergymen; but one of the most unfortunate things in many of our sectarian colleges has been that the primary object of instruction has so often been made to yield to the necessity of taking care of these two excellent classes.

How well I remember sundry recitations in Cicero's Letters to an excellent elderly clergyman whose one defect was that he had forgotten his Latin; and how well, too, I recall the martyrdom of a divinity student in teaching Physics to a large class in which many of the students knew more of the subject than he did.

Look, also, at the catalogue, and see whether various duties are loaded upon one professor. That was the old way: one man often taught Chemistry, Physics, Geology and Physiology; or Ancient, Mediæval, Modern and American History; or History and Literature; or Greek and Latin; or all the Modern Languages and Literatures together.

This was well enough, perhaps, when teaching in Science, Art, and Literature, so far as our institutions of learning were concerned, was in its infancy; but that sort of thing has now become farcical. The time has come when not only each leading subject, but each leading division of a subject, demands the attention of a well-trained man who makes that subject the object of his life.

In colleges and universities worthy of the name there is no more lumbering together of various sciences and literatures under the teaching of one man. In courses of History worthy of the name there are separate professors, instructors, or lecturers for Ancient, General Modern, and American History; and to these are frequently added special instructors in special subjects or periods, as for example the Constitutional History of England, the Constitutional History of the United States, and the like.

As to Modern Literature, no worthy institution of learning thinks of having one instructor for several different languages or literatures. Each demands its own; and our own language is becoming less and less content with a single professor. As a rule, there must be at least one for its literature, and one for its philological side.

Even in departments which have generally been regarded as inseparably bound together, the advance of modern thought demands a division. Thus Philosophy, which used to be taught by one man, is now frequently divided between three professors, one having Moral Philosophy, another the History of Philosophy, and another Psychology.

So, too, while formerly it was sufficient if a Professor of Greek or Latin found a little time to give a short course on International Law, there is *now seen to be more and more a necessity for* giving to International Law and kindred subjects a full professorship.

Look, then, to see how this is arranged. It is certain that no proper idea of the leading departments of human thought can now be given to advanced students by the old method, which so many of our feebler colleges are trying to maintain.

To sum up: See what the general character of the professors is; whether they are mainly chosen from one fraction of the community within the limits of some one sect, and whether each is obliged to teach several different things: see especially, if, in the departments in which are your tastes and aims, the right sort of men fill the Chairs.

To do this, make as thorough a study as possible of catalogues; but talk also with earnest students,—men who are interested in your own lines of thought, if you can find any such. Correspond with the authorities of the institutions which seem to you most promising, and find out what they have to offer. Such a correspondence will be of use both to you and to the colleges; it will help you in deciding upon your best course, and it will impress upon the colleges the fact that the old day of perfunctory teaching is gone by.

The second question is hardly less important than the first: "What are the means of illustration?"

Here there is an enormous difference between the lesser and larger institutions of learning. On the one hand some are fitted to do University work, having large and adequate means of investigation and illustration in various fields. On the other hand, many are fitted only to be intermediate colleges,—giving general preliminary discipline, preparatory to the work of Universities.

No work is more honorable and useful than that of these smaller institutions, provided they really do it, and do not pretend to do University work, for which they have neither the men nor the equipment.

The equipment necessary to thorough, advanced instruction in various fields has become very great.

Take what is generally considered to need least;—instruction in the Greek and Latin Classics. It is no longer sufficient to have simple construing of sentences or reading of parts of books with a professor or tutor; the day of merely studying the skeleton of a language and scraps of its literature has gone by.

There must be collections to throw light upon the life of Greece and Rome,—collections of the most costly books, maps, plans, casts of statues, bassreliefs, architectural details, coins, engravings, photographs. Indeed, our better-equipped institutions have now in every classical lecture-room appliances for projecting upon a screen, by means of the lime light, illustrations which make references to Greek and Roman life vivid.

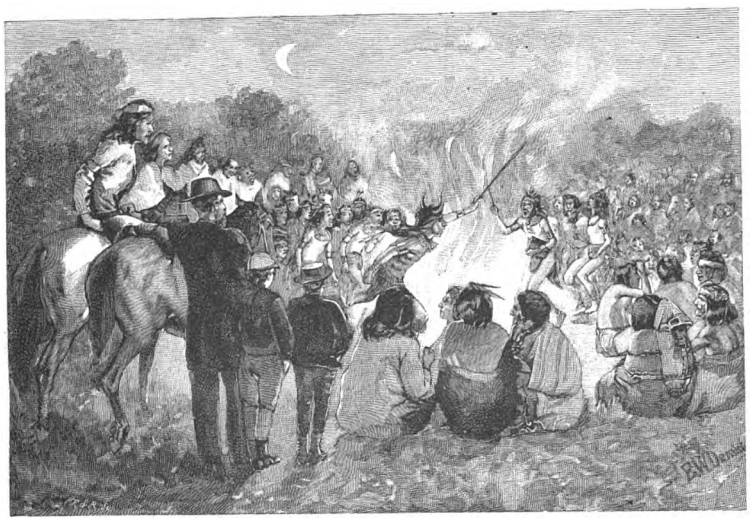
Thus alone can classical teaching be real; thus alone can the interest of any number of thinking young men be aroused. No dragging through classical dictionaries and dictionaries of antiquities can take the place of this full, stimulating, vivifying illustration.

Still more important is the most complete equipment for investigation and illustration in the Physical Sciences.

Take Physics and Chemistry. In the good old days a short course of lectures with experiments, and possibly a little text-book recitation, were thought sufficient; now, not only must fully illustrated courses of lectures be provided for, but every student who goes with any thoroughness into these subjects is expected to conduct experiments and investigations himself, under the eye of competent instructors.

Hence the necessity of great physical and chemical laboratories, in which every student who takes these subjects can acquaint himself not merely with facts, but with methods.

Take next what are usually spoken of as the Natural Sciences. Here, too, the same change has *taken place. Formerly, if there was any instruction* at all, it was given by a few lectures; but now there must be, besides these lectures, laboratory work in Physiology, Botany, and various other sciences, sufficient at least to fasten not merely leading facts, but the best methods of research, into the minds of the students.



Take next Historical Studies. In these, under the old system, it was thought sufficient that some professor should give a few general lectures; but now various professors, assigned to different historical fields, must each have his well-equipped "seminary" for students who go thoroughly into his subject, — a room equipped with maps, photographic and other illustrations, and above all with a great apparatus in the shape of books.

Subjects being assigned, students are shown the best sources in these special libraries, and taught to extract from them the best knowledge by the best methods.

Hence it is, that in the library buildings which have been erected within the last few years at several of the leading Universities, there are not merely general reading-rooms for students, but "seminary rooms," containing special libraries in various fields of human knowledge, where students can be shown the most important sources and how to use them.

Take next Studies in Literature. It is no longer sufficient to have mere recitations from a rhetorical text-book. Here, too, a large provision of books is required; students who make this field one of their leading objects of interest are expected to study special subjects under the direction of professors and instructors who guide them among the best authorities.

The day is past in our institutions worthy to be called Universities, when students wrote essays on "The Real and the Ideal," or "The Beauties of the Classics," or "The Greatness of Julius Cæsar," or "The Ambition of Napoleon" and the like.

An Indian War-Dance.

For the Companion.

AN APACHE WAR-DANCE.

Near Fort Apache, Arizona, in the spring of 1885, I saw a war-dance of the Chiricahua band of the Apaches, ten days before a part of these Indians went on the war-path, to remain until they were captured by General Miles sixteen months later. During this time they overran the Territories of New Mexico and Arizona and the States of Sonora and Chihuahua in Mexico, capturing many children and killing hundreds of people.

At the store of the Post Trader, one day, Francisco, the Mexican interpreter, told me that the Chiricahuas were to dance that night at their lower camp on the North Fork of the White River, three miles above the Post, and that I might go if I wished.

Of course I wished to go. I ran home and told my father what Francisco had said, and obtained his consent to take me to see the dance.

Just after "retreat" had sounded, a trumpeter brought two horses to our quarters. I mounted behind the trumpeter. My younger brother got up behind my father, and off we started at a trot, taking the trail for the camp soon after leaving the Post.

We rode rapidly, because we intended to return early in the night, before the young moon had set. But fast as we were riding, we were overtaken several times on the trail by blanketed figures, mounted on galloping ponies. They were White Mountain Apaches, who, like ourselves, were going as spectators to their cousins' dance.

I say like ourselves, because they could not join in the dance. In fact, it was dangerous for them, even as invited guests, to go into the Chiricahua camp after dark, for although the two were bands of the same tribe, and lived near each other on the reservation, they were not friendly to each other.

But before we had gone more than two miles we had been joined by a dozen White Mountain braves, taking their chances for a little excitement.

By this time it was dark. We formed in Indian file. The trail was narrow and rough, leading through mesquite and piñon-trees. We rode silently, save for the noise made by the horses' feet, until we reached a side cañon about half a mile from the place where we expected to find the dance.

Then we heard, on the still night air, the dull, booming sound of the Indian drums or tom-toms, and knew that the dance had begun. We left the trail and headed in the direction of the noise, which increased as we approached.

When we were near enough to hear voices joining in with the tom-toms, shouting "Hi-ya! Ho-ya!" we halted, and the white part of our procession dismounted, leaving the horses in charge of the trumpeter. The rest of us walked to the scene of the dance.

There was only a small, pale moon; but it was easy to tell where to go, for, besides the noise, we were guided by bright flashes of light flaring up from the fires built on the dance ground. My brother and I kept close to our father, for, although we had come for fun, we did not feel quite safe.

We stepped between two mesquite-trees into the

Digitized by Google

fire-lit space where the dance was in full swing. My father said "How!" to some braves near by, who answered with a nod of the head.

Two mongrel curs snarled at us; and this was all the ceremony of reception with which the company greeted us.

Around the edge of a circular clearing, squatted by small fires built for their comfort—it was May, and at that altitude in the mountains the nights are chilly — were Chiricahua braves, squaws, papooses and dogs. The men were dressed in buckskins, beads and blankets.

Ranged outside, among the bushes, were the White Mountain Indian visitors, mounted, and leaning over their ponies' necks. In case of a disturbance they would be safer mounted than on foot.

At the side of the circle, near where we entered, was the orchestra. It was composed of as fierce-looking an assortment of musicians as ever played upon instruments.

About a dozen of these performers were squatted around three large tom-toms, and were pounding on them with bass drumsticks; while the leader, a big medicine-man named Chino, stood in front, violently beating a little tom-tom held under his left arm. This tom-tom was so small, compared with the others, that it might be called a tommy-tommy.

The performers were assisted in making their music by a group of half-grown boys, who hammered with long sticks a dry rawhide stretched on the ground near the drums—just as we beat carpets. But as all this did not make quite enough noise, the combined orchestra shouted in guttural tones, "Hi-ya!" "Ho-ya!" at each thump on the drums.

The time of the dance was marked by the musicians. The only break in the monotony was an occasional roll on the drums, when the voices joined in with a succession of quick "ho! hos!"

Chino gave the signal for these changes of time which, as the music was continuous, served as breathing spells, on the same principle that cowboys run their horses uphill to rest them.

Near the orchestra was a large fire, upon which an old gray-haired squaw, looking like one of the witches in "Macbeth," continually piled brush.

If the centre of the circle burned a much larger fire; but no squaw dared touch this. It was a "medicine fire," and none but medicine-men could tend it. Two medicine-men performed this task, one of them beating on a small tom-tom when wood was thrown on by the other.

They kept up an immense blaze, around which, dancing in couples, were twenty braves stripped down to breech-clouts and moccasins. The night air was chilly, but they were warmed by their exertion and by the coats of paint which were daubed upon their faces and bodies. It was rather a light dress, but the painting was done in what artists call "warm colors" — reds and yellows.

Besides these body coverings, the dancers wore head-dresses like crowns, made of hawks' feathers and fancy-painted sticks, the sticks being joined so that the parts, hanging down, rattled as the heads were moved.

These crowns appeared to be no more comfortable than they were beautiful. The Apache notion of comfort, however, like the Apache notion of beauty, is quite different from the white man's.

The men danced two by two, squatting and springing from the ground in time with the music. That is to say, one of each pair would squat and then jump aside as the other sprang at him with a drawn knife in his hands.

Their leaps and bounds showed wonderful agility. The squaws, in shrill, piping voices, expressed their admiration of the braves' performance.

The dance was an imitation of "a surprise and an escape." The squatting one, who sprang aside and escaped, like the under dog in a fight, was plainly the one who drew the admiration of the audience.

It was a wild sight to see these savages, leaping and lunging at one another with knives as if they were trying to kill; and we two small boys, standing very close to our protector, watched it eagerly a long time, more absorbed in wonder, probably, than any other spectators of the weird dance.

Suddenly some shots were fired among the trees to our right; and more quickly than I tell it, the whole dance changed.

The dancers stopped their performance and backed in a circle around the centre fire. Chino left the orchestra and went to the central fire and threw upon it a bundle of painted sticks. As they ignited and blazed up, he shouted some Apache words.

The tom-tom players with increased vigor now rolled with a booming noise upon their instruments. A cow-bell was rung in the bushes; and with yells and screams from the squaws and papooses—firing of guns by the men and barks and yells from the dogs—there dashed wildly into the circle the "Dancer of the Night."

To us, who did not understand at the time what this dashing, whirling figure represented, he seemed a clown; but later, when we learned from Mickey Free, a half-breed interpreter, that he impersonated the spirits of dead warriors who had returned to their people in answer to Chino's prayer, uttered when he threw the medicine-sticks upon the fire, we comprehended what we had seen, and understood the enthusiasm of the audience.

Upon this dancer, spinning swiftly around the circle, all eyes were now fixed. His body and legs were painted white, barred off on breast and back with black stripes, in imitation of a skeleton. A pair of cow's horns were fastened to his head, and in his hand was a wand of *Ochetea*—a porous variety of cactus.

Five or six times he rushed around the circle with bounds, leaps and whirls. Meantime the other dancers were ranged around the central fire, singing and jumping up and down, seemingly carried away with their mystic enthusiasm.

Suddenly the impersonator of the spirits of the dead stopped and approached each dancer in turn. Placing one end of his wand against the dancer's breast, and putting the other end into his own mouth, he blew through it upon the dancer, thus, as the interpreter said, "blowing his spirit into them."

After doing this to all of them, he threw the wand upon the fire and again danced about the circle.

Having made a few circuits with great rapidity, he uttered a wild shriek and flung himself on the ground. As he fell, the rest of the dancers sprang toward him, making stabs with their knives. Then Chino and three other medicine-men jumped in among the knifers, seized the body, and dragged it into the darkness, back into the brush.

That was the last we saw of the "departed spirit." As long as we stayed the dance went on without him. But he had played his part well; his spirit had gone into the dancers he left, and they seemed wild.

They no longer danced in couples, but alone, each one performing different antics, and all appearing as if possessed of demons.

Then Chino, mingling with the dancers, pointed to individuals among them and named some dead warrior. Instantly the one pointed out would imagine himself the person mentioned, and would assume some peculiarity of the dead man. One limped, another carried one shoulder higher than the other, and so on.

The spectators, as though saluting an old friend, cried "How! How!" whenever a familiar name was spoken. This encouraged the performer to do his best as an imitator of the dead man.

We were witnessing an unusual ceremony—the "calling back of the dead."

The Apache "big medicine-men," in common with the medicine-men of other Indian nations, claim that they have the power to do this. It was while arresting a medicine-man for a performance of this kind that Captain Hentig, of the Sixth Cavalry, and several of the men of his troop were killed in 1881 on this same reservation and by some of the White Mountain Indians present as onlookers at the dance I am describing.

What was going on before our eyes was a mystery to us, and it was not until ten days later, when ninety-two of these Chiricahuas took the war-path, to inflict death and misery upon hundreds of innocent people, that the officers present realized that these Indians were at that time preparing an outbreak, and that Chino was working on their imagination in pretending to bring back to earth the fierce spirits of the dead braves of the tribes.

The dancers had become actors—they were both dancing and acting a part; and judging from the interest displayed by the audience, they were successful.

One tall, powerfully built brave attracted most attention, not only from his majestic bearing, but from the fact that Chino had named him Cochise, —the most famous of Apache Warriors,—whose son, Natchez, was the head chief of the tribe.

While the others danced and played their characters, this brave walked with stately strides around the edge of the circle, close to the seated people, with his hands extended over their heads, like a minister pronouncing a benediction, until he came to Natchez and his family. Here he stopped, and said something in a loud voice. Of course I did not understand it, but Natchez did; and reaching over, he took his boy from the lap of a squaw near by and handed him to this representative of Cochise.

The brave carried the child near the centre fire, where he pulled off his blanket and placed him on the ground. Whether or not he was told to do so I do not know; but as soon as his feet touched the ground the little boy began to dance.

This performance was greeted with whoops and howls of applause from the Indians, and with a great deal of mirth from us pale-faces, for it was a laughable sight to see the child, who was about three or four years old, arrayed as a brave and dancing vigorously among the large, wild figures.

Perhaps the Indians were justified in imagining that the spirit of his grandfather, Cochise, was in him, for he footed it with the best of them. It was the only amusing incident connected with what was really a serious affair—so serious that the outcome of it, as I have explained, was the loss of many lives, including those of two of the White Mountain braves who had ridden to the dance with us.

One of the dancers, Joseana, a sub-chief, led a raiding party back from Mexico almost to this same spot some months later and killed twenty-four White Mountain Indians, among which number were the two bucks I have referred to.

Soon after the boy had made his appearance we left the dance, thoroughly satisfied with the sights we had witnessed.

ALLEN SMITH, JR.

CAMPING OUT.

A camping holiday spent by those who rush out into the woods blindly is apt to be full of discomfort, confusion and unpleasant experiences. I have visited such camps and felt sure that their inmates ought to have remained at home. Everything was topsy-turvy, and the campers continually complained about one inconvenience or another.

But it was all their own fault. They had no system, and had not studied camp management, duties and discipline.

A camp outfit should first be considered. This will always depend upon the distance, and the nature of the country to be travelled after leaving the boat or rail.

If the camp is to be pitched at a considerable distance from the water or railway, articles should not be carried in boxes. No experienced woodsman will ever carry boxes, if he has to "portage" them.

I know of nothing better than strong, oiled canvas bags, cylindrical in form, and so made that they will lace close, having flaps, making them water-tight when drawn together. Into these can be packed provisions, camp utensils and clothing.

The tent-pins, and anything for which there is not room in the bags should be packed in one piece. Axes, hatchets, etc., should also be bound up together. No package should weigh more than fifty or sixty pounds.

Canned provisions are indispensable in camp, unless the place chosen is convenient to a grocery or farm-house. But it is foolish to carry provisions a great distance, if they can be obtained near the camping-ground.

Canned provisions should include beef, tongue, perhaps boned fowl, prepared soups, lobster, salmon, mackerel and sardines, corn, tomatoes, peas, beans, condensed milk of good brand, condensed coffee, chocolate and cocoa.

Coffee, tea, chocolate, and cocoa should also be taken in bulk, as well as split peas, lima beans, breakfast bacon, sugar, salt, pepper, mustard, chow-chow, vinegar, rice and the prepared flours, including buckwheat and curry.

Exquisite dishes can be made with curry, with the help of the cook-book, which should be in every camp.

Don't forget soap and candles.

Never take crockery or glass. They are sure to break with rough usage. Tin-ware is the best, and should include for each camper a tin plate and a cup, and, for general use, three tin kettles, which fit into one another, the largest holding a gallon or more.

There should be a metal frying-pan for fish, game, eggs or fresh meat. Have a knife and fork, a spoon, a strong clasp-knife and a sheath-knife. It is well to have an abundance of matches.

A small mica lantern is the best for rough travel; but one like those used by railway-track men throws a good light, and is excellent to read by at night.

Take brushes, combs, and a looking-glass; an axe, a small hatchet, and one or more pocket compasses; a barometer, needles, thread, thimble, safety-pins and buttons; a pair of scissors, a book or two of court-plaster, two large coarse crash towels for each camper; writing pads and pencils, envelopes and some entertaining books of travel.

Dominos are easy to carry, but it is easy to make a checker-board and pieces.

As to clothing, two things should be kept in view,—comfort and convenience. Homespun is best, because it wears well; but it should not be so light in color as to show stains readily. Corduroy is good, but the homespun is better. All clothing, in my judgment, except light socks and pajamas or night-shirts, ought to be of wool, the undershirts being as fine as possible. Pajamas are far preferable to night-shirts in camp.

Each camper needs one coat, which should be a Norfolk jacket, often known as an Oxford or belted coat; two outside woollen shirts, and three inside shirts; three light pairs of drawers, and three or four pairs of woollen stockings. Knicker-bockers are more tidy than trousers.

The cap is a matter of personal taste, but a "deer-stalker,"—called also "a double peak" or a "fore-and-aft,"—suits the dress described.

For rough tramping, have strong laced boots with wide sole and low heel; but canvas shoes are best for lying about in camp, and for rowing or paddling, if the boat is perfectly tight. Don't forget a stock of handkerchiefs.

Preparations are sold with which to anoint the face and hands to keep away mosquitoes, but most of them are bad. The best and the least offensive preparation that I know for this purpose is a compound of Stockholm tar and grease.

A large cap with white net placed over a wire frame, standing well out from the head, face and neck, and so arranged as to fasten around the shirt or coat-collar, is a safeguard against fly pests. It is light and cool, and may be worn fishing or tramping where the bushes are not too thick.

If the distance is great it is better to obtain boats from regular builders near the camping territory; and it is better to hire than to buy.

The selection of a camp site involves many considerations. The place chosen should be secluded, and either in, or on the edge of, a wood. There should be an opening facing the east, so that the morning sun may shine upon the camp. There should also be a clear view of the best scenery that the place affords.

Before pitching the camp, be sure that there is plenty of dry fire-wood near. If possible, get near a spring where the water comes out of rocky or gravelly soil, for then it will always be pure and cold. Of course if the party has a boat or canoe, the camps should be near the edge of the lake or river.

Never have the tent near a swamp, for there mosquitoes swarm, and unwholesome vapors are apt to rise. Select high ground or a knoll, so that the rain shall run off. It is an excellent plan to dig a trench around the tent, with a drain leading away from the lower part of the circle.

For shallow rivers and brooks no boat is comparable with a birch-bark canoe; but I should advise no one to use a birch unless he has had experience in its management. Always take lessons from an expert before trusting yourself in a birch-bark.

A light flat-bottomed, lapstreak boat, provided with a water-tight after-cuddy, large enough to hold provisions and some clothing, is best, because with it the party can move about from point to point.

In shooting from a boat, never fire from it crosswise.

The best tent is the "A." One six feet wide, six feet high, and eight feet long will house from four to six persons. Tent-pins should be taken, because it is necessary sometimes to put up the tent after dark, or when overtaken by a rain-storm, when it would be inconvenient to obtain tent-pins in the woods.

When a storm is threatened the tent should be firmly stayed; but it is well to have the stays slacked, because they shrink when wet and draw out the tent-pins.

The camp line, stretched inside the tent for drying clothes, might be extended through both ends and fastened outside when a serious storm is threatened.

When the kingfisher takes his perch on a dead willow limb and makes ready for his breakfest on minnows, which is just before the rising of the sun, all good campers should arise, take their soap and towels, and go to the lake or river for a bath. After the plunge rub briskly with a coarse towel till the flesh glows; then back to the camp and get breakfast.

There is as much system required in camp-keeping as in housekeeping. If each member of the party understands cooking, this duty should be taken in turn. While one has charge of the meals another should provide wood and water. The fires should be built outside, except when it is very wet or cold. All cooking utensils, dishes, etc., should be cleaned in hot water after the meal is over and put neatly away.

Provisions of every kind should be carefully covered and kept out of the sun. Empty cans, offal, crumbs and scraps should be taken to some concealed place well away from the camp.

Each camper should wash his clothes once or twice a week according to the extent of his kit, hanging his garments on a tent line inside when it is wet, and between the trees outside when it is dry. Always take off wet socks or clothes on returning to camp, and set them to dry; and have dry ones ready to put on.

Torches may be made by doubling up strips of birch-bark and fastening them into the split ends of sticks. This is a common custom among Indians and old woodsmen.

It is well to be within a few miles of farm-houses or a village in order that supplies of fresh eggs, butter and vegetables may be procured. Have a good breakfast but make the midday meal light; otherwise you will be drowsy. But when the day's exercise is over, and every one is tired and hungry, prepare the best meal of the day.

During the open game season it will not be difficult to have fresh meat occasionally, and fish can nearly always be obtained. Of course the party is not likely to be without fishing tackle and guns.

The best camp-bed that I know is made of fir boughs overlapped, raised high at one end for a pillow. Moss, also, makes a good bed. Either should be replaced about once a week. The fir boughs give out a pleasant and wholesome odor.

Camp-mats may be contrived of birch-bark. During a rain-storm nothing should touch the tent inside or out, or it will be made to leak.

One of the miseries attending long tramps from the camp is losing one's way. This is pretty sure to be the fate of some members of every camping party in a wild and wooded country, unless the proper precautions are observed.

Carefully notice all the hills and valleys, the course of the streams and the fall of the land, and get the bearings of these. Note, too, the points at which the sun rises and sets, and, before setting out in the morning, if there is wind, observe the direction in which the clouds are moving.

But the safest guide is a pocket-compass; for no one can go far astray who carefully follows it.

It is well to shift camp from place to place, provided each new spot chosen has the advantages desired.

EDMUND COLLINS.

SUGGESTIONS

POLYGONS AND A CIRCLE.

Compare the size of a square inscribed in a circle with that of one around the same circle.

Compare in same way regular six-sided figures.

Try regular figures of twelve, twenty-four, forty-eight, etc., sides.

How many sides must the figures have to make the inner and outer figures the same?

With so many sides, what would each figure become?

For the Companion.

MY FELLOW-TRAVELLER.

Sunny-faced, with bounding gait,
Long he follows on my way,
Dowered by each bewitching trait,
Fresh as dawn and fair as May.

Tender-voiced as birds of Spring,
One at heart with Summer flowers,
He fills Hope's high imagining
With raptures of a world not ours.

Silken curls enwreathe his head,
Laughter sparkles in his eyes,
On a rainbow pathway led
Came he down from Paradise.

Now and then some doubter says:
"He no longer is your mate,
Time's unfolded roll of days
Writes for you the words—*Too Late.*"

But still I know his voice I hear,
Note his footsteps day by day,—
Nothing yet shall make me fear
I have lost him on my way.

Whilst the maid of rosy cheek
Smiles for me, her joy to show,
I his presence need not seek,
He must follow where I go.

So do your best, stern graybeard Time,
Your power to-day I here deny,—
Who feels not age is in his prime,
And we are brothers—YOUTH and I.

JOEL BENTON.

For the Companion.

INCIDENT IN A MINING TOWN.

Doctor Paddock, a well-known missionary, says that an itinerant minister reached a mining town in the State of Washington, late one Saturday. The place seemed to be peopled wholly by men. Not a woman was to be seen.

"Where is the church?" he asked a passer-by.

"Aint no church."

"The schoolhouse, then?"

"No schoolhouse, neither."

"Is there a hall, then? I wish to preach here to-morrow."

"Bless you, that's easy fixed! We've got no hall. But this gentleman here has the biggest gambling-room in town. What d'ye say, Ben? Can't you lend your place for meetin'?"

"Certainly," said Ben, bowing politely. "I'll stop business for a couple of hours with pleasure."

On Sunday morning, the tables were pushed aside, and chairs, kegs and barrels were arranged as seats for the congregation, which consisted wholly of men. The room was crowded. The preacher, stirred by the imminent need of his hearers, spoke as a man with life in his hands to dying men. They listened attentively, and joined with energy in the hymns.

When the service was over, "Ben" solemnly passed around a hat, and emptied the contents on the table. The pile consisted of silver and gold coins, and some red and white ivory discs.

"What are these?" inquired the minister.

"Chips, sir. You can have them cashed at the bar, or if you like to take a hand, the tables will be set up in five minutes."

"No," said the stranger. "But I will use the money, boys, to send a preacher to you twice a month."

In this town there are now churches which are well supported. The saloons and gambling-houses have nearly disappeared.

A similar story is told of a camp in Colorado. A young lad from Virginia whose health had failed was sent by his physician to a great ranch in this territory. He found there about fifty men—ranchmen, herders and cowboys.

Every Sunday evening they assembled, and a scene of horse-play and ribald joking followed. It was the only way in which the day was kept. The boy was not a member of the church, but the teachings of home grew strong and tender here. What could he do? He could not lecture or rebuke his companions.

One Sunday evening, just as the moon rose over the mountain, there was a sudden silence in the crowd scattered over the field. The roughest man seemed to feel the sublime beauty of the sight.

The boy, who had a mellow, sweet voice, began to sing "Nearer, My God, to Thee." One or two voices joined, and soon every man sang, with neither tune nor time, perhaps, but with zealous eagerness.

The "singing" became a regular Sunday service after that, and when, two or three weeks later, one of the older men volunteered to read prayers, he was listened to with devout attention.

Many a lad who reads these words may be cast by circumstances among companions who are reckless and immoral. Even if he is not a member of any church, let him not be ashamed to acknowledge to them that his God is with him.

If he does this in a manly, discreet way, he will not be flouted nor jeered at, nor made a martyr in any manner. The worst man is at heart more interested in his own soul and its God than he is ready to acknowledge, and will often listen to any human being who can humbly and sincerely speak the truth about them to him.

DIVING.

One of the occupations which have grown up within the last century, and one which, under certain circumstances, has been extremely profitable, is the business of diving into deep water, in a dress made for the purpose. Many people, such as most of the native inhabitants of the Pacific Islands, and the people of the shores of the Persian Gulf, where pearl fisheries are carried on, are expert divers, and without apparatus of any kind to help them, remain under water an astonishingly long time; but the civilized method of going down into the water clothed in a dress and apparatus which enables the wearer to work and breathe in the water, is quite another thing. The modern "diver" does not really dive at all; he descends into the water, breathes through a tube, carries a light with him to illuminate the water about him, and has means of communicating with those above him.

The diver's most romantic and interesting work is to recover treasure from sunken vessels; but his services are oftenest required for something quite different.

The diving-dress, for instance, is now used by men in the pearl and sponge fisheries. In these, one man now accomplishes what twenty naked divers were formerly needed for. They could remain under water but a short time, and could collect only what came within reach of their arms. The diver in the modern dress remains from two to four hours under water, and reaps a rich harvest.

Divers are also employed in laying stone abutments and breakwaters, and in blasting and clearing away submarine obstructions.

The greatest depth to which any diver in diving-dress has descended is two hundred and four feet. At this depth the work becomes very difficult and dangerous, on account of the pressure of the water.

The additional pressure upon each square inch of surface—for of course the natural pressure of the atmosphere is everywhere—is, at thirty feet, twelve and three-quarters pounds, or less than that of the atmosphere; but it increases at such a rate that at one hundred feet deep the pressure is forty-three and a half pounds, at one hundred and fifty feet it is sixty-five and one-fourth pounds, and at two hundred and four feet it is eighty-eight and a half pounds.

This depth was reached by the diver Hooper, an Englishman, in recovering a cargo of copper from the ship *Cape Horn*, wrecked on the coast of South America some years ago. Under this pressure, which subjected the tubes and apparatus to a severe strain, Hooper remained under water at one time forty-two minutes, and descended seven times.

A diver's method of work is as follows: He first arrays himself in his suit, the most important feature of which is a great air-tight and glass-windowed helmet. Then he goes down, upon a rope-ladder if he is inexperienced or timid; but the expert diver simply uses a rope. Every diver has a signalman, who holds his life-line and air-pipe, both of which are kept just taut and clear of the boat, so that any motion of the diver may be felt.

The diver descends slowly, halting for a few moments after his head is under water, to satisfy himself that everything is correct, and then continues.

If he feels oppressed, or experiences any humming noise in his ears, he rises a yard or two in the water, and swallows his saliva several times. If oppression, ringing in the ears or headache continues, he returns slowly to the surface and for the time being gives up the attempt.

If he is "all right" and able to persevere, he keeps on to the bottom, where he gives one pull on the life-line to signify that all is well, and sets about the work for which he has come.

In returning to the surface the diver must use great care. It is more important to move slowly in rising than in descending; for if he goes up too quickly, the effect of passing from a heavy pressure to a light pressure will make him faint, and prove disastrous. He stops now and then, and gets accustomed to the change.

Only men of the greatest skill, strength and endurance can make a descent below a depth of one hundred and fifty feet.

One of the most celebrated of diving feats was performed by Mr. Lambert, an English diver, who brought up three hundred and fifty thousand dollars in gold from the wreck of the mail steamer *Alfonso XII.*, which was sunk off the Canaries with five hundred thousand dollars in treasure.

The wreck lay at a depth of one hundred and sixty feet. The treasure-room was in the run of the ship, or aftmost part of the bottom, with three decks above it, so that the task of reaching and getting out the gold was an unprecedented one.

After a little work Lambert succeeded in getting both the scuttles open, and entered the magazine. Then he blew up a portion of the deck with cartridges, and descended straight to the bullion room through the wreckage.

After that the boxes of gold were attached one after another to ropes, and hauled up; but the difficulties were so great that a considerable part of the treasure had to be left behind.

HIS CLASS RING.

A lady whose son was in a recent class ——, at Harvard, happened to go down to the laundry of her house in Boston to give directions to a new laundress in regard to some Japanese things which were to be washed. She found the woman, who did not live in the house but came in by the day, both young and intelligent-looking. So much was the lady struck with her manner and bearing, that she stayed talking with her for some minutes after the errand which brought her downstairs was done. Just as she turned to leave the laundress she caught sight of a ring upon the girl's finger which attracted her attention; so that she asked to be allowed to look at it.

The stranger blushed, but held out her hand, which was a small one although somewhat swollen by the suds.

"But that is a society ring," the lady said.

"Yes," the laundress answered in some confusion, "it belongs to my husband."

The lady was tempted to go on with her questions, but instead of doing so she betook herself to the room of her son, a young man at that time in the medical school.

"Henry," she said, "I want to see the ring which you had in some sort of a college society. I am not sure that I remember it."

The ring was produced, and she examined it closely.

"How many of these were there?" she asked; and when her son told her she added, "One of them is on the finger of a very pretty and ladylike young woman who is washing in the laundry downstairs, who says that it belongs to her husband."

The son was interested at once, and the outcome of the matter was that he discovered the husband of the laundress to be one of his classmates and friends, who had lost his fortune just after leaving college. The girl to whom he was engaged to be married, at the time, had insisted upon helping him to finish his education; so she married him and went out to do laundry work, because it paid her better than anything else which she could find to do.

The young couple were devoted to each other, were well and happy, and the husband was doing copying, and getting on admirably with his studies, which were nearly completed when his friend discovered all this.

To offers of help from the wealthy classmate, the young couple answered that they were able to take care of themselves, and that while they appreciated the spirit in which the offer was made, they thought it better to decline it.

They were, however, grateful for the companionship of the mother and sisters of the rich youth, and it has been a source of quiet amusement to the young wife, when, after passing part of the day in somebody's laundry, she has rested in the luxurious rooms of one of the most beautiful houses in Boston.

These hard times are now fortunately over, and the husband of the plucky laundress is rising rapidly in his profession; but they are not in the least ashamed of the hard times they have had, nor of the work they did to get over them.

OFF THE COAST OF IRELAND.

Rocks furred with the velvety heather,
As brown as the dun deer's horns in the spring;
Where the sea-birds, like bees in June weather
That hum 'round the hive, on untiring wing
Hover in clouds of gray;
While far below,
The wavering line of spray
Rims the cliff's foot with snow,
Where restless waves their foam-wreaths fling,
And isle and ocean melt together.

ARLO BATES.

SECOND CLASS.

No man has a right to complain if strangers form their first impressions of him from his manner and personal appearance. For the moment they have no other resource. But while this is true, it is also true that preliminary judgments of this kind should be taken for no more than they are worth, and if unfavorable, should be as far as possible kept to one's self. The *Analoston Magazine* relates a story of a man who was perhaps not quite so careful as he should have been in this respect.

Silas Reynolds and Thomas Judd—known respectively as Uncle Silas and Uncle Tom—were rich farmers in Illinois twenty-five years ago. They were neighbors and very close friends, and were both of them somewhat notorious for their oddities and their shabby dress.

They carried long hickory poles as canes, and Uncle Tom almost always had a basket on his arm, because he "couldn't bear pockets in his clothes."

Both men were familiar figures about the old board of trade in Chicago. One evening they missed their train, and were obliged to remain in town overnight; so they went to the Palmer House, then just built, and the pride of the city.

The night clerk was a dapper young man, "with an air of cologne and importance about him," and when he saw the two seedy-looking wayfarers reach for the register he accosted them with a measure of brusqueness.

"Have you any baggage?" said he.

He was told that they had not—nothing but Uncle Tom's basket.

"You will have to pay in advance, I suppose you know," said the pretty young man.

"Yes," answered Uncle Silas, slowly, "I supposed so," and with an air of humility he went down into his trouser's pocket and fished up a purse, which he began to unwind.

"What is the cheapest room you have?" he inquired.

The cheapest was none too cheap, but the clerk named the figure.

"All right," said Uncle Silas, "take it out of that," and he laid down a thousand-dollar bill.

The clerk at once put on his other manners. He was very sorry to have made such a mistake. Of course he couldn't change the bill, but that made no difference; they could pay at any time, and meanwhile could have anything they wanted.

"Can't change it, eh?" said Uncle Silas.

The clerk repeated his statement that he couldn't and didn't wish to.

"Well, Tom," said Uncle Silas, stuffing the bill into his wallet and picking up his big stick, "come on, let's go to some first-class hotel. I told you we should have trouble if we came to one of these cheap places."

SAWING ON A WAGER.

Between Lieutenant Smith and Jonathan Sawyer of Henniker, New Hampshire, there had long existed a good-natured rivalry as to which could do the most work in a given time, but the question had never been put to a test. "Say, Jock," said the Lieutenant one day, "I want you to help me saw logs next week." "All right, I'm with you," Sawyer answered, "an' I'll give you a pretty stint to beat me at it." "Done," said Lieutenant Smith, "an' we'll see who's the first to cry 'halt.'"

Monday morning the rivals began work on the logs in what was known as the Oliver Edwards mill. They took a week's provision along with them, as the mill was remote from any house. The work was evenly allotted, each taking a turn at the old-fashioned circular saw, and both together hauling up the logs.

The first day they joked and chaffed each other about the result of the wager. They stopped work barely long enough to eat. As night came on torches were lighted and the sawing continued. Neither Smith nor Sawyer stopped for a moment to rest or sleep. Tuesday and Tuesday night, Wednesday and Wednesday night the sawing continued without interruption.

Both men were in dead earnest, and each was resolved not to be outdone by the other. They had ceased to jest, and not a smile had touched their faces since Tuesday noon. Neither man dared to stop for fear of falling asleep.

Thursday morning came, but there was no sign of yielding. The men looked haggard and worn; their eyes were bloodshot; their faces were seamed with deep furrows like those of old men. Each would steal an occasional glance at the other, and then momentarily straighten up. Smith staggered when he walked, and Sawyer had a way of rubbing his eyes as if he were going blind. All that day the buzz of the saw went on without intermission. Evening came, and torches were lighted.

Sawyer was tending the saw. Three times he dropped down on the log and as quickly sprung to his feet again, giving a furtive glance at his companion to see if his act had been noticed. The fourth time he yielded to deadly weariness, and sunk down upon the log and closed his eyes. He was brought to his senses by tumbling off the log.

He scrambled to his feet and was horrified to see how narrowly he had escaped the saw. That tumble to the floor had saved his life. The Lieutenant had apparently seen nothing of this performance, and was busy at the chute.

"Wal," Sawyer said to himself, "the Lieutenant's got grit, and I guess he'd hang on till he died; but I've had enough, unless I want to be sawed through."

Watching his opportunity, Sawyer threw a slab into the flutter wheel. The next moment there was a jar, a crash, and the saw stopped; the wheel was broken.

Lieutenant Smith gave one glance, saw what had happened, and without turning in his tracks threw himself on the floor of the mill and fell asleep in an instant. Sawyer followed his example, and both men slept as they never had before.

It was several years before Sawyer confessed the part he had played in stopping the mill, and acknowledged that he had lost the wager.

HINDERED IN PRAYER.

No man in the community was more respected than Elder Goodman. He was foremost in every good word and work, and exceedingly eloquent in exhortation. No devotional exercises were infused with so much life as those he led. So well was this recognized that he was always called upon for that duty. He was once attending a conference, and had passed the night at the house of a worthy brother. At family worship the next morning the Elder was naturally called upon to offer prayer. This he was doing with his usual fervor, when the door sprang slightly ajar, and in walked "Tabby," the family cat.

Tabby was at once a very large cat, and a badly spoiled and self-willed cat; she ruled the household with a rod of iron. Among her prerogatives was a certain comfortable and capacious rocker, which she had long since preëmpted. She would never occupy any other chair, nor permit any one else in her presence to occupy this one.

Unfortunately, Elder Goodman had this chair. Tabby eyed the kneeling figure for a moment, and then with an easy bound landed firmly in the middle of his back. The Elder, taken wholly by surprise, and not knowing the nature of this sudden assault, hesitated and stammered for a moment, and then, deeply ashamed that anything should interfere with his duties at such a time, he went on with steady and determined accents.

Tabby, finding herself disappointed in the hope of immediate evacuation, began to reconnoitre, walking slowly and impressively up and down the good man's back, poking her whiskered nose into his neck, and sniffing with great deliberation just behind his ears.

The two boys of the family, out of the corners of their eyes, were watching the whole tableau and biting their tongues hard to save the family reputation. But their father, with eyes properly and tightly closed, saw nothing.

Elder Goodman's prayers were always full and comprehensive; to hurry or abbreviate them would have seemed sacrilege in his eyes, no matter with what "various hindrances" he might meet, and he was determined not to resort to such a course now. But when Tabby finally settled down across his shoulders, and began vigorously purring down the most susceptible part of his neck, even the good Elder realized that a crisis had been reached; and coming to an abrupt stop, he exclaimed to his startled host:

"Brother G——, if I'm going to remain any longer at the throne of grace, I must have that cat removed from my back."

TAKEN IN.

President Lincoln's sage proverb relative to the disadvantage of "swapping horses in the middle of the stream" applies to many of the ordinary affairs of life. Especially should it be taken to heart by the joker who is not sure of his game. Says the war correspondent, Irving Montagu, in "Camp and Studio:"

During the Russo-Turkish war, when we were on very short commons, we were one day about to do justice to a fowl which we had—well!—caught, and duly cooked. On turning, we were surprised to find one of a long train of Cossack bullock-drivers, stopping and looking down at us with envious curiosity.

We began talking to him with playful *badinage*, rubbish which we felt, being in English, would do well enough for an ill-bred Muscovite. He listened to our chaff with stolid indifference, until Coningsby, dividing the fowl, and holding up one half by the drumstick, said:

"Does a fondness for cold fowl run in your family, dear boy? This sort of thing would suit you to a T."

In a moment, that clumsy wagoner became a new man. All nervous energy and settled purpose, he sprang suddenly forward, grasped the fleshy end of that drumstick in his grimy fingers, and the next instant, had mangled it, with his teeth, beyond reclaim.

He had taken Coningsby at his word, and we were left on short commons indeed, though this surprise, sudden as it was, was quite eclipsed by that which followed, when that burly bullock-driver replied, in excellent English:

"Ah, just so! Sad, isn't it? Very sad. Lost your leg! But not in the service; no, not so bad as that, anyhow."

Then, turning to a dog which I had not before noticed, he said:

"Crunch, poor Crunch! Hungry too? Never mind, there's the bone. Make the best of it. Thank you. Good-morning. Remember, there may be Britishers in Cossack garb, as well as wolves in sheep's clothing."

"TWENTY-FIVE OFF."

A want of familiarity with business practices sometimes leads to amusing, and sometimes to embarrassing results; and occasionally to both. A woman who kept a small sea-side hotel thought it would be profitable to bring the fact to the attention of the public. Accordingly she drafted a suitable advertisement, and carried it to the counting-room of a newspaper, where she inquired the expense of several insertions.

It was the custom of this paper, where advertisements were inserted more than four times, to deduct twenty-five per cent. from the usual rates. The clerk read over what she had written, estimated the space it would require, and said, "It will come to twenty-six dollars; but as it is going in over four times, it will be twenty-five off."

"Oh!" she exclaimed. "Why, that's very reasonable;" and putting down a dollar she started for the door.

It was difficult to tell which was the more embarrassed, the landlady or the clerk, when he called her back and explained that "twenty-five off" meant twenty-five per cent., and not twenty-five dollars.

DAISY'S CALENDAR.—VIII.

See, now we have come to A-U-G;
A richer season there could not be,
With its fields of gold and the wealth untold
That the orchards hold for you and me.
The blaze of the sun has bronzed the sod
And kindled the flaming goldenrod;
And grandma's garden is gaily drest
With the dear old flowers we love the best—
The ten-week-stocks and the four-o'clocks,
The bright sweet-williams and fragrant phlox,
The tansy-bed, the needle-and-thread,
And the morning-glories in velvet frocks.
O Daisy, my dear, I'm sure the year
Is glad to open when August knocks.

For the Companion.

HER LADYSHIP.

"I want her ladyship," said Reggie.

"Then I'll have Mrs. Fitzgerald," said Grace.

"And here's her ladyship's coach. And here's Mrs. Fitzgerald's carriage. And here are the horses."

"Well, it's her ladyship's turn to call first," said Reggie, as he picked out two of the newest black pant-button horses and hitched them to a bright dress-buckle coach.

Coaches have tongues, and so do buckles. Ladies have eyes, and so do buttons. These things are not so different as they might be. When you have played with them an hour or two the ladies and coaches and horses are quite real. And so are the little pearl babies, and the porcelain boys and girls, and the dress-button women, and the coat-button men, and the ragged-button beggars, and the faded-button washer-women, and the thimble-tubs and the pincushion houses.

Mrs. Fitzgerald wore jewelry—a silver crescent. Her ladyship had a gilt star almost like a crown. They went to call on each other every day.

But this time, just as her ladyship was stepping down from the coach, Baby Minnie, who was too small for this kind of play, happened to ring her little bell.

"Ho! There's the fire-alarm!" cried Reggie.

"There's the fire in Crazy-work Block," said Grace, pointing to a bright piece of silk on one of the pincushion houses.

Out came the fire-engine, which looked to auntie just like a pretty shoe-buckle.

The horses were hitched on in no time. How they did run, with one of Reggie's fat fingers on each horse. Then came the coat-button men and the porcelain boys, as many as Grace had fingers for.

There were cries of "Fire! Fire!" "Where? Where?" "Crazy-work Block!" "Here comes the engine!" "Look out there!"

A little shoe-button darky was run over in spite of the warning. He was placed on a bed in the Penwiper Hospital, and attended by a black rubber doctor and a pretty blue and white nurse.

Then a gallant glass fireman almost lost his life in trying to rescue a smoked-pearl young lady from the blazing roof. And soon after a vest-button pickpocket was caught in the act of robbing the overcoat-button mayor, and was promptly arrested by a cuff-button policeman, and shut up in the collar-box jail. It was very exciting.

Little Minnie climbed up on her low chair to see the fun. It took some time to put out the fire, but at last Crazy-work Block was saved.

"Now Mrs. Fitzgerald will call on her ladyship," said Grace.

"All right," said Reggie, "but where *is* her ladyship?"

"Isn't she in Needle-book Street?" said Grace.

"No, she isn't," said Reggie, "nor she isn't behind the Red Tassel House, nor in the Ball-room, nor lost in Carpet Park."

"Well, hasn't she gone down cellar?" asked Grace, feeling in Reggie's pockets. "No, I can't find her. Reggie, I do believe her ladyship has perished in the flames!"

So Mrs. Fitzgerald went to call on Mrs. Brass-nose, and they talked it all over together, and agreed that her ladyship must really have perished in the flames.

There was cake for tea that evening. It was very nice. It had raisins in it. Reggie finished his piece almost before he knew it. He was sure it must have been a thin piece.

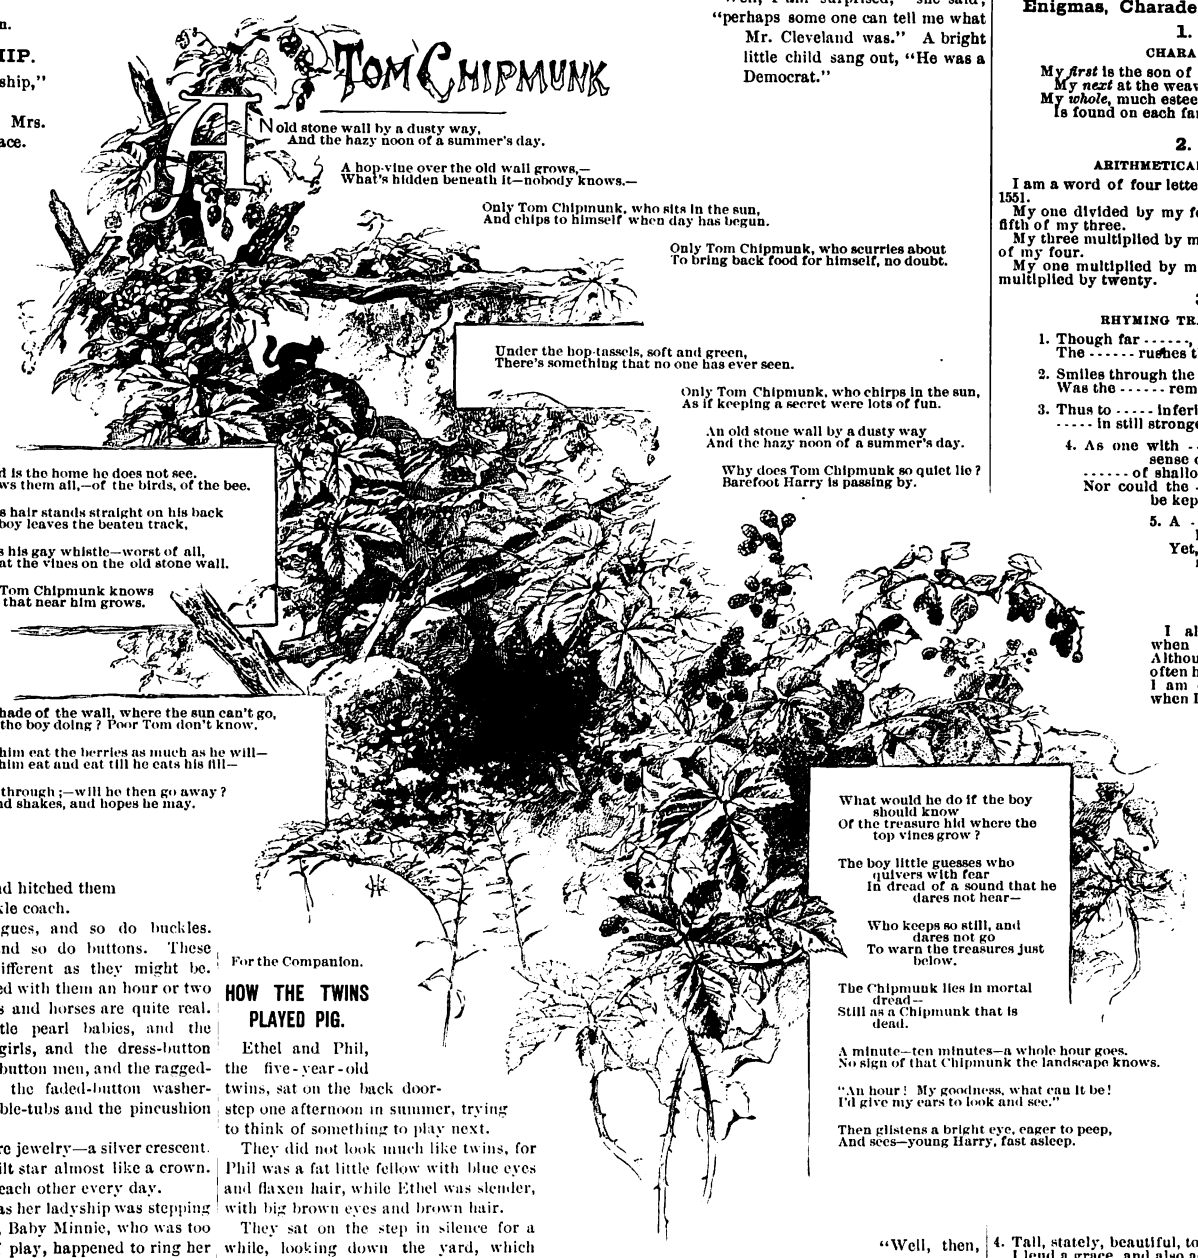
He knew one slice was thought to be quite enough for a small boy, but he leaned over to mamma and whispered, "Couldn't you please ask me to have a little more cake?"

Mamma knew how he felt. She gave him a piece of hers.

"Thank you, mamma," said he, as he broke off a morsel. "Why, there's her ladyship!"

And there she was right among the raisins.

"Minnie must have done that," said mamma. "I left the cake a minute to wait on the milk-man, and when I came back Minnie was there. I thought she acted as if she'd been in mischief, so I popped the cake into the oven and then looked around."



"And the mischief was right in the cake," said Reggie.

"So her ladyship didn't perish in the flames, after all," said Grace. "But we'll play she went to visit the prison."

EUDORA S. BUMSTEAD.

A SUNDAY school teacher was teaching an infant class the lesson of "Israel demanding a King." She was trying to explain the different forms of government. After telling them how a judge and a king ruled, she asked the class how they were ruled. No answer came. Again she asked, "What is Mr. Harrison?" No answer.

"Well, I am surprised," she said; "perhaps some one can tell me what Mr. Cleveland was." A bright little child sang out, "He was a Democrat."

HOW THE TWINS PLAYED PIG.

Ethel and Phil, the five-year-old twins, sat on the back door-step one afternoon in summer, trying to think of something to play next.

They did not look much like twins, for Phil was a fat little fellow with blue eyes and flaxen hair, while Ethel was slender, with big brown eyes and brown hair.

They sat on the step in silence for a while, looking down the yard, which made a long, steep slope, to where a tiny brook rippled along.

Close by the door-step was the outside cellar door, and by this stood an empty potato barrel which had been brought up from the cellar that day.

Phil's glance happened to fall on this barrel, and his eyes brightened.

"I'll tell you, Ethel. Let's play pig."

Ethel looked up. She was accustomed to letting Phil take the lead in their games, but now she did not quite understand.

"I don't know how," she said.

Phil explained: "Don't you 'member how we heard about some little boys that rolled a pig down hill in a barrel, and the piggy squealed and they laughed?"

Oh, yes, Ethel remembered.

"Well, I'll be it first, and you can roll me down this hill. Here's a barrel that's empty. I'll go first, if you're 'fraid. Girls is always 'fraid," he added, with some scorn.

"But you'll go into the brook," objected Ethel. "And mamma'll scold."

"Why, you wouldn't get wet in a barrel, if it did roll into the brook, 'cause they aint 'nough water in it to drown a kitty. Mamma said so," argued Phil.

"Well, then, you go first," said Ethel.

Together they tipped the barrel over, and rolled it to where the yard began to slope.

"Now I'll crawl in," said Phil, "and when I count three, you push."

In he crawled, till nothing could be seen of him but a pair of rusty little shoes.

Then a hollow-sounding voice said, "Now, one, two, three," and Ethel pushed.

Round went the barrel and over and over, faster and faster it went as it got nearer the brook.

Ethel watched the wildly kicking legs and giggled at first, but a muffled scream from the barrel stopped her. Another scream frightened her, and she began to cry, too, and when the barrel stopped with a great splash in the brook, she ran for her mother, screaming wildly.

"O mamma, Phillie's dead!" she shrieked, running into the room where her mother sat sewing.

"What, child? Where is he?" exclaimed the frightened mother, starting up, as Ethel caught her dress and began to pull her toward the back yard.

She reached the door just in time to see a dripping little boy crawling up the bank of the brook, crying lustily. His face was badly scratched and his clothing torn in several places.

"Why, Phil, what have you been doing?" said mamma, running to him and putting her arms around him, wet as he was.

"We was playing pig, like that story we heard," he sobbed. "Ethel rolled me down hill in the barrel, and the nails—boohoo—scratched me, and 'taint a bit of fun."

"We didn't know it would hurt, and we didn't think you'd care," pleaded Ethel, crying as hard as Phil.

"Well, never mind about it now, dears," said mamma, touched by their distress, though she wanted to laugh when she thought of the funny performance, and still felt like scolding Phil for getting himself into such a fix. "Come in, now, and let mamma put dry clothes on you, Phil. Don't cry any more, Ethel; he isn't hurt much. But you must never play this again."

"Guess we won't," said Phil, with a sob he couldn't help. And Ethel agreed.

POOR JACK.

A noted horseman of the West, one familiar with the wild horse of the plains, relates the following incident of which he was a witness, and which, he said, made his "nerves tingle." Near the forks of the North and South Platte he came upon about two hundred wild horses in a drove.

I was mounted on my own mustang. He saw them and lifted his head high into the air, at the same time pawing the earth with his forefeet and snorting expectantly. Every one of those wild horses lifted his head on hearing that neigh of welcome from my steed, and they all stood still.

One magnificent black stallion, which appeared to be the leader of the troop, after looking at me for a moment, came toward me with an easy, graceful stride and took a position in front of his followers. He was the finest specimen of horse-flesh I ever saw. His tail swept the ground, and his mane hung to his shoulders. His skin shone like a looking-glass in the morning sunlight.

My mustang became so excited that I made haste to tie him to a tree. Soon afterward the black stallion gave his head a toss and started on a rapid trot across the prairie, the entire band following him in single file. After going about half a mile the band returned, the magnificent black still leading. They came within one hundred yards of me, and the leader whinnied as if to invite my horse to join them.

My poor Jack! I pitied him. He stood looking at the wild rovers, his lariat drawn taut, and as the leader whinnied, he made the most frantic struggles for freedom. Sweat came from every pore; he wouldn't have been wetter if he had done a thirty-mile race.

I was afraid he would break away; so I fired my rifle into the air to frighten the drove, and the leader took the hint and galloped off, followed by the others, and Jack calmed down after a while.

WHEN IT HURT.

An army surgeon in the late Civil War had occasion to lance an abscess for a poor fellow at Camp Douglass; and as the sore was obstinate, it became necessary to use the knife twice. The operation was not a very painful one, but the patient declared that it had nearly killed him, and when a third resort to the lancet was proposed, he protested that he could never go through the operation alive.

The surgeon promised to make it easy for him, and calling up a few of the loungers, ordered one of them to hold his hands close over the patient's eyes, and two others to grasp his hands firmly.

"This arrangement," explained the doctor, "is said to prevent pain in such an operation. Now lie perfectly quiet, and when I say 'Now!' prepare yourself."

The surgeon at once began quietly with his work, and in a short time had completed the operation without the least trouble, the patient lying as quiet as though in sleep.

When all was done, the surgeon laid aside the knife, and said, "Now!" Such a roar came from the lips of the sick man as seldom is heard from any human being. He struggled to free himself, yelling, "O doctor, you're killing me!"

Shouts of laughter soon drowned his cries, and he was told that the operation had been all over before the signal was given. It was a good joke, but it is doubtful if the poor fellow could ever be made to believe that he did not feel actual pain immediately after that fatal "Now!"

CATCHING A SWORDFISH.

A Fall River fisherman had an adventure with a swordfish, which came near being fatal to the man and resulted in the capture of the fish in a most novel manner.

The fisherman in question belonged to the crew of the *Hattie Ellen*, which frequently makes trips for swordfish. On this occasion a large fish was sighted and struck a few miles off Brenton's Reef Lightship. When struck it at once darted off through the water, carrying forty fathoms of line and a large keg. For an hour it raced on.

A man in a row-boat followed, and when the fish stopped, the man, believing it ready to give up, began hauling in the line. The fish came in all right for a time.

Suddenly, however, it started from the bottom, came to the surface with a rush, stuck its sword through the boat, and came near swamping it. The sailor had a narrow escape from being impaled on the sword; it grazed his pantaloons.

Seeing that the swordfish had obligingly come to him, however, the sailor quickly resolved to hold it. He took a half-hitch around the sword sticking through the boat, and the game was secure.

The schooner soon bore down upon the boat, and the sailor with the fish was taken aboard. The fish weighed two hundred and fifty pounds.

IN HIS FORELEG.

In the hurry of writing, laughable blunders will inevitably occur. Thus an editor of *The Companion* found in a piece of his own copy, the other day, a sentence about a man who was "wearing a knew hat."

The New York *Tribune* tells a story of a correspondent who described an accident by which a man was injured "in his right foreleg." The editor who read the copy did not notice the expression, and the compositor set it up as if it were an every-day occurrence to meet four-legged men.

The ever-watchful proof-reader was equal to the emergency, however, and came into the room with a broad grin on his face to ask if the injured man could probably be secured for a dime museum.

"YOUNG AGAIN."

In one of the last years of his life General Von Moltke, who was then more than ninety years old, attended a court reception. In the course of the evening he attempted some gallant compliments to a group of ladies, and then, shaking his head, said, laughing:

"Ah, I see I do not do this well at all now! If I were young again!"

"About how old should you like to be, count?" asked one of the ladies.

"Well, if I could only be eighty once more!" said Von Moltke.

QUEER.

Affairs in this distracted world
Are very queer indeed;
To try to get them straightened out
Would worry one need sadly.

For instance, there's a man I know,
Who's very queer indeed;
Who now, for twenty years or so,
Has made his living dying.

HIGH COURAGE.

Before the days of anæsthetics there were marvellous exhibitions of courage among men on whom it was necessary that surgery could only try to benefit, and not relieve, the last hope. The archives of Military Medicine tell, on account of the siege of Mayence, in 1793, that among the wounded after a dreadful cannonade was a little volunteer, who was brought to the hospital suffering terribly.

He lay was enormously swollen, and proved to have a fracture of the thigh-bone, with the splinters pounds. It was astonishing that a man of this size could have had the force to lodge in the bone a ball of such weight.

There was nothing to be done but to amputate the limb, as high as possible, and the poor boy bore his misery from without flinching.

"Is it done?" asked he, and the surgeon answered "Yes."

Then the young hero cried out, "Long live the nation!"

On another occasion, the firing of a mine caused the explosion of a powder-mill in the midst of a building by its foundations. At the moment a surgeon was engaged in amputating the limbof a man, and just as he was about to apply the second shot, the roof which brought down the whole of a glass skylight over himself and the patient.

"See and see where that glass comes from," he said to his assistant, who was busy in picking out the wood, remarked, coolly, "Sir-sir. Don't alarm yourself; you will see plenty of this kind of thing."

The operation was finished, and the patient told that he had no more torture to suffer.

"They is Republicans"—cried he, in answer.

REPEATED FAREWELLS.

In Russia a great deal of emotion is expended over a railway journey. To nine-tenths of the people a trip of a hundred miles by rail is a tremendous event, and they accordingly bid their friend farewell with a solemnity and effusion unknown to the "globe-trotting" American. Rough men and dead old women hug one another with the fervor of lunes, and half the people are either kissing or shedding tears.

Not the least amazing part of the spectacle, by the onlooker, are the half-way mistakes of the quantities. Several warnings are given before the train starts, and many persons take even warning for the final one.

Thomas Stevens, in his volume entitled "Through Russia," tells how a lady friend of his, who was saying her parting words to her husband through an open window of the car. The bell was rung. The lady kissed out her husband's arms were placed about her neck. They kissed each other's lips, and then each other's cheeks. She drew back into the car, and both expected the train to move off.

It did not move, however, and an officer told the man that some one still fifteen minutes to wait, and that another signal would be given. Instead of one signal there proved to be two, and on this being made treated the by-dashers to their little tableau no less than three times, two of which were the result of false alarms.

CONSCIENTIOUS.

Many a good story is told of a school where the boys are remarkably conscientious. One day the principal was lecturing them on the subject of cheatfulness, and asked, "Is there any boy here who has not taken a through bath this morning?" one lad only, a pattern of neatness, pleaded guilty.

"You, Harris," said the teacher. "I am surprised."

"I tried, sir," said Harris, stoutly, "that there's one thing I'm not afraid of, and that I'm not sure I oughtn't. So I can't call it a thorough bath."

Harper's Monthly tells a story of an equally conscientious child of six or seven years, attending the primary school. She was reciting in mental arithmetic, and the teacher told the class to write the answers on their slates. Finally, there came a pause.

"I told four and three."

"I couldn't do it, mamma," said the child, as she afterwards related the incident, and tell down three straight notches on the slate, and then drew a fourth one. "But then I thought that wasn't morral. So, though I knew the answer was seven, I wrote down 'five.'"

EMERGENCIES.

It has been truly said that the luxuries of one age are the necessities of the next, and I may be added that the luxury of one man is the necessity of his neighbor. In fact, the two simply so completely that it is difficult to draw the line between them.

At a meeting of the Board of Aldermen in a Western city, the pending object-lesson question to represent the members with itself, of attendance.

"At the last meeting," he said, "only twenty-three members were present. Such carelessness must be stopped. I intend to stop it, and I hope to see a resolution passed defining what is a proper excuse for non-attendance."

Before the question was put, a motion was made defining the reasonable excuse for non-attendance as "illness in the family, illness of a member, or absence on municipal business."

Then a serious-looking member arose, and said, "Mr. President, I move to amend by adding—

"But, sir, what is a member to do when there's a base-ball game?"

"He's a great preacher," said an enthusiastic parishioner; "he never falls below his average, but often rises above it."

Ladies' Underwear should be made from KING PHILIP CAMBRIC, LAWNS and NAINSOOKS. Send stamp for samples. King Philip Mills, Worth St., N. Y. Lndr.

To cleanse and preserve the teeth use "Dr. Sweet's Camphorated Magnesia-ceous Dentifrice." The Youth's Companion is an illustrated weekly paper of eight pages. Its subscription price is $1.75 a year, payment in advance.

Twelve or sixteen pages are often given its subscribers in a single weekly issue of the paper. All additional pages over eight—which is the number given for $1.75—are a gift to the subscribers from the Publishers.

New Subscriptions can commence at any time during the year. The Companion does not employ agents to solicit renewals of subscriptions.

Payment for The Companion, when sent by mail, should be made in a Post-Office Money Order, Bank Check, or Draft, or an Express Money Order. WHEN NEITHER OF THESE CAN BE PROCURED, send the money in a Registered Letter. All postmasters are required to register letters whenever requested to do so.

Silver should never be sent through the mail. It is almost sure to wear a hole through the envelope and be lost, or else it is stolen. Persons who send silver to us in a letter must do it on their own responsibility.

Postal Notes are not a safe means of sending money. Any one can collect them at any Money-Order Post-office, and, if lost or stolen, the money cannot be recovered, as no duplicates are issued. Subscribers who send us Postal Notes must do so at their own risk.

Renewals.—Three weeks are required after the receipt of money by us before the date opposite your name on your paper, which shows to what time your subscription is paid, can be changed.

Discontinuances.—Remember that the publishers must be notified by letter when a subscriber wishes his paper stopped. All arrearages must be paid.

Returning your paper will not enable us to discontinue it, as we cannot find your name on our books unless your Post-office address is given.

Always give the name of the Post-office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed and drafts made payable to

THE YOUTH'S COMPANION,
41 Temple Place, Boston, Mass.

For the Companion.

REPRODUCTION OF BACTERIA.

Science has done much to lay the ghosts that have walked the earth from times immemorial. It has scattered darkness once fearfully felt, even by the learned; and has brought within the domain of the natural much that formerly seemed to belong to the realm of the supernatural.

But science has sometimes increased human fears, at least for a time, by revealing dangers before unperceived. Not a few persons would like to imitate the Brahman king who crushed the microscope which showed animal life in his drinking-water. They would like to ignore troublesome facts.

Science has revealed the presence of bacteria,—microbes,—some harmless, some harmful, everywhere within and without us. Many species have their habitat in our very mouths! Most of the worst diseases and the most infectious epidemics are believed to be the work of these malignant foes, that no unaided eye can see, and seeing, guard against. The old imps of superstition were nothing to them.

One of the most terrible facts connected with them is their capacity for multiplication. It almost staggers belief; certainly it is beyond our power fully to apprehend. In a single day one of these foes may become over sixteen millions, and in forty-eight hours nearly two hundred and eighty-one thousand millions! Shall we smash our microscope? Shall we, like the ostrich, hide our heads from the danger? There is something better. We give it in the language of the *Times and Register*:

"Sunlight, pure air and thorough cleanliness are natural enemies to disease-germs. The germs cannot flourish where they have not their proper food, and that is found in dampness, darkness, mold and filth. Keep the habitation flooded with sunshine and pure air, keep away all filth and dampness, and the germs of disease will find no foothold, no nidus in which to breed, and no food on which to grow.

"Nature is struggling all the time to keep her domain healthful and a fit habitation for man, but man shuts out the air and light, contaminates all things about him, and disease is the reward of his recklessness and neglect. There is more health in a sunbeam than in drugs, and more life in pure air than in the physician's skill.

"The sunlight may fade the parlor carpet, but better that than have disease fade the cheek. The wind may tan and freckle the face, but it is better tanned and freckled than thin and sallow.

"Help nature to keep your habitation healthful by allowing her forces an opportunity to operate. There is more health about you than disease.

"Health is man's natural condition. He can place about himself such conditions that disease germs will not *invade* but *evade* his system."

"CLEVER FLIP."

He was only a common black-and-tan dog, not a beauty by any means, for his eyes were so unpleasantly prominent as to have almost the appearance of glass eyes. What he lacked in beauty, however, he made up in wit.

As there were no little children in the house, he became a great pet, and was taught many funny tricks; but none of these were so clever as some things that he did of his own motion.

In a bright, sunny room of the third story lived a dear old lady, a distant but greatly beloved relative of the family.

She had chosen this room in order that she might be out of everybody's way, as she said, and free to entertain herself with writing, reading or sewing, as she liked; for she was very deaf and could not enjoy general conversation. Indeed, she could not hear at all without an ear-trumpet.

As she could not hear the bell, Flip had been taught to go up and summon her to her meals. If sent to call any one else he always barked noisily, but when sent for his deaf friend he would scamper up to that third-story room, and, if he found the door open, would begin frisking and dancing around her, saying, "Come, come," in every movement, but without uttering a sound. He had learned by experience that he must attract her attention by the eye.

Even if he found the door closed, he never barked, but waited patiently until it opened. For his old friend knew about what time to expect him, and looked out now and then to see if he was there.

One day he came up in this way to let her know that dinner was ready. She had been cutting out some work on the bed, but laid aside her scissors at once and, having washed her hands and adjusted her cap, followed Flip toward the stairway. But the little fellow was not altogether satisfied. He stopped, looked up at her, and back toward the room. Then he ran back himself.

As she made no motion to return, he stood in the door irresolute, came and looked up into her eyes again with a troubled expression, and once more darted back into the room.

This time she followed, murmuring, "What's wrong, Flip? Have I left anything?"

Sure enough, there he was on tiptoe, looking eagerly over at her spectacles, which she had forgotten and left on the bed. Flip knew very well that she could not eat her dinner comfortably without them.

All that time he had made no sound, but had done all his talking by pantomime, as it were.

"Flip is a very clever dog," the old lady said, as she told the story at the dinner-table, "to save me that long walk upstairs."

HUNTING ALLIGATORS AT NIGHT.

Mr. C. W. Butler in an article on "Alligator-Shooting in Florida," contributed to "The Big Game of North America," says that he went out one night with a doctor for a companion, intent on striking alligators. The doctor rowed, and Mr. Butler stood up at the bow, striking-pole in hand. Soon the white chin of an alligator appeared within the circle of light.

The pole left Mr. Butler's hand, and the line ran out as fast as a nine-foot alligator could travel. It was a novel night ride. The alligator did his best, swimming head and shoulders above water. The jack-light swung to and fro, and the water splashed fiercely against the boat.

All at once the tow-horse stopped, and a revolver-bullet rolled him over. Apparently he was dead, and the two men were trying to haul him into the boat, when suddenly he darted under it and began splintering the keel with his teeth.

A quick haul on the line brought the creature's head above water; instantly the doctor struck him a heavy blow on the head with the axe. Again he rolled over, and was hauled into the boat.

As the two men were congratulating each other, the alligator recovered from the stunning blow and began to clear out that boat. With his huge tail he fanned the doctor, who was in the stern, and with yawning jaws he reached after the man in the bow.

Something had to be done, and that promptly, or the boat would be threshed into pieces. The bowsman managed to get hold of the axe, and by a well-aimed blow to split open the saurian's head. Then he was quiet.

NEUTRAL.

A New Orleans newspaper says that a squad of Confederate soldiers, who were wearing captured blue overcoats, rode up to a house in Tennessee during the Civil War, and called out to the owner: "Well, old man, what are you, reb or Yank?" Old Caution was puzzled by the blue coats and the gray trousers. "Gentlemen," said he, "I'm nothin', and precious little of that."

A similar spirit seems to have possessed a certain aged negro whom a writer for the New York *World* met some time ago while wandering over the battlefield of Antietam.

"Were you here when the fight took place?" asked the visitor.

"Right yere, sah," answered the white-haired negro.

"Then you saw it all?"

"Well, sah, not zackly, but I saw de dead folks arter de battle."

"Why didn't you see the movements of the troops?"

"Well, sah, I was done embarrassed a heap dat day. I knowed Gin'ral Lee was dependin' on me not to whoop ag'in 'em, an' so I done wen' down cellar an' sat on de head ob a cider bar'l an' let 'em fight it out de best way dey could."

WANTED HIS RIGHTS.

Some years ago a wealthy manufacturer in the West, employing nearly a thousand hands, established a "model" city, thus giving the workmen and their families many comforts and luxuries that they could not have attained unaided. Of course there were regulations to govern the model city, which as a rule were cheerfully observed.

There were fault-finders, however, and especially a new-comer, named Bascomb. Among the rules was one forbidding the burning of soft coal, on account of the odor and smoke, and Bascomb objected strongly.

"My goodness!" remonstrated a friend, "I don't see what you are growling about. We get hard coal at cost, and as one ton goes as far as two of the other, you aint out of pocket."

"'Taint right to forbid it," asserted Bascomb.

"See here," demanded his friend, "do you really want to burn the nasty stuff?"

"No, I don't wanter," replied Bascomb, "but I wanter have the right in case I wanter!"

SHE HAD HEARD SO.

The application of general principles to particular cases is so nice a matter that the wisest of people never attain to perfection in it.

Lucy, three years old, was playing with a neighbor of her own age. All went smoothly until some childish dispute arose, when Lucy, regarding her little friend as the aggressor, slapped her soundly.

Lucy's grandmother reproved her for her rudeness and display of temper, but the child clinched the argument by saying:

"Why, dan'mudder, dan'mudder, don't you know it does little dirls dood to whip 'em?"—*New York Tribune.*

These are Facts which Housekeepers should Seriously Consider.

If you want the best food you will be interested in the following facts, which show why "Royal" is the best baking powder, why it makes the best and most wholesome food, and why its use has become almost universal—its sale greater in this country than the sale of all other cream of tartar baking powders combined.

The Royal Baking Powder NEVER Fails.

It is absolutely pure and wholesome.

It is combined from the most approved and healthful ingredients.

It makes the finest flavored, most tender, delicious and wholesome food.

It has greater leavening strength than any other baking powder, and is therefore the cheapest.

It never loses its strength, but will keep fresh and of full leavening power until used.

It acts slowly in the dough, so that none of its strength is lost before the baking is completed.

It makes food that will keep sweet, moist and fresh longer, or that may be eaten hot and fresh with impunity.

The reasons why the Royal Baking Powder is superior to all others in these respects are easily stated. One is because it is made from chemically pure materials. Another is because it is made with greater care and accuracy than any other. It is always uniform in composition and leavening power. It has been the standard baking powder for twenty-five years. The founder and conductor of its business ever since is still at the head of its management. Thus all the knowledge and skill attained by over a quarter of a century's experience is available in its present preparation. The consumer is not experimented upon by changes of formula that are constantly being made in other powders in an effort to get a mixture that will not "cake" or lose its strength, or that follow changes of proprietorship or manufacturers. The Royal Baking Powder is always certain and equal in its work; a teaspoonful does the same perfect work to-day that it did yesterday or last week or month or last year.

While the last teaspoonful in a can of Royal is as good as the first, other powders lose their strength after being made a short time, and particularly after the can is opened.

No great efforts are made by other manufacturers to procure pure materials. They use the ordinary cream of tartar of the market, which contains tartrate of lime and is generally mixed with alum, phosphates, or terra alba. The frequent tests by the Massachusetts and New York State Boards of Health show the great extent of this adulteration.

But experiments that cost many hundred thousand dollars were made by the Royal Baking Powder Company to secure for its use chemically pure ingredients, and to devise methods and formulas that would make a perfect baking powder.

In the manufacture of this powder there is used more than half of all the cream of tartar consumed in the United States for all purposes. This is refined in the mammoth works of the company (erected at a cost of over half a million dollars) by special, patented processes by which means there are secured to the Royal Baking Powder exclusively ingredients absolutely free from tartrate of lime or other adulterant or inert matter.

While there is no secret as to the ingredients used,—the methods of their preparation, their relative proportions and the manipulations which are indispensable to this end are unknown to other manufacturers.

The exactness with which the active principle of each ingredient prior to mixing is ascertained by expert chemists; the actual prohibition enforced against the receipt into the works of an impure ingredient; the care with which the materials are dried, coated and prepared before their combination, and the precision in packing the powder so that it shall be delivered to the consumer in the perfect condition in which it leaves the factory, are some of the details which go to make the perfect "Royal."

Are not the same means employed by other manufacturers? They are not. There have been a great many imitations of the Royal, but no equals. Pure materials are not employed, care is not taken in their preparation and combination, while in the great majority of baking powders alum is added to give them strength, while cheapening their cost.

No alum, phosphates or dangerous or doubtful substances are used in the Royal, and it costs more to manufacture than any other brand.

The great popularity and general use of the Royal Baking Powder attest its superiority.

Success is generally deserved.

Scores of brands of baking powders have been placed upon the market since it was introduced. Most of these have died; none have achieved a general success, while the Royal has increased in popularity until its sale is general in every city, town and hamlet in the country. Nothing but the superior quality of the Royal Baking Powder could have effected this.

Corroborative of the foregoing are the official tests. These have been made without prejudice, by entirely unbiased officers, have been elaborate, exhaustive, and should be conclusive. Prof. Tucker of Albany, whose thorough and scientific work in examining articles of food for the State of New York is well-known, says it is "a baking powder unequalled for purity, strength and wholesomeness;" while **the United States Government investigation, recently made under the authority of Congress, shows the Royal superior to all others** in leavening power.

The day has come for a rigid discrimination in the purchase of baking powders by the housekeepers.

Health and economy demand the use of that brand ascertained absolutely pure and wholesome and of greatest strength.

Those who have tested all thoroughly, use "Royal" only. If you are not using it, the facts here given should induce you to give it a trial.

No other Article of Human Food has ever received such emphatic commendation for purity, strength and wholesomeness from the most eminent authorities, as the Royal Baking Powder.

No other Article used in the domestic economy of the household has so many enthusiastic friends among the housekeepers of America; and its reputation is world-wide.

In Eight Chapters.—Chapter III.

Commencement Day.

Never had Dorothy welcomed the sound of the rising-bell as she did this morning. All through the long hours she had lain upon her bed crying silently, or pacing her little room stifling her groans and trying to bear her pain without a sign.

She had not thought of removing her clothes until well on toward daylight, and then she had suddenly remembered that if she wished to avoid being "found out," she must begin by practising deceit—pretending to have been in bed all night.

How she was to account for the injury to her arm she could not think. But it finally managed itself.

A few moments after the rising-bell rang, Dorothy heard a knock upon her door. She was standing before her tiny looking-glass, trying to arrange, with her one hand, her hair into its customary long braid.

"Come in," she said, tremulously.

Miss Lorimer entered. At sight of her, Dorothy straightened herself up and set her teeth hard, trying to hide her swollen wrist behind the folds of her skirt. But her face told the tale all too plainly, and at sight of her haggard cheeks and dark-ringed eyes Miss Lorimer gave an exclamation of shocked surprise.

"*My dear!*" she cried, "what *has* happened to you? You are ill. Tell me, Dorothy, what is the matter? You look as if you had not slept all night. Poor child! is it the old worry again?"

The kind words went straight to Dorothy's heart, and her overcharged nerves gave way under this new strain—the endeavor to barely deceive this woman, who was kind to her.

She bent her head and sobbed wildly for a few moments, while Miss Lorimer went to her and took her in her arms. In drawing Dorothy to her, she pressed against the injured limb, causing the sufferer to cry out with sudden pain.

Miss Lorimer looked down and saw. She knew what was the matter, but how it had come about she did not try to discover.

"You poor, *poor* little thing!" she said, her voice unsteady with sympathy. "Wait here a moment. I am going to 'make it well,' as they say to the ladies."

She hurried from the room. Presently she came back with cloths and arnica and strips of flannel, and began to bind up the aching wrist, meanwhile uttering words of comfort. But every syllable, instead of soothing her, pierced Dorothy like a thorn.

"It is only a sprain," said Miss Lorimer, "and if we are careful it will soon be sound again. But you were a foolish Dorothy not to come to me at once."

Dorothy said nothing.

"I had a friend once," Miss Lorimer went on, "who sprained his arm in the night just as you have done. He could not account for it at all, and the physician said he must have wrenched the wrist in his sleep."

The breakfast bell rang.

"I will explain it to Miss Dupree," said Miss Lorimer, "and have you excused from chapel. Good-by; I will send you up some toast and tea."

She was gone before Dorothy could say a word in protest or explanation.

A dainty breakfast made its appearance. Dorothy tried to eat, but every mouthful seemed to choke her, and she sent it down only half-tasted. She tried to sleep, but when she closed her eyes she seemed to see in herself the picture of a mean impostor.

"But I'm not lying," insisted Dorothy to her conscience. "If she thinks I hurt my wrist in my sleep why can't I let her keep thinking so? And, besides, if I told—there are the other girls."

"But you have nothing to do with the other girls," returned her conscience. "You are lying just as much by keeping silence now as you would be at another time by telling a falsehood. You are acting a lie."

When Miss Lorimer came up again to see how she was doing, she was astonished to find her patient still awake, and as feverish as before. She sat down beside her to lay her palm upon the throbbing temples.

"No, no, Miss Lorimer," Dorothy exclaimed, sitting up. "Please don't—yet. If you knew, you'd think I was only being served right, and I don't suppose you'd try to cure me at all—only you're so good perhaps you would. Anyway, I'm going to tell you, because it would be lying if I didn't. I didn't hurt my arm in my sleep—I was awfully awake. I was on the—shed-roof!"

Miss Lorimer looked at her in wonder.

"The shed-roof?" she repeated, wondering if Dorothy was not delirious and wandering.

"Yes, ma'am, the shed-roof. I kind of felt as if I *must* have some fun last night, and so I slipped down the hall and crawled out of the window and all along the piazza till I came to the shed, and then I slid down the roof and—and—sort of went out on the lake and—and—came back again, and it was when I was crawling up again that I hurt my arm! I'm awfully sorry, Miss Lorimer! I'm sorry clear from my head to my feet. I feel just as if I never wanted to have any one look at me again."

"There, there, Dorothy! That will do. I cannot quite understand this affair, and you are in no condition to try to explain it more fully. When you have slept and are stronger, we shall hear the rest."

She left the room. Dorothy dropped back against her pillow with a sigh of mingled uneasiness and relief—uneasiness because of the fear that a fuller explanation might involve the other girls; and relief at having confessed her own guilt. Presently she fell asleep, and slept until quite late. When she woke she found Miss Lorimer beside her.

"You have had a long nap," said the teacher, kindly. "And now, here is a little cold luncheon for you."

She produced a tray. Dorothy was very hungry and ate with relish, her companion sitting beside her and looking up now and then with eyes whose expression Dorothy could not quite understand.

When the last crumb was gone Miss Lorimer put the tray aside, and turning to her patient, said: "Now tell me, Dorothy, all about last night. I will not say, 'Keep nothing back,' because I trust you sufficiently to believe you will tell me the truth, the whole truth and nothing but the truth."

Dorothy told truly all that she had done, but said nothing about the other girls' complicity in the affair; and Miss Lorimer forbore to question her concerning it. If she suspected that Dorothy had not set out on her adventure alone, she gave no evidence of her suspicion.

"Well," said Miss Lorimer, "I think your experience has been severe enough, and I have pleaded with Miss Dupree to pardon you, because your fault brought with it its own punishment." Miss Lorimer told her how necessary were such rules as those which she had disobeyed; how a school was like a nation, whose laws were not made to harass people, but to protect them.

Dorothy meets her new Father.

"And remember this," she said, "No man thinks well of a woman who puts herself forward and gives him a chance to think lightly of her. Do you think those young fellows on the steamer last night, flighty as they were, would have dared address you if they had considered you more than a silly girl? A man never holds up to the ridicule of his friends a woman for whom he has respect, nor speaks of her lightly in their presence.

"If you knew as much of the world as I do, you would know that what I have said is true. I was brought up among a number of boys,—brothers and cousins,—and so was behind the scenes. I saw the lads flirt with girls who thought it 'splendid fun' to be smiled at by strange young men, and who had no other idea than that they were the admiration and envy of their mates.

"If they could only have heard these same young fellows talk about them later, how their cheeks would have burned with mortification and shame! And I was always warned against associating with such a girl. She is not just the kind we want you to know, Margaret.'

"But I have said enough, I think. You will remember, dear?"

Dorothy felt strangely humble, and when she tried to say "yes," her voice trembled as though she were on the verge of tears. But she did not cry; instead, she put her arms about Miss Lorimer's neck and whispered:

"I'll try to be as good as I ought. Really I will. You have been so good to me."

In the meantime Miss Dupree had learned enough of the affair to feel that Dorothy was not the only one concerned in it, and accordingly had made up her mind to discover the other culprits, not by means of secret investigation, but by a direct demand upon their honor.

She appeared just before dismissal, and desired any or all of the young ladies connected with last night's misconduct to hold up their hands.

Out of all the class only one arm was raised,—Dorothy was still in her room,—and that was Marie Pollock's.

Miss Dupree waited a moment, as though in expectation of seeing more respond to her call, and then remarked, quietly:

"Of course, having put you young ladies upon your honor, I cannot think, for a moment, that any concerned would fail to acknowledge herself. Therefore, I suppose Miss Pollock is the only other offender. Should there be, however, any one who from fear or any other motive has sought to shield herself by silence, I trust she will remember that while disobedience is a fault, dishonor is a crime."

Again she paused, but no one made an attempt at confession; and after telling Marie to come to her in her study, the principal left the room.

The moment the girls were able to escape from the school-room they gathered into a little knot, and began to whisper among themselves about Dorothy's supposed treachery.

"Miss Lorimer shows a great deal of partiality," complained Fanny Bergen. "She always lets Dorothy off easy, and the rest of us can catch it. That's the reason Dorothy tells her everything. Talk about honor! I'd like to know if she's been honorable!"

"Besides, she got us all into it," explained Pauline Leonard.

"Yes, indeed," assented Kate Van Voorhies.

"We never should have thought of going out in the boat if it hadn't been for her. She proposed it. And she looked right straight at the men on the steamer when they called out to us, and—"

"And helped us on the shed-roof, and everything. She was just the worst of us all, so there!"

"If you had raised your hand, Paul, I would have moved mine," whispered Della Carpenter. "I kept watching to see if you would, but you didn't."

"Oh, dear!" exclaimed Paul, sharply, "it's a pity about you. You needn't speak in that kind of despising way, either. If you wanted to be so fine, why didn't you put your hand up on your own account, and not wait for me?"

"The fact is," said Kate, "we're all in a pretty mess, and I'm going straight up to Dorothy's room and tell her what she's got us into. I'll pay her up!"

"Why, I don't see how we're in a *mess*," returned Fanny. "No one knows about us."

"You goose! Of course not. Only a fellow feels uncomfortable, and that's mess enough. If Dorothy hadn't told—"

"Dorothy didn't tell!"

The girls started apart, and there, behind them, stood Miss Dupree, stern-faced and severe. The girls shrank back.

"No, Dorothy did not tell," repeated the principal, slowly. "Neither did Marie Pollock. In the first place, I do not believe in trying to make one girl inform against another, and even if I did, Dorothy would have been the last to answer any questions that might implicate you.

"Marie Pollock confessed to her own fault, but I might have imagined that those two were alone to blame if I had not been fortunate enough to come upon you just now and receive your own evidence against yourselves. I am sorry to find that out of six there are only two who have the moral courage, to say nothing of honor—to speak the truth.

"You may go to your own rooms, young

Digitized by Google

ladies. At supper you need not appear, as I feel a desire to spare you the mortification of hearing your names read before the whole school as having been connected with Dorothy and Marie in last night's performance, and having failed to declare yourselves even when your honor was appealed to."

The girls went slowly from the room.

Miss Duprée's heart did not soften to them. Their misdemeanor was as nothing in her sight compared with their dishonest denial of it.

For two weeks cards of invitation had been flying, and the hotel had long ago disposed of all its apartments. The chapel in which the exercises of the day were to be held, was fragrant with blossoms and dim with shadowy boughs, while the gymnasium, where the concluding party was to be held, was converted into a bower. Poor Barney, the man-of-all-work, had oiled and polished the floor until his "back was broke."

These Commencement days were the bane of his existence, for at their season it was "Barney" here and "Barney" there, until the poor man was "kilt entirely;" and when he happened to be taking a breathing spell for the space of a minute, Bridget, his wife, who was the seminary cook, would always remark:

"Och, Barney, me b'y, while yer ristin', be schrubbin' down me sthairs, for they nade it the day."

Dorothy's enjoyment of the Commencement festivities was sadly interfered with. Her sprained wrist must still be bandaged; a new frock was lacking, and there was the prospect of the meeting with the "interlopers."

But she had determined to swathe her arm in a pretty silk handkerchief, to make the most of a bad job and be satisfied with her last summer's white swiss, and to remember only the fact of her mother's coming, which would reconcile her to the rest.

She and her classmates were among the gayest of the gay. Having served their sentence and being forgiven, they could rest assured that their misbehavior would never be referred to again.

Dorothy was holding one of her informal receptions in her room after study hours, when Barney appeared, bearing in his arms a huge pasteboard box, and remarking:

"It's mesilf is wonderin' what's the contints, Miss Dorothy. They do be so loight and yit so lar-r-ge."

The girls laughed, and then crowded about the bed while Dorothy snapped the cords and tried to free the box from its wrappings. "I sort of think maybe it's a dress," said Dorothy, "and that would be—Ah!"

For at last the cover was flung aside and there, beneath its coverlet of muslin wrappings, in its bed of tissue paper, lay the daintiest little frock imaginable—a mass of filmy lace and delicate mull. It proved to be just the right thing—simple and graceful, and fitting to perfection.

The fact that the lace was real did not greatly enhance its value in the girls' sight, for would it not have been enough, in any case, that it came from Paris?

It was Miss Lorimer who told Dorothy what a costly little affair it was; at which Dorothy looked grave.

"If it was so expensive I don't see how mamma ever could have bought it," she said, "for she isn't rich, you know, and when I wrote about having a new frock for Commencement, she said she was afraid she couldn't afford it. And to think of her having sent not only the frock, but slippers and laced stockings, and handkerchief and fan and—and—everything!"

Miss Lorimer smiled, and presently went away, while Dorothy felt that one of her cares was lifted from her mind.

The Commencement proceedings in the hall were done, and the supper gong had sounded. Such chattering and laughing; such sounds of whispered jokes and giggling response! The girls were allowed special privileges at this last supper, and they made the best of them.

The reception of the evening was the topic of overwhelming interest.

"Are your people here, Fanny?"

"Yes, indeed. Didn't you see my mother this afternoon?"

"My cousin Dick is here. Did you see him in chapel? That light-haired one with a mustache. He's dreadfully clever; he goes to college!"

"I kind of wished I was graduating when Miss Loring read her essay and got so many flowers and was clapped so. It must be lovely fun; and then, never to go to school any more —"

"Poh! I don't care. I like it here and I'm coming back, aren't you, Dorothy? By the way, has your mother come yet?"

Dorothy gave a short, disappointed sigh. "No, I watched for her but she didn't come, and I'm worried. I guess she will be on the quarter past eight train; she wouldn't want to take a later one. Oh, there! *Did* you hear that fiddle? Isn't it elegant?"

When the girls found themselves in the immense ball-room, late the gymnasium, with flowers everywhere and guests arriving constantly, they could scarcely keep their feet still with excitement.

Dorothy was chatting gaily when some one touched her upon the elbow and whispered in her ear:

"You're wanted in the reception-room. Quick!"

She needed no second bidding, but rushed away, her heart beating joyously, her lips trembling, and her only thought being of her mother.

Her feet scarcely touched the stairs, she ran so fast. When had the distance from gymnasium to reception-room seemed so long before?

But in a moment, which only seemed an hour, she was pushing open the door and passing through it like a little whirlwind, her arms open, her heart beating and on her lips the cry, "Oh, mamma, mamma!"

But the words died before they were uttered; for suddenly, as though in a moment turned to immovable stone, Dorothy stood still, her color fading, her breath forsaking her, and her heart almost ceasing to beat.

The room was nearly deserted. Not quite, for by the table sat a gentleman who rose to meet her as she entered; who saw her change from a joyous girl into a cold little statue, and who, stepping forward, held out his hand, saying:

"And this is Dorothy?"

JULIE M. LIPPMANN.

(To be continued.)

PEACE.

I have seen it brightly shining
On many a face,
A peace that is born of struggle,
Serenest grace!

—*Nellie Hart Woodworth.*

For the Companion.

FOR MARSE CHOUCHOUTE.

"An' now, young man, w'at you want to remember is this—an' take it fer yo' motto: 'No monkey-shines with Uncle Sam.' You unda-stan'? You aware now o' the penalties attached to monkey-shinin' with Uncle Sam. I reckon that's 'bout all I got to say; so you be on han' promp' to-morrow mornin' at seven o'clock, to take charge o' the United States mail-bag."

This formed the close of a very pompous address delivered by the postmaster of Centreville to young Armand Verchette, who had been appointed to carry the mails from the village to the railway station three miles away.

Armand—or Chouchoute, as every one chose to call him, following the habit of the Creoles in giving nicknames—had listened a little impatiently.

Not so the little negro boy who accompanied him. The child had listened with the deepest respect and awe to every word of the rambling admonition.

"How much you gwine git, Marse Chouchoute?" he asked, as they walked down the village street together, the black boy a little behind. He was very black, and slightly deformed; a small boy, scarcely reaching to the shoulder of his companion, whose cast-off garments he wore.

But Chouchoute was tall for his sixteen years, and carried himself well.

"W'y, I'm goin' to git thirty dolla' a month, Wash; w'at you say to that? Betta 'an hoein' cotton, a'nt it?" He laughed, with a triumphant ring in his voice.

But Wash did not laugh; he was too much impressed by the importance of this new function, too much bewildered by the vision of sudden wealth which thirty dollars a month meant to his understanding.

He felt, too, deeply conscious of the great weight of responsibility which this new office brought with it. The imposing salary had confirmed the impression left by the postmaster's words.

"*You* gwine git all dat money? Sakes! W'at you reckon Ma'ame Armand say? I know she gwine mos' take a fit w'en she heah dat."

But Chouchoute's mother did not "mos' take a fit" when she heard of her son's good fortune. The white and wasted hand which she rested upon the boy's black curls trembled a little, it is true, and tears of emotion came into her tired eyes. This step seemed to her the beginning of better things for her fatherless boy.

They lived quite at the end of this little French village, which was simply two long rows of very old frame houses, facing each other closely across a dusty roadway.

Their home was a cottage, so small and so humble that it just escaped the reproach of being a cabin.

Every one was kind to Madame Armand. Neighbors ran in of mornings to help her with her work—she could do so little for herself. And often the good priest, Père Antoine, came to sit with her and talk innocent gossip.

To say that Wash was fond of Madame Armand and her son is to be poor in language to express devotion. He worshipped her as if she were already an angel in Paradise.

Chouchoute was a delightful young fellow; no one could help loving him. His heart was as warm and cheery as his own Southern sunbeams. If he was born with an unlucky trick of forgetfulness—or better, thoughtlessness—no one ever felt much like blaming him for it, so much did it seem a part of his happy, careless nature. And why was that faithful watch-dog, Wash, always at Marse Chouchoute's heels, if it were not to be hands and ears and eyes to him, more than half the time?

One beautiful spring night Chouchoute, on his way to the station, was riding along the road that skirted the river. The clumsy mail-bag that lay before him across the pony was almost empty; for the Centreville mail was a meagre and unimportant one at best.

But he did not know this. He was not thinking of the mail, in fact; he was only feeling that life was very agreeable this delicious spring night.

There were cabins at intervals upon the road—most of them darkened, for the hour was late. As he approached one of these, larger than the others, he heard the sound of a fiddle, and saw lights through the openings of the house.

It was so far from the road that when he stopped his horse and peered through the darkness he could not recognize the dancers who passed before the open doors and windows. But he knew this was Gros-Leon's ball, which he had heard the boys talking about all the week.

Suppose he should stand in the doorway an instant and exchange a word with the dancers? It would not take a moment.

Chouchoute dismounted, fastened his horse to the fence-post, and proceeded toward the house.

The room, crowded with people young and old, was long and low, with rough beams across the ceiling, blackened by smoke and time. Upon the high mantel-piece a single coal-oil lamp burned—and none too brightly.

In a far corner, upon a platform of boards laid across two flour barrels, sat Uncle Ben, playing upon a squeaky fiddle, and shouting the "figures."

"Ah! v'la Chouchoute!" some one called.

"Eh! Chouchoute!"

"Jus' in time, Chouchoute; yere's Miss Leontine waitin' fer a partna."

"S'lute yo' partnas!" Uncle Ben was thundering forth; and Chouchoute, with one hand gracefully behind him, made a profound bow to Miss Leontine, as he offered her the other.

Now Chouchoute was noted far and wide for his skill as a dancer. The moment he stood upon the floor, a fresh spirit seemed to enter into all present. It was with renewed vigor that Uncle Ben intoned his "Balancy all! Fus' fo' fo'ard an' back!"

The spectaters drew close about the couples to watch Chouchoute's wonderful dancing.

"It take Chouchoute to show 'em de step, va!" proclaimed Gros-Leon, with fat satisfaction, to the audience at large.

"Look 'im! look 'im yonda! Ole Ben got to work hard' 'an dat, if he want to keep up wid Chouchoute, va!"

So it was; encouragement and adulation on all sides, till, from the praise that was showered on him, Chouchoute's head was as light as his feet.

At the windows appeared the dusky faces of negroes, their bright eyes gleaming as they viewed the scene within and mingled their loud guffaws with the medley of sound that was already deafening.

The time was speeding. The air was heavy in the room, but no one seemed to mind this. Uncle Ben was calling the figures now with a rhythmic sing-song:

"Right an' lef' all 'roun'! Swing co'nas!"

Chouchoute turned with a smile to Miss Félicie on his left, his hand extended, when what should break upon his ear but the long, harrowing wail of a locomotive!

Then he vanished from the room. Miss Félicie stood as he left her, with hand uplifted, rooted to the spot with astonishment.

It was the train whistling for his station, and he a mile and more away! He knew he was too late, and that he could not make the distance; but the sound had been a rude reminder that he was not at his post of duty.

However, he would do what he could now. He ran swiftly to the outer road, and to the spot where he had left his pony.

The horse was gone, and with it the United States mail-bag!

For an instant Chouchoute stood half-stunned with terror. Then, in one quick flash, came to his mind a vision of possibilities that sickened him. Disgrace overtaking him in this position of trust; poverty his portion again; and his dear mother forced to share both with him.

He turned desperately to some negroes who had followed him, seeing his wild rush from the house:

"Who saw my hoss? W'at you all did with my hoss, say?"

"Who you reckon tech yo' hoss, boy?" grumbled Gustave, a sullen-looking mulatto. "You didn' have no call to lef' 'im in de road, fus' place."

"'Pear to me like I heahed a hoss a-lopin' down de road jis' now; didn' you, Uncle Jake?" ventured a second.

"Neva heahed nuttin'—nuttin' 't all 'cep' dat big-mouf Ben in yonda makin' mo' fuss 'an a t'unda-sto'm."

"Boys!" cried Chouchoute, excitedly, "bring me a hoss, quick, one of you. I'm boun' to have one! I'm boun' to! I'll give two dolla to the firs' man brings me a hoss."

Near at hand, in the "lot" that adjoined Uncle Jake's cabin, was his little creole pony, nibbling the cool, wet grass that he found, along the edges and in the corners of the fence.

The negro led the pony forth. With no further word, and with one bound, Chouchoute was upon the animal's back. He wanted neither saddle nor bridle, for there were few horses in the neighborhood that had not been trained to be guided by the simple motions of a rider's body.

Once mounted, he threw himself forward with a certain violent impulse, leaning till his cheek touched the animal's mane.

He uttered a sharp "Hei!" and at once, as if possessed by sudden frenzy, the horse dashed forward, leaving the bewildered black men in a cloud of dust.

What a mad ride it was! On one side was the river bank, steep in places and crumbling away; on the other, an unbroken line of fencing; now in straight lines of neat planking; now, treacherous barbed wire, sometimes the zigzag rail.

The night was black, with only such faint light as the stars were shedding. No sound was to be heard save the quick thud of the horse's hoofs upon the hard dirt road, the animal's heavy breathing, and the boy's feverish "hei-hei!" when he fancied the speed slackened.

Occasionally a marauding dog started from the obscurity to bark and give useless chase.

"To the road, to the road, Bon-a-rien!" panted Chouchoute, for the horse in his wild race had approached so closely to the river's edge that the bank crumbled beneath his flying feet. It was only by a desperate lunge and bound that he saved himself and rider from plunging into the water below.

Chouchoute hardly knew what he was pursuing so madly. It was rather something that drove him—fear, hope, desperation.

He was rushing to the station, because it seemed to him, naturally, the first thing to do. There was the faint hope that his own horse had broken rein and gone there of his own accord; but such hope was almost lost in a wretched conviction that had seized him the instant he saw "Gustave the thief" among the men gathered at Gros-Leon's.

"Hei! hei, Bon-a-rien!"

The lights of the railway station were gleaming ahead, and Chouchoute's hot ride was almost at an end.

With sudden and strange perversity of purpose Chouchoute, as he drew closer upon the station, slackened his horse's speed. A low fence was in his way. Not long before, he would have cleared it at a bound—for Bon-a-rien could do such things. Now he cantered easily to the end of it, to go through the gate.

His courage was growing faint, and his heart sinking within him as he drew nearer and nearer.

He dismounted, and holding the pony by the mane, approached with some trepidation the young station-master, who was taking note of some freight that had been deposited near the tracks.

"Mr. Hudson," faltered Chouchoute, "did you see my pony 'roun' yere anywhere? an'—an' the mail-sack?"

"Your pony's safe in the woods, Chou'te. The mail-bag 's on its way to New Orleans —"

"Thank God!" breathed the boy.

"But that poor little black fellow of yours has about done it for himself, I guess."

"Wash? O Mr. Hudson! w'at's—w'at's happen' to Wash?"

"He's inside there, on my mattress. He's hurt, and he's hurt bad; that's what's the matter. You see the ten forty-five had come in, and she didn't make much of a stop; she was just pushing out, when bless me if that little chap of yours didn't come tearing along on Spunky as if Old Harry was behind him.

"You know how No. 22 can pull at the start; and there was that little imp keeping abreast of her 'most under the thing's wheels.

"I shouted at him. I couldn't make out what he was up to, when blamed if he didn't pitch the mail-bag clean into the car! Buffalo Bill couldn't have done it neater.

"Then Spunky, she shied; and Wash he bounced against the side of that car and back, like a rubber ball, and laid in the ditch till we carried him inside.

"I've wired down the road for Doctor Campbell to come up on 14 and do what he can for him."

Hudson had related these events to the distracted boy while they made their way toward the house.

Inside, upon a low pallet, lay the little negro, breathing heavily, his black face pinched and ashen with approaching death. He had wanted no one to touch him further than to lay him upon the bed.

The few men and colored women gathered in the room were looking upon him with pity mingled with curiosity.

When he saw Chouchoute he closed his eyes, and a shiver passed through his small frame. Those about him thought he was dead. Chouchoute knelt, choking, at his side and held his hand.

"O Wash, Wash! W'at you did that for? W'at made you, Wash?"

"Marse Chouchoute," the boy whispered, so low that no one could hear him but his friend, "I was gwine 'long de big road, pas' Marse Gros-Leon's, an' I seed Spunky tied dah wid de mail. Dar warn't a minute—I 'clar', Marse Chouchoute, dar warn't a minute—to fotch you. W'at makes my head tu'n 'roun' dat away?"

"Neva mine, Wash; keep still; don't you try to talk," entreated Chouchoute.

"You aint mad, Marse Chouchoute?"

The lad could only answer with a hand-pressure.

"Dar warn't a minute, so I gits top o' Spunky—I neva seed nuttin' cl'ar de road like dat. I come 'long side—de train—an' fling de sack. I seed 'im kotch it, and I don't know nuttin' mo' 'cep'

Digitized by Google

mis'ry, till I see you—a-comin' frough de do'. Mebby Ma'ame Armand know some'pin," he murmured, faintly, "w'at gwine make my—head quit tu'nin' 'round dat away. I boun' to git well; 'case who—gwine—watch Marse—Chouchoute?"

NEPIGON.

In Six Chapters.—Chapter III.

Trouting in Nepigon Pool.

Not only John and Wen-a-goosh, but every member of our party, brought driftwood and brush for the search-fire on the rocks. But the belief that Lee was drowned grew upon us.

The red glare of an increasing bonfire soon shone out on the dark pool, and lighted up the huge, brown side of Split Rock across the rapids. John and Wen-a-goosh launched a canoe. Professor William, with Dick and Alton, were embarking with them, while the rest of us stood despairingly by, when Thea suddenly screamed:

"Why, there's Lee!"

Turning, we all saw him, standing a few steps up the path, looking toward us and blinking, as if in wonder.

Teacher Sarah was so much affected by his sudden reappearance that she sat down on the rocks without a word, and covered her face with both hands. Dick was the first to recover breath.

"Well, you're a pretty fellow to give us such a scare!" he exclaimed.

"'Scare'?" said Lee. "Why, have you been worried about me? Have you been to dinner? And did you catch any trout?"

Alton groaned. "I wish somebody would carry me into our tent," he said, sarcastically; "I think I shall faint!"

"Lee, where have you been?" Professor William asked, gravely. "We have been in the greatest alarm about you for two hours!"

"We feared you were drowned," added Teacher Sarah.

"And we were going to search for your body," said Dick, with grim irony.

"Why, I went to sleep," the boy said, falteringly, "but I thought it was only a minute."

Lee looked confused and very penitent.

"I went up there to the head of the rapids," he began to explain, "and made ever so many casts off the ledge, and stood looking at the water for some time.

"But I did not get a rise, and after a while I felt sure I shouldn't catch anything, and so reeled in my line.

"The sun had just gone behind the mountain, but was shining bright and beautiful on the other mountain across the river. It was so fine I thought I would sit down and write up my notes, a few minutes, for I hadn't got a chance to write a word since yesterday morning.

"So I looked about for a chance to sit down, and went along on the rocks, a few steps above the canoe-landing, among the cedars, and sat down on a mossy stone.

"I wrote in my note-book ten or fifteen minutes, and then I was dreadfully tired, for I haven't slept much on the cars, and last night my bed had a great, hard ridge in it,—and I went to sleep!"

"Well," said Teacher Sarah, laughing, "you gave us a good fright."

Lee was so humble and shamefaced that no further reproach was uttered. John warmed up for him as good a dinner as possible from what was left, and Teacher Sarah brewed a cup of tea.

At six o'clock the next morning we were all astir, none the worse for our adventures.

Alton and Dick had got out in time to angle an hour before breakfast, and had caught three trout. John made excellent coffee, and again we feasted upon fried fish.

Immediately after breakfast the short portage was made, and we went on up the river, reaching Island Portage at ten o'clock, and the longer Pine Portage at noon.

There is here a carry of a mile or more around a succession of rapids and pools, the most celebrated of which—famous among sportsmen the whole country over—is known as Hamilton's Pool.

It is situated near the head of the portage, and is formed by a boisterous white rapid which comes foaming down a rocky cañon, and turning abruptly around the foot of a wooded bluff on the left or west side, spreads out in a seething pool of wonderful depth and color.

The waters of the pool have a peculiar intermittent movement, a sort of ebb and flow, not easily explained, which the Indians attribute to Wahbunoo-nah-magoos, the Spirit Trout of Nepigon.

The place is a tangle of whirlpools and counter currents, somewhat dangerous to a canoe. Even the trout are vexed by the turmoil of the waters; many of them, often great six-pounders, are constantly seen leaping out of the water, and tumbling back into the foamy caldron with sudden splashings.

At Pine Portage we found the place occupied before us by a party of sportsmen, and accordingly we reëmbarked, made Little Flat Rock Portage, crossed Lake Emma, and just at nightfall reached Nepigon Pool.

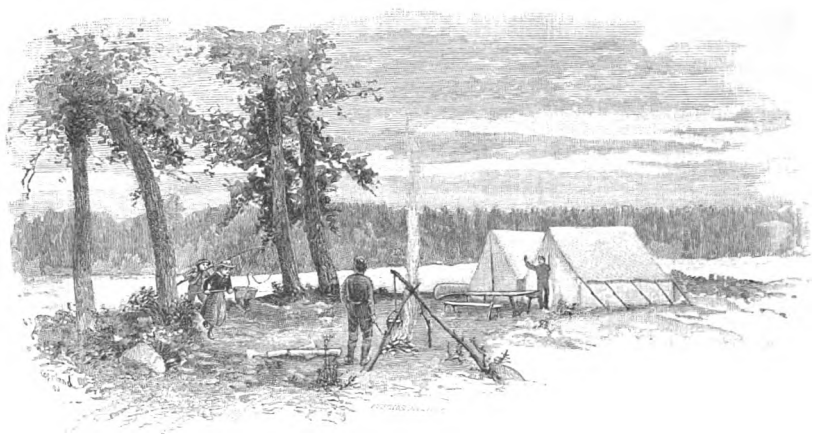
This is the deepest and grandest pool on the river. It is a mile and a half in length by nearly half a mile in breadth, and of great depth. Like Hamilton's Pool, it is a maze of shifting currents and eddies.

As we paddled along by the east shore, the white water of a tumultuous rapid could be seen pouring diagonally into the pool near the upper end of it. From behind a wooded bluff to the right, the heavy roar of the falls came distinctly to our ears.

But evening was upon us, with rising clouds, and presently a growl of thunder in the northwest interrupted the continuous roar of the waters.

Where the rapids turn half around into the great pool, there is a pretty little headland, made all the more picturesque by four balsam poplars, which we called balm-o'-gilead-trees.

We had barely time to land and pitch the tents at this point, and prepare a hasty campers' supper, when darkness fell, and the rain came in torrents.



One sleeps till morning when camping. No one stirred until half-past five, when Lee crept quietly out, and taking his rod, made for the rapid in advance of all save Thea, who had waked and was meditating a similar project.

They each intended to surprise the party by catching the first fish, but Lee was a little ahead. As Thea approached the rapid, she saw him excitedly playing a trout. He had hooked one at his second cast with a "gray hackle." Thea generously ran and brought a scoop net.

It was a rough place for them, for the rapid is full of great boulders at this point. The trout darted wildly around the submerged stones, but after a few flurries, Lee reeled it down to a short line, and then, as he drew it slowly in shore, Thea scooped it up in the net and ran with it, line, hook and all, back from the water.

"Lee has caught the first trout here!" she cried. "And isn't it a beauty!"

It was a young trout of not quite two pounds' weight, by our little dial scales, but as Thea had said, it was the most beautiful trout that we had seen thus far, both as regards form and its red spots.

Thea and Lee bring in the First Trout.

It was scarcely ten minutes after Thea and Lee had taken their still struggling two-pounder to the camp-fire when John called out to them, "Come eat your fish!" He had rolled it in meal and fried it to a delightful brown.

"Pretty quick work that, John," said Teacher Sarah. "From the river to the platter in ten minutes!"

"Now go fish again," John said to them, with a laugh; "I will fry them as fast as you bring them to me."

Two which Alton and Dick presently caught sufficed for breakfast for the others. All then went along the rapids, to begin fishing in earnest.

Dick obtained the first cast, but no fish rose. Then Alton whipped out his two flies, which fell lightly on the whirling water. Being still dry, they floated off airily across the seething hole, on a refluent wave.

Flash! Something shining, specked with gleaming red, broke through the foam. Alton struck, but as he struck, another flash and gleam rose at the other fly, and the reel whirred sharp and loud! "Isaak Walton help me!" exclaimed the lucky fisher, under his breath. "I've hooked both of them, and they're whales! For mercy sake, Dick, give me more room on this rock. There's no room here to do anything!"

Away went both trout out across the rapid, with his entire fifty yards of line, and doubled the thin spindle of rod clear down to the water.

"Reel in! reel in!" cried Dick.

"I can't! I dare not!" replied Alton. "The rod will go if I do! Oh!" he groaned an instant later, "there goes one of them. 'Twas the big one, too! I know by the way the strain slacks off."

He was able now to reel in the line, and after playing the fish in the pool for three minutes or more, managed with Dick's aid to pass the net beneath it, and lift it out.

"Just about two pounds and a half," said Dick.

"Three, sure," exclaimed Alton. "But oh, that one that broke away was the big one! Five pounds, I know by the way he pulled. He took my leader short off. Wasn't it a shame to lose such a trout?"

While Alton was replacing his lost fly and leader, Dick went down to the hole next below, and with almost his first cast here, hooked a trout as large as Alton's.

This fish made the liveliest fight of any, thus far. It was nearly fifteen minutes before it tired sufficiently to be reeled into the shallow water beside the rocks.

Both were very handsome trout, and the two together weighed exactly five pounds.

Dick and Alton wished very much to cross over to the other bank of the rapids and try their luck on that side. Accordingly, after lunch the canoes were launched, and all the party except Lucia embarked, and were paddled around the foot of the rapids to a point of rocks on the northerly bank of the river, whence it was possible to reach the coveted position on foot.

Lucia preferred to remain in camp and make sketches. She had already taken several photographs.

"We shall not be gone for more than two hours, probably," Professor William said to her, as they were putting off.

But more than half an hour was occupied in going around the foot of the rapids. The party then began jack-fishing in the still water of a bay on that side, so that, as it chanced, Lucia was left alone for more than three hours. She sketched the falls, the rapids and the camp from various points of view, and was for some time pleasantly occupied.

By and by she took her rod and angled along the rapid.

After about half an hour she had a fine rise, and at the next cast hooked a two-pound trout, which she played for a long time. Finally she drew it into shallow water beside a stranded log, and scoop-netted it with her hat. The spasmodic struggles of the fish excited her pity, and she put it in a bucket of water to show to the rest of the party on their return.

By this time it was almost sunset. Lucia was momentarily expecting the return of the party. But the canoes did not come around the point in sight.

As she stood watching her fish in the bucket and waiting, she heard a slight noise in the bushes fifty or sixty yards away, on the lower side of the little open space near the shore of the pool. Looking in the direction of the sound, she saw the thick alders moving a little at one point.

Her first thought was that some animal was coming through them—a bear, or more likely a deer. For a moment she felt slightly uneasy, not to say alarmed. Then it flashed to her mind that Alton or Dick was there, trying to frighten her, since they knew she was alone in camp. Probably they had crossed the pool at some point below, she thought, and come up through the bushes. She knew this would be quite like Alton.

"But I will turn the tables on him," she murmured to herself. Going on tiptoe to the tent, she got her camera, which held a plate ready to expose by merely removing the cap.

She stole softly along toward the alder copse, full of her project, and almost bursting with suppressed laughter. Her plan was to get a photograph of Alton in the very act of "playing bear" to frighten her. It would be a fine advantage to have it to show to the others, and would turn the laugh upon him capitally.

As she went forward the bushes waved a little more, and she caught a glimpse of some object amongst the twigs and leaves, which she was sure was either Alton or Dick covered over with a rubber coat, for it looked as much like that as anything.

Evidently the joker was working his way around to get nearer to the tents, and had not seen her coming forward.

Directing her camera at the spot, with the cap ready to whip off, she determined to take the initiative and surprise the rogue into suddenly rising up and exhibiting himself.

She now called out, "Shoo!"

At the sound of her voice, not a boy in a rubber coat, but a large black animal suddenly looked out of the bushes—where it had manifestly been devouring some fish refuse; and seeing Lucia, it gave a *snuff* of extreme surprise, and bounded away through the thick brushwood.

Lucia was equally disconcerted. Dropping her camera, she uttered a scream which John and the others heard across the pool; for they were now on their way to camp.

In great alarm they plied their paddles and made haste to cross over.

"It wasn't so much that I was actually terrified," Lucia explained afterward, "as that it so completely took me aback; for I had quite settled it in my mind that Alton or Dick was there under a rubber coat!"

Recovering from her first fright, Lucia stopped to listen, and heard the animal, which she well knew must be a bear, running off. Then she went back and picked up her camera, which had fallen forward and struck the end of the lens tube down into the grass. The cap lay close by; it had fallen off the instant she had let go the camera.

Replacing it on the tube, she carried the apparatus to the tent, resolving meantime that no one should ever be the wiser for her adventure.

But by this time the canoes were coming around in plain view, and they had no sooner reached the landing than Dick and all the others cried out, "Was that you, Lucia, who screamed?"

To clear up the matter, Lucia was obliged to give an explicit recital of the entire incident.

The most singular part of the adventure was that a somewhat imperfect negative of the scene, where the bear was in the act of bounding away into the brush, had been caught on the plate, exposed for a moment by the tumbling off of the cap, as the camera was falling forward to the ground! Upon developing the set of plates made use of during the trip, a few weeks later, this queer "view" came out with the others. It is one of the curious instances of accidental photography.

ENGLISH ELECTIONS.

By Justin McCarthy, M. P.

We have seen many changes in England of late years. The English people—whom Cobden once described as the Chinese of Europe because of their love of old ways and their abhorrence of all things new—have of late been changing, reconstructing, pulling down the old, and setting up the new after a fashion which might entitle them to be described as the Japanese of Europe.

In nothing have they accomplished a greater transformation scene than in their system of parliamentary elections.

A parliamentary election is now conducted on the ballot system, whereas in former days it was done by open voting, and the poor voter hardly dared to call his soul his own. If he ventured to vote according to his conscience he was likely to be turned out of his house by his landlord, or if he were a shopkeeper, to be refused the custom of the landlord's class. Now that is all changed, and a man can vote as he pleases, for he need not let any one know how he votes.

But that is not the only change. The whole form and conditions of an election are made quite different from what they used to be.

Before Mr. Gladstone introduced these great reforms, every election day was preceded by a public nomination day.

On the nomination day the various candidates and their friends met on a great public platform usually set up in the open air, probably in the market-place of a town. There the candidates were duly proposed and seconded, and made speeches in reply, each man setting forth his own pretensions and disparaging the pretensions of his rival.

A vast crowd gathered round the platform, and there were the bands of the different political parties—the bands of the Blues, let us say, and the bands of the Buffs; and the great object of the Blue Band was to drown the voice of the Buff candidate, while the Buff Band was determined that if brass and drum-parchment could do anything, the eloquence of no Blue orator should be allowed to steal men's souls away.

Generally gangs of prize-fighters and other rowdies were hired on both sides to get up riots; and several sets of hand-to-hand combats commonly went on while the political antagonists were distending their throats and making their eyes almost start from their sockets in furious and futile attempts to deliver their speeches.

The ceremonials were, in fact, a mere saturnalia of riot, drunkenness and ruffianism.

Now the whole of this public nomination is abolished. All that is done on the nomination day at present is this: the proposers, seconders and supporters of each candidate hand in at a given hour of the day what are called the nomination papers, and which merely set forth the name of each candidate and of the electors who make themselves personally responsible for his nomination.

Then the day for the polling comes; and the polling, too, is a quiet, not to say a humdrum, piece of business.

In each polling division of a constituency there is a polling-place. In cities it is generally held in some parochial office or public school. A voter going up to one of these places sees, perhaps, two or three voters going in or coming out; he sees a policeman standing on guard at the door; and probably he does not see a single lounger.

He goes into the room, and there he sees a long desk with two or three officials behind it, who have big books in front of them; and at the other side of the room a few little compartments, very much like those of an English or Continental telegraph office.

He goes up to the desk and gives his name; and when the rate-books have been looked up and his credentials duly examined, he is handed a printed ticket containing the names of all the candidates, each in a separate line. At the end of each name is a small blank space.

The elector is now shown into one of the little compartments, and there, all alone and in secrecy, he makes the mark of a cross opposite the name of the candidate he prefers.

He then goes back to the desk, and in presence of the officials drops his voting-paper, carefully folded, into the ballot-box. The officials see that he drops the paper in, but they cannot see what he has marked upon it.

Then the voter has done his duty to his country, and lounges quietly home to dinner.

All or nearly all the old "humors" of the British election have vanished. But of course

Digitized by Google

we still have the election meetings, the speech-makings and the animated interchange of personal abuse.

We have also some new and original humors of our own. The petticoat is a tremendous influence in the English elections of our time. The Primrose Dames swoop down on the electoral field like eagles striking a bee-line for a carcass.

Bringing Voters to the Poll.

The Primrose League is an association of Conservative matrons and maids who have started a fable about the late Lord Beaconsfield's love of the primrose; and under the inspiration of that symbolic flower they devote themselves to the upholding and the further propagation of the opinions of Lord Beaconsfield's political party.

I must say they do their work right well. They are indefatigable; they are inexhaustible; they pervade the country, holding meetings and making speeches—and very clever speeches some of these ladies can make.

When an election comes on they have additional and different work to do. Under the late electoral reform bills a candidate or his friends may no longer pay for the conveyance of a voter to the poll; but any one may use his private carriage for the conveyance of as many voters as he pleases.

Now in the case of poor men, workingmen, living or laboring at a great distance from the polling-place, it makes a vast difference whether the voter is left to trudge to the poll himself or whether he is pleasantly and briskly driven to the spot in the carriage of some countess. Very often the countess or the duchess, as it may be, drives her own pair of ponies, and she rattles up to the door of a weaver or a blacksmith, and with voice of sweet courtesy beseeches him to take a seat beside her, and let her have the honor of conducting him to the poll.

The Tories have decidedly more carriages than the Liberals, and this gives them an immense advantage.

The Liberal ladies have lately been getting up political organizations of their own, and have been contributing the heavy family coaches and the light barouches and the smart pony-traps to the business of electoral battle—making them genuine war-chariots.

But the organization of the Tory dames is as yet much in advance of anything their Liberal sisters have been able to accomplish, although these latter have recently been showing great energy; and be it observed that they can put into the field their countesses and their marchionesses, too.

A young Liberal lady told me lately some of her odd experiences in a campaign in one of the midland cities. She had her big old family coach, and was personally conducting the capture of Liberal voters. Two or three men whom she was to take charge of were working in a dye manufactory.

The first man whom she invited into her carriage hung back in a sheepish way. She urged him to lose no time, but to get in and sit beside her. At last he spoke.

"Please, Miss," he said, "I have been working hard in the dyes all the morning, and I think I had better put some cleaner man in next to you!"

Another time she had to convey a voter who could not read or write. In such a case the official at the polling-booth is permitted by law to ask the man privately the name of his favorite candidate, and to mark the cross for him.

This particular voter of whom I am now speaking was a big, good-natured, shy man, terribly afraid that something would happen to him, that he should be made responsible for some sort of punishable offence, if he had not some one with him to protect him. So he firmly declared that he would not enter the polling-booth at all unless the young lady, my friend, went with him.

There was no moving him from this resolve. No; he knew nothing about it, he persisted, and they would only puzzle him if they got him alone.

So my friend had no way out of the difficulty but to go with him. She entered the sacred precincts, the voter clinging to her skirts, and she began an explanation to the officials.

The explanation was promptly cut short by the official sternly holding up to her eyes a printed placard bearing the inscription, "No women admitted to this room." She might agitate, she might organize, she might make speeches all day long, she might convey scores and hundreds of voters to the poll; but she must not enter the polling-booth!

The voter would not consent to trust himself without her. She had to quit the building; he sorrowfully but resolutely quitted it with her—and a vote was lost to the Liberal candidate.

THY BURDEN.

To every one on earth
God gives a burden to be carried down
The road that lies between the cross and crown.
No lot is wholly free,
He giveth one to thee.

—*Christian World.*

THE TRIPLE ALLIANCE.

The recent visit of the young German Emperor William to his English grandmother and her subjects was not only an interesting event by reason of the splendor of his welcome, but probably an important one in its political results.

The cordiality with which the Emperor was received, the brilliant fêtes given in his honor, the banquets, reviews, hospitalities which occupied his time were mainly due, no doubt, to the fact that he is the almost absolute ruler of a mighty nation, and is, moreover, the grandson of the English queen.

Certainly his gracious welcome was not owing to his personal achievements as a warrior or a sovereign, for his record in these respects has still to be made.

The most important aspect of his visit to England is probably the political rather than the social one.

At the same time that William was enjoying the pageants in his honor at London and Windsor, a British fleet in the Mediterranean was being visited successively by the Emperor of Austria-Hungary and the King of Italy.

Thus England was being honored at the same time by the three continental sovereigns who have just extended the time of the famous "Dreibund," or "Triple Alliance."

For several years the three powers of Germany, Austria-Hungary and Italy have held themselves bound by mutual compacts to defend each other against any attack made by another power.

This Alliance was formed by three ministers who are now, curiously enough, all out of power—Prince Bismarck, Count Andrassy, and Signor Crispi. Its intention was to form a solid barrier, in Central Europe, against the possible aggressions of Russia or of France. By it Germany was freed from the fear of a French invasion, Austria from a Russian attack, and Italy from a collision with France.

The purpose and effect of the Triple Alliance has thus been to preserve the peace of Europe. It was, nevertheless, somewhat doubtful for a time whether, when the period of the Alliance came to an end, it would be renewed. The political power had passed, in all three countries, from the men who formed it; and all the influence of Russia and France would naturally be thrown against it.

But at last it has been announced that the period of the Triple Alliance has been extended for six years. The three powers resolve that, at least for that time, they will stand shoulder to shoulder in resisting any attempt to disturb European peace.

In order, moreover, to make themselves yet more secure, they undoubtedly desire that England should support and coöperate with the Triple Alliance. England would not consent to actually enter the Alliance herself. But there is good reason to believe that her interests and sympathies lie rather with the allied powers than with Russia or France.

It may be readily conjectured that one important purpose of the Emperor William's visit to his royal grandmother was to establish more cordial relations between England and Germany, and to engage, as far as he could, England's support to the Triple Alliance. The same reason probably actuated his two allies of Austria and Italy, in going out of their way to stand on the decks of British men-of-war.

The result seems to be that to-day England wishes well to the Alliance, and in case of war, would either stand neutral, with a friendly attitude toward the allies, or enter upon hostilities, with her magnificent fleet and ample wealth, in their support.

The world at large will rejoice at the extension of the Triple Alliance, which purposes to keep the peace for six years longer. Still better news, however, would be the announcement that the great powers had agreed to decrease the enormous armies which now burden their soil, and deplete the pockets of their people.

For the Companion.

TWILIGHT.

How fair and broad is this reposeful scene!
The shining lake inverts the sloping shore—
House, wheatfield, grassland, acreage of corn.
The twilight hills stand girt by stirless pines;
And, softly crescent-lit, far mountain-tops
Neighbor God's stars. Our spirits are at rest.
Why should we wish to waken Memory?
Why care to question Hope?

ISRAEL JORDAN.

THE WEATHER BUREAU.

It is almost exactly twenty-two years since the work of observing, reporting, and predicting changes in the weather was first undertaken by the United States government. The first order for anything of the kind was issued by the Secretary of War in 1869, shortly after the close of the Civil War.

At the start, the Signal Corps, as it was called, consisted merely of a body of officers and soldiers from the regular army, detailed for this particular work. Their only important stations were along the great lakes.

But in a short time the Weather Bureau developed far beyond the designs of those who originally planned it. From a simple telegraphic report of weather conditions at a few military posts, a great system of offices and observers grew up, whose published bulletins were used daily in every department of the country's industry.

The farmers consulted the weather prophecies to learn whether it was safe to begin on a given day to harvest their grain or cut down their hay. Captains of coast steamers planned their course according to the Signal Service predictions of storm or fair weather.

Even the every-day business man got into the habit of glancing at the weather forecast in his morning newspaper before deciding whether to take his umbrella to business with him or not. Scientists used the statistics of the Weather Bureau as a basis for their own studies of the world we live in.

It would be interesting to notice into how many of the affairs of life the weather reports and forecasts enter. To illustrate by but a single example: If a heavy storm is raging in Texas the cotton crop may be injured, and the price of cotton at the New York Exchange will advance, in anticipation of the injury.

But the making of forecasts is work requiring intelligence and scientific knowledge, and it was soon discovered that simple army training could not supply the experts needed for this work. A curious compromise was made. The officers at the signal stations were very generally chosen from private life; but when they began their work they were enlisted in the army, with an army officer's regular rank and pay. The assistants, too, were formally admitted to the army service.

This combination of regular army officers doing civilians' work, and civilians bearing military titles, hampered for many years the bureau's work. Finally people made up their minds that the whole plan of an army Weather Bureau was absurd.

In its second session of 1890, after a discussion which developed no actual difference of opinion, Congress passed a law providing for the transfer of the Weather Bureau from the War Department to the Agricultural Department.

The Chief Signal Officer of the army was still to remain in charge of "all military signal duties," but these were far less important than the duties of the modern Weather Bureau, and the law itself stated that the duties of the officer and his corps "shall be confined to strictly military matters."

Meantime a new chief for the Weather Bureau was to be appointed, and the necessary employees, after being honorably discharged from the army, were to be reëmployed under the Agricultural Department, at the same salary.

The law was signed by the President, October 1, 1890, and went into effect on the First of July, 1891. It is believed by careful observers that its effect will be excellent.

Hereafter, it will be more easily possible to engage the services of first-class scientists in the work of the bureau, and to conduct its work without being hampered by the rules of a department whose principles and organization are on a totally different basis. In fact, there is reason to look for great improvements, even in the weather prophecies.

"HI" AND "HULLO."

A little girl was recently criticised by her family for the unceremonious manner in which she had been observed to greet a group of playmates in the street. She was told that while, of course, no one would expect her to observe elaborate formalities of etiquette in her intercourse with other children, she should not omit the simple formulas of politeness. She should at least say good-morning.

"They would think something was wrong if I did," was the unexpected reply. "They would think it meant I was mad with somebody, and was trying to be stiff. We girls never say, 'Good-morning,' or 'How do you do,' or things like that. We say 'Hi' and 'Hullo.'"

"But good-morning is both more polite and more sensible," she was told. "It is the expression of a kindly wish, and a brief and convenient phrase besides. It means something, and is perfectly easy to say. There is no meaning in hullo and hi."

"Why, yes, there is," she persisted. "They mean ever so much more than 'good-morning.'"

Being pressed for further information, she added that hullo was generally another way of saying, "There you are, are you?" or "I'm glad to see you;" while hi implied surprise, joy, excitement or preparation for immediate action of some sort. Moreover, hullo was usually a phrase in itself, but hi was more often used in combination, as "Hi! come along," or "Hi! girls, are you ready?" or "Hi, isn't this fun!"

But neither word could be reduced to a cold-blooded dictionary definition, because so much depended on the inflection and the occasion, and whether it was spoken or shouted.

The little girl's family tried in vain to convince her that the customary forms of salutation were preferable to those which chanced to have become current at school. She admitted that if they wished her to say good-morning she ought to say it, but only to satisfy them; her own choice she was quite sure would always be hullo.

Her mother and aunts, while they were more amused than distressed, yet indulged after she was gone in some lamentations over the roughness of the public schools, the little attention given to manners, and the prevalence at the present time of the tomboy type among girls.

Polly would outgrow her roughness, they hoped; but they did wish she was more polite. People were likely to misjudge her so; she would never be popular, as Mrs. Jones's Mamie was, who was no older than she, but had the manners of a perfect little lady. It was impossible to imagine Mamie Jones saying *hi!*

But they were somewhat consoled a few days later when Polly returned flushed and indignant from an errand in an unfashionable neighborhood upon which Mamie Jones had accompanied her.

They had carried flowers and attracted the attention of a number of dirty little children, with whom Polly had exchanged greetings.

"They called out 'hi' to me, so I called back 'hi' to them," she told her mother, "but Mamie thought it was dreadful, and I ought not to speak to them at all—not even to say hi!"

In this case, although *hi* can never be regarded as a wholly desirable expression, the child who employed it was the more truly polite, because moved by the more kindly feeling; and it was the "little lady" who failed in courtesy.

"Hi" with good-will behind it is not polished, but it is a root from which in time the best kind of politeness may grow and flourish. It is well sometimes to have patience with the hullo's and hi's that the good-morning may be genuine when it comes, and ready alike for rich and poor.

NOBLE WORK.

How shall we help the poor? The old way is to give alms. A still older and better way is to give one's self.

Years ago a young man named Toynbee, gifted and fresh from the university, led a company of young men like himself to settle in a colony amid the slums of London.

While daily engaged in their special pursuits, they made this region their home; and by living among the poor and the vicious they had their evenings to give to acquiring personal acquaintance with them, devising for them healthy amusements, and awakening their better natures.

"Toynbee Hall" has become a historic force for good. It has also shown that this old and simple way of friendly intercourse and familiarity is the true method of reaching the degraded.

Of late there has been a growing disposition among some of the best people in our country to grapple with poverty in the same sympathetic way. Not long ago in New York a company of college young ladies formed a colony among the tenements. Most of them gave their days to their regular vocations; and all of them gave their evenings and Sundays to personal touch with their unfortunate sisters.

And now young men have taken up this work. An organization has been formed in New York called the University Settlement Society. Its patrons and leaders are some of the most prominent gentlemen of the metropolis, but the actual work among the poor is to be mostly done by young men—college graduates from all parts of the country.

Entering one of these college settlements, their residence in the great city is to be made a season of exalted living for themselves and of help to the unfortunate.

By coöperation in large schemes such as "Neighborhood Guilds," and more privately as solitary workers, these young men are in a position to accomplish an enviable amount of good. Moral ambition, care of the body, healthful recreation, employment of the leisure hour, brightening of

Digitized by Google

the home of the laborer, are among the practical ideals which they will seek to cultivate among the men of their neighborhood.

This is the right kind of work. But the "worthy" and the "unworthy" poor need moral help. Official visitations by salaried workers often leave behind a sense of humiliation.

We need the enlargement of heart which comes from familiarity with distress and weakness. The unfortunate need the moral inspiration of strong and sympathetic personalities which do not shrink from them. When the members of our Christian Churches give themselves to such unselfish work for others, Christianity will command a respect and influence which we are sorry to say it fails in a large degree to receive to-day.

GOUNOD'S FIRST SUCCESS.

The composer Gounod, like many another genius, was compelled to wait and work for success. But his case was a peculiar one, for his talents were recognized early, and he was not in need of money. Nevertheless, it was disheartening to him to feel that his work was not considered of sufficient commercial value to pay for publishing it.

The popular singers, the brothers Lionnet, found a publisher for one of his charming songs, composed for Beranger's words, "*Mon Habit*." Anatole Lionnet relates the incident in his volume of "Souvenirs."

After hearing him play for the first time, Anatole expressed enthusiastic admiration. It was at the rooms of the Escudier brothers, publishers of music, and as the two men were alone for the moment Gounod said:

"Ah, you have heard what the Messieurs Escudier say of my works. They think them interesting, they do not deny their merit, but they will not publish them. They think them too difficult for the public taste. Do you know," he went on, rather sadly, "that up to this time, except the *Nonne Sanglante* and two pieces from 'Sappho,' nothing of mine has been published. They were printed at my expense and are still on the hands of the dealer."

He turned away and began playing "*Mon Habit*," saying, "This would suit your voice and that of your brother."

It did suit the voices of the Lionnets beautifully, and Anatole, full of enthusiasm over the composition, hastened to Hengel the publisher, and asked him to take it.

"It is exquisite," said the publisher, "but it would not sell."

After considerable urging, however, he said, "If you intend to sing the piece at your concert and will popularize it in that way, I will give M. Gounod a hundred francs for it."

Gounod was delighted with the news, and with the hundred francs, the first money he had received for his work. Years later he said to Anatole Lionnet:

"How well I remember that hundred francs. I left Hengel, went home overjoyed, and threw five of the beautiful gold-pieces into mamma's apron."

"It was charming and touching," adds Lionnet, "to hear that man of genius, then sixty-eight years old, use that word 'mamma' as sweetly and as simply as a child."

MANUAL TRAINING IN SCHOOLS.

A youth of eighteen was lately engaged as clerk on a small rock excavation designed to drain a backwoods lake. The contractor had brought all his men, including a blacksmith, from the distant settlements.

Knowing his employer to be under heavy bonds to finish by December, and being aware that another blacksmith could not be imported within ten days, the man at the forge struck for enormous wages about the middle of November.

The contractor, in danger of serious loss, was on the point of yielding when his clerk said, "Let Meiggs go. I'll take his place."

He did it successfully, for the sharpening of drills is a simple operation of heating, hammering, filing and tempering. This youth had attended a technical school. The contractor, having saved his forfeit, added a handsome sum to the young fellow's stipulated wages.

By his manual training that lad had become an American of the old school. Former generations of our countrymen were noted for their readiness in using the simpler implements. They could build a barn, lay a floor, repair a wagon, make furniture, construct a punt or a rough bridge—in short, "turn their hands to anything."

Nowadays the proportion of American-born boys who can hit a nail instead of their thumbs is small and decreasing.

This is because our boys, in an ever-increasing ratio, are bred in towns. Nevertheless, manual training would often enable them to save if not to earn money. Moreover, it is well proved that such training brightens the intellect of students.

When national circumstances change, national education should be adapted to supply what family life gave formerly. Sufficient workshops should be added to our schools. Thus youngsters peculiarly gifted with mechanical ability could soon discover their bent, while the whole body of pupils would receive a training at once pleasant and useful.

A PATRIOT.

In 1861 it was decided to organize the clerks of the Treasury Department at Washington to defend the building and its contents against an anticipated attack. The following paper was presented to each employee to sign:

"I will defend the Treasury under the orders of the officer in charge of it, against all its enemies, to the best of my ability."

The pledge was not received with enthusiasm, writes Mr. Chittenden, then the Register of the Treasury, in his "Recollections of Lincoln." "They all, with one consent, began to make excuse."

There was an epidemic of heart and nervous diseases, which were always brought on by any sudden shock. But one old Southerner put them to shame. He had been in the office half a century and belonged to an old Carolina family. His desk was in the basement of the Treasury, where he had charge of surrendered ship's registers. Few of the other clerks knew him, for scarcely any one had occasion to go to his desk.

"I never fired a gun in my life," he said. "I could not hit the side of a barn, and I have no doubt that I am a coward. But as long as the star-spangled banner waves, I have something to live for. If I am too old to be of any other use, I can at least act as a powder-monkey, and my body will at least stop a Secession bullet with the best of you."

He seized the pen, and the name first signed to the paper was that of Francis Lowndes.

RABBITS THAT CLIMB.

The effect upon animals of a change in the conditions of their life is a favorite topic among zoölogists and biologists, who find that nearly every species of animal existed in some other than its present form, at some previous epoch of the world. The whale, for instance, was once a land animal. Forced to take to the water for a living, he became, in time, much more like a fish in shape than like a land animal.

According to a Tasmanian paper, the *Hobart Mercury*, a modification of the form of a familiar European animal is going on in the Australasian world under the eyes of the people there.

The Australian rabbit, imported from England, is acquiring nails on his feet, and learning to climb. As is well known, the rabbits of Australia have increased to such enormous numbers that they have become a great pest, swarming over the land and devouring the farmers' crops.

In order to protect their fields, the farmers put up wire nettings in place of fences. The rabbits could not get through these, but they presently began to burrow beneath them.

Then the farmers sank the nettings six or eight inches into the soil. This stopped the rabbits from getting in by digging, but they presently began to attempt to climb over the netting.

As the result of this climbing, it is said, the rabbits are developing a nail in their toes. The nail development has been noticed in Queensland, and still later in Tasmania.

According to the theory of natural selection, it is likely presently to happen that in certain districts only those rabbits will survive which can climb at least a little; and in this way a race of climbing rabbits may be developed.

IN ARKANSAS.

An article in the *Atlantic Monthly* on "Plantation Life in Arkansas" is prodigal of rich and quaint sayings common among Arkansas "crackers." A sort of rude poetry shows in such phases as "mighty quick weather," for uncertain weather, "burn the wind," to run fast, and "r'arin' and chargin'," a synonym for fierce anger. The roads are "only muddy shoe-mouth deep," or again they are muddy enough to "mire a saddle-blanket."

"Come to git a fire?" the hostess demands of a visitor making a brief stay, alluding in hospitable sarcasm to old times, when matches were rare, and a neighbor might run over to borrow a brand from the fireplace.

"Got your name in the pot," means that you are expected to a meal.

"I aint goin' to marry a wife won't work as in a col' collar," a man will say, having in mind the horses who will pull only when they are warmed by preliminary exercise.

Cattle are shut up to "gentle them." A housewife will say that her boiling water "aint kicking yet," or "*is* kicking," according as it bubbles or not.

The "all overs" is a striking name for nervousness, and somehow a "fitified sheep" seems more to be pitied than a sheep liable to fits.

ACCURACY AND GREATNESS.

The wonder of Professor Agassiz's knowledge was the completeness of it. That is the secret of the power of all great naturalists. They see what escapes the observation of others, and are able to discover the meaning of slight differences that ordinary men have not noticed at all.

A young artist once called upon Audubon, the great student of birds, to show him drawings and paintings. Audubon, after examining the work, said:

"I like it very much, but it is deficient. You have painted the legs of this bird nicely, except in one respect. The scales are exact in shape and color, but you have not arranged them correctly as to number."

"I never thought of that," said the artist.

"Quite likely," said Audubon. "Now upon this upper ridge of the partridge's leg there are just so many scales. You have too many. Examine the legs of a thousand partridges, and you will find the scales the same in number."

The lesson shows how Audubon became great—by patient study of small things.

MORE BEAUTIFUL THAN GOLD.

Professor Roberts-Austen, of England, has succeeded in making out of gold and aluminium a compound metal or alloy, which is said to be the most brilliant known. Its general hue is a splendid purple, but as it is turned in the light it reflects bright tints of ruby color.

A little more than three-quarters—more accurately seventy-eight per cent.—of the alloy is gold, the remainder being aluminium.

Some of the expectations recently raised in regard to the possibility of substituting aluminium for steel and iron are not likely to be realized, but that wonderful metal is proving of great use in combination with others, and the discovery of Professor Roberts-Austen may lead to the production of very beautiful effects in jewelry.

"LABOR" CLOCK.

It is in Paris that the art of finding mercantile advantage in political excitements is practised to its fullest extent.

During the recent labor demonstrations in that city, a clock-maker exhibited a rather queer-looking clock in his window, with this placard upon it:

THE LABORING MAN'S CLOCK.
(Runs only eight hours a day.)

White Teeth.—"*Brown's Camphorated Saponaceous Dentifrice*" whitens and preserves the teeth. [*Adv.*

NONE BUT ROYAL

Baking Powder is absolutely pure. No other equals it, or approaches it in leavening strength, purity, or wholesomeness. (See U. S. Gov't Reports.) No other is made from cream of tartar specially refined for it and chemically pure. No other makes such light, sweet, finely-flavored, and wholesome food. No other will maintain its strength without loss until used, or will make bread or cake that will keep fresh so long, or that can be eaten hot with impunity, even by dyspeptics. No other is so economical.

The official chemists of the United States and Canada, State analysts, municipal boards of health, and physicians indorse the great qualities of the Royal Baking Powder.

SUGGESTIONS

BREAD-MAKING.

Make a list of materials for a loaf of bread.
Classify them as animal, vegetable or mineral.
Learn how each is obtained and manufactured.
How does the yeast "raise" the bread?
What is the object of kneading or chopping?
Why does dough "sour" if raised too long?
Why does bread sometimes smell of alcohol?
Why is "bread and butter" so excellent a food?

For the Companion.

THE MEMORY-BRIDGES.

Busily, busily to and fro,
See them, the bridge-builders, come and go,
Grey-beards and bonny-eyes, mothers and midges,
All of them busy a-building bridges.
High be they? Low be they?
Who can tell?
Each keeps his secret, and keeps it well.

Steadily, steadily, see them build.
Not one is idle of all the guild.
This one is planning and placing and plying:
That one is trusting and tracing and trying.
Strong be they? Weak be they?
Who is there
Knows if the bridges will break or bear?

Cleverly, cleverly day by day
Toil the bridge-makers sans stone or clay,
Fashioning after their own designing,
Some for rejoicing and some for repining.
Ugly or beautiful?
Who can know
What is the pattern the bridges show?

Ceaselessly, ceaselessly year by year
Grow the abutment, the arch and the pier,
Grow on the builders' brows wrinkles and ridges,
Caused by the rearing of memory-bridges.
Deep be they? Slight be they?
All may see
What sort of furrows these furrows be.

Finally, finally each must tread
Over the Memory-bridge he's made,
Over the deeds that are long past doing,
Over the faults that are left for rueing.
Light is it? Hard is it?
They may ken
Who've crossed the bridges from Now to Then.

JULIE M. LIPPMANN.

For the Companion.

SHUT HERSELF OUT.

The village street was long and grassy, and on the hill at one end stood the church, surrounded by trees, and with roses climbing up to the windows.

Anne, when she was a baby, used to stand at the gate in front of her home, and watch her mother as she went into the church on Sunday morning. If she could only go with her, and see what was done there, and listen to the music! When she was grown she would go.

When Anne was a girl of sixteen, she stood at the door of the church one day, and remembered her childish fancy. The music was sweeter to her now, and a deeper mystery urged her to go in. But not to-day — not to-day! The little church was familiar to her as her own home. Some of her schoolmates were that day before the assembled congregation, to say that they would try to be the faithful servants of Christ while life should last. If she could go with them—oh, if she could go!

But there were so many things which she did not want to give up; selfish habits, extravagant dress, delightful, malicious gossip. She could not make up her mind to be stupidly good, as she expressed it. "I must have my fling," she thought. "But I'll go—some day."

The music followed her with a sad appeal as she hurried down the hill.

Anne's mother was a widow who supported herself and her daughter by the work of her own hands. The girl used to watch her hurrying across the street to an evening service when her work was done. She always came back with a light in her eyes, and a cheery, tender tone in her voice. What did she find there?

The day came when Anne for the first time in her life loved some one better than herself. But he was a poor man.

"Come," he said, "let us go into the little church and be married. God will bless us. It will be a delight to meet the blessings and trials of life together."

Never had the roses seemed so sweet, or the music so full of promise. The church was like heaven to her. But the tempter had come. A wealthy young man of the neighborhood had also asked her to become his wife. She would have riches and luxuries!

What could she not do with money! The world, with fine houses and clothes and jewelry of her own, was a more real place than heaven, after all; and her God was farther off than the man whom she did not love, but who could give her these things.

"I cannot go with you," she said to the man she loved, and before the altar in the little church she sold herself for the riches she coveted.

Anne lived to be an old woman. She had great triumphs and sharp pains in life. Her husband was indifferent to her; her son, whom she dearly loved, became a drunkard and a criminal. When he was a child she always intended to take him to church, to teach him to know her mother's God. But her own life was so different! How could she teach him?

When misery and disaster shut her in her luxurious home, she used to look at the gate, and at her mother's grave, over which the roses grew. The red, rejoicing light of the risen sun rested upon it.

"If I, too, could enter in and find peace!" she thought, listening to the sound of prayer within.

But time had made her heart callous. "I will go—but not now," she said.

One day the gate opened wide for her to enter. They carried her in. She did not lift her hand. She spoke no word to say what she would do—or would not do. After the solemn burial service they laid her outside, in a grave not far from her mother's.

The door of the church was always open during her life. The hymns of praise and the sound of prayer rose to God there from week to week. His peace descended upon His people.

She had made her own choice, and would not enter in.

STARS BEYOND SIGHT.

When the air is damp and warm a new iron surface will corrode very quickly. Exposure for a single day is enough to mark a nail here and there with specks of rust, easily removed by a touch. However closely one might observe the nail from the first moment of its exposure, it would be impossible to see the change taking place in its color. The eye would tire of watching long before a grain of rust would come into view. An example this of countless forces in nature, too gradual in their activity to come within the limits during which the eye can sustain its attention. They require time, and often a very long time.

Now, if instead of the eye, so feeble and so easily fatigued, we have something more sensitive to light and not subject to weariness, we can at once indirectly and very greatly extend the field of human vision. Such a substitute is found in the photographic plate when it is treated with newly devised compounds, upon which rays too faint to be otherwise detected can imprint themselves.

Besides its exquisite responsiveness to light, this plate has another advantage over the eye. We may look directly at a distant star, but if its ray is too weak to excite vision, our gaze is in vain, no matter how long we may be able to maintain it. Not so with the plate. The rays which fall upon it, however faint they may be, steadily increase their effect from minute to minute, from hour to hour, until at last they yield a perfectly distinct image.

All this has been applied in a wonderful way to the study of the heavens. With every successive improvement in the power of telescopes, astronomers have brought into their ken nebulæ and stars before unseen.

They know that invisible stars must far outnumber the visible ones, for the whole volume of starlight is much greater than the beams received from the stars within the telescope's range. Their belief, based upon past observation, is that space beyond vision is ever ready to reveal a new wealth of worlds to any new power of exploration.

Precisely such a power is conferred by the sensitive plate just described. When it is attached to a telescope whose lenses are by suitable mechanism kept constantly directed at a particular point in the sky, the astronomer is able vastly to extend the diameter of the visible universe. Orbs so remote, or so feeble in their ray, as to be invisible to the keenest observer, in the course of a clear night form a well-defined picture in the camera.

This noblest use of light as a limner has brought to view a sphere of creation which no mortal eye shall ever directly see, a sphere thickly gemmed with stars, and stars in the making—as we now know nebulæ to be.

By a subdivision of the heavens among the world's chief observatories, a comprehensive mapping of the skies is now in progress. It will be much more accurate and full than any previous work of the kind.

In securing pictures of particular heavenly bodies photography is quite as important as in making charts of the stars. Professor E. S. Holden, who has charge of the great Lick telescope at Mount Hamilton, California, declares that the camera in forty minutes has given him as much knowledge of the moon's surface as he had been able to obtain in four years' observation.

The satellite of Neptune, though invisible in the telescope on account of its proximity to the planet, has been photographed in every part of its orbit.

What wielder of the pencil or the brush would have dared to transfer the sun's lineaments to paper or canvas? It was reserved for the photographer, by a fine stretch of audacity, to compel the sun to take his own portrait, and to do it in the fraction of a second.

GREAT MEN'S DIVERSIONS.

Every one knows that things may appear exceedingly amusing to some people which to others have not the smallest element of the funny about them. Not infrequently the notion which great men have as to what is amusing and diverting is very hard for ordinary people to account for. Since the death of M. Pouyer-Quertier, a French statesman who was conspicuous during the war between France and Germany, but who was afterward almost forgotten by the French people, some anecdotes have been told of his participation in the peace negotiations of 1871, which reveal Prince Bismarck's sense of humor in an interesting light.

After the capitulation of Paris, the French provisional government sent to Frankfort a deputation to arrange terms of peace with the Germans. M. Thiers, the greatest French statesman of the times, was at the head of the deputation, and another member was M. Pouyer-Quertier.

Count Bismarck, as he was then, monopolized the negotiations on the part of the Germans; and for M. Thiers, who was a very little man, and who spoke in a high-pitched, flute-like voice, it pleased the German Chancellor to affect a sort of contempt.

For Pouyer-Quertier, on the other hand, he showed constant and great admiration. Pouyer was a very large man, with a big voice; moreover, he had a tremendous appetite; he could drink as much beer as Bismarck himself, and enveloped his head in clouds of tobacco-smoke.

All this eating, smoking and drinking during the negotiations was extremely offensive to M. Thiers, who detested cigars no less than he did beer. Bismarck, accordingly, in his relations with the Frenchmen, promoted Pouyer-Quertier, who was a man of inferior intelligence, to the head of the delegation. He called him, admiringly, *un rude homme*, which may be translated "a terrible fellow," and devoted most of his attentions to him.

Pouyer-Quertier, in one of these diplomatic smoke-talks at Frankfort, complained to Bismarck of the charges on the German railways.

"I paid," said he, "sixteen thalers for my ticket from the frontier here. The fare would be about half as much in France."

Bismarck laughed. "When you consider," he said, "that the sixteen dollars includes the return fare, and all other return expenses, meals, cigars, and so forth, it is pretty cheap."

This was regarded as Prince Bismarck's idea of a joke, as the ticket was only an ordinary single-trip one.

When the negotiations were over, M. Pouyer-Quertier went to buy a ticket back to France, and was told that his return fare was paid by the price of the ticket upon which he had come. He took a meal at the restaurant at the station, and payment was refused for that. "It's all in the ticket," said the attendant.

At the first stopping-place on the way an attendant brought a tray of wines and food to M. Pouyer-Quertier's compartment.

"In Germany," said the attendant, "this goes with the return ticket."

The scene was repeated at every stopping-place, until M. Pouyer-Quertier, "terrible fellow" as he was, found himself in danger of being gorged to death.

It was Prince Bismarck's joke. M. Thiers, as a serious man, and yet not without a keen wit and strong sense of humor on his own part, could only shrug his shoulders and wonder at this singular diversion on the part of his nation's conqueror.

MUTE.

The heart most torn by grief hath never flung
Its plaint abroad for all the world to hear.
The voice of song is hushed beside love's bier,
And deepest sorrow is for aye unsung.
The mellow threnes that down the years are rung,
For fame are sounded, in the haunting fear
That love will perish in oblivion drear
Unless the singer give it golden tongue.
But, oh, the broken heart doth turn away
To silence, listening and remembering!
It loveth starlight more than blinding day,
And trusteth time to heal its wounded wing,
Hoping to rise when love's eternal ray
Pierceth the darkness,—but it doth not sing.

ANNA B. AVERILL.

BY THE CLOCK.

A case was being tried in a country court. A horse had been stolen from a pasture, and the evidence all pointed to a certain doubtful character of the neighborhood as the culprit. Though his guilt seemed clear, he had found a lawyer to undertake his defence. At the trial, the defendant's attorney expended his energy in trying to confuse and frighten the opposing witnesses, especially a certain farmer whose testimony was particularly damaging. The lawyer kept up a fire of questions, asking many foolish ones, and repeating himself again and again, in the hope of decoying the witness into a contradiction.

"You say," the lawyer went on, "that you can swear to having seen this man drive a horse past your farm on the day in question?"

"I can," replied the witness, wearily, for he had already answered the question a dozen times.

"What time was this?"

"I told you it was about the middle of the forenoon."

"But I don't want any 'abouts' or any 'middles;' I want you to tell the jury exactly the time."

"Why," said the farmer, "I don't always carry a gold watch with me when I'm digging potatoes."

"But you have a clock in the house, haven't you?"

"Yes."

"Well, what time was it by that?"

"Why, by that clock it was just nineteen minutes past ten."

"You were in the field all the morning?" went on the lawyer, smiling suggestively.

"I was."

"How far from the house is this field?"

"About half a mile."

"You swear, do you, that by the clock in your house it was exactly nineteen minutes past ten?"

"I do."

The lawyer paused, and looked triumphantly at the jury; at last he had entrapped the witness into a contradictory statement that would greatly weaken his testimony. "I think that will do," he said, with a wave of his hand, "I am quite through with you."

The farmer leisurely picked up his hat, and started to leave the witness-stand; then turning slowly about, he added, "I ought perhaps to say that too much reliance should not be placed upon that clock, as it got out of gear about six months ago, and it's been nineteen minutes past ten ever since."

THEY FOLLOWED HIM.

The battle of Raymond was the third of a series necessary to drive General Pemberton with his Confederate army into Vicksburg, and so clear the road to Jackson, Mississippi. Defeat in either of them meant failure to the campaign. At Grand Gulf three days' rations were issued to the troops. These were intended to last six days, but as things turned out, the men got nothing more for ten days. The country was poorly supplied with provisions, and soldiers' meals were light repasts.

No one understood the situation and the necessity for prompt and decisive victory better than General Logan. His division had the advance on the road leading to Raymond. A short distance from the town it struck General Gregg's Confederate division, about five thousand strong, moving forward. A slight fence was between the forces, at about an equal distance from each line.

Gregg's division was the stronger. The emergency was pressing. An hour of delay meant an hour in which the enemy could build fortifications. Logan could not await reënforcements. He must fight.

Gregg's skirmishers were driven in and his line of battle was struck with great impetuosity; but it stood firm. His troops were veterans. The Union line was checked suddenly. The fire was fierce. Disaster seemed imminent. The Union officers were unable to induce the men to advance. There the line of battle stood, and under the sharp fire began to waver. To break was defeat. A few moments and all would be over.

General Logan dashed up, looking black as a thunder-cloud. He made a fiery speech, but the line did not stir. He exhorted the men, but they would not move forward. It did not seem that they could. It looked like certain death to every one who should advance.

Gregg's batteries swept the Union front. Logan resolved to triumph or die on the field. Quickly he rode to the centre of a regiment, and taking a national flag from the grasp of the color-bearer, amid a heavy leaden hail, galloped to the fence and planted it only twenty or thirty steps from the Confederate line.

Then he turned and with tears streaming down his cheeks said, "Men, will you abandon your flag? Will you give your flag to the enemy? Come here with me and defend it!" and again he faced the foe.

A second of silence followed; then a cheer rang along the line louder than the din of battle. It swept forward. It reached the fence. A withering volley was fired. The color-bearer again took his flag. Over the fence the men climbed, and with another cheer away they went at a charge. Gregg's line wavered; it yielded a little, and then broke and fled. The Union troops were in pursuit. Their cheers added to the panic and speed of the flying foe. The battle of Raymond was won, and the road to Jackson was clear.

MIXED PRONOUNS.

Old Mrs. Maynard, in Strawbury, a little village of Northern Vermont, was famed—among people who all had good abilities in the same line—for "long-windedness," and a sublime contempt for those who "couldn't foller along an' git the gist of a story 'thaout havin' ev'ry other minute ter cast back in their minds an' find out who yer tellin' of 'em 'baout!"

"Where's Dan'l an' his dog gone to? I aint seen 'em pass by, this three or four days," asked a neighbor, one hot August afternoon, taking a "spell o' restin'" in Mrs. Maynard's "livin'-room."

"Well," began Mrs. Maynard, rocking and fanning herself vigorously as she talked, "he's nothin' but a peck o' trouble to us. Seems ef, ever sence we fust 'dopted of him; *he* [this doubly emphatic "he" stood for the old lady's husband] said to me, day before yist'day, didn't seem es ef he was ever goin' ter be any manner o' use; an' then they wouldn't be sep'rated, an' at fust it did seem kinder cruel, jest them two left anyway.

"She give him the dog when she died, ye see, an' he said he guessed we could make out to stan' it ef he didn't bark much; but he does, an' one day las' week he was off fishin' all day when he'd oughter helped *him*. Both of 'em was off together, so we was spared the barkin', that was one thing, to be sure.

"An' then he et up two chickens a spell back, though his mother allus said he was a splendid hand ter mind him, but he aint naow, whatever he was 'fore she died; nor he aint nuther, an' *he* can't do nothin' with either on 'em, an' he licked 'em both Tuesday; took him out'n the hen-coop as 'twas, an' we don't know where nuther on 'em is, boy or dog, but more'n likely he's gone back to the 'poor-farm' with him, an' a shif'less pair they be!"

The visitor gasped a little. Evidently it had been hard work to keep the boy and the dog apart, but she was able to reply in such a way as not to incur old Mrs. Maynard's disapprobation.

WELL PLAYED.

A New York gentleman, says the *Times*, has a fine St. Bernard dog named Monk, who has been taught a trick of which his master is very proud. Upon a signal, Monk lies down before his master, with his big head stretched out on the floor before his outspread paws.

The owner begins, in a low voice, a thrilling story of a poor wanderer struggling up the passes of the Alps, lost in the blinding snow. Monk listens intently to every word. His voice growing stronger, the gentleman describes the wayfarer as overcome with fatigue, and tells how, thoroughly worn out, he lies down to rest.

At this point the gentleman stretches himself out on the floor, resting his head on his arm, face downward. Monk remains perfectly rigid. The gentleman goes on reciting in a tone growing gradually softer. He turns up his coat collar, and then, lifting one hand above his head, lets fall a shower of fine white paper.

As the pieces representing a gust of snow flurry down, Monk bounds across the floor, barking at the top of his lungs, and reaching the prostrate form of his master, lies down, stretching his paws across the man's back and poking his big black nose under his collar. He whines and snuffs and pounds the floor with his big white tail.

Finding that all such efforts to resuscitate the wanderer are unavailing, Monk rises, and lifting his head, sends forth a howl of woe that would unquestionably bring the whole Alpine hospice to the rescue.

Then comes the climax. Monk seizes the helpless man by the coat collar, and is about to drag him away, when life suddenly returns, and the exhibition ends with a lively tussle between dog and man, and joyous howls of delight on the part of Monk. Of course a round of applause always follows the entertainment.

STRANGE COINCIDENCE.

An English gentleman vouches for the truth of a very singular coincidence, which without such testimony it would be hard to credit. About twenty-five years ago a man who had been in a counting-room in Manchester was convicted of theft from his employers, and sentenced to imprisonment for two years. When he had served his time he found it impossible to get employment as bookkeeper again, and after trying other things settled at last into journalism, in which he was reasonably successful.

His life was now thoroughly honest, and after several years he was sent to edit a paper in a British colony where his story was unknown.

Here he was working his way up, and enjoying once more the respect of his fellows as a man of unblemished reputation, when the wind one day tore the roof from a building on the opposite side of the street. This building had formerly been used as a post-office. Under the roof were some old newspapers which had not been delivered from want of proper address; and these papers were blown about the street.

With true journalistic enterprise one of the staff of the journal edited by the ex-convict examined these wind-blown papers with a view to finding anything of interest which they might contain, and fate directed his attention to an account of the trial and conviction of the editor.

As the editor was doing all that an honest life can do to redeem a past fault, it is sad to be obliged to add that the story was told, and that it went far toward ruining the unfortunate man.

HOUSES OF SAWDUST.

A recent German periodical speaks of the discovery that sawdust is of great value in the construction of house-building materials. In Berlin already a number of buildings are in process of erection, in whose formation sawdust plays an important part.

The sawdust is mixed with certain inexpensive pulverized minerals, and is formed into bricks, plastering, and so forth, by means of strong hydraulic pressure.

It has been demonstrated that the building materials constructed in this manner are impervious to dampness, and quite fire-proof as well. They are also remarkably firm and of extremely light weight.

A still further advantage is said to be that the material of this sort can be tinted and colored to suit the most exacting taste, with a slight amount of trouble and expense, so that the ornamental part of house-building can be carried on from the time the first sawdust brick is laid in its place.

A QUEER QUARREL.

"I'm the happiest boy in town!" cried Lee;
"I'm happier'n you!" said Roy;
And then they grew angry as angry could be
Over which was the happier boy.

"Happy folks never quarrel," said sweet Auntie Belle;
But "I'm happy!" said Lee and said Roy;
Then they laughed at their folly, till no one could tell
Which was the happier boy.

EDNA'S STORY.

I'm going to tell you a story about my gran'ma.

You'd think gran'mas would always be good, but they aint. I mean they are when you know them, but you don't know them till they're grown-up ladies with gray hair and red cheeks and spectacles. It's when they're not gran'mas yet,—when they're little like me, I mean,—and then I guess they're better'n I am.

I'd like to know a real gran'ma when she was little.

Gran'ma's name was Orissa,—only now we call her Gran'ma Foster,—and she had to spin tow. She had to spin twenty rolls every day, ten rolls in the morning and ten in the afternoon.

She used to do it up over the kitchen in the kitchen-chamber, and her mother—that's my Great-gran'ma Hooper—used to bring the rolls up to her and leave her there all alone to spin her "stint." And Orissa didn't like to spin very well.

Well—and there was a fireplace in the kitchen-chamber, and no one ever built a fire there, and there was a fireboard that covered the fireplace all up so you couldn't see it. And gran'ma—Orissa—found that there was a hole in the fireboard just big enough so she could put her hand in.

And one day,—it's s'prising what gran'mas will do when they're little—one day Orissa just hated spinning, 'n' she'd spun six rolls, 'n' she looked at the other four, 'n' she took one of them 'n' began to chew it.

It was so big that her mouth was full at first, but she chewed 'n' chewed till at last it was only a wad, and then she took and put it right through that hole in the fireboard and dropped it in the dark behind, where she knew that no one would ever find it. So she didn't have to spin that roll.

Well—and then she took another roll, and she chewed that up 'n' dropped it through the hole. And then she didn't dare chew any more, so she spun the other two rolls, but when she came to the other ten that she had to spin in the afternoon she chewed one of them and dropped it through the hole.

And that was the way Orissa kept doing every day. She didn't dare put as many through the hole as she wanted to, only one or two at a time.

Her mother kept wondering why what Orissa spun didn't come to more, but Orissa never told her why. She didn't dare.

But her mother thought Orissa was a good girl. Mothers 'most always do think you're good just as long as they can, you know; and Orissa's mother would say what a good girl she was to spin, and Orissa would feel just as *mean* when she thought about the chewed-up rolls back of the fireboard.

Well—after a while, Orissa's mother thought she'd s'prise her with a new dress. It was only calico, but calico was real precious then.

Why, Gran'ma Foster—Orissa—never had had a bought dress in all her life. They made all the cloth at home, and a calico that was bought was *real* precious.

So one day her mother said, "Orissa, you've been such a good girl spinning, I've bought you a dress," and then she showed her it. Gran'ma Foster's got a piece of it now in an old quilt, and it was two blues—dark blue and light blue—and yellow and white.

It was pretty, and Orissa laughed and hopped up and down, she was so glad. And then—all of a sudden—she remembered about the chewed-up rolls. There were a good many of them by that time in behind the fireboard. Orissa stopped hopping. But she didn't tell her mother.

And her mother made the dress with gathers 'round the neck, and it had shoulder-straps and a full waist. I think gran'ma must have looked funny.

And she used to wear the calico to church Sundays because it was so precious. Gran'ma says she always used to go two miles to church, and she used to carry her shoes in her hand and go barefoot till she was pretty near, and then she'd walk through a brook and put her shoes on. That's the way lots of the children did then to save their shoes, because shoes were precious as well as calico.

And all the other little girls thought Orissa's bought calico was so fine, and they looked at it and wished they had one, 'stead of dresses out of cloth their mothers had made at home. But Orissa just *hated* that calico dress.

She hated it worse 'n' worse every time she wore it. *I* know why. Don't you?

She thought the minister looked at her every Sunday when she sat in church with that calico dress on, and it just seemed as if he must know all about those chewed-up rolls, someway.

And Orissa felt worse 'n' worse 'n' *worse* every time she heard her mother say she gave her the dress because she was such a good girl spinning, 'n' one Sunday, when she was getting ready, Orissa just couldn't stand it any longer, and she cried 'n' cried 'n' *cried*, 'n' told her mother all about the chewed-up rolls 'n' everything.

And her mother looked at her, 'n' said, "Why, *Orissa!*"

And that day Orissa had to go to church in her old dress, for her mother didn't let her wear her calico again for a whole month to punish her; and all the little girls looked at Orissa and said, "Why! What you got on your old dress for?"

But Orissa didn't care. She was so glad that her mother knew, and she dared look at the minister now. And Orissa never, *never* chewed any more rolls.

This 's the story I was going to tell you about my gran'ma. She told it to me when she showed me the piece of calico in her quilt. And she told me to 'member that, no matter if other folks do praise you up, and think you're real good, if you're *not* good it just makes you feel bad. And she says it's a *great deal* better to be good all through. And my gran'ma *knows*.

MARY E. BAMFORD.

For the Companion.

CHILDREN'S SAYINGS.

Little eight-year-old Mollie sat petulantly tapping on the library window, as she watched her playmates enjoying their playtime.

"Why, Mollie, what can be the matter?" kindly inquired auntie as she entered the room. Turning her head to conceal the tears that *would* come, and elevating her little snub nose, Mollie replied in much disgusted tones, "Simply an *illustrated* tooth."

Alma had been taken to Sunday school for the first time in her four and a half years. All the way home her heart was running over with joy. Just as papa lifted her from the carriage, she exclaimed, "Oh, yes, papa, and I am in the *elephant* class."

Little Bessie, aged four years, coming down stairs the next morning after the carpets had been removed from the floor, ran up to her grandmamma and exclaimed, "Why, grandmamma, the upstairs is all barefooted!"

For the Companion.

SUMMER SUNSHINE.

His real name is Roland, but we call him "Summer Sunshine" because he is such a bright, jolly little fellow, never out of sorts, always happy to see any one and just as happy if alone.

His hair is bright golden and curls beautifully, his eyes are a lovely blue, his pretty mouth is always in smiles, and one cannot see him without being happy, too.

Ladies stop their carriages to greet the little chap, and sturdy farmers forget their work to say pleasant things in answer to his baby "Morning, man."

Roland is a country boy. His favorite place is the barn-yard, and what a good time he has there, for the chickens and turkeys and ducks seem to like him just as much as the grown-up people who know him.

Every bright summer day you may see him sitting on the barn steps with his dolly and his little kitty. Kitty is very fond of Roland, and Roland is very fond of kitty; he thinks her whiskers are "so bu'ful."

But Roland's greatest delight are the little chickens, and doesn't he have a fine time with them! He feeds them with the bread and butter mamma gives him, or if he has anything else that is nice he always gives his little chickies some, until they follow him around wherever he goes.

Sometimes he plays soldiers with his chickies, and puts his paper hat on his head, for he could not get along without his paper hat. He sticks a chicken's feather in it or a peacock's feather or any other feather he may happen to find; it doesn't make any difference what he sticks in it, so that he sticks in something—a wisp of hay serves as well as anything.

He is the big soldier and the little chickies are the little soldiers. Round and round the barn-yard they go, Roland and dolly, Roland singing, "Stick a feather in his cap, called it macker noney;" little chickies coming next, peep, peep, peep; kitty coming last, looking very wise.

The parade over, Roland sits down on the barn steps, kitty by his side, and talks to the little chickies and sings to them, while they keep up a constant peep.

Or, tired of talking to the chickies, he has a roll in the hay with kitty, stopping long enough to put some pretty pieces of hay in dolly's hair and in her dress, for he thinks dolly looks just splendid when she is "fixed up."

It's fortunate for dolly she is a strong, healthy country dolly, or it would go hard with her. She is Roland's special pride, and goes with him everywhere; but Roland is not very careful how he carries her, sometimes he holds her by one arm or by her foot, or perhaps puts his chubby fingers around her neck and carries her in that way, but he never means to hurt her.

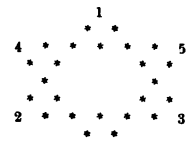
One day in June Roland found a baby sparrow that had fallen out of its nest. He picked up the little chirping fellow in his tiny hands and talked to it, and gently stroked its head, while the baby bird held its mouth wide open as if to swallow his kind little fingers.

Soon the baby became quiet in Roland's warm hands, and he walked very slowly on tiptoe to the barn steps and sat down, whispering all the time to kitty to "keep very kiet," and gently warning the little chickies off with his tiny foot, so as not to disturb the pretty stranger.

When he thought the baby bird was fast asleep, he took it over to a tree near where he picked it up, and left it just where he said "its mamma tood find it."

Thus it is he is always happy, whether running through fields of daisies as tall as himself or singing away on the barn steps surrounded by his favorites.

Enigmas, Charades, Puzzles, etc.



1.

CHARADE.

My *first two* combined are applied to those
Who do nothing the livelong day;
My *third* is untamed as the wind that blows,
Or the ocean billows at play.
My *whole* is the name which a poet bestowed
On the home of his choice, a charming abode.

2.

A STAR.

1 to 2 and 1 to 3 connected, the name of a Scottish chief who was executed on August 23, 1305.
2 to 3. To intercede.
4 to 5. A sea mentioned in the Bible.
4 to 6. An iron pan for baking cakes.
5 to 6. To arise.

ANDY HANDY.

3.

PUZZLE.

1 * * * * 12
2 * * * * 11
* 3 * * 10 *
* 4 * * 9 *
* * 5 8 * *
* * 6 7 * *

Read the letters in the order of the numbers, and find the date at which, according to old mythology, the Moon was born.

Across.

To put in actual possession of an office by the customary ceremony.
More than one, but not a great number.
In botany—veined.
To designate or appoint for a particular purpose.
A light, loose garment resembling a frock coat.
Up to the accomplishment of anything.

4.

ANAGRAM.

So go, O ye greedy.—A song.

Up and down I like to roam,
Yet I never stray from home,
And when I would correct a wrong
My violence shows that I am strong.

A. M. P.

5.

METAGRAM.

Whole, I am a valley. Change my head and I become in succession

1. White.
2. A strong wind.
3. A kind of cabbage.
4. A story.
5. A bundle of goods.
6. Healthy.
7. A market.
8. A plank extending along the side of a ship.

6.

CONCEALED ACROSTIC.

In each of the following sentences a cross-word is concealed, the definition of which is given in the same sentence.

There is a certain way by which you can telegraph your feelings to horses, and few are insensible to kindness.

When you take breakfast at home let me prepare a dainty dish for you.

I wanted to wear my new gown, but to-night I found it needed some more trimming.

You can see by this picture, although it is dim, age has only added sweetness to her expression.

There is a good reason for my not going out to dinner very often. It is found in my aching tooth.

The initials spell the name of a bird that is welcomed early in the season.

7.

PROVERB PUZZLE.

Supply the blanks with words to complete the sense, and transpose them into an appropriate proverb with no letter repeated.

There was a farmer once who said,
"I'm tired to death of * * * *,
If I could write as poets do
I wouldn't till the soil."
He worked all day, then lit the * * *,
And wrote till early * * * *
Upon a * * * * * * to the * * * * *,
But tore it up with scorn;
And dug a * * * * beneath a tree,
And buried it where none could see;
Now neither poet nor plowman he.

Conundrums.

Which is the most bloodthirsty age? Carnage.

What exclamation do we sometimes mention in speaking of a young girl? Alas (a lass)!

What kind of nuts should always grow on the sea-shore? Beech (beach) nuts.

Answers to Puzzles in Last Number.

1. Heir, loom (heirloom).

2. Mild.

3. 1. Remote, meteor. 2. Statue, astute. 3. Equip, pique. 4. Dearth, hatred, thread. 5. Priest, ripest, sprite.

4. An apron.

The Youth's Companion is an illustrated weekly paper of eight pages. Its subscription price is $1.75 a year, payment in advance.

Twelve or sixteen pages are often given its subscribers in a single weekly issue of the paper. All additional pages over eight—which is the number given for $1.75—are a gift to the subscribers from the Publishers.

New Subscriptions can commence at any time during the year. The Companion does not employ agents to solicit renewals of subscriptions.

Payment for The Companion, when sent by mail, should be made in a Post-Office Money Order, Bank Check, or Draft, or an Express Money Order. WHEN NEITHER OF THESE CAN BE PROCURED, send the money in a Registered Letter. All postmasters are required to register letters whenever requested to do so.

Silver should never be sent through the mail. It is almost sure to wear a hole through the envelope and be lost, or else it is stolen. Persons who send silver to us in a letter must do it on their own responsibility.

Postal Notes are not a safe means of sending money. Any one can collect them at any Money-Order Post-office, and, if lost or stolen, the money cannot be recovered, as no duplicates are issued. Subscribers who send us Postal Notes must do so at their own risk.

Renewals.—Three weeks are required after the receipt of money by us before the date opposite your name on your paper, which shows to what time your subscription is paid, can be changed.

Discontinuances.—Remember that the publishers must be notified by letter when a subscriber wishes his paper stopped. All arrearages must be paid.

Returning your paper will not enable us to discontinue it, as we cannot find your name on our books unless your Post-office address is given.

Always give the name of the Post-office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed and drafts made payable to

THE YOUTH'S COMPANION,
41 Temple Place, Boston, Mass.

For the Companion.

CONSUMPTION.

Professor Burt, of the New York Post-Graduate Medical School, read an article on "Consumption and Modern Research" before the New York Academy of Medicine, the substance of which will interest many of our readers.

It is now believed that phthisis, in all its forms, is due to the presence of tubercle, and that all tubercle is the outgrowth of microscopic organisms—the *bacillus tuberculosis*—without whose presence no debility on the one hand, nor bad hygienic surroundings on the other, can give rise to the disease.

Having gained an entrance into the body, these microbes find lodgment at the points of least resistance, where they become centres of irritation resulting in tubercular development. Our race would be exterminated by them if they were not repelled by healthy tissue and actually killed by healthy blood-serum.

Though consumption itself cannot be inherited, the weakened resistance to the microbes may be. Whatever lowers the tone of the system, especially of the lungs, facilitates infection and so does whatever interferes with full respiration, for thoroughly oxygenated blood not only keeps up the resistance of the cells but actually kills the germs.

The expectorations of the patient contain numerous microbes, and as these retain their vitality after drying, they may float in the air and settle on the walls of the room, and thus in time find their way into the lungs by inhalation, into the circulation through an abraded surface, or into the stomach with some infected article of food. Therefore all expectorations of a consumptive patient should be destroyed, and all clothing disinfected.

The hopeful side of the case is that the microbes can seldom find lodgment in healthy tissues, that the breath of patients does not, as a rule, contain them, and that they do not multiply outside the body.

A person with a tubercular parentage should never marry another of like history. If one parent has good blood, the child may expect to escape, if reared intelligently—that is to say, if he is properly clothed, carefully fed, and allowed to spend most of his time in the open air.

Nothing is more conducive to complete renovation than horseback-riding. The regular practice of deep breathing, with the mouth closed, out of doors, while the blood is coursing through the veins, is a purifier equalled by no drug. The great aim is to raise the tone of the tissues and the fluids that bathe them to the pitch of highest health. The chief essential to this is the free, full breathing of pure air thoroughly vitalized by sunlight.

ECCENTRIC JOURNEYS.

A sudden passion for journeying in new and peculiar ways has lately been developed in Europe, by way, it seems, of a reaction from the monotony of railway travel.

The courage of certain English gentlemen, who so highly regarded the old system of travelling in coaches that they set up regular lines of coaches of their own, driving the teams with their own hands and taking as passengers all who would pay the fare has been imitated by others who travel all the way across Europe on bicycles or on foot.

Not long ago a man set out from Paris for St. Petersburg on stilts; but how he progressed on his journey, no one seemed to care. Public interest in him was exhausted with seeing him march through the streets of Paris with long, slow strides, perched on his tall stilts.

His purpose is stated to be to prove that stilt-walking is superior as a means of locomotion to ordinary walking, or to riding on wheels.

Another man rode from Paris to Marseilles on a mule—a very comfortable and pleasant way of travelling. His object was to call attention to the good qualities and endurance of the mule—an animal which, he declared, is not so highly regarded as it deserves to be.

A glass-worker in the South of France has lately announced his intention to go from Marseilles to Paris for the purpose of visiting the grave of Napoleon I. He is to walk backward all the way!

The man who is to undertake this remarkable journey does not do it to illustrate the superior advantages of walking backward over walking forward, but in the hope of making money out of the journey.

Most extraordinary of all is the reported determination of a young Russian officer of the gendarmerie at Vladivostock, on the Pacific coast of Siberia, to travel from that town to Paris between April, 1891, and April, 1893, on his hands and feet. *This is certainly the extreme* of reaction from the railway train.

THE PARROT'S NAME.

It is often convenient for a man to have a "middle initial" in his name, but not always so convenient to a bird or an animal to be thus provided. A certain dog, for instance, whose name was George B. McClellan, declined to be known by it, resolutely refusing to answer to any other name than the *alias* "Gyp."

This has not been the case, however, with a green parrot who at this day lives in the city of Chelsea, Mass., and who actually rejoices in the name of John W. Clarkson.

This parrot is a very good talker indeed. Visitors to the house where he resides are frequently astonished very soon after their arrival to hear a harsh and somewhat husky, but perfectly comprehensible voice, call out:

"John W. Clarkson wants a cracker!"

Another of his accustomed speeches, which sounds somewhat strange, is this:

"Pretty John W. Clarkson! Pretty, pretty John W. Clarkson!"

On one occasion, when some boy visitors were engaged in poking sticks between the wires of this accomplished bird's cage, they were startled to hear him call out to his mistress:

"Jennie! They're plaguing John W. Clarkson!"

AT ANY PRICE.

John Gill, an old fisherman "down east," was exceedingly fond of a bargain. One day he came into the midst of a set of jolly campers who were sitting about the fire cooking their supper.

"Any fish to-day?" quoth John, displaying a basketful of beauties.

"No, we caught our own," said Doctor G., the head of the party. "Splendid luck to-day!"

"Now, I tell ye, doctor, your fish aint a circumstance to mine. Jest try 'em!"

"Don't want them. Haven't any money, either, John."

"No money? Do tell! Well, just give me a bottle or two of doctor's stuff, and we'll call it square."

"Oh, we don't bring much medicine into the wilderness. I don't believe we can trade to-day, John."

The old man leaned forward, and said, with a shrewd twinkle of the eye:

"Then you jest pull a tooth for me! I don't rightly know as I've got any that aint sound, but mebbe you could pitch on one!"

HE COULD SPELL.

Grandma had forgotten that it was two years since she had seen one small member of the family, and that the child had, in the mean time, done a great deal toward learning to spell.

"I can't take it!" stoutly asserted this little Frank, when his mother insisted on his swallowing a spoonful of medicine. "I can't! I can't!"

"Then I shall be obliged to punish you," said mamma, who had passed through more than one scene of the kind, and was beginning to tire of them.

Grandma did not like to interfere, but thought she could do so without showing her partisanship to the boy.

"My dear," said she to her daughter, "why not try h-o-n-e-y?"

"Yes," cried Frank, before his mother could answer, "I'd do most anything for honey!"

Grandma's ruse had not succeeded, but he got the honey.

RIDING A WHALE.

In the memoir of John Murray, the famous London publisher, there is a letter from Mrs. Graham, then living on the Tay, describing an attack made upon a school of whales by the inhabitants of Dundee. She writes:

"We saw the shoal of fish go up the river the day before, but little thought they were to afford such sport.

"A currier ran up to his middle into the water with a dressing-knife, and manfully plunged it up to the hilt into the side of the finner. The whale turned sharp on the currier, and turned him head over heels in the water, but bore off the knife of the half-drowning currier.

"Meanwhile a sailor leaped on the enraged animal's back, and swam Arion-like round the harbor, holding by the back fin. I am sorry to relate that the poor fish was at last mastered."

"BY GOOD RIGHTS."

It is possible that the boy alluded to in the following letter, received by an English board-school teacher, was fairly entitled, under the law of heredity, to be "dull in learning:"

Madam; Mr. Jones have kept bill away to help to cart muck so long as mr. *jones* wants him I shall not trouble to send him to school as he is dull in learning and get a thrashing every day he is best at work.

FROM MRS. BROWN.

A CIRCUS manager was asked how his great show could be moved so quickly and easily. "Why," said he, "you see every elephant has a trunk, the kangaroos all carry pouches, and the bears have grips."—*New York Journal.*

"WE have a creature at our house that has four legs and only one foot," said a travelling salesman; and nobody believed him until he explained that it was a bedstead.—*Exchange.*

THE reading of the comic papers suggests to an exchange that even the funny men are sometimes out of humor.

An effectual worm medicine will be found in "*Brown's Vermifuge Comfits.*" 25 cents a box. [*Adv.*

Itching Piles.
Burnett's Kalliston is a sure relief. A quarter pint bottle by mail only for 50 cts. Joseph Burnett & Co., 27 Central St., Boston, Mass. Regular size by druggists, $1.

INTERLOPERS.

In Eight Chapters.—Chapter IV.

Dorothy and Her New Father.

Dorothy made no reply. Indeed she could not have uttered a word just then; her revulsion of feeling was too great. She felt choked and blinded and scarcely knew where she was.

At first she had an idea that the gentleman had bent down as if to kiss her, but she had started back with a gesture of repugnance, and when she looked up again he was standing erect and stalwart by the table, one hand resting lightly upon it, the other thrust into the breast of his closely buttoned coat.

Colonel Everest did not make another attempt to touch her hand. He contented himself with glancing at her as she stood before him, her breast heaving, her eyes downcast and her fingers nervously clutching the lace upon her skirt.

Then he repeated in his full, deep voice:

"And this is Dorothy?"

"Yes."

That was all. He had asked a question and she had answered. Dorothy's heart was bursting with the bitter sense of mother-want. It was as if she had been starving and some one had offered her food only to snatch it away before her lips could taste its sweetness, her body be revived by its strengthening power.

If her mother had been there it would have been different. But she was not, and her unexplained absence cut Dorothy to the quick, but she would not ask this man why he came alone to greet her.

The Colonel understood the quick, keen flash of passionate hatred that passed over Dorothy's face. He knew that she was disappointed and angry, and guessed rightly that she would ask for no explanations.

"I am sorry that I am here in place of your mother. Our voyage across was particularly severe, and both she and Helen were so worn out by it that I thought better to have them remain in New York. After all, the delay in meeting is only of a few hours. We can leave by any train you wish to-morrow."

"I thought better." Dorothy raged inwardly against him more bitterly than ever. What right had he to prevent her mother from coming to her? She was her mother before she was his wife and—but she only raised her head high and with a little outward tilt of her chin replied:

"If my mother was not well I am glad she did not come. Do you wish to go upstairs? We are having a reception there and I do not want to miss any more of it."

There was a twinkle in the Colonel's brown eyes, but Dorothy was not looking at him and did not see his amusement at her awkward attempt to be haughtily indifferent.

"What a hostile little enemy I have here," he thought to himself, as he replied: "Yes. Certainly. Let us go." And with grave and stately dignity he offered her his arm.

This gave Dorothy another opportunity, for she bluntly declined the offer. Colonel Everest, surprised at her refusal, glanced down and spied the bandage upon her wrist.

"I see you have met with an accident," he said in a tone of sympathy. "I hope it is nothing serious."

"Oh no," she replied, with a careless laugh. "I sprained it about a week ago climbing out of the window in the middle of the night. I went out on the lake rowing and when I came back I hurt my arm."

She wanted to shock him. She had a reckless desire to make him think as hardly of her as she could. What did she care what he thought of her? He wasn't her father.

"Was not that in violation of rules?" inquired Colonel Everest, quietly.

"Oh yes," replied Dorothy. "That's why I did it. I never obey any one except my—my mother."

Her companion did not seem to receive this intelligence with any marked evidence of surprise or disapproval. All he said was, "One of the first requisites of a soldier is obedience. He must subject himself to his superior and respect his discipline."

"Oho!" thought Dorothy. "So he expects me to be obedient to him, does he? He thinks he's my superior, does he? Well, he'll see —"

But now they gained the reception-room. At the threshold Colonel Everest paused, and standing aside, permitted Dorothy to pass in before him.

"For all the world as if she was a young lady," whispered Della Carpenter, who was watching them as they entered.

Miss Lorimer was standing near, and in a moment Dorothy made her way to her side and whispered, unsteadily:

"Miss Lorimer, please talk to him; I can't. I —" and then in a louder tone, untrembling and distinct, turning to her companion:

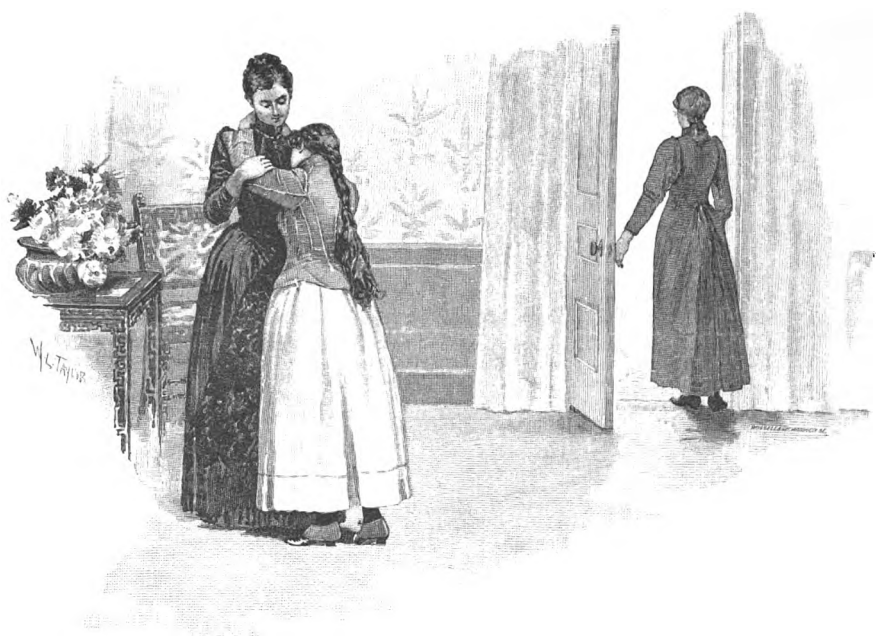
"Colonel Everest, please let me introduce you to Miss Lorimer." Then without another word she left them and abruptly disappeared. Neither Miss Lorimer nor Colonel Everest could restrain a smile which was on neither side one of amusement. Miss Lorimer took in the situation at a glance. She knew what Dorothy's disappointment must have been at not seeing her mother, and she suspected that she had vented it upon the Colonel. He saw that she comprehended, and so they were at once upon the common ground of a mutual understanding.

The young teacher looked up into the face of the handsome, soldierly man beside her and with one swift, searching glance saw what it would take poor little passion-blinded Dorothy months to discover: that here was a true, noble, great-hearted gentleman.

By this time many eyes were turned toward the stalwart figure standing, erect and tall, beside the slender teacher.

The head, with its dark hair, just dashed with gray at the temples, was held high enough to make the large brown eyes appear always looking down at the object of their scrutiny, while the square shoulders and military bearing of the man gave him a special air of distinction.

The girls whispered among themselves: "That's Dorothy's stepfather. Isn't he handsome?"



Miss Lorimer saw in him something more than a handsome man. She read his character and saw that he was a man who could win the wayward but warm-hearted Dorothy.

In a few words she sketched the real Dorothy that was hidden under the unpleasant exterior the Colonel had seen. At the end she said:

"She is pure gold at heart. I have never known her to do a mean or dishonest act. We all love her, and I know you will."

"You may be sure I shall," Colonel Everest replied, with grave earnestness.

Miss Lorimer's duties soon called her away, and she was forced to excuse herself. Colonel Everest sat a few moments watching Dorothy, now one of the merriest as well as one of the most graceful of the dancers.

"O mamma, mamma!"

Presently the shifting and movement of the crowd brought her so near to him that his coat-sleeve brushed her shoulder. She tried to look supremely indifferent to the situation, but her scowl was beginning to be altogether too apparent, when Marie Pollock came tripping up to her all asmile, and banished it by saying:

"O Dorothy, mamma is right back of me and I want you to know her, and — and — Here, mamma, this is Dorothy."

Then there was nothing to do but for Dorothy to present her father to Marie's mother, and try to slip away under cover of the introduction.

But Mrs. Pollock would not let go her hand, saying: "I have heard so much of Dorothy from Marie that I feel I know her already," and after a few commonplaces extended a formal invitation to Dorothy, through the Colonel, to make Marie a visit at Newport during the summer.

Dorothy turned scarlet with pleasure and was about to burst out with a grateful: "Oh, thank you, Mrs. Pollock. I'd love to go. I'll ask mamma if I may," when she heard with a shock of dismay her stepfather replying:

"Thank you, Mrs. Pollock. But I think we could scarcely spare her. My wife has been separated from Dorothy for so long that she will want to keep her beside her now, and as for me—I am just about to begin enjoying the thought of having my family about me. I am afraid I could not be unselfish enough to lend you Dorothy even for a week."

There! He had done it fairly and squarely this time.

Dorothy grew rosy red with anger and deliberately turned on her heel and left the spot. What right had he, a stranger, to refuse an invitation for her? What right had he to call her "his family?" She wasn't "his family." She hadn't anything to do with him or he with her. He was nothing but an interloper.

The lights, instead of gleaming gaily as they had seemed to do at first, appeared like so many eyes trying to stare her out of countenance, while the merry buzz and hum of the crowd only seemed mocking her unhappiness.

She was standing by the large open French window behind a screen of palms and looking out into the darkness of the night, and trying to crush back the tears when she suddenly remembered Miss Lorimer's kindly warning words of a few hours ago.

For one brief second she seemed to be on the point of casting out the wretched spirit that was tormenting her with its evil suggestions and wrathful reminders, and inviting, as Miss Lorimer had begged her to do, in its stead, "every tender, true and womanly thought."

Her heart seemed warming and softening and then — she shook herself angrily.

"He meant from the first to make me suffer. He does everything to plague me. Made my mother not come, and told Mrs. Pollock I couldn't go and—and —he wants to be cruel to me. Why should I love him? He doesn't love me; didn't even kiss me when I came downstairs —but *I* don't care. I don't like him. I hate him."

Then out gushed the burning tears, which she angrily brushed away with the lace handkerchief that was certainly not made to be wept upon.

When Dorothy left her retreat and made her way back into the crowd again, she saw that Colonel Everest was once more talking with Miss Lorimer and Miss Duprée. She was vexed to see that the ladies did not appear to find their companion very villanous, but on the contrary seemed rather to consider him especially interesting and agreeable.

As Miss Lorimer caught sight of Dorothy she beckoned to her. Upon her approach Miss Duprée noticed her tired and distressed appearance, and advised her, as the rooms were now thinning fast, to retire at once, reminding her that a long journey awaited her the next day. Dorothy nodded her head silently, and the Colonel looked relieved.

As the girl and her stepfather went slowly toward the door, the passage-way happened to be quite crowded and they were forced to stand a few moments wedged in among a number of others before they could reach the stairs.

Neither Dorothy nor Colonel Everest said one word, and so it was not strange that the voice of some one behind them, speaking in a loud undertone, should reach their ears with a clearness and distinctness that could not be misunderstood. It was Fanny Bergen who spoke.

"There! That's him. He married Dorothy's mother and she hates him, and he has a daughter and she hates her, too, and she calls them 'interlopers' because they—oh, I never can remember the definition, but you know what it is—and—"

Here, happily, the block was cleared and they were enabled to make their way down the stairs and out of the hearing of that dreadful voice.

Neither Dorothy nor her stepfather spoke. The girl, amid all her shame and mortification, scarcely saw where she stepped, and blundered on blindly until she almost slipped on the edge of a polished stair.

Then Colonel Everest's hand was upon her arm, and he was saying, kindly:

"My dear, do you think you can be ready to start at ten o'clock in the morning? Yes? Well, then, good-night and God bless you."

Dorothy stood at the head of the corridor leading to her room, and looked after him as he descended the stairs.

As she watched him she was filled with a sudden impulse to run after him and beg, at least, for his forgiveness, but she delayed too long, and the next moment she heard the heavy front door close after him and it was too late.

She crept into bed that night without saying

Digitized by Google

her prayers as she was wont to do, kneeling with folded hands before her mother's picture. That picture had served her for two years instead of her mother's knee at which she used to pray, and she had grown to feel that it had something of the beloved presence itself and told it all her secrets, all her disappointments, all her joys and sorrows.

But to-night, just because she had grown to feel that in speaking to it she was almost speaking to her mother herself, she could not approach it at all. In fact, she felt more like biding her face from the innocent thing, whose eyes seemed silently asking: "How can you hurt me so through one I love?" and she could not answer.

She tried to justify herself to her conscience by repeating: "I can't help it. I don't want to be horrid. I'd love to be good, but I can't when everything is going so criss-cross."

In the midst of her brooding she fell asleep, and only wakened upon hearing the early gong clang out loud and clear its signal to rise.

She had only to dress herself and slip a few little things into her hand-bag to be quite ready for her journey, for her trunk stood locked and strapped beside the wall, kind Miss Lorimer having packed it the day before.

Every one was in a flutter during breakfast. Trunks were being carried downstairs, checks were being delivered, questions asked and no answers given, and in the midst of it all the stage lumbered up, and then the hurly-burly grew more confusing still.

"Good-by! Good-by!" "Write to me, Fan." "Remember Hillside in August, Paul." "Be sure and let me know when to come, Kate." "Good-by! Good-by!"

Then Dorothy, feeling a bit "teary 'round the lashes" and not at all as glad to leave the place as she had supposed she would be, kissed every one good-by, and then her stepfather lifted her into the hack and they were driven off amid quite a chorus of adieux and good wishes.

The journey proved wearisome and long to Dorothy, despite Colonel Everest's repeated attempts at entertainment and occasional bestowals of candy, books and magazines which he obtained from the loud-voiced boy who made it his business to shriek their virtues into the aching ears of the passengers.

He even offered to read aloud to her when he saw she did not care to read herself, but she elected to look so uninterested and bored that at last he left her to amuse herself, which she did by looking out of the window, sighing and longing for the time to come when she could creep into her berth and, hiding behind the curtains, lie thinking her own thoughts and listening to the clatter, clatter of the wheels and occasional sharp hoots of the engine.

And by and by the time came for all this, and then she found herself as ill at ease as before, never thinking that the cause of her discontent lay in herself, and for hours at a time she would lie open-eyed and staring, while the lights flickered past them of some sleepy village, and she would grow drowsy herself—soothed by the train's strange lullaby—and only dimly wonder why she felt so restless and unhappy.

Then she would fall into a doze, only to be waked again almost immediately by some unearthly noise of whistle or wheel or engine-bell.

But all things come to an end, and so at last did this long journey, and Dorothy, somewhat pale and fagged, stepped out of the car, followed by her stepfather, and was whirled away in the sunlight along the hot, dusty streets of New York.

Colonel Everest let down the carriage windows, and in came the summer breeze, which blew with a sweet freshness over their tired faces and travel-stained garments.

Dorothy had scarcely spoken to her companion through all the journey, and now she said, somewhat irritably:

"I don't even know where she is."

Colonel Everest evidently guessed at once who "she" was, for he replied:

"At the Victoria. I left them there until we should return. As soon as you are rested we are all to go up the Hudson to a place I have there. It is ready for us, and I hope you will like it. You and Helen can have your horses to ride and drive, and there is some sort of a river craft, I believe, that you can paddle about in—or, at least, there used to be when I was a boy. Yes, I hope you will like it and be happy there."

For a moment Dorothy was silent. Then she said:

"If my mother is there I shall like it. I'm always happy where she is."

She had just time to hear her stepfather say, "So am I,"—and no more for any of her contrary little speeches, when they reached the hotel.

Dorothy never knew how she got to their apartments. She had dim visions of an elevator and a hall-boy and a knock upon a closed door, and then—the door flew open, she was caught in some one's arms and was hiding her face against some one's bosom and crying, "O mamma, mamma!" without a thought of anything or any one else.

Then she seemed to be conscious, in a vague, uncertain sort of way, of a slender figure slipping past them and out of the door, closing it gently behind her—but who she was or why she went Dorothy did not know nor care.

It was enough that she was clinging about her mother's neck and hearing the dear voice, for which she had hungered so long, saying: "Little Dorothy! Darling daughter!"

ART IS LONG.

All passes. Art alone
Enduring stays to us;
The bust outlasts the throne,
The coin Tiberius.

—*Selected.*

For the Companion.

TOM BUCHANAN'S GHOST.

Tom Buchanan, as I first remember him, when we sat at opposite desks in school and swopped jackknives, "sight unseen," was a shock-headed, uncouth, awkward lad of sixteen.

He had no mother—and no father worth mentioning. His mother was dead and buried, but his father was only dead and pickled—in alcohol. However, Tom had hired himself out to Abiel Gordon, a farmer near Marbury, and as his father never managed to get himself so far from the saloons as the Gordon farm, Tom rarely saw him.

Tom was a total failure as a farm-hand; but in two weeks' time he knew more about that farm, its topography and its denizens, wild and tame, than the farmer and all his family knew.

In the first three days he found two bee-trees that netted Mr. Gordon ten dollars each. That tickled the old farmer hugely.

Tom next discovered where two turkey-hens were setting which had been given up for lost, and that pleased the farmer's wife. Then he found a missing steer stranded flank-deep in a bog, just in time to have it rescued and saved from death. When I add that he found a pheasant-hen on her nest, you may know at once that he had quick eyes.

In fact, Farmer Gordon declares that if Tom had only stayed a little longer on the farm, he would have discovered a gold mine or an oil well as sure as fate.

Tom went to school in winter, and discovered as many interesting things in and about the little country schoolhouse as he had discovered on the Gordon farm. But when he discovered the new teacher one morning, his career of discovery seemed to come to a full stop.

After that he had no eyes for bee-trees or setting turkeys or anything else of that trivial sort. He fell in love, madly and devotedly, with all the ardor that can be excited in a boy of sixteen by a blooming young beauty of twenty-five.

Unintentionally Miss Jennie Forman, the teacher, fanned the flames that were making such havoc with Tom's sensibilities.

There were older scholars than Tom casting sheep's eyes at the teacher, who were likely, if not carefully kept at the proper distance, to become far more annoying than he. She needed a foil, and, looking about her for the pupil toward whom she could manifest partiality, with the least likelihood of arousing jealousy, she naturally hit upon poor, homely, shock-headed Tom.

If some one of her admirers insisted on escorting her to this, that or the other place, she was always sure to have a prior engagement with Tom. If she divined, from an unusual degree of vacuity on the part of one of them during school hours, that he had resolved on seeing her home after school, she managed to secure Tom as an escort beforehand.

It saved her unlimited annoyance, and it was glory trebly glorified to Tom, while it lasted.

I do not deny that the teacher was to blame in the matter, and played with him in a culpable manner. But she had, of course, no idea that he would take it as seriously as he did. He was to her just a big, awkward boy—nothing more.

The crisis came late in the spring. As the time for the long summer vacation drew near, Tom made up his mind to make a formal declaration of his love. It was a formidable thing to do, but he was equal to the emergency.

In the old farm-house there was a library consisting of a big Bible, a score of back numbers of a fashion magazine, and a large volume of general information on all sorts of topics. In this volume there was a department entitled "The Complete Letter-Writer."

There was one letter in particular that took his fancy. It was entitled:

"Declaring the Love of a Poor Young Man for One who is Above Him in Station."

It began as follows: "Dear Miss ——: I take my pen in hand to declare unto you the passionate yearnings," etc.

Tom concluded that he could change the beginning as follows: "The time has now come when I must declare unto you the passionate yearnings," etc.

The rest of the letter seemed to do as well for a verbal as a written declaration, and he carefully committed it to memory. He found one difficulty, however. The opening sentence seemed to stick to his mind as it was printed. He invariably began with taking his pen in hand, and then had to go back and begin again.

The way from the schoolhouse to the Burnham farm-house, where Miss Forman was staying, led along a country road, then through a neck of woods, then through a field between a big clump of alders and the skirt of the woods, then up a lane to the house.

It was a beautiful hazy afternoon. Tom had been unusually silent during the walk along the road, and, as they turned into the woods, Miss Forman remarked:

"What's the matter with you this afternoon, Tom? I never knew you to be so stupid."

"Well, I—yer see, I wer thinkin' 'bout yer going away. It's purty soon, aint it?"

"Only two weeks. Will you miss me, Tom?"

"Well, yes," said Tom, adding half-apologetically, "yer see they aint many folks round here."

"I see. But if there were more people here, I suppose it would make no difference!"

"I don't know 'bout that," said Tom, earnestly. "That is to say, I—I—don't know 'bout that."

She laughed a gay little laugh. What he said contrasted so oddly with his tremulously earnest manner of saying it.

"Well," she ejaculated, "I like *that!*"

Tom was silent for a while, nerving himself for a great effort. "I take my pen in hand," "I take my pen in hand," kept running through his head.

She stopped to pluck some white phlox by the side of the path. Tom looked at her as she bent down, scrutinized closely her trim figure, well-rounded shoulders, and her wavy brown hair, and longed for the eloquence of the campaign orator he had heard a few months before. She sat down on a low stump to arrange the flowers with some maiden-hair ferns she had gathered into a nosegay, and Tom knew that "the clock of Destiny was striking the hour of Opportunity."

"Miss Forman," he began, "I—I've got something I'd like to say to you."

"Delighted to hear it," she said, without looking up. "I didn't know whether you ever would say anything again."

"Miss Forman, I take my pen in hand—"

She looked up then, full into his agitated eyes. "Your *what?* Tom Buchanan, are you going crazy?"

He was cast down, but not destroyed. He must go through with it now at all hazards. So fixing his eyes on a dogwood blossom about ten yards ahead, he began again in a stilted tone much as if he were declaiming the "Battle of Waterloo," and had to say it all in one breath.

"Miss Forman, the time has now come when I must take my pen in hand to declare unto you the passionate yearnings which you have inspired within my heart. That this is presumptuous on my part is a fact of which no one is more fully aware than myself. But love invades all stations of life, and beauty, like the dawn, cannot hide its charms from the eyes even of the humblest.

"Though I am unable to offer you either wealth or position equal to your own, yet I dare to believe that I can offer you as true a heart and as devoted an affection as any of your numerous suitors of more exalted station; and, as the poet has said:

Kind hearts are more than coronets,
And simple faith than Norman blood.

"As the idol-worshipper who lays his choicest offering at the shrine, so, fair lady, I lay my life and service at your feet, hardly daring to hope that you will accept this offer of yours devotedly, Thomas Buchanan."

At the first sentence of this harangue, a frightened expression had crept into the "fair lady's" eyes, for she thought the boy was out of his mind. Then, as the truth dawned upon her, she repressed, at some risk of strangling, the desire to scream, until the last words were uttered.

Then a gale of merriment swept through the woods that startled every chipmunk within a radius of one hundred yards.

It was answered by a roar of laughter, somewhat deeper in tone, as two of Tom's schoolfellows stepped out from behind a neighboring brush-heap. The poor boy could stand no more. He turned and fled, anger in his heart and mortification in his face.

One more week of school, and then the long vacation. For two days Tom did not appear. On the third day he took his seat as usual, amid the suppressed snickers of the other scholars.

He bore it very well, however. A deep plan of revenge had been contrived by him, and the consciousness of this helped him to face the scorn of his companions.

The last afternoon of the term had been set apart for a spelling-match and a tub-race. Visitors from all the farm-houses near were present to enjoy the sport.

Tom's thoughts were not on the spelling-match, and he went down among the first. His whole mind was on the tub-race, and the preparations he had made in advance were elaborate and novel.

For one thing, he had secretly conveyed to a cave, distant about two miles, a supply of provisions, several bundles of straw, and a pair of blankets which he "borrowed" from the barn; also two rusty table-knives, one without a handle, and a rusty old pistol that would "go off" at least once in ten times.

Then he had hid a suit of clothes in the bushes on the bank of the creek, just below the bend, about two hundred yards from the place where the race was to be held.

All these were sufficiently strange preparations for a tub-race; but Tom, with his usual skill in finding out things, had some time before made a discovery concerning tubs, which he had reserved to himself for the purpose of creating a sensation at some time among his playmates. He was now to put his discovery to a different use, though one not lacking in sensational aspects.

Fifteen tubs, with fifteen boys, started out from the bank amid cheers and laughter when the signal was given. Two tubs soon took the lead, one of them being Tom's. The creek was about one hundred feet wide.

By the time Tom reached the middle of the current he had outstripped his rival by several feet, and the plaudits were bestowed generously upon him.

Suddenly he was seen to stop and look wildly around. Then he clapped his hand to his heart as if in pain. The boy nearest to him heard him groan, and the next instant, with a reel, over went Tom into the river.

A shudder of apprehension passed through the crowd. They watched eagerly for his reappearance, but they watched in vain.

A rush was made for the boat near at hand, and three men rowed hastily to the spot. Not a sign of the lad yet. Two of the men stripped off their outer garments and plunged down to the bottom of the water, at this point about eight feet deep.

They reappeared, shook their heads and dove again. Again each reappeared, shook his head, and went down again. Again, and again, and again they repeated the operation, to no effect.

In the meantime, Tom's tub, upside down, had been drifting down stream toward the bend. Strange to say, if any one had had eyes to notice the fact, the tub drifted much more rapidly than Tom's hat, which was borne on the surface of the same current.

Both, however, disappeared around the bend while the divers were still searching. By this time at least five minutes had elapsed, and all hope of rescuing Tom alive had vanished.

They dragged the bottom of the creek with hooks, they prodded it with poles, and the divers searched it over yard by yard until night came, but no trace did they find of the body.

About one hour after all hope of ever seeing Tom Buchanan alive had been abandoned, that young scapegrace might have been seen entering the cave, two miles away. Into one pocket he hastily shoved the rusty old pistol. Beneath his waistband he shoved one knife, and into his bootleg went the other. Thus equipped, he sat down to meditate.

Let the world now beware! Tom Buchanan, disappointed in love, had become a bandit!

The school teacher had not been present at the tub-race, having stayed behind at the schoolhouse to attend to some papers.

When the news of Tom's catastrophe was brought to her, her grief was sharp and remorseful. Somehow she felt as if she were to blame for it. Some said it was a case of heart disease. Others said it was an epileptic fit, calling to mind the character of Tom's father, and citing learned authorities to prove the predisposition to such disorders on the part of the offspring of drinking parents.

But the teacher was worried over the rather ridiculous fear that Tom, in a mad fit of maudlin sentimentality, had committed suicide. This thought haunted her all the evening, disturbed her sleep at night, and was present during the following day.

The search for the body was renewed on the following morning, but, as before, nothing was found. Various theories were advanced to account for this, among them being that of some subterranean current which had sucked the body into a hole, where it had become wedged.

So the search was finally abandoned, and the solution of the mystery was left to time—which proved to be a very wise thing to do.

Miss Forman had arranged to spend the day in the schoolhouse, to attend to the thousand and one finishing-up details which fall to a teacher's lot at the end of a term. She was expecting that afternoon the arrival from the city of a gentleman friend, who—she had every reason to expect—would, not many weeks later, assume a much dearer title, and who was to accompany her next day to the city.

She had written to him to come direct to the schoolhouse, and promptly at five o'clock he was present.

Her worry over Tom had hampered her somewhat in her work during the day, and it was after six o'clock when they started from the schoolhouse.

They loitered slowly along the road and through the neck of woods. When they emerged, the twilight was already deepening into gloom.

She had been telling him about Tom's disappearance, and his proposal extraordinary the week before, and the boy was in the thoughts of both. They had nearly reached the point where the path ran between the clump of alders and the wood, when a violent rustling in the alders attracted their attention.

The next instant there emerged from the clump a tall white figure, which seemed to glide stealthily and silently across their path. As it did so, the face was turned toward them, and despite the gloom, Miss Forman recognized the reproachful, silent, wide-open eyes of Tom Buchanan.

She was a sensible young woman, but the sight struck a chill to her very heart, and she clutched her companion's arm tightly to keep from falling.

"It's *Tom!* Why! it's Tom Buchanan!" she gasped, quaking in every muscle.

The silent spectre glided on toward the woods, the eyes still fixed on her face with a mute, upbraiding stare. Then a low wailing came from its lips that sounded as though a heart were indeed breaking.

The young man would have rushed forward at all hazards, but his companion would have fallen prone had he withdrawn his support. Nor were his own nerves altogether steady after the apparition.

The ghostly figure had reached the very edge of the woods, and the next instant would no doubt have disappeared. But there it stopped. A deep shudder seemed to rack it violently.

The next moment the low wail changed to a piercing shriek of agony.

A look of horrible pain came into the face, driving away the stony glare of fixed melancholy. Miss Forman could stand no more, but fell to the ground and buried her face in her hands.

Then came a metamorphosis. The ghostly arms were brandished wildly to and fro, a white garment went sailing through the air, and the young man watching saw the figure of a shock-headed boy of sixteen, in ordinary work-a-day clothes, bending down and clutching at his feet, and awakening the twilight with his yells for help.

The young man rushed forward, and found Tom Buchanan, alias a bandit, alias a ghost, with one foot caught in a steel trap which Farmer Burnham had set to catch a pestiferous animal that had been molesting his hen-coops.

Miss Forman and her affianced lover did not return to the city the next day. It took two days for her to recover her equanimity in a sufficient degree to make the journey. When they did return, Tom, with one bandaged foot that required the use of a crutch, accompanied them.

On hearing Tom's story in all its details, the young man, who was editor of a daily paper, had been so struck with Tom's constructive skill and his "nerve" in carrying out his plans, that he at once prevailed upon him to go to the city and become a "printer's devil."

Digitized by Google

To-day Tom is city editor, and has the best reputation for skill in finding out things of any newspaper man in the city.

Nevertheless, Tom was a very foolish boy in attempting such an absurd method of what he supposed to be retaliation, and he himself now thinks so.

NEPIGON.

In Six Chapters.—Chapter IV.

White-fishing on Nepigon Pool.

After a rainy night and a wet forenoon the sky cleared, and the sun looked out beautifully warm and bright.

"If you like, we go out on the great pool now," John said. "You will see fine sight there."

Rods and nets were brought, the canoes launched, and we embarked just as the sun was sinking from view behind the wooded ridge across the river, the shadow of it stealing over the deep, slowly turning waters.

We floated out, and entering the limb of the enormous eddy, were borne slowly but resistlessly around, in a great circle, two or three hundred yards in diameter. It was a veritable merry-go-round of the Tritons.

There was little danger, yet the Indian boatmen crouched low, both at the bow and stern of the canoes, and watched the eddies closely as they formed, ready with their paddles to work out quickly, if the downward draught or upward swirl of the waters should be too strong.

The pool was teeming with large white fish. Unlike trout, the white-fish does not break water with a leap and a splash, but comes quietly up, and, turning, wriggles along with a peculiar serpentine motion, its back just showing above the surface. Scores of them were in sight at once on all sides. It was a spectacle to drive an angler wild with anticipation.

"What brings them up in such a peculiar manner at this hour, John?" Professor William asked. "I have not noticed them before."

"The millers, sir," said John. "They are feeding. Don't you see the millers falling?"

Sure enough, there were hundreds and thousands of little dusky millers, the miller of the tree caterpillar, we thought, floating out from the wooded shore and dropping upon the water.

"The white-fish live on millers at this time o' year," continued John. "It's the only time the fish ever come to the surface like that, and they are never so good to eat as when they are feeding on millers. Millers give their flesh a sweet taste."

"A miller's a small mouthful for a five-pound fish," Alton remarked.

"Oh, they catch hundreds o' them," replied John. "Can open one of these white-fish now, and you will find his stomach packed with millers. But a few weeks later you will not see a white-fish anywhere on these waters. They will be all on the bottom, feeding on a kind of water-worm that come out then."

"I see now what that young sportsman down at Hamilton's Pool meant by telling me to fish here with a miller-fly," observed Dick. "I'll act on his advice, for I believe I have a few little flies of that sort."

In a few minutes Alton had a bite.

"They bite easy," continued John. "They do have very tender mouths. If you pull much you will pull the hook out of them. Their mouths are not so strong as a trout's."

Alton let the fish have plenty of line at first, but gradually he reeled it in. White-fish, although fairly gamey, do not fight so long and so strongly as trout or salmon. In four or five minutes this one was brought so close to the canoe that John secured it with the net. It weighed about three pounds.

Meantime Professor William's rod began to whir in the other canoe.

"Oh, he has hooked a big one!" cried Lucia, to know by the way it rigs." A moment later the fish broke the water, leaping entirely out.

"That is a trout," said Joe Eskimo, and Wap-a-shecis also said, "Ush-aw-pow."

After a smart while the fish was netted. It was, as Joe had declared, a trout. Dick immediately hooked a small white-fish and Alton also caught another. But Lee fished in vain, and the rest of the party had indifferent luck.

The late twilight was calm and beautiful. The quiet of the great wilderness was broken only by the roar of the cataract and a few distant wild cries of animals and birds. Suddenly from the woods on the farther back of the pool, a little tongue of fire blazed up. We had seen and smelled smoke in that direction.

"It is my old camp-fire," John remarked. "When I was up here last month I got supper there. The fire has kept in the scurf among the spruce root ever since."

This seemed quite remarkable, for there had been several drenching rain-storms.

Far up above the ridge-pole above the little fire, we twice heard an odd outcry of peculiar wild intonation. Wen-a-goosh muttered, "*Mor-gos.*"

"What is 'mor-gos'?" Then asked, but Wen-a-goosh did not understand even so simple a question in English. Joe Eskimo laughed, but said nothing.

"Oh, he don't mean anything," said John, as if to change the subject.

"I know what mor-gos is," said Lee; "*mor-gos* means bear."

John looked a little embarrassed. He had manifestly disliked to have the Indian know that there was a bear about.

"Oh, I am not afraid of bears," said Lucia. "I've had experience of bears."

The next morning we were all rather late astir. Immediately after breakfast Professor William announced his intention of setting off on a prospecting trip for minerals, to the ridge on the west side of the pool, and proposed to Alton and Dick to go with him. Somewhat to his surprise and that of the others, they declined.

Alton said something about fishing for trout in a new place that forenoon, and Dick also excused himself a little clumsily.

Professor William did not urge them, but Lee offered to go with him. They set off very soon, promising to return by luncheon.

Then went with Lucia, who had not fished very much here as yet, to use Lee's rod at the rapids. They followed up the path to the great "pot-hole" —as Alton had named it—near the foot of the falls, but met with no success.

At length, Lucia came down to camp for another hook and a bit of pork for bait, and while there she saw Joe and Wap-a-sheesh carrying a canoe up the path toward the two short rapids above the falls. Dick and Alton were following them.

overboard and let the canoe down by the line into the quicker water near the brink of the falls. This quick water was known to be good fishing ground, where some of the biggest trout in the river were apt to be lying.

"Oh, they have pretty good luck there, I guess," John added.

"But why should that be such good fishing ground?" asked Then.

"Because, I suppose not many ever fished there," replied John. "Joe is about the only one who will try that."

"But what if the line were to slip off the stone, or get frayed and break," said Teacher Sarah, uneasily.

"Well, I guess they would go over then," said John.

"It is a dangerous situation, and they shall not stay there!" said Teacher Sarah. She began calling to them, and making signals with her scarf. At length Alton looked up and saw them. The canoe was taken back a little and pushed to the shore. At any rate he professed not to hear or understand, but held up two huge trout.

Just then Professor William appeared on the scene. He had returned to the camp, and finding no one there but set out to look up some of the party. Lucia pointed to the water which was still rippling.

He looked out upon the river, and when he saw what was going on his face took on an expression of alarm and of annoyance as well.

"What sent those boys out there? Wan," turning to John, "how came those boys in that perilous place?"

John hastily, and with all the excuses he could find, explained Joe's expertness for aiding such tedious fishermen. But Professor William interrupted with a stentorian hail.

At that the boys looked up quickly enough. They appeared to experience far less difficulty in hearing now.

There was a hasty reeling in of lines, and the two Indians drew back from out the quick water by hauling steadily on the line. Fortunately, they regained the pool above and came ashore without accident.

Alton and Dick were much elated and, partly to cover their confusion, perhaps, came to so hauling up each a noble trout, the largest we had seen. Alton's, indeed, weighed six and a quarter pounds, and Dick's only a pound less. They had also caught four smaller ones.

Professor William admired the fish, but expressed himself quite pointedly to the boys and Joe Eskimo regarding their adventure.

Upon the morning of the fourth day we set off on the lake to go around from the falls into South Bay. There a portage can be made into Lake Hannah, and thence across into the Nepigon River again, on our homeward way.

The guides had carried the canoes around the rapids to a cove above the falls, the previous evening. We embarked at seven o'clock, and soon emerging from among a group of islands, saw a great lake stretching away to the horizon like the ocean.

For three or four hours we coasted the south shore, and at noon landed for lunch. Refreshed after lunch, we passed through a pretty group of small islands and doubled a cape into South Bay, itself a large lake.

The wind had been blowing for an hour or two from the south, but thus far the shores had sheltered us. Immediately upon entering this great bay, we felt a heavy swell and noted a suspicious appearance of white caps farther out.

Joe stood up and looked earnestly down the bay for a moment, then turned to John and made a sign as of canoes dancing up and down.

"How much farther have we to go?" Professor William asked.

"It is five miles from here to Flat Rock Portage, the place where we land to cross over into Lake Hannah, sir," John replied.

Accepting the assurance of the guides that the trip had in it "not much danger, just a little wet, that's all," Professor William allowed the men to push on.

They tightened their belts and pushed out into the bay. Immediately there was a lively pitching of the canoes, the great swells racing past and tossing them like puff-balls.

Then and Teacher Sarah sat grasping the rail of the canoe, looking terrified. Lucia laughed and made merry as the spray drenched her face. Dick and Professor William looked ill at ease.

A little cove in the lee of a jutting headland offered a convenient camping place, but there was no wood suitable for a fire. Teacher Sarah proposed that we take refuge here, notwithstanding.

"Of course we put in and camp, if all say so," replied John, glancing at Professor William.

"You still do not deem it really dangerous?" questioned the latter.

"Not very little danger," said John.

"Then let's go ahead!" cried Lucia. "Who's afraid?"

"I'm afraid," replied Then, candidly.

"So am I," said Teacher Sarah. "Dreadfully afraid!"

"I am just a little afraid," admitted Lee.

"I'm not afraid, but it wouldn't take but a little more to scare me," said Dick, laughing.

"We shall have to vote on the question," cried Alton. "All who are afraid raise their right hands."

Up went three hands with a rush.

"Contrary minded!"

Four hands were raised.

"Courage wins!" exclaimed Alton.

"Not courage, but recklessness," said Then, discontentedly.

C. A. STEPHENS.

(To be continued.)

For the Companion.

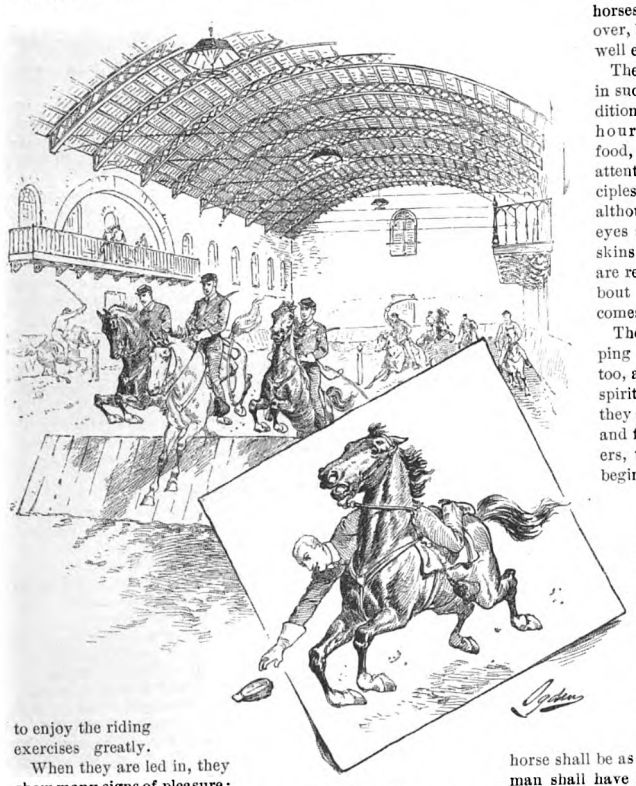
RIDING AT WEST POINT.

One of the most interesting places at the West Point Military Academy is the great riding hall, where the cadets are taught what has come to be recognized as the best style of riding in the world. It is altogether unlike that used in any foreign military school. In the foreign schools the riding taught may be classed as "ornamental," but there is a marked difference in the ordinary seat on horseback and the "military seat."

All military men in Europe sit close to the saddle and very upright, when on parade. But the moment the parade is dissolved, the officer rises in the saddle as the horse trots, and adopts what seems to an American to be the most awkward and ungainly fashion of riding that can be imagined.

But the American officers are taught to ride as the Indians of the plains, and the Bedouins of the desert, and the Cossacks of the Don ride—an all seen ride who live and fight on horseback.

The superiority of this system was first made plain to European officers when a company of American cowboys and Indians went to Europe, three or four years ago, to give exhibitions illustrative of far-western scenes. The Duke of Cambridge, the Commander-in-Chief of the British army, after seeing the cowboys ride—and their system is exactly the West Point system—said publicly that the British officers must revolutionize their manner of riding.



The Duke's words were after the military authorities in Paris saw the American ride, they employed two or three of the cowboys, and put one hundred of the students at the military school of St. Cyr under their instruction.

There was very great interest in the American officers, who had all been taught at West Point that the art of riding meant sticking to a horse under all conditions, and being able to handle a pistol, carbine or sword, as well as the horse.

The Riding Hall at West Point is an immense granite structure. Its floor is covered with tanbark, and along the wall runs a sort of rough wooden wainscoting. This boarding of planks inclines away from the ground, so that if a cadet is thrown against it—as cadets sometimes are—the force of the fall is broken upon its slanting surface.

The riding lesson is given in the morning, and usually to a squad of sixteen cadets. The horses, which are splendid thoroughbreds, are led into the hall by troopers. People who do not know horses well would not, perhaps, regard these as fine horses, for they are thin like most thoroughbreds; their ribs show plainly and their coats are dull. But they are really perfect types of cavalry horses, with small, alert ears, bright eyes and slender

legs. They are carefully broken beforehand, but the cadets delight in making them wild, and sometimes, after a few months' service, they become so unmanageable that the officers in charge are compelled to send them away, much to the regret of the cadets, who scorn gentle and well-broken horses. The horses themselves seem

to enjoy the riding exercises greatly.

When they are led in, they show many signs of pleasure; and the spur is not needed to make them do their best. By an unwritten law among the cadets, the members of the first class have the choice of chargers, and they invariably take the wildest.

The squad usually divides, eight forming at one end of the hall, and eight at the other. The word is given for a preliminary trot, canter and gallop to warm both cadets and horses up to their work.

Soon the horses are flying around the great ellipse of tanbark like phantoms, scarcely a sound of their hoofs being heard in the soft bark.

Then comes the bareback riding. By this time some of the horses are generally enough excited to be troublesome, but the cadets stick to them like leeches, and not all the kicking and plunging can, as a rule, unseat their riders.

Then comes the riding without stirrups, all of which is done at full speed, and then riding without either saddle or reins. A cadet, holding on firmly by his knees with his feet out of the stirrups, hands the reins over to another mounted cadet, who gallops at his side.

Those who ride particularly well clasp their hands behind their backs, and sit bolt-upright without reins or stirrups while the horse is careering madly around.

Then the mounting and dismounting while the horse is at full speed take place. The cadet slips to the ground, runs along by the horse's side, holding the reins over his left arm, and then vaults to the horse's back from the ground. This is done both with and without the saddle; and the cadets become so expert at it, that they generally succeed at the first trial.

If they do not, they run along until they succeed in scrambling on.

All these are riding exercises proper. After them come the fighting on horseback, and the sabre exercise. The horses are saddled and bridled, after a brief rest, and the cadets, mounting, fight imaginary Indians at full speed.

At intervals around the hall are placed dummies of various heights, upon the tops of which are what may be described as detachable heads. On the tanbark, between these images, are placed other dummy heads. The cadet is required to gallop around at full speed, sabre the dummy on the ground, cut off the Indians' heads as they are passed, and incidentally to jump four hurdles, and take off two rings above his head. His highest proficiency is reached when the cadet, starting around the ellipse, can cut off a tall Indian's head, jump a hurdle, sabre an Indian on the ground, and then, as quick as thought, raise his sabre over his head and take off a ring. This he repeats—if he can do it—four times going around the hall.

By the time the rider has reached this point, his neat and trig appearance—for cadets are often models of military dandyism—is somewhat changed for the worse. His immaculate collar is wilted, his close-cropped hair is blowsed, and often he has lost his cap.

If a cadet dismounted to pick up his cap he would be laughed at by his class; he must pick it up from the ground while on horseback. So if one drops his cap, all the others stop to watch him as he picks it up.

The horse, which by this time is in a fever of excitement, is apt to dance about, and to make up his mind that the cap shall not be picked up. If the cadet is long about it, owing to his horse's unruliness, he becomes a target for the grins and whispers of the others, who regard his frantic efforts with the greatest amusement. But the cap is always picked up.

Two hours of this kind of exercise is enough for both cadets and horses; and when it is over, both look pretty well exhausted.

The cadets are kept in such physical condition by their regular hours, wholesome food, and the strict attention to the principles of health, that although tired, their eyes are bright, their skins clear, and they are ready for another bout as soon as it comes.

The horses are dripping wet, but they, too, are undaunted in spirit; and as soon as they are rubbed down and fed by the troopers, they are able to begin again.

It is by such exercises as this that the American officers are made the best horsemen among civilized nations.

Grace in riding is taught them, too, but the chief thing sought is that man and horse shall be as one, and that the man shall have as free use of his hands, eyes, and legs on horseback as on foot.

LIGHT-BLIND.

Blue splendor fills the void, no deeps unclose
Beyond day's glory to our dazzled eyes.
Night sweeps away the blinding veil and shows
The worlds that blossom in the infinite skies.

ANNA BOYNTON AVERILL.

MINOR EUROPEAN STATES.

Public attention is so much absorbed, usually, in what is going on in the larger countries, that the minor States of the world and their affairs are but little noted.

Yet events, apparently of small importance, which take place in these smaller States, have sometimes a bearing upon the destiny of their bigger neighbors.

The course of events to-day, for instance, in the small kingdoms and principalities of south-eastern Europe—in Servia, Roumania, Bulgaria and Montenegro—is watched with anxious interest by the great powers; for a disturbance in that region always carries with it the possibility of bringing about a European war.

Taking a general glance at the minor States of Europe, we find that in two of them—in Spain and in Holland—general elections for new Parliaments have been held within the past six months; while in several others, important ministerial changes have taken place.

The Spanish general election occurred early in February, and was the most interesting which has been held in Spain since the restoration of the Bourbon monarchy.

Its result was the return of a very heavy majority in favor of the conservative ministry of the present Prime Minister, Señor Canovas del Castillo. In the Deputies his supporters number about three hundred and fifty, while all shades of the opposition—including liberals and republicans—only number one hundred and twenty.

The Spanish Senate, since the elections, has one hundred and thirty conservative members, while the parties in opposition have only thirty.

Strong, however, as the conservative majority is in the Cortes, or Parliament, the other parties are sufficiently formidable, especially in the cities and towns, to render Señor Castillo's task of governing far from an easy one; and it is probable that troublous times are ahead in Spanish politics.

The elections in Holland, which took place in June, instead of confirming the ministry in power, as was the case in Spain, resulted adversely to the statesmen in office, and involved a change of ministers. The Dutch chamber now comprises fifty-five liberals, twenty-four Catholics, two radicals, and nineteen moderates.

The transfer of political power has been made quietly, however, and on the whole, the affairs of the thrifty little kingdom, ruled over by its young queen of eleven years, appear to be progressing quietly.

In both Greece and Norway changes of ministry have taken place within a year. Delyannis succeeded Tricoupis in Greece, having at his back only ten majority in the popular house of Parliament. It was supposed that Delyannis would enter upon a more vigorous policy against the Turks than his predecessor, and make an effort to obtain the territories inhabited by Greeks and still held by Turkey.

But although Delyannis has been in power seven or eight months, as yet he has not alarmed Europe by any threatening step in that direction.

In Norway the change of ministry has a yet more significant aspect. It arose from the dissatisfaction of Norway with the superior influence held by its sister kingdom, Sweden, in foreign policy, and from what seems to be the wish of Norway to be virtually separated from Sweden altogether.

Mr. Steen, the representative of this aspiration on the part of the Norwegians, succeeded Mr. Stang as Prime Minister in March; Mr. Stang having been the champion of Swedish interests in Norway.

Portugal has had a hard time of it during the past few months, with its changes of ministry, its quarrel with England over South Africa, its financial straits, and the trouble given to its government by Republican agitators. The condition of Portugal is critical, and startling changes may occur at Lisbon any time.

For the Companion.

RIGHTED.

Human hopes and human fears,
Weary days and weary years;
This is living.

Lifted clouds and vision clear,
Ended toil and heaven near;
This is dying.

LOUISE HOUGHTON.

EXECUTION BY ELECTRICITY.

The method of executing by electricity persons convicted of murder, adopted by the State of New York, is an experiment, distinctly intended to be in the direction of humanity and public decorum. The people of all the States of the Union have watched the experiment with interest. If the method is fully successful, it may be adopted in many other States and even in foreign countries.

The new law in New York was not put into force without a great deal of deliberation and examination.

In 1886 a commission was created by law to look carefully into the whole subject of the execution of the death penalty, and see if some means more humane than the gallows could not be found.

The gallows is used for executions in this country, not because it has been found by experience here to be the fittest means for the purpose, but because it is inherited from England. It came into general use at a time when men believed that it was desirable to make a public spectacle of an execution, and one visible to as many people as possible.

In those times, there was very little consideration of questions of humanity. The frequency of public executions was considered a sign of progress and civilization.

That is not the modern view. Public executions, and detailed accounts of executions are deemed demoralizing and brutalizing. The New York commission found that, of the civilized foreign countries which make use of the death penalty, only four employ the gallows—counting Great Britain and her colonies as one country. The rest use mainly the guillotine or the sword.

After due examination of many proposed methods, the commission reported in favor of the use of electricity; and a law providing for its introduction was passed, which was to go into force with the first day of 1889.

But a new examination of the whole matter began here; for the first criminal condemned to die by the new means appealed to the State and federal courts, calling in question the constitutionality of the law. After a thorough inquiry the courts sustained the law.

Several convicts have been executed since the law has been fully in operation. An excellent feature of the statute is a clause forbidding the publication of the details of an execution, or of any story of it beyond the statement of the fact that such a convict was, on such a day, executed according to law.

Not much, therefore, has been with propriety made known of the executions; but in a general way it is properly known that, while the first execution was somewhat clumsily performed, the latest have been successful.

As the electric current is known to be many times swifter than the nerve force in the human body, it is believed that the men executed could not have suffered at all.

With this end gained, and with a better enforcement of the law which prohibits the publication of details of the executions, the death penalty will be reduced to its minimum of horror.

Whether or not the penalty should be employed at all is a question which has been agitated for many years, and is still agitated.

Capital punishment is opposed by many people on religious grounds. The power over existence, they urge, belongs to the Maker, and no man can rightfully take it away; moreover, if this life were given to man as a probation for another, what man has a right to deprive another of it?

Still others oppose the death penalty on the ground that the motive of retribution being now absent from the punishment of crime, and the sacrifice of a bad man's liberty being sufficient for the protection of society, it is unnecessary, and an evil, to take away his life.

Two of the States of the American Union, and several European countries, have abolished the death penalty. By far the greater part of the civilized world, however, still adheres to the doctrine that one who murderously takes the life of another rightfully forfeits his own, for the general good.

SHE WANTED A LEGACY.

"I wish some one would die and leave me a legacy!"

It was a schoolgirl of thirteen who said these words, and she proceeded to take into consideration the most desirable amount of the benefaction.

"Not a million dollars," she remarked; "no, not a million; that would be too much bother. But enough for us all to have a good time, and take journeys, and subscribe to the Tuskegee School, and send all the teachers in town to the mountains for six weeks, and pay off poor widows' mortgages and do all those nice things that we are always wanting to do and can't."

She thought all this could be done for "about fifty thousand dollars or so."

But a disturbing thought crossed her mind.

"Not," she continued, eagerly, "that I wish any one to die for the sake of giving us a lot of money. I mean a very old person, who is going to die any way, or some one who has lost her mind and can never get well, and would just as soon die as not."

With this proviso, the young lady of thirteen was sure it would be "a perfectly splendid thing" to be put down in somebody's will for "money enough to do as we like as long as we live."

The doting circle who were favored with this burst of eloquence tried to laugh her out of the notion, and gave utterance to the customary moral reflections bearing on the subject. They spoke of the poor use that rich people often make of their money, and the many diseases that result from ease and luxury.

The little girl held her own, however, and brought low all her antagonists by putting to each the searching question, "Wouldn't you like a legacy yourself?"

All the company in turn had to confess that, in trying moments, they had indulged such a desire; and when some one told the old story, from Blackwood, of the pious Scotch lady who was overheard to pray for a legacy "of four hundred a year paid quarterly," the whole family laughed, and said it was human nature, and that everybody felt so sometimes, although, of course, it was very silly.

The thought of a sudden release from a routine of duty which has become monotonous, and often oppressive, is seductive enough, and it is not surprising that so many persons, young and old, give way to it.

Bearded men are no more exempt from this weakness than little girls. The American Statistical Association reports more than ten thousand business failures last year, of which four per cent. were due to fraud, ten per cent. to inexperience, eleven per cent. to neglect, nineteen per cent. to incapacity, and all the rest to a desire to make money too fast. So general is the propensity to try for wealth without paying the natural price for it!

CONNIE'S DAY.

A New York mother whose wealth, position and kind heart fill her life with social and charitable occupations, tells how a chance word opened her mind to the fact of pressing duties at home.

"One day last March my little daughter Constance, who is twelve years old, came into my room as I was hurriedly dressing to drive to a directors' meeting of one of the charities in which I am interested. It was just after her birthday, and she had a game, one of her presents, in her hand.

"'O mamma,' she cried, full of eagerness, 'this is the loveliest game; do try it with me!'

"Her request, in my haste and absorption, seemed trivial to me.

"'Nonsense, Connie, you know I cannot,' I replied rather sharply; 'this is board day at the hospital, and I am shockingly late now.'

"I was standing in front of the mirror, and saw in the glass how her face fell and the light died out of it at my words.

"'I wish,' she said, wistfully, 'you would sometimes have a day with me, mamma.'

"The child's speech went through me like a knife. I had never received so stinging a rebuke. Was it possible that in the pursuit of other duties I was neglecting the one that should be chief? My drive to the hospital that morning was full of serious introspection.

"Connie has had her day ever since. Saturdays my daughter and I spend together, and no other engagement can draw me away that day, for the child looks forward to it all the rest of the week."

GIVING A BREAKFAST.

Among the many practical methods devised by kindly Christian people to reach and help the poor and criminal classes, one of the most effective is the Sunday Breakfast in Philadelphia.

At nine o'clock every Sunday morning a room is opened in one of the most degraded quarters of the city, within easy reach of sailors, emigrants, and that unnumbered class who, from misfortune, crime, or drunkenness, are homeless and hungry.

The room is clean and warm, a pleasant refuge in stormy weather. The tables are set, and each man or woman who enters, no matter how filthy or degraded, is heartily welcomed. The breakfast consists of two substantial sandwiches and a cup of strong hot coffee.

After the meal is over there is music, and one or two hymns are sung, while the hosts,—men and

Digitized by Google

women of all sects,—go quietly about among their guests and try to find out the special misery in their lives, and to make them their friends.

Drunkards have been reached and saved by this homely charity. Many ruined and outcast women who stole in to get the hot drink to keep them from freezing, have been taken from the streets, given employment, and sent to the West, where, unknown, they could begin a new, honorable life.

This beautiful charity reaches a class which never comes under church influence, and deals with them as the Great Teacher did with the poor and sick who came to Him. He fed and healed their bodies before He tried to cure the sickness of their souls.

We must make our pity and love real to our poorer brother, whose degradation keeps him away from our churches, by the touch of our hand and the comfort of our food, before we venture to speak for Him Who is all pity and love.

PACIFIED.

French journalists have earned a reputation for being particularly ready duellists, but there have been occasional exceptions to the general rule. There have been French editors, who with a little good-nature and forbearance have turned aside a challenge.

The late Charles Monselet once sent a second away bewildered but pacified. Monselet was in the habit of writing for hours at a time at his favorite café. There he saw many of his friends.

His home address was known to few persons, as he wished the time which he gave to study and to his family at home to be undisturbed.

The director of a matrimonial bureau was offended by a pleasantry of Monselet's at his expense which appeared in a newspaper, and he requested a friend of his, a captain of dragoons, to wait upon Monselet with a challenge.

For a month the anxious officer sought for Monselet's residence, that he might leave the challenge there. At last, in despair, he decided to offer it in the café. He approached Monselet.

"I am captain of dragoons."

"Delighted to made your acquaintance," returned Monselet, with his accustomed gracious smile.

"This is M. Monselet, to whom I have the honor —"

"Certainly," cordially.

"I am charged by M. Z——"

"M. Z——? I do not know him."

"But it is he who arranges marriages, and it is for him —"

"Say no more," cried Monselet, cheerfully, "it is useless. I am already married, and do not care to communicate with your principal. I will not listen to any of his propositions," and with a smile he turned away to his work.

The captain was completely nonplussed. He went away well pleased that the duel was averted, his heart quite won by the journalist's geniality.

RUSSIAN JEWS.

Baron Hirsch, the millionaire banker, has a fine "philanthropic" scheme for taking care of the Russian Jews whom the rigor of the restrictive laws of the Czar's government has thrown into poverty, distress and exile.

He proposes to colonize them in the United States.

His philanthropy resembles Artemus Ward's famous declaration of patriotism during the Civil War, when he expressed his willingness to sacrifice all his wife's relations in order to save the Union.

Baron Hirsch is quite willing to help these Jews to remove to a distant part of the South, where another community may be forced to incur a moral obligation to prevent them from starving.

There is no objection whatever to them because they are Jews. Hundreds of thousands of the race have their home in America, and they make as good citizens and cause as little trouble as an equal number of any other race in the world.

The reason why it is proposed to colonize them here is a sufficient reason why Americans should oppose, and if possible prevent, their coming. It is because they are paupers.

If they come they will come without the means of subsistence, without a knowledge of our language or our ways, and without the least power of assimilating themselves with the great American nation.

The very fact that this scheme can be proposed and carried out, and that there is no law to put a stop to it, is the strongest of arguments in favor of new regulations to restrict immigration. Other governments turn the cold shoulder to the paupers whom their countries wish to cast out. Why should America offer to discharge the duty which the Russian government shirks?

LESSON IN COURTESY.

The American artist, Waldo, was once very much amused at hearing, in the New York National Academy of Design, the sharp criticisms of a group of girlish art-students from the School of Design. Waldo sent an invitation for the students to come to his house to see his pictures and studio. There he entertained them with an account of his studies at the Royal Academy in London.

The president of the Royal Academy at that time, he told them, was Sir Benjamin West, who took a deep interest in the American students in London, partly because he was born an American citizen, and partly because he knew that talented children in this country did not have the same advantages as European children in the development of their artistic talent.

One day the small American colony of students treated the president to their opinion of the pictures in the Royal Academy Exhibition. Sir Benjamin West simply listened, and at the end invited Waldo to dinner the next week.

After dinner the president called Waldo's attention to some small wood-carvings. Patiently Sir Benjamin West pointed out the graceful lines of the carving, and persistently called his guest's attention to some attempt at giving the characteristics of nature.

"The first lesson for a man of taste," said Sir Benjamin, "is to learn what to admire. Any savage can find fault. And never forget, it is the peculiar province of the artist to see, to point out, and to perpetuate beauty."

"After that," said Mr. Waldo, in concluding the story, "I was very careful in a picture gallery. If I liked a painting I said so; if I did not admire a picture I went to the next."

The girlish students glanced at each other. They understood why Mr. Waldo had narrated the incident. Some, at least, of that group have not forgotten that flippant fault-finding is not art criticism.

NEW SECT.

There are so many religious sects nowadays that it is difficult for one to remember the names of all of them. The confusion which overtook the mind of Farmer Giddings on this point one summer is not surprising. He had lived in one small village all his life. He had known some people who were "Congregationals" and some who were Baptists, but farther than that his knowledge of denominational differences did not extend; for there were no churches of any other religious bodies within fifteen miles of his home.

One summer a traveller through the mountains "discovered" the little village of Crowsbury, and the next summer the old inn was well filled with "city folks" during July and August. Farmer Giddings, who had a fine "hay rigging," often took parties off on excursions to some picnicking spot, where he would deposit them in the morning and go for them again in the late afternoon.

On these occasions he kept his ears open, and listened to the discussions and arguments going on behind him, although the most of what he heard was quite beyond his comprehension. He used to talk things over with his wife at supper-time, and they hazarded conjectures as to what certain words and terms might mean.

"Wa-al, Sary," said the farmer, at the end of one hot August day, "I declare I never heard the beat of 'em, the way they've gone on this arternoon; argyfyin' an' explainin' the hull lot on 'em, 'baout their *b'liefs!*

"I'd give a good deal ef I c'd rec'lect half they said, ter tell ye; but I gethered thet most on 'em hed got past believin' anythin', though they all hed diff'rent reasons fer it, an' diff'rent names they called 'emselves by.

"There was one feller said he was a daownright Augustick, an' another thet 'llaowed he was a Bessymixed, an' there was a sight of other names beside.

"But I kin tell ye, Sary, that pooty little Mis' Nuttin' *she* spoke up, an' giv' 'em some real gospel. She b'lieves 'baout es we do, an' 'twas pleasant ter hear her, but she said, when they questioned her sharp, thet she was a member of a Norway-borgin' church, an' I sh'd admire ter know how she ever come ter travel so fur from home!"

FOR HIS SOUL'S SAKE.

Of J. R. Herbert, the eccentric artist, many amusing stories are told. He insisted that his models should *feel* the emotions which animated the characters they were to represent, and once, in explaining this necessity to a somewhat stolid model, became himself affected to tears at the mere thought of what the other ought to feel. He had, moreover, a sense of humor, and a calm way of displaying it.

One day he was with Landseer at the Athenæum, after an Academy meeting, and the latter called for refreshments.

"Some of zat also to me," said Herbert to the waiter, in the broken English he affected. When it was brought he continued, "Ah, I shall have no money. Pay for me, Landseer."

His friend paid, and they went out together. Herbert then stopped to listen to a beggar in the street.

"Ah, stay a bit," said he, "I want to do a leetle charity, and you, my dear friend, must lend me a shilling."

Soon after they came upon another beggar, and a similar bit of charity was indulged in, Landseer furnishing the money.

When Herbert rejoined him, it was to say with the utmost coolness:

"Let me see, borrowed at the club one shilling; charity, two shillings. Ah, I do owe you three shillings. Yet, now I zink of it, you shall do ze charity. It will be good for your soul. I shall pay you ze one shilling!"

ARCTIC COLD.

While we are sweltering under the heats of August, it may not be unpleasant to read a traveller's account of his experience under Lapland cold. Our physical sensations are relative, he says, and the mere enumeration of so many degrees of heat or cold gives no idea of their effect upon the system.

I should have frozen at home in a temperature which I found very comfortable in Lapland, with my solid diet of meat and butter, and my garments of reindeer. The following is a correct scale of the physical effects of cold, calculated for the latitude of sixty-five to seventy degrees north:

Fifteen degrees above zero—Unpleasantly warm.

Zero—Mild and agreeable.

Ten degrees below zero—Pleasantly fresh and bracing.

Twenty degrees below zero—Sharp, but not severely cold. Keep your fingers and toes in motion, and rub your nose occasionally.

Thirty degrees below zero—Very cold. Take particular care of your nose and extremities; eat the fattest food, and plenty of it.

Forty degrees below zero—Intensely cold. Keep awake at all hazards, muffle up to the eyes, and test your circulation frequently, that it may not stop somewhere before you know it.

Fifty degrees below zero—A struggle for life.

WONDERFUL CONTRAST.

Brevity may be the "soul of wit," but the laughable effect is sometimes the very thing the speaker doesn't mean. In the following case a word or two more would have made a clearer description, but it would not have been half so funny.

The head-master of the girls' high school is describing to the class the beauty of the Alps, which he has visited during his vacation, and ends his lecture in these words:

"And there, with one foot I stood on the ice of the glacier, while with the other I was plucking the most beautiful flowers!"

America again takes the lead. "We could hardly believe our good luck when we ventured to ask for Burnett's Extract of Vanilla in Paris, to have it handed us; it was like meeting an old friend." [*Adv.*

That Bicycle Offer Renewed.

June 11th we offered a $35.00 Boy's and Girl's Safety Bicycle to any of our old subscribers who would send us 20 new subscriptions by August 20th.

August 20th is now past. A great many have worked for the machines. A large number succeeded, have received their wheels, and are now riding them.

A good many others **almost succeeded,** yet they were unable to get quite the 20 new names by August 20th.

Now we know just how they feel after having worked so hard, and yet have not quite succeeded. We have had some letters from these asking us to extend the offer.

Therefore, we have decided to give these friends another opportunity. We hereby extend the time to October 15th.

It gives a chance to those who have served The Companion so well to get just the Reward which they wanted most of all. It also gives an opportunity to those who have got only two or three subscribers to get the wheel if they will start in again.

Now for another effort. September will be an easier month in which to get subscribers than July. Send for the Special Helps.

THE YOUTH'S COMPANION, Boston, Mass.

ALLCOCK'S POROUS PLASTERS

ALLCOCK'S POROUS PLASTERS have attained a world-wide reputation solely upon their superlative merits. They have many would-be rivals, but have never been equalled or even approached in curative properties and rapidity and safety of action. Their value has been attested by the highest medical authorities, as well as by unimpeachable testimonials from those who have used them, and they are recommended as the best external remedy for Weak Back, Rheumatism, Sciatica, Colds, Coughs, Sore Throat, Chest and Stomach Affections, Kidney Difficulties, Weak Muscles, Strains, Stitches, and Aches and Pains of every description.

Beware of imitations, and do not be deceived by misrepresentation. Ask for ALLCOCK'S, and let no solicitation or explanation induce you to accept a substitute.

HOW TO CHOOSE A COLLEGE.

By Andrew D. White,

Formerly President of Cornell University.

Second Paper.

The third item of my advice is, Look at the students; — What are they? Whence do they come?

There is no more wholesome, stimulating environment for a thoughtful young man than a large body of students interested in various branches of knowledge, and coming from the good homes of the country. There is no safer environment.

I am aware that a great many anxious fathers and mothers think our large colleges very dangerous places for young men; but such places are not dangerous if they are well chosen. While I differ from my dear and respected Instructor, President Porter, on some points, I agree with him fully that there is no safer place for the young man than a good large University.

Of course there is a great difference in this respect between various institutions for advanced instruction. Colleges which are so dependent upon students' instruction fees that they cannot afford to maintain discipline are dangerous. I regard as the epoch in my own life when I was in the most danger, the year spent in such a feeble college; but the three years afterward spent in a large, strong institution, which could and did maintain thorough discipline, were years of safety.

There were in my class at this larger institution one hundred and seven men; not one of them, so far as I can learn, has turned out badly. Now take one hundred and seven men in any other sort of life; take one hundred and seven clerks on any street, in any city, and see whether they make a record approaching this.

From such a body of students a thinking young man gets his best inspiration; even if some of them are inclined to be a little careless or even wild, they almost universally come out well in the long run. There is a spirit in such bodies of men which prevents a young man from disgracing his class; the moral atmosphere is wholesome and bracing.

I know that much has been said recently about our system of advanced education in the United States not furnishing business men to the country. Now the fact is, that our greater colleges and universities do supply far more than their proportion. A recent investigation shows that college graduates form only about one-half of one per cent. of the population, while they hold nearly sixty per cent. of the important and influential positions.

This percentage of leading men is undoubtedly to be greatly increased, now that there is so much more instruction in applied science and in branches that bear directly, not merely on what are known as "the learned professions," but on a multitude of other callings.

As to preparing men for mercantile and industrial pursuits, I can say that my own college class, as well as others in other institutions, has furnished its full share. I am also thankful to say that if among my classmates I cannot count any of the colossal millionaires of the country, I can at least rejoice that there is not one who has disgraced himself and his country in accumulating a vast fortune by questionable means.

I referred above to young men coming from "good homes." I do not by this mean the homes of rich men, and, least of all, rich city men. These may be good, but they are sometimes among the worst.

I confess to a dislike for the encroachments in our great colleges and universities by the sons of New York and Boston and Chicago and San Francisco millionaires, to say nothing of those from other cities.

Many of them doubtless are fine fellows, but I see in some of our institutions, into which our great cities pour their students, signs of a general influence which I do not at all like; an extravagant use of money, shown in college rooms befitting an actress or a bar-keeper; in dress befitting jockeys or bruisers; in suppers of terrapin and champagne; in vealy affectations of club life, and of familiarity with minor theatrical and operatic personages; in the physical dissipation of the cigarette, and in the æsthetic dissipation of the banjo.

Let me say here that I never knew a young student smoke cigarettes who did not disappoint expectations, or, to use our expressive vernacular, "kinder peter out." I have watched this class of men for thirty years, and cannot now recall an exception to this rule. Cigarette-smoking seems not only to weaken a young man's body, but to undermine his will and to weaken his ambition.

In colleges or universities having a large percentage of these futile personages, they too often give the student tone; they sound the key-note; they set the fashion — the fashion of over-expenditure, of carelessness as to the real aim and glory of college life.

A very eminent gentleman recently told me that he would not send his second son to the college from which both he and his eldest son had graduated, because he had learned from this eldest son that in his "set" study was voted "rather bad form," and striving for scholarships, prizes, and the like, "not the correct thing."

"The correct thing" was apparently to lounge about the rooms of the various members of the "set," to talk feebly about the aforesaid minor personages of the theatre and opera, offer bets upon boating and base-ball, and in fact do everything except that which really goes to the making of a *man*.

By "good homes" I mean the homes of the substantial, thinking, self-respecting people of the land—the people, as a rule, whose blessing it is to have received neither poverty nor riches. The sons and daughters of such know the value of time and money, and give the most wholesome atmosphere possible in any college or university.

Fourth: The next question which I would suggest is, "What provision is made for physical training?"

This question should be not merely, "Is there a gymnasium?" but also, "How is the gymnasium used? Is there a proper system with a suitable director and assistants in charge?" Nothing is so sad in the history of American education as the waste of educated men for want of proper physical care. Our colleges have too often been breeding-places for dyspeptics.

But valuable as a gymnasium is, an ill-regulated gymnasium is perhaps worse than none.

The system now observed in most of our best institutions of having a suitable director in charge of the whole matter of physical culture, preferably a man trained as a physician, and thoroughly interested in his department, is one of the best things we have recently achieved.

Under such a system every young man entering the institution is carefully and confidentially examined by the director, a general course of exercises is suggested, and if there is any symptom of disease of the heart or lungs, or any inherited tendency in that direction, the youth is kept out of the boats, heavy ball-playing, and other of the more severe forms of exercise. Various courses of simple gymnastic training are provided, and these are carried out under the director and competent assistants.

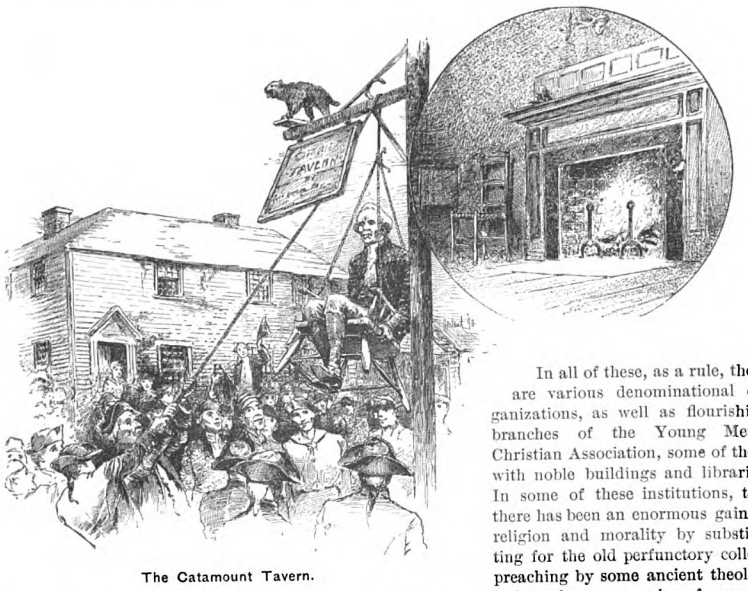
Such provision, too, is very necessary with reference to the prevailing student sports. I am a great admirer of college boating; in fact, I think that boating in college saved my life. But it has now been carried to a point where, valuable as it is, there is need of supervision and restriction.

So, too, with other games: I confess that, other things being equal, if I were sending to college a son who cared anything for games in the open air, I should be inclined to ask of the authorities the question, "Do you permit what is known as the Rugby game of foot-ball?" If the answer were in the affirmative, I would endeavor to find some equally good institution where the Rugby game is not allowed, and where the Harrow game is substituted for it.

I believe that the time is near when the authorities of the leading universities will absolutely decline to retain longer any student who takes part in the Rugby game.

The sight of a confused mass of educated young men making battering-rams of their bodies, plunging their heads into each other's stomachs, piling upon each other, rolling each other in the mud, and occasionally breaking each other's ribs, or maiming each other for life,—sometimes indeed, as recently in several English games, killing each other,—in the presence of a great mass of screaming, betting bystanders, many among them utterly disreputable, is to me a brutal monstrosity.

The Rugby game is not a foot-ball game at all. The ball is the merest pretence; there is no argument in its favor which cannot be made for prize-fighting.



The Harrow game of foot-ball is, as I understand it, what it pretends to be—foot-ball, not brutal horse-play.

I say this not at all as one prejudiced against games, or as advocating milksop games. Boating, base-ball, the Harrow game of foot-ball, lacrosse, tennis, and especially sparring and boxing, I like exceedingly; all these train the mind, the eye, and the hand, while they strengthen the muscles.

Boxing I like because it tends to morality. There is something as manly in a youth's training to defend himself with the weapons nature has given him as there is mean in his substituting for these the concealed knife or pistol.

I would choose, then, a college, other things being equal, where there is full opportunity for physical exercise of various sorts, and all under proper direction and restriction.

But it will be objected that I have said nothing about looking into the religious character of a college or university. I have delayed this purposely. The simple fact is, that never in our greater institutions were the religious interests of students better provided for than at present; and nowhere is this more truly the case than in the larger institutions which, on account of their charters and connection with the State, cannot favor any one religious sect.

The Catamount Tavern.

In all of these, as a rule, there are various denominational organizations, as well as flourishing branches of the Young Men's Christian Association, some of them with noble buildings and libraries. In some of these institutions, too, there has been an enormous gain to religion and morality by substituting for the old perfunctory college preaching by some ancient theological professor, a series of sermons by the most distinguished and thoughtful divines of various religious bodies, fresh from actual contact with the great problems of active life.

Experience has shown me that the rule is this: Whenever any institution of learning attempts to fall back upon its religious or sectarian claims, it is usually to cover a poverty in resources for its proper work.

The healthiest places I know religiously and morally, are our larger institutions of learning. In these the great majority of professors and students are always religious men, and I know of no such institution in which there is not a distinctly religious atmosphere, in the higher sense of that word.

As to the religious claims sometimes insisted upon by sectarian colleges, I think that, from their own point of view, they frequently injure their own interests.

I may cite a case from my own experience. Several years since one of the most eminent judges of the United States consulted me as to the best college for his son. I suggested to him one of the greater colleges of the country.

"But," said he, "that is not a religious college."

"No," I said, "not nominally, but in it your son will find as many incentives to religious conduct as elsewhere."

The judge did not at first take my advice, but sent his son to a little college carried on by the religious body to which he belonged.

Two or three years afterward, meeting the judge, I inquired, "How is your son getting along?" He answered, "Very well at present, but he is no longer at the little church college where I placed him; I have taken your advice and sent him to the university you named."

That the judge was right seems to be proven by the fact that his son has now become one of the most devoted members of the church to which the father belonged.

It may be thought that I would sacrifice the smaller institutions to the larger. Not so; I would have each do its proper work, and all move harmoniously together as parts of one great educational system. Then the smaller colleges would be as precious as the larger, indeed even more precious, for the greatest want of this country to-day is thoroughly good intermediate education,—between the common schools and the universities.

I would have the smaller colleges, to the number of about three hundred, which are most of them pretending to do university work that they have not the means to do, become intermediate colleges, taking students a year or two earlier than they take them now, and carrying them up, say to the beginning of the junior year.

At this point I would have the dozen or twenty large and thoroughly endowed universities of the country take the students for their advanced general and professional instruction.

We would thus have, first, as the roots of our educational system, the great common school system of the country; secondly, as its trunk, the high school and intermediate colleges; and thirdly, as its upper part, giving its full bloom and fruitage, a thorough university system.

When this shall be brought about, our country will have the most admirable means of education the world has yet seen, and it will be far easier to answer the question, "How to choose a college."

For the Companion.

THE CATAMOUNT TAVERN.

In the year 1871, one of the most notable buildings connected with the early history of Vermont, standing in the centre village of Bennington, was burned. Only two large chimneys were spared, as memorials of the quaint-looking old structure—silent witnesses of stirring scenes which had occurred within its walls in years long past.

It was the famous Catamount Tavern House, a wooden edifice erected more than a hundred years before its day of doom, by Captain Stephen Fay, one of the most enterprising and public-spirited of the early settlers in the New Hampshire Grants, as Vermont was called before the Revolution.

This edifice was built for a house of entertainment for travellers, and for the immigrants who were flocking into that region from New England.

It was about forty-four by thirty-four feet square, two stories in height, with a large room for the use of the people in public gatherings, law courts, dancing assemblies, and meetings of committees for consultation, public and private.

Such meetings were frequent there during the later period of the famous quarrel of twenty-six years' duration between the authorities of New York and the settlers on the New Hampshire Grants.

The controversy arose in this wise: By virtue of the charter granted to the Duke of York in 1664, the authorities of the province of New York claimed territorial jurisdiction eastward to the Connecticut River. Families from New Hampshire settled in the region between that river and Lake Champlain. In 1752, the governor of New Hampshire began to issue grants to these and other settlers who came afterwards. The New Yorkers perceived that the domain was filling with a sturdy, enterprising population, and asserted the legal right of that province to the territory.

A mild controversy was begun. New York had relinquished its claim to territory so far eastward as the Connecticut River, as to Massachusetts and Connecticut, and New Hampshire urged its claim to have a western extent equal to that of the other two provinces. Grants continued to be issued to settlers who flocked in.

The controversy grew warmer and warmer, and in 1764 the government of New York procured a royal decree giving it territorial jurisdiction to the Connecticut River.

The issue of land-grants by New Hampshire now ceased, and the settlers acquiesced; but when the authorities of New York proclaimed that the land-titles of the immigrants on the Grants were void, and proceeded to dispossess the dwellers and dispose of their homes to speculators, instant and stubborn resistance was manifested.

Sheriffs and their assistants who came to seize and sell the property of the settlers, which had been paid for and improved, met resolute armed defenders of their rights and were driven off.

Committees of Safety assumed judicial powers and tried and punished intruders from without and offenders within. For several years the Grants bore the aspects of Civil War, excepting that of actual carnage.

It was while this quarrel was hotly raging that Captain Fay built his tavern. He was a zealous supporter of the oppressed settlers. In front of his house he erected a tall sign-post; and twenty-five feet from the ground he hung upon it a large cantilever sign, which was surmounted by the stuffed skin of a Catamount or wild-cat. Its fierce visage, showing its teeth, was turned toward New York, at which it grinned perpetual defiance. This gave the name to the tavern.

The large room in which meetings were held had, at one end, a deep and high fireplace, surrounded by clouded marble slabs and a heavy oak frame. Above it was a panelled mantle-piece with a broad shelf, over which were the antlers of a buck.

The room was furnished with a small, leaved table, a sideboard with decanters, a mural candelabra and a few rush-bottomed chairs. At an early period the words Council-Room had been cut in the slab over the fireplace. The carver of the words left out the "n" in Council.

Ethan Allen, the stalwart champion of right and justice, with a big heart and honest purpose had come from Connecticut a few years before this tavern was built, and cast his lot among the

Digitized by Google

settlers in the Grants. He espoused their cause, and soon became their trusted leader in sharp contests with the hated "Yorkers." He trained a band of young settlers and called them "Green Mountain Boys." They became conspicuous in our national history.

When the Catamount Tavern was built, Allen made it his home and the headquarters of his administration as a virtual dictator during stirring political periods. Out of the Council-Room went orders for the assembling of his forces, civil and military. Before him as chairman of a Committee of Safety offenders were brought, tried, condemned and received sentences from his lips, sometimes of banishment from the territory, sometimes of imprisonment, and frequently scourging with the "twigs of the wilderness." One of his quaint judicial utterances ran as follows:

"You, Joe Tairiter, being a sneak, helped the mean 'Yorkers,' with all your mustard-seed ability, rob your neighbors of their property. Therefore you are sentenced to strip yourself to the skin and have the beech-seal stamped on your bare back with the twigs of the wilderness applied thirty times; and this shall be your receipt that you have paid the penalty of your crime."

When Tryon was royal governor of New York in 1777, he offered a reward of twenty pounds each for the arrest of Ethan Allen, Remember Baker, and Robert Cochran, because of their "riotous conduct in opposing the measures of the New York government."

These three "outlaws" and their friends had a jolly time of it at the Catamount Tavern over the matter, and out from the Council-Room went a counter proclamation, offering fifteen pounds for the arrest of James Duane, and ten pounds for John Kemp, New York land speculators, styling them "the common disturbers of the public peace." The rewards were to be paid on the delivery of the culprits, at "Landlord Fay's, at Bennington." It was signed by Ethan Allen, Remember Baker and Robert Cochran.

The breaking out of the old war for independence suspended the intercolonial quarrel. Allen was appointed colonel of local forces. He was sojourning at the Catamount Tavern in the spring of 1775, when all New England was aroused by the tocsin sounded at Lexington. He had espoused the cause of the patriots, and his loyal Green Mountain Boys had increased in numbers to a large multitude.

From the Council-Room of the Catamount, after a consultation with a committee, Allen issued an order on May Third, mustering the Green Mountain Boys at Bennington to make an attempt to capture the British forts Ticonderoga and Crown Point, on Lake Champlain. Allen led them on that expedition which resulted in the surrender of the former stronghold to the Americans, on his demand in the name of the "Great Jehovah and the Continental Congress."

There Stark and Warner, with the aid of the Committee, planned the attack on the British intrenchments near Bennington and won the brilliant victory there which sealed the fate of Burgoyne and his army. In that battle Landlord Fay had five sons, one of whom was killed. On hearing the news the patriot exclaimed:

"Thank God I had a son who was willing to die for his country!"

In the Council-Room of the Catamount, Daniel Redding was tried as a traitor and spy, and was condemned and sentenced to death, in 1778. A gallows was erected in a field in front of the Tavern, and around it a great crowd was gathered to see him hanged.

On the morning fixed for his execution, the Governor and Council granted him a reprieve for one week, it having been discovered that he had been tried by only six jurors while the law required twelve. The multitude were clamorous for the execution then and seemed disposed to be riotous, when Ethan Allen, who had just returned from his long captivity, mounted a stump and exclaimed in a loud voice: "Attention the whole!"

He then informed the people of the cause of the reprieve, advised them to go home and return a week from that day, and declared that they should see *somebody* hanged then. "For," he said, "if Redding is not, I will be hanged myself!"

In that Council-Room, Courts of the Vicinage were sometimes held. On one occasion an amusing scene occurred there which illustrated, in an admirable manner, the character of Ethan Allen. He owed a citizen of Boston a moderate sum of money for which he had given a promissory note. It was sent to a lawyer at Bennington for collection. Allen did not find it convenient to pay just then, and it was put in suit. Allen employed a lawyer to attend the court sitting in the Council-Room of the Catamount Tavern, and have the payment of the note postponed until he could raise the money.

When the case was called, the lawyer, as the readiest way to obtain the postponement, denied the genuineness of the signature to the note. Allen happened to be at the further end of the room, and heard with astonishment and indignation this denial of his signature; and, pressing through the crowd and confronting the astonished attorney, he angrily exclaimed with a loud voice:

"Mr.——, I did not hire you to come here and lie. That's a true note. I'll swear that I signed it. I will pay it. I want no shuffling, I want time. What I employed you for was to get this business postponed to the next court, not to come here and lie and juggle about it."

The postponement was amicably arranged between the lawyers. BENSON J. LOSSING.

MY CHUM AND I.

At a recent meeting of a party of the alumni of Bowdoin, the conversation turned upon "Tree Day" at college. One of the gentlemen present remarked impulsively that there was a trip which he would like especially to make.

"I would like," he said, "to go down to Bowdoin next Arbor Day, and plant a tree near old Professor Packard's grave. What a noble-hearted old gentleman! He was the soul of honor and integrity, yet he never forgot that a boy is a boy. He was my friend at a hard pinch, once, and he had to strain a point of college discipline to befriend me."

"How was that, Kellogg?" several voices called out. "Tell us about it."

"Well, the dear old gentleman is gone. The trustees cannot censure him now, if I do tell it.

"Owing to a circumstance which occurred on the roof of Winthrop Hall, one night about the First of April, and the stern view taken of it by the College Faculty, it happened that my room-mate, King,—and he was a royal good fellow at heart, despite his indiscretions,—was not only severely reprimanded, but rusticated. He was ordered not to show himself in Brunswick again during that year. He was even forbidden to come up for examination till the beginning of the next year, in September.

"This was a far greater hardship than appears on the face of it, for, as you know, not to be examined at Commencement in June, with the rest of the class, and thus have to carry the whole year's studies in one's head, through hot weather and the summer vacation, means simply misery for twelve long weeks.

"My chum felt this very keenly; and I never pitied a person more sincerely; for, strangely enough, I had been included in the edict of banishment with him.

"We packed our trunks, locked our room and left in no little haste; for the Faculty had allowed us less than twenty-four hours in which to get out of town.

"As my room-mate lived not more than fifteen miles from Brunswick, he journeyed homeward and broke the news as gently as possible to his family. My own home being in a distant State, I accompanied him, having first written a careful letter to my mother, who was an exceedingly kind-hearted woman. If it had not been for this letter and my mother's timely intercession, I am afraid it would have gone hard with me when my father heard of my rustication. He was the judge of a criminal court, and sometimes sat on my cases judicially rather than paternally.

"Neither of us was a brilliant scholar; we had been in arrears when calamity overtook us, and now we were only too certain that nothing less than very hard study would save us from the disgrace of failing at examinations and being either heavily conditioned, or set back a year.

"So, with an ever-deepening apprehension haunting our minds, we sat indoors and 'ground' away at Greek and Trigonometry, without instruction, through the spring and early summer days. Neither of us had ever attempted to study without an instructor before; and as the days became warmer we chafed like caged animals.

"Several of our classmates had offered to coach us, if we would venture into town; and although this was not safe—since if caught defying the decree of exile, we might be expelled altogether—we saw no other way of overcoming our difficulties.

"At length we hit on a scheme. A good supply of pocket-money was not one of the things lacking with us, and on one of our numerous trips to Portland, about sixteen miles from my classmate's home, we bought a hand-organ at the shop of a dealer in second-hand musical instruments on Congress Street, and also a tambourine. I could play the violin a little; but we decided on the tambourine, as more easily within the range of my talent.

"King was no musician, but he thought himself equal to the task of turning the crank of the hand-organ, which, by the way, had a *repertoire* of popular American airs. Our plan was to personate a wandering Italian organ-grinder and his *signora*.

"King, who was short and rather dark, had only to put on a very large false mustache, an old velveteen coat and loose trousers and a slouch hat to pass muster as an Italian; but my complexion was of the sandy order, and dye-stuff was required to give me an olive tint.

"However, by wearing a red handkerchief to conceal my hair for the most part, and donning a limp old gown with plenty of green and red cotton bows, I blossomed out as a *contadina* who could spin her tambourine and execute an occasional pirouette.

"We employed a trustworthy person to drive us to the outskirts of the town; and there, under cover of the pine brush, we put on our disguises.

"King then slung the hand-organ on his back; it was more work than he had ever done before. Doubling down in the usual posture of an organ-grinder, he headed for the college Campus. I followed meekly with my tambourine. By way of preliminary practice, we halted in front of Professor Packard's house, and ground out 'The Sweet By and By;' then, entering the Campus by the little wicket, so often swung by the venerable professor, we lumbered up to the Chapel and opened on the college at large with 'Peek-a-boo.'

"We had previously agreed to 'spik no Ingleece;' and, if actually detected, we intended to drop the organ and make for the woods.

"The first man to pass was 'Prof. Stevy,' the Professor of Modern Languages. He scarcely vouchsafed us a glance.

"Presently Professor Brackett passed, in haste as usual. He regarded us with an amused expression, but declined to contribute anything, although I sidled up toward him with extended tambourine.

"Then a group of Seniors came along from Appleton Hall and chaffed us; but one of them gave a nickel.

"There were two or three of our classmen whom we were endeavoring to get sight of; but it was not till we had ground out our whole *repertoire* of tunes, both at the Chapel and at each end of Maine Hall, that one of the boys, whom I will call Bob, made his appearance.

"He listened to 'Peek-a-boo,' contributed a nickel into the tambourine, and was going on, when I said in a low tone, 'Bob, don't you know me?'

"He stopped short and regarded us with a most amusing look of perplexity! Then he suddenly recognized King, and made pretence of fainting dead away.

"'Grind away around town till night,' he whispered, passing close beside King. 'Then come to my room. And I say, fellows, you had better be shy! They will expel you, sure, if they find you out.'

"We took supper at the railroad station, and, having bought a bagful of confectionery, oranges, lemons and other material for 'treats,' we hid our organ after dark in the border of little trees round the Campus, near the old church, and watching our chance, stole into Maine Hall and upstairs to Bob's room.

"Bob had made our presence known to his chum and three others of our classmates. They locked the door, pulled down the curtains, and we had a grand time till midnight.

"King then crept out and got our hand-organ, for we were afraid some one might find it; and Bob and his chum made up for us a bed out of chairs and an old settee in the wood-closet.

"The 'end woman' was bribed to secrecy, next morning; and we lived and studied there for five days. Bob and the others coached us. The room was kept locked and no one except 'trusties' was let in. The password for the 'trusties' was 'Peek-a-boo,' after three taps at the door.

"One afternoon Bob saw the tutor spying around our hall, and did not dare harbor us any longer. We wished very much to remain, and the boys wished us to do so; but they did not know what to do with us.

"After a perplexing consultation, they resolved to put us in a recitation room, upstairs, in Adams Hall,—or 'Medical Hall,' as the students more commonly spoke of it.

"The Medical School term had closed. There were now no lectures in this room; and there was a window that could be raised from the outside, on the east end of the building. Bob and his room-mate smuggled us in there, with our organ, at midnight; and we lived there two days, coming forth only at night.

"Two of the Juniors, as we afterwards learned, found out that we were there and frightened us out of the room by assuming the voices of members of the Faculty and pretending that they had a constable to take us into custody. We made our escape through a window, and at two o'clock in the morning started for King's home.

"This adventure gave us so rude a shock that we remained at home for some time, till Bob wrote us all about it. He also recaptured the organ and stored it in his room. We returned then with the intention of waylaying the two Juniors who had played the trick upon us, but Bob dissuaded us; for there was danger that they might lodge information against us.

"The next week was Commencement week. It is the great event of the year at Brunswick, and the town and the college are thronged with visitors.

"We took advantage of the diversion to re-occupy our own room secretly. Every day we sallied out in disguise, with our organ, and enjoyed the Commencement as much as anybody.

"The visitors proved to be generous people. We earned seventeen dollars, and saw the whole programme. It was great sport for Bob and those who knew us; they laughed until they made us very uncomfortable, to see us standing about the old church and the chapel, grinding 'Peek-a-boo.'

"Indeed, we were a conspicuous feature of that Commencement. We grew terribly sick of our own music, however; even at this time I cannot bear the sound of a hand-organ.

"After Commencement almost every one went home. The College Halls and Campus were almost deserted, but our previous success had emboldened us so much that we ventured to stay at our room. Bob agreed to remain a week and give us help with our studies. We kept indoors during the day, but went and came as we pleased in the evening. Our apartment was on the ground floor of the south end of Appleton Hall; and although the hall was closed, we entered by our window without difficulty.

"Three or four other undergraduates remained for a while at the college, and we still enjoyed ourselves much, although we studied hard every day.

"The Fourth of July, which came that week, we celebrated by joining a parade of 'horribles,' got up by the town boys. Bob hired an open carriage which he drove, in the character of an enormous crow; while King and I, masked, stuffed out and attired to represent clowns, rode behind, blowing horns and making speeches.

"We finished the day, or rather we attempted to finish it, with a 'spread' in our room. Bob and three others were with us; and we were in the midst of our supper, when there came a rap at the door.

"This was ominous on the face of it; for the hall doors were locked. We had all come in at the window.

"We sat as still as mice and listened. The rap was repeated—and again repeated.

"At last Bob crept along to the door and said, 'Who's there?' in a low tone.

"'One who wishes to speak with the occupants of this room,' replied a voice that we instantly recognized.

"'Good gracious, boys! It's Professor Packard!' whispered Bob. 'We're gone up!'

"King instantly blew out the light; and he and I, by a common impulse, threw up the window, intending to jump out and run.

"To our horror, a man stood beneath, with what looked like a club.

"'No yer don't!' was his greeting to us. It was John, the janitor.

"We were trapped. We might have known that the careful old professor, according to his wont, would have been looking about the college on a holiday night, to see that all was well.

"With a sigh like that of a lost soul, Bob unbolted the door. I considered our doom as good as sealed. We then regarded Professor Packard as a mild but firm disciplinarian.

"One of the other boys re-lighted the lamp. Bob opened the door; and there stood the venerable professor, gazing at us through his spectacles, with judicial curiosity. All the alumni of the college remember with what strict courtesy he always spoke.

"'I greatly regret that I seem to intrude upon you at such an hour. My interest in the welfare of the college alone leads me to do so,' were his first words.

"'Why, Mr. King! Why, Mr. Kellogg! It surprises me greatly to see you here. I fear that I must say that it distresses me,' he continued.

"It distressed us, even more. Ah, how mean we felt! I was thinking what I could possibly say for myself, when King burst out in an impetuous confession of everything. It was his way. He even told much more than was necessary.

"Meantime Bob got a chair for the old gentleman, and shut the door. Bob, too, had a confession to make, for inhabiting the hall, in vacation, without permission. In fact, we confessed a great deal during the next half-hour.

"King and I had been painfully conscious of wrong-doing for some time. We owned up to everything; my chum, in fact, was so moved that he almost shed tears. It was a despairing confession, for the most part; for we had little hope of leniency. Our offences were black, even in our own eyes.

"'I cannot respect a student who has promised allegiance to the college, and then habitually violates its needful laws!' the old professor remarked. 'I regard that student as lacking in moral character.'

"We were, at least, honest in our contrition; and our youthful distress moved his heart. He rose in agitation.

"'If I might presume to counsel you,' he continued, 'I would earnestly entreat you to abstain from further infraction of the college decree.'

"We most sincerely promised to follow his advice in this particular. His manner had moved us greatly; it was the manner of a man with a delicate sense of honor, who abhorred wrong-doing, but whose heart was touched by our trouble.

"He bade us good-night and withdrew as kindly and courteously as if we had won class honors, instead of being caught in a dishonorable trick. I think this affected us most of all.

"He had said little, and had uttered no reproach, in fact, he had scarcely alluded to our trespasses. Yet he left us all quite resolved to 'sin no more.' It was purely the influence of his high character as a man,—that delicate, renovating power which proceeds from a person who is himself true and right at heart.

"We passed, in examinations, at the opening of the year, and got our 'Junior tickets.' None of the Faculty appeared to know of our offences; and as time passed, we began to feel certain that Professor Packard had not reported us.

"He never so much as indicated to us, by a look, that he had done us a favor, and we were obliged to keep our gratitude bottled up in our own hearts. But as King used to say, 'We should have been glad and proud to black his boots for him.'" E. C. K.

A SEA LYRIC.

They went to save the salmon nets
Out of the hungry sea,
'Twas just outside of the Harbor bar,
As near as near could be;
It was just behind the sandy bar,
The women were all on the quay.

The boat rode o'er the rolling foam,
They pulled against the wind,
For 'twas rough within the Harbor bar,
The breakers reared behind;
And grey gulls shrieked o'er the shelt'ring bar,
The caverns with sea-birds were lined.

They went to draw the fishing nets,
A cruel, crested wave
Swept slowly on to the Harbor bar,
And scooped for them a grave;
The boat heeled over the Harbor bar,
And, keel up, to the women drave.

They went to save the salmon nets
Out of the leaden sea,
'Twas just outside of the Harbor bar,
Near to Home as could be;
It was just behind the sandy bar
And beyond the little stone quay.

One moment black against the wave,
The women still with dread,
Then the boat leapt over the Harbor bar,
And on to the Mothers sped;
And two lads lost o'er the shifting bar
Till the sea giveth up her dead.

They went to save the salmon nets
Out of the surging sea,
From just without the sandy bar,
So near, as you can see,
The screams that rang o'er the fleeting bar
Were the women's cries from the quay.

HER GUILT.

Mrs. Wilbour was a member of the church, and believed fully that the only way to secure happy and honorable lives for her children was to make Christians of them. And she thought she could do it. Hence she was careful to send them regularly to Sunday school, and compelled them to attend church on Sunday morning, and to recite the catechism to her in the evening.

Her husband was dead and she had sole charge of her household. But she was an energetic, shrewd woman, and was accustomed to rely entirely upon her own judgment. It never had occurred to her to ask God's help in her work, or to think that He had anything to do with it.

One bright summer morning Mrs. Wilbour sat down to breakfast with a pale, fretful face. She was tired and nervous, and scolded the children and maids unjustly.

Fred accidentally broke a cup and began to cry, on which, provoked by the accident and the noise, she boxed his ears and sent him away from the table.

A scared silence followed, broken in a few minutes by the maid, who came to the door.

"There is an old blind man at the gate, ma'am," she said. "He says he has had nothing to eat since yesterday."

"Send him away. I will not be annoyed with beggars to-day!" was the sharp reply.

The grocer called next and sent in his bill.

"Tell him I'll attend to it some other time," she said.

The maid, after a minute or two, reappeared.

"Mr. Brown says the bill has been due for three months," she said.

Mrs. Wilbour reddened angrily. "I will settle it to-morrow," she replied.

The children and the servants knew that she owed half the tradespeople in town; not for lack of money, but from carelessness in paying her debts.

Her neighbor, Mrs. Coxe, ran in an hour later, and she and Mrs. Wilbour eagerly discussed two or three bits of ugly gossip. Mrs. Wilbour's judgment of her neighbors was invariably severe. She recklessly pronounced them to be cheats or fools.

The conversation turned upon Mrs. Coxe's intended tour in Canada, and Mrs. Wilbour eagerly advised her how to smuggle gloves and silk across the border without detection, relating with delight and triumph how she had hidden material for gowns under a false bottom in her trunk, and so tricked the custom-house officers.

After breakfast she read hurriedly a chapter in the Bible, to which the children gave little attention. They had been too keenly interested in the lessons which she had unconsciously taught them in her fretfulness, in her impulsive anger, and in her trickery in evading certain duties to care for words.

When Mrs. Wilbour's children were grown men and women, she was amazed and grieved to find them uncharitable, passionate and dishonest.

"Why is this?" she cried, despairingly, to the old minister. "Why are they not Christians?"

He could not answer her. He did not know. God knew that the cause and the guilt were hers.

There are such mothers as the one here presented in every town and in every church. Is there nothing in her story which may help them to do the work which God has given them in their children, while it is not yet too late?

HAITI.

Sir Spencer St. John, formerly British Minister to Haiti, saw two handsome marble coffins lying neglected in the grounds of the palace, at Port-au-Prince, soon after he went to reside there. He was told they had been imported by the government as final resting-places for the bodies of Pétion and Boyer, two highly esteemed presidents of the early republic. For many years the coffins lay neglected and empty. At last they mysteriously disappeared. This is one of many anecdotes by which Sir Spencer illustrates the shiftlessness of administration and apathy of public spirit among that people.

Ask Haitians why they do not mend their roads, and they answer, "*Bon Dieu gâté li, bon Dieu paré li*," God spoilt them, God will mend them.

Their bridges are commonly so dilapidated that a saying is current, "It is safe to go round a bridge; never cross one."

A young lady in Haitian high society was indignant at hearing official peculation denounced. "Why," said she, "to take public money is not theft!"

To such a condition have a people, neither unkindly nor unintelligent, been brought by a long series of insurrections, revolutions, and foolish or mercenary administrations.

Their political troubles are attributed mainly to three causes: the geographical shape of the country, strife between its black and its mulatto or "colored" people, and oppression by France at a critical period of Haitian history.

Haiti is a strip of land, two hundred and fifty miles long, seldom thirty miles and sometimes but fifteen miles wide, which bends round the great bay formed by the western coast of the fertile island of San Domingo. The country is shaped something like two links of sausage, one representing North, the other South Haiti.

About midway stands the seat of government, Port-au-Prince, with no great populous middle land about it to share in the sentiments of both districts and modify the political struggle between them. Each geographical section naturally wishes its presidential candidate to succeed; the more so as the presidency, by custom rather than by the letter of the constitution, amounts to a dictatorship.

Again, though Haitian whites and blacks agree fairly well, the blacks and the "colored" or mulatto people have long been fiercely opposed. This is said to be partly because the colored people copy the arrogant race demeanor of their former French masters, whose blood they share, and partly because of the cruelty with which the more ignorant portion of the blacks have often revenged the social slights put on their color.

But a large share of blame for the disturbances of Haiti rests on France. Between 1825 and 1840, her tyrannical enforcement of certain claims upon the Haitian treasury assisted the disorderly elements to bring into disrepute President Boyer, who had administered public affairs prudently and honestly for twenty-five years.

Upon his abdication, in 1843, an insurrectionist leader, Herard-Rivière, was placed at the head of the State. His misgovernment caused his deposition within four months; his successor, Guerrier, was incapable; ferment soon became chronic; disorder bred disorder, and this state of things has continued, with a few short intervals of exhaustion and quiet, up to the present day.

"PASS IT ON."

After the close of the Civil War the North was filled with Southern refugees, many of them delicate women, reduced from affluence to poverty, and compelled to earn a living for themselves and their families. One of these was a niece of Jefferson Davis, a woman of unusual cultivation, who found a scanty and precarious subsistence by giving an occasional lecture before a country audience on Southern life. Sheltered and shielded as she had always been, the struggle with the world was a hard one. Women were just beginning to appear on the public platform, and she was unknown and friendless; but bravely she worked on, asking aid from no one.

It was a cold, blustering January day in 1868 when, cold and shivering from an early morning drive in the rain, and with her thin wraps dripping, Mrs. H. entered the Boston train at a way-station. All the seats were occupied, some with passengers, some with bags, bundles and overcoats.

Trembling from weakness and weariness, Mrs. H. supported herself against the back of a seat as the train moved off.

At that moment a gentleman chanced to lower his newspaper, and caught sight of the black-robed woman. With a quick exclamation he sprang to his feet, removed a valise from the seat beside him, and invited her to occupy it. As she sank down exhausted, he carefully wrapped his travelling rug about her.

She thanked him for his kindness, and he, turning to her, said:

"Pardon me, madam, but are you not a Southerner?"

"Yes," she answered, "I am. I suppose you knew it from my speech; many people have done so."

"The accent is unmistakable," he replied; "but pardon me again, are you not a long way from home?"

"A long way indeed," she replied, and encouraged by his sympathetic voice and manner, she added, "I lost my all during the war, and as there is no money in the South, I came North to find means to support my fatherless children."

"And have you done so?" he asked in a kindly manner.

"After a small fashion," she answered. "I have occasional engagements to speak to country audiences on life in the South during and before the War."

"Did you speak last night?" he asked.

"Yes, in X.," was the answer.

"And—I do not wish to be impertinent, but I am somewhat in the same business myself, and I should like to know, that is if you would not mind telling me, how much they paid you for your lecture."

"Five dollars and the fare to and from Boston," was the response.

"Five dollars!" he exclaimed. "Why, I always get one or two hundred; and your lecture must be worth a great deal more than mine, for you can give facts, while I can only furnish opinions."

"Little as it is," answered Mrs. H., "I am very glad to get it; I would talk at that rate every night during the winter."

For a while the man sat in silence; then putting his hand in his pocket, he drew out a roll of bank-notes, and in a hesitating manner said:

"I don't want to be intrusive, but one of the articles of my creed is that a woman is entitled to the same pay as a man if she does the same amount of work. My price for a night's talk is two hundred dollars, and that sum they paid me last night at Z.; now if you will let me divide it with you, I shall have had my share, and the thing will be even, don't you see?"

After much urging and many thoughts of her needy little ones, Mrs. H. was persuaded to put the roll in her purse; but it was not until the end of her journey that she examined the roll and found it to contain just one hundred dollars.

Some years afterward she discovered that her unknown benefactor was Wendell Phillips, and being then past the need of help, she essayed to pay back the debt.

"Don't speak of it," said Mr. Phillips; "I had entirely forgotten the incident."

"That is very probable," she replied, "but I have never forgotten it; that money, and still more your words of sympathy and encouragement, were the beginning of better days; and now I am abundantly able to pay back the money."

"Pass it on, then, my dear madam, pass it on to some one who needs it."

GOLDENROD.

In olden days the sunlight stept
Down to the earth below,
Across the fields and hedges crept
All noiselessly and slow;
And where it passed the shadows fled
Swift speeding far away,
As from the gateways overhead
Came down the light of day.

But as along a lane it passed,
It weary was and slept,
And slumber's fetters held it fast
While night her vigil kept;
And when the morning's couriers came,
In velvet buskins shod,
Where last was seen the sunlight's flame
Were shafts of goldenrod.

ERNEST MCGAFFEY.

BORN TO BE A LAWYER.

What is the chief characteristic of a "born lawyer?" Some people fancy that it is audacity; but audacity has, perhaps, spoiled a lawyer's success as often as it has made it. Craftiness, another quality often attributed to lawyers as a class, is as likely to get them into trouble as it is to win them cases. The real master-quality of a good lawyer, according to many modern authorities, is a "genius for details"—an ability to see through a case to the uttermost particular, and keep everything in mind, ready for use at the right moment. The following story has probably been told by more than one lawyer to illustrate this fact:

A lawyer advertised for a clerk. The next morning his office was crowded with applicants—all bright, and many suitable.

He bade them wait until all should arrive, and then ranged them in a row and said he would tell them a story, note their comments, and so judge whom he would choose.

"A certain farmer," began the lawyer, "was troubled with a red squirrel that got in through a hole in his barn and stole his seed-corn. He resolved to kill the squirrel at the first opportunity.

"Seeing him go in at the hole one noon, he took his shot-gun and fired away. The first shot set the barn on fire."

"Did the barn burn?" said one of the boys.

The lawyer, without answer, continued, "And, seeing the barn on fire, the farmer seized a pail of water, and ran to put it out."

"Did he put it out?" said another.

"As he passed inside, the door shut to and the barn was soon in flames. When the hired girl rushed out with more water —"

"Did they all burn up?" said another boy.

The lawyer went on without answer, "Then the old lady came out, and all was noise and confusion, and everybody was trying to put out the fire."

"Did any one burn up?" said another.

The lawyer said, "There, that will do; you have all shown great interest in the story."

But observing one little bright-eyed fellow in deep silence, he said, "Now, my little man, what have you to say?"

The little fellow blushed, grew uneasy, and stammered out, "I want to know what became of that squirrel; that's what I want to know."

"You'll do," said the lawyer; "you are my man. You have not been switched off by a confusion and a barn burning, and the hired girls and water-pails. You have kept your eye on the squirrel."

NERVE.

One of the surprises of the American Civil War was the nerve shown by boys whose youthfulness caused the recruiting officer to hesitate about enlisting them. At the Battle of Shiloh—as we learn from "Military Essays and Recollections"—the little drummers of the Fifty-fifth Illinois were found in the ranks, gun in hand, whence they were rescued by the chaplain, who formed them into a hospital corps. One of them, "Little Joe," worked like a hero in caring for the wounded. When night came it found him by the log-house used as a hospital at Pittsburg Landing.

He lay down on the wet ground outside and went to sleep. As the wounded died inside they were carried out and laid along side of the sleeping boy, whom the attendants supposed to be dead. In the morning, when Joe awoke, he found himself at the head of a ghastly row of dead bodies.

The nerve which had carried the boy through the toil and dangers of the preceding day forsook him, and with a yell he fled from the spot, shouting, "I won't be used as a *header* to dead men!"

Bob Oliver was a corporal at Shiloh; he left the army a captain. During the battle he had been ordered to the rear with a wounded man. Overtaking a sergeant with a broken arm, he turned his charge over to him, and started for the line of battle. What happened afterward is best told in a private letter which he wrote after the victory.

"I heard some one call out, 'For God's sake, Robert, don't leave me!'

"I looked back and saw James I. Goodwin of my company. He had everything off but his trousers and shirt, and had been very severely wounded. I said, 'Never! Put your arm around my neck, and I will do the best I can for you.'

"The Confederates were very close all around us, but I felt strong enough to pull up all the young saplings that grew on the battlefield. While I was taking him back he was hit once or twice. When I got to a surgeon and we cut the shirt off Goodwin, to my horror I found seven bullet-holes in that boy not yet seventeen years old.

"I never could tell this experience without something coming up in my throat to cut my speech off. From the minute I took hold of him until I got to the river he never murmured nor broke down. Whenever he was hit he gave a sudden start and then braced up again; I never saw such nerve. He died on May eighth, the noblest boy I ever saw."

Those of us who complain of the petty ills of life, such as the weather, or a badly-cooked dinner, are rebuked by this boy, who "never murmured nor broke down," though his body was pierced by seven bullet-holes.

MINISTER AND DEACON.

At a certain country church the service was much distracted on a recent Sunday. In the first place some one thought that he smelled smoke, and became convinced that the church was on fire; so in the midst of the first prayer he tiptoed up to the sexton's pew, of course making so much noise with his creaking boots that the attention of the whole congregation was attracted. The sexton set about an investigation, and finding nothing below stairs, went into the attic.

In the course of his search he managed to step off the line of planks which ran along from end to end of the attic, and there being no flooring on either side, his foot went through the laths and plaster and his leg followed.

As it chanced, he broke through directly above the head of the clergyman, who was interrupted in the midst of his prayer by the sound of breaking laths above him, and by a shower of plastering which rattled down upon his head. In his endeavor to defend himself the clergyman put up his arm hastily.

He was a somewhat dandified parson, and unbeknown to his people had helped out nature in the matter of hair by wearing a top-piece. This he managed to brush off with the lime, and the astonished people, distracted by the sight of a man's leg sticking through the ceiling above, were further amazed to see the clergyman standing before them with a bald head.

In this extremity the senior deacon of the church proved himself a man of genius. The sexton drew up his leg with no further effect than the sending of a fresh shower of lime down upon the unlucky parson. The deacon rose in his place, and with marked emphasis upon the first words, said:

"Let us all bow the head in silent thanksgiving for the escape of our beloved pastor."

The hint was taken, the congregation bowed their heads, and when they lifted them again the clergyman had adjusted his wig and the service proceeded.

HIS WEDDING GIFT.

Gifts are too often made as a duty, not as the expression of any genuine feeling of regard. An amusing example of this happened on the occasion of a fashionable city wedding. Young Mr. Jerome Vernon had been invited to be usher at the marriage of Mr. Bell and Miss Everett. As soon as the invitation came his mother said: "Now you must send Miss Everett a present at once and go to call on her."

"You pick me out something for her, will you, mamma?" said young Mr. Vernon.

His mother did so that very morning; she ordered a rare vase sent to Miss Everett, and put her son's card in it. When he called at five o'clock he was shown the gifts already sent to Miss Everett, and directly began especially admiring this vase, not observing his own card with it.

Again and again he returned to this vase, praising its color and outlines and saying at last that he thought it the prettiest of all her gifts, while Miss Everett gazed at him curiously.

When he met his mother at the dinner-table he described to her this vase, and said he hoped she would get Miss Everett something as handsome as that for his gift to her.

"Why, I sent her that!" exclaimed Mrs. Vernon, and the laughter that followed Jerome's exclamation and explanation was lively for an hour.

"What can I do? I can't do anything. I can't tell her I didn't know it was my present!" said Jerome, his face red with merriment and mortification.

There was nothing to be done but to let Miss Everett think one of her ushers either a great joker or a stupid boaster, and Jerome Vernon has always hoped that she took his praise of his own present as a piece of modest, airy chaff intended to prevent her from expressing her gratitude.

ORIGINAL VOTING.

In many of the provinces of old Japan it was the custom to elect the chiefs of the village by ballot. Certain of the large landholders were privileged to choose, and when positions became vacant they assembled on a certain day and handed in their votes, written on a paper and placed in a sealed envelope. "But if the ballot of those days was something like our own," says a writer in *Scribner's Magazine*, "the times are changed, and the new ideas are none the less strange to old heads.

"Even at the election of last year, we saw one good old soul for whom the ballot seemed to have many mysteries. After a series of interviews with various election officials—in which the mutual politeness was at once painful and delightful to behold—he was finally guided to the ballot-box, and there, inspired by what associations it is impossible to tell, he carefully reached under the table on which the box stood, and dropped his ballot on the floor. The unbroken soberness with which both he and the officials regarded his blunder was characteristically Japanese.

"The incident need not be taken, however, as indicating any peculiarly Japanese rusticity; a year or two ago, in a New England town well known as a seat of learning, an election was held, at which many women voted for the first time. One lady, painfully conscious of the newness of her privilege, approached the ballot-box and proceeded to insert her ballot with its face upward and open to the sight, contrary to the law of the State. But the vigilant official prevented her, and said, firmly:

"'Face down, madam, face down;' whereupon the inexperienced elector, in all simplicity, bowed her head reverently, and continued to fumble blindly at the box with the ballot still facing upward."

AMERICAN DONKEY.

An American traveller in Egypt has a paragraph about the donkey boys of Cairo, and their readiness in playing upon the patriotic feelings of possible customers.

One fellow stepped up to me, pulled his forelock,—at the same moment giving the boy behind him an accidental punch in the stomach,—and with a grin of humor on his dirty face, said:

"Take ride, sah? Mine splendid donkey. Name Prince—" then as he caught an English word, he added, "of Wales. Prince of Wales, sah."

If I had uttered a French word the name would have been "Prince Napoleon."

Others of the boys called out, "Mine Billy Button," "Tom Jones," "Waterloo," "Duke Wellington."

One little urchin, a better guesser than the rest, cried: "Mine berry good donkey Yankee Doodle—General Grant."

That shot took effect, and I followed the boy to take the "donk" with so illustrious a name.

GRANDPA'S WAY.

My grandpa is the strangest man!
Of course I love him dearly,
But really it does seem to me
He looks at things so queerly.

He always thinks that every day
Is right, no matter whether
It rains or snows, or shines or blows,
Or what the kind of weather.

When out-door fun is ruined by
A heavy shower provoking,
He pats my head, and says, "You see
The dry earth needs a soaking."

And when I think the day too warm
For any kind of pleasure,
He says, "The corn has grown an inch—
I see without a measure."

And when I fret because the wind
Has set my things all whirring,
He looks at me, and says, "Tut! tut!
This close air needs a stirring!"

He says, when drifts are piling high,
And fence-posts scarcely peeping,
"How warm beneath their blanket white
The little flowers are keeping!"

Sometimes I think, when on his face
His sweet smile shines so clearly,
It would be nice if every one
Could see things just so queerly!

GETTING THE BABY TO SLEEP.

The boys, Phil and Teddy Clark, had just come up from the city to grandpa's to spend the summer, and were out in the field watching grandpa plow the ground for sowing buckwheat.

It was quite warm, and Beck and Bright, the patient oxen, began to loll out their tongues, for all the world like two dogs, so grandpa stopped in the shade where the little boys sat, to let the oxen cool off.

"Let me see," he said, "it was forty-nine years ago this very spring, and I was plowing this very same piece of ground. It was all solid woods when I moved here the year before, but I had chopped down the trees and dug out some of the stumps, and now I was plowing it for the first time.

"Your father was a baby then, about six months old, and the crossest baby I ever saw cutting teeth. Your grandma had all the work to do, and take care of him besides."

"Didn't she keep a nurse for the baby?" asked Phil.

"I s'posed they always did," said Teddy.

"No, indeed, my boy! We lived in a one-roomed log-cabin, standing just where the house does now, and we had to keep one or two hired men to help clear the land, so there was not much room to spare, and your grandma had to work very hard.

"She came out here where the hired man and I were plowing that morning, the baby in her arms crying as hard as he could cry, and she was crying too.

"'O John!' she said. 'I'm all discouraged. Baby is so cross and my head aches to split. I've got bread to make and churning to do, and I can't put him down a minute. You've got to take care of him.'

"'Give him here,' I said, and took him in my arms, while she went back to the house.

"I took my old frock and tied it by the sleeves in among the plow-handles, making a sort of hammock for him. Then I put him into it and went to plowing again.

"It was pretty rough shaking, but he seemed to enjoy it, and lay watching the oxen till he fell asleep. Then I made him a bed of our two frocks among the bushes right about here, and left him to finish his nap.

"About noon your grandma came out to get the baby. She had taken a nap; so her head felt better; and she had done up her work and got dinner ready.

"The hired man was digging at a stump over about where those choke-cherry bushes are, and I was over here plowing.

"'Where's the baby, Mr. Cook?' she asked, when she came to him.

"'Wal,' he said, 'the little feller was awful cross, and you didn't seem to care much what became of him, so Mr. Clark, he just threw him down and turned a furrow over him!'

"She glared at him; then ran across the plowed ground to me as fast as she could come.

"'Where's the baby?' she screamed, so loud that it frightened me.

"I pointed into the bushes, and there she saw him, still fast asleep."

"The hired man told a lie, didn't he?" said Teddy.

"Yes," said grandpa, "it was a lie all the same though he said it in fun."

"How queer it seems that papa was ever a baby!" mused Phil.

"Everybody was a baby once," said Teddy, wisely.

"Yes," corrected Phil, "everybody 'cept Adam and Eve!"

For the Companion.

A DARLING LITTLE DUNCE.

She did not look at all like a dunce, as she sat on the lowest step of the new house that the workmen were finishing inside.

I wondered whose home it was to be, and I fancied that the little girl might know.

"Can you tell me who is building this house?" I asked.

"Oh, my papa," she said, looking up into my face with the brightest blue eyes I ever saw.

"And who is your papa?" I asked.

"Why, he's papa!" she said, with loving emphasis.

"Yes, but what is your papa's name?"

"His name is papa."

"But what do other people call him?" I urged.

"They say Mr.—what?"

"I—don't—know," a little cloud coming over the sunny face.

"Can't you recollect what strangers call your papa, gentlemen who ask you if he is at home? Don't they ever ask you that?"

"Oh, yes; they say, 'Is your papa at home?'"

"Well, what is your name?" I asked, thinking I might now find out what I wanted to know.

"Celeste," was the answer.

"Celeste what?"

"Celeste Rosabel Marguerite. That is enough, isn't it? Mamma says I have almost as many names as a princess."

Just as I was turning away, a girl of about eight years ran out from a house opposite.

"There's Bessie! P'r'aps she'll know. Bessie! Bess-sie!" called the little one at my side.

And Bessie came.

"Bessie, what's papa's other name 'sides papa?"

"Why, Mr. Griffith, of course! What a little dunce you are!"

"Am I a dunce?" and the blue eyes looked up tearfully.

"You are a darling," I whispered, taking the sweet upturned face between my hands and kissing it.

Then the blue eyes smiled again, and the dimples danced back to their places, and I continued my way down town.

Enigmas, Charades, Puzzles, etc.

1.

A CURIOUS TRANSPOSITION.

In the following stanza transpose the last word of the first and second lines into the *first two* words of the fourth and fifth lines:

The sun may shine, or cold winds whistle,
Through sun or shade he's like a thistle,
With prickly points at every touch.
Let this be shown with condemnation,
He wills before the accusation,
Which none, I'm sure, could relish much.

2.

DOUBLE ZIGZAGS.

Across.

1. A town in Austria.
2. Material.
3. Homeless.
4. A celebrated English author and essayist (1694–1732).
5. Absorbing.
6. Supports.
7. An infant.
8. The popular name of some species of a genus of plants.
9. A slight woollen stuff.
10. Critically examining.

Zigzags.

1 to 10. The name of an English religious author who died on August 31, 1666.

11 to 20. The name of a now celebrated city taken by the British on August 24, 1814. C. D.

3.

GEOGRAPHICAL CONNECTIONS.

1. Join a young bull to somewhat and make an empire in Europe.
2. Join to venerate to a measure and make a city in Maine.
3. Join a Scripture proper name (feminine) to a mass of cotton for apparel for quilts and make a river of Asia Minor.
4. Join part of the earth's surface to to hinder and make a city of Connecticut.
5. Join a mammoth bird of Arabian mythology to a feminine name and make a city in New York.
6. Join a feminine name to a fish and make a mountain chain of China.

4.

WORDS ENIGMATICALLY EXPRESSED.

Example—Forty (XL, excel).

1. A simple quarrel.
2. The price of a decision.
3. Ten pieces of land.
4. An object at a distance.
5. Your choice between a human being and his habitation.
6. A principal calamity.
7. Spring work.
8. The family of a domestic animal.
9. The sleep of a young goat.

Conundrums.

What flower expresses what all men seek after? Heart's-ease.

What kind of muffins are generally tough? Ragamuffins.

What word contains all the letters? Alphabet.

Answers to Puzzles in Last Number.

1. Idlewild—the home of N. P. Willis.

MONKEYS' LANGUAGE.

Not long ago a learned man gave to the world an able paper going to show that crows have a language which is made up of distinct words, each with its own specific meaning; and now a distinguished professor, Mr. Garner, has published an article in the *New Review*, in which he adduces facts in support of a theory that monkeys have a regular spoken language. His observation of these animals had led him to the conclusion that with them certain vocal sounds mean certain special things, and he resolved to investigate the matter.

"I went to Washington," says Professor Garner, "and called upon the Director of the National Zoölogical Garden, and told him how I proposed to work. We set the time and prepared the work.

"We separated two monkeys which had been caged together, and placed them in separate rooms. I then arranged a phonograph near the cage of the female, and caused her to utter a few sounds, which were recorded on the cylinder.

"The machine was then placed near the cage of the male, and the record repeated to him, and his conduct closely studied.

"His surprise and perplexity were evident. He traced the sounds to the horn from which they came, and failing to find his mate, he thrust his hand and arm into the horn quite up to the shoulder; withdrew it, and peeped into the horn again and again. The expressions of his face were indeed a study.

"Having satisfied myself that he recognized the sounds as those of his mate, I proceeded to record some of his efforts. I secured from him enough to win the attention of his mate, and elicit from her signs of recognition. For the first time in the history of philology the Simian tongue was reduced to record."

This was but a small beginning, however. Afterward Professor Garner obtained many records of monkey speech in the zoölogical gardens at Chicago and Cincinnati, made notes upon the monkeys' doings at the time they uttered the "words," and took the records home with him for careful study.

Having hit upon certain sounds as meaning certain things, he went back to the monkeys at Cincinnati, and began to make experiments:

"When the visitors had left the cage of a Capuchin monkey, I approached him, and found him crouched at the back of the cage. I spoke to him in his own tongue, using the word which I had called 'milk.'

"He rose, answered me with the same word, and came at once to the front of the cage. I repeated the word; he did the same, and turned at once to a small pan in the cage, which he picked up and placed near the door at the side, and returned to me and uttered the word again.

"I asked the keeper for milk, which he did not have, but brought me some water. The efforts of my little Simian friend to secure the glass were very earnest, and the pleading manner and tone assured me of his extreme thirst.

"I allowed him to dip his hand into the glass; he would suck his fingers and reach again. I kept the glass out of reach of his hand, and he would repeat the sound and beg for more.

"I was thus convinced that the word I had translated 'milk' must also mean 'water;' and from this and other tests, I at last determined that it meant also 'drink' and probably 'thirst.' I have never seen a Capuchin monkey that did not use these two words.

"The sounds are very soft and not unlike a flute; very difficult to imitate and quite impossible to write. They are purely vocal, except as to faint traces of 'h' or 'wh' as in the word 'who;' a very feeble 'w,' and here and there a slight guttural 'ch.'"

Professor Garner's opinion, as the result of his experiments, is that the chatter of monkeys "contains the rudiments from which the tongues of mankind could easily develop."

TREATMENT OF WATCHES.

That a watch may keep good time, says *Chambers's Journal*, it should be carefully treated; it should be wound at the same time daily, and when not worn should be placed in the same position, always hung up, or always laid down, as every watch goes differently in different positions.

In watches having a double case, the outer one should never be left open. If it is left open even for one night, the glass is covered with a thin film of dust, which will gradually enter the works through even the tiniest openings in the case.

Watches should be wound in the morning, because a spring fully wound up will more readily overcome the disturbances produced by the movements of the wearer. Springs will not break so easily if watches are carefully wound up and not taken out of a warm pocket and placed directly against a cold wall or on a marble slab; for that reason a protective mat is desirable.

The changes of the oil, the variations in temperature, the density and humidity of the air, all greatly affect the going of a watch, and it is only the lever watch of the most perfect finish which almost neutralizes those adverse influences. No watch keeps perfectly correct time. Even the best chronometers, used in observatories and on board ships, must be regulated according to tables which fix the variations to which watches are subject.

A watch should be cleaned every two or three years. In time the oil decomposes, gets mixed with the particles of dust which enter the works of even the best-closing watch, begins to act as a grinding material, and wears out the working parts. It frequently happens that a watch requires cleaning oftener than once in two years, especially if it closes badly or is exposed to much dust and dirt.

Any one who has the misfortune to drop his watch into water should take it at once to the watch-maker, to have it taken to pieces and cleaned; a delay of even an hour may spoil the watch forever.

HUGO'S SELF-CONCEIT.

Many great men have been aware of their own genius. In most cases their self-confidence has been pardoned to them on account of their achievements. Victor Hugo, the most famous of modern French authors, was so great a man that his vanity might well have been overlooked, but it was nevertheless sometimes amusing.

In 1851, when Napoleon III. was crushing the liberties of the republic, Hugo was anxious to stir up a revolution. M. Jules Simon relates that, in company with a friend, he met Hugo on the street one day during the excitement.

"Simon," said the poet, "do you think that if I caused myself to be killed in the Latin Quarter, and my body were carried through the streets, the students would rise in revolt?"

"I am sure they would," said Simon.

Victor Hugo shook his hand in a tragical manner, and went away. M. Simon's companion looked at him with an expression of terror.

"Don't be afraid," said Simon; "he really means it, but it is a long way to the Latin Quarter and before he gets there he will have forgotten all about it."

It is related that during the siege of Paris by the Germans in 1871, Victor Hugo said one day at a dinner-table:

"I am going to raise the siege and save Paris!"

"But how?" asked a guest.

"I shall expose myself at the outposts and shall be killed. And when the Prussians see my dead body, they will retire with sorrow and shame to their own country!"

The poet evidently forgot this project as well as the other.

THE EXAMPLE OF KINGS.

The French court, ever fond of novelty, once carried its innovations in language so far as to alter the gender of a substantive in compliment to an infant mistake of their Grand Monarch. The word "carrosse," a coach, was originally feminine, as its termination implies.

But when M. Menage published a dictionary he gave it as avowedly masculine. The revolution as to the gender of this word arose from a trivial grammatical error.

Louis XIV. succeeded to the crown at the age of about five years. Not long afterward, on inquiring for his coach one day, he happened to mistake the gender of the noun, and said, "*Ou est mon carrosse?*" using the masculine pronoun instead of the feminine. The courtiers, on the principle that the King can do no wrong, even in grammar, at once treated the word "carrosse" as masculine, and so it has continued ever since.

"Every one imitates the example of the King," used to be a courtly maxim, and it is even now acted upon more generally than those who imitate it would acknowledge. Yet even the most slavish imitators of royalty would hardly go so far as did the French courtiers during the preceding reign, that of Louis XIII.

This monarch also was a boy when he succeeded Henry IV. And being a boy he had no beard. Therefore the courtiers would wear no beard themselves. Not a man of them ventured to appear in the King's presence unless smoothly shaven.

DETAINED.

A New Haven letter-carrier was making his last round for the day, not long ago, according to the *Register*, when he unexpectedly found himself a prisoner. It was about half-past ten in the evening, and he was hastening from box to box, taking up their contents.

His key was attached to a small but strong chain, which was fastened about his waist in such a way that it could be taken off only by having the key end of the chain. It is customary for the carriers to put the key in a breast-pocket after opening a box, the box being fastened again with a spring-lock.

In the present case the key happened not to enter the man's pocket, but slid down inside the box unobserved. He slammed up the loosely closing door, put on the padlock, snapped it, and darted onward.

He took two steps, and was brought up with a suddenness that jarred both the man and the post. The key was inside the box, and the carrier was a prisoner. To remove the chain from his body was out of the question. He stood still, therefore, until a young man happened along. To him he explained his predicament, and in half an hour or so a duplicate key was brought from the post-office and he was released.

JOACHIM, the musician, was having his hair cut, and strenuously insisted that it should not be very short. "Well, sir," said the barber, losing patience, "if you, as a gentleman, don't mind being taken for a foreign musician, I'm sure *I* don't care."

Ladies' Underwear should be made from KING PHILIP CAMBRIC, LAWNS and NAINSOOKS. Send stamp for samples. King Philip Mills, Worth St., N. Y. [*Adv.*

BORROWED PLUMES.

Country boys for the most part affect a supreme disdain for the clothes and manners of city lads who spend their vacations in the country. A young artist, however, who has spent several summers at a farm-house in a picturesque village on the coast of Maine, tells of the unusual fascination which his clothes seemed to possess for the son of the house.

His white flannel tennis suit especially excited John Henry's admiration. Whenever he put it on, the boy had some emphatic word of approbation.

One morning, as the artist and John Henry were driving to the post-office, the expression on the latter's face was so doleful that the artist asked if anything was the matter.

"I guess you'd feel sorter blue," said John Henry, "if you'd ben invited to a lawn party at your cousin Lucy's, and had to cut a figure in your overalls and jumper."

"Why, you've a good suit," said the artist. "What's the matter with your Sunday clothes?"

"They aint any good for a lawn party," said John Henry. "I wish to goodness I had a white rig."

"I'll lend you mine," said the artist, joking.

"Oh, I'd spill something on 'em or tear 'em," John Henry replied, mournfully.

"I guess not," said the artist. "You would look first-rate in them. You're about my size."

Just then a carriage full of young people from the hotel came along, and the artist was invited to join them on an all-day's ride. John Henry drove on.

The artist did not return to the farm until the following evening. The first thing that met his eye as he entered the yard was his white flannel suit hung on the line to dry. He looked at it a moment and then went to his room, where soon afterward John Henry joined him with a lugubrious face.

"You saw 'em a-hangin' there, didn't you? I thought you would. Well, I'm terrible sorry, and I've got four dollars and seventy-five cents. You see I wore 'em to the party. Ma said I looked real genteel. I got to Lucy's house early, and she asked me if I'd as lief go down to the swamp back of the yard and get her some wild roses to put in the parlor.

"So I went, and her old dog went, too. He had to go sniffin' into every mud-hole after frogs. And finally he went into a big one, and when he came out he just shook himself all over me, and I suppose the clothes are all spoilt. I wish to goodness I never borrowed the rig. I didn't stay to the party, I was so dirty. Ma's rubbed most of the mud out, but I'm feared they're done fer. I wouldn't 'a' took 'em if you hadn't put me in mind to. I wish I hadn't."

The stains all came out, but the clothes shrunk so that no one bigger than John Henry's smallest brother ever wore them again.

SHE BORE UP.

A London journal says that a stout and elderly woman was on board a train which was approaching the Forth bridge. Her remarks, which she bestowed right and left upon her fellow-passengers, showed that she was unaccustomed to travelling; yet she must have been something of a philosopher in her own way. As the reader will perceive, she was a believer in what may be called specific levity.

The old lady was nervous about the bridge. She had seen pictures of it, and had made up her mind that it could not be quite safe. She kept inquiring when the train would come to it, and at last was told that it was close at hand.

"Well," said she, rather solemnly, "I don't know whether we shall get over alive or not, but if we don't it sha'n't be my fault."

Then she settled into the corner of the seat with a determined air and a puckered-up mouth, which were only less droll than the general air of responsibility which brooded over her. During the passage of the bridge she did not speak a word, but seemed to be holding her breath.

"There," said a gentleman in a neighboring seat, "we are over it safe."

The old woman heaved an explosive sigh.

"Well," she said, "if we had gone to the bottom I should have died with a clear conscience, for it wouldn't have been my weight that did it. I bore up so that I really made the train lighter than it would have been without me."

CONSIDERATION.

A New Hampshire farmer gave evidence of his belief in his cattle's appreciation of scenery not long since, when showing a visitor over his estate. After a long tramp through the woods, the two men climbed a steep hill, on the summit of which was an enclosure where several cows were standing.

"Isn't this a grand place for pasture?" asked the farmer.

The visitor looked out over the beautiful sheet of water which lay at the foot of the hill, more than a mile away, and agreed that it was a grand place.

"But," he said, after a little, "there isn't much grass here for your cows to feed upon."

"No, that's true," the farmer admitted. "But it's a grand good place for them."

"There doesn't seem to be any water handy, either," remarked the visitor.

"No, but they drink just before they are driven up here and when they come down at night."

"There isn't much shade, is there?" the critical visitor further remarked.

"Well, no," replied the farmer. "But good land, man! Just think of the magnificent view!"

IN THE OLDEN TIME.

The following "Twelve Rules," a copy of which used to hang in every colonial kitchen for the benefit of the household servants, had perhaps a share in forming the sturdy, upright character of which New England is justly proud:

Profane no divine ordinance.
Touch no state matters.
Urge no healths.
Pick no quarrels.
Encourage no vice.
Repeat no grievances.
Reveal no secrets.
Maintain no ill opinions.
Make no comparisons.
Keep no bad company.
Make no long meals.
Lay no wagers.

The Youth's Companion is an illustrated weekly paper of eight pages. Its subscription price is $1.75 a year, payment in advance.

Twelve or sixteen pages are often given its subscribers in a single weekly issue of the paper. All additional pages over eight—which is the number given for $1.75—are a gift to the subscribers from the Publishers.

New Subscriptions can commence at any time during the year. The Companion does not employ agents to solicit renewals of subscriptions.

Payment for The Companion, when sent by mail, should be made in a Post-Office Money Order, Bank Check, or Draft, or an Express Money Order. WHEN NEITHER OF THESE CAN BE PROCURED, send the money in a Registered Letter. All postmasters are required to register letters whenever requested to do so.

Silver should never be sent through the mail. It is almost sure to wear a hole through the envelope and be lost, or else it is stolen. Persons who send silver to us in a letter must do it on their own responsibility.

Postal Notes are not a safe means of sending money. Any one can collect them at any Money-Order Post-Office, and, if lost or stolen, the money cannot be recovered, as no duplicates are issued. Subscribers who send us Postal Notes must do so at their own risk.

Renewals.—Three weeks are required after the receipt of money by us before the date opposite your name on your paper, which shows to what time your subscription is paid, can be changed.

Discontinuances.—Remember that the publishers must be notified by letter when a subscriber wishes his paper stopped. All arrearages must be paid.

Returning your paper will not enable us to discontinue it, as we cannot find your name on our books unless your Post-Office address is given.

Always give the name of the Post-Office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed and drafts made payable to

INCIPIENT MELANCHOLIA.

Melancholia is a grave disease, especially because of its strange and terrible tendency to induce suicide and homicide. As the patient's reasoning processes seem to be perfectly clear, friends are seldom sufficiently on their guard. The danger is always present, however, nor is the highest degree of intelligence or of moral worth any safeguard against it.

The New York *Medical Journal* has a report of a lecture on the importance of recognizing melancholia in its earlier stage by Doctor Burnet, lecturer in the Kansas City Medical College, of which report we make free use.

"There is a marked difference between sadness and melancholia," says Dr. Burnet. "In ordinary sadness there is a cause comprehensible to the individual, and he will seek to remove it. In melancholia there is no apparent cause; there is some implication of the higher faculties, and the patient is usually indifferent to his condition, surroundings and future progress."

There are several forms of the affection: simple melancholia, melancholia agitata, melancholia attonita and melancholia with stupor. The first two are the most difficult of recognition, and it is these that especially endanger the lives of the patient and his friends.

The first important symptom of simple melancholia is sleeplessness. Another symptom, of the greatest importance, is a dull pain in the back of the neck, extending to the back of the head. It is only within a few years that this symptom has been recognized. The third symptom is depression of spirits, accompanied by slower mental movements and retarded speech and actions. When the first and the last symptoms are connected with pain in the neck, the diagnosis may be considered as conclusive.

In melancholia agitata, these three symptoms are very marked, but it is not so difficult to diagnose the disease, since the agitation is of itself a strong indication. There are generally terrifying hallucinations, an utter indifference to one's self and one's surroundings, aversion to food and inability to sleep, except under the influence of drugs.

The propensity to take life may come on suddenly, or be gradually developed. It is not uncommon to see melancholiacs whose morbid tendencies are first brought out by some suggestion.

One such patient was thought to have the "blues," and on his remarking that he wished he was dead, a friend carelessly said, "Go throw yourself over the stair railing." He acted upon the word, fell through three floors, and was killed.

Every case of melancholia should at an early date be put into the hands of a competent physician, who can have the entire control of it.

For the Companion.

THE PLANET JUPITER.

A radiant star will adorn the sky during August, and for several months to come. It is Jupiter, the largest and grandest planet of the solar system.

Observers who watch his course will see that his size and brilliancy increase, and that he rises earlier every night. He will continue to do this until September sixth, when he will be in opposition with the sun, rising at sunset, reaching the meridian at midnight, and setting at sunrise; being visible through the whole night.

Jupiter in opposition, or opposite the sun, as the word implies, is at his greatest distance from the sun, and nearest to the earth, which accounts for his superb appearance.

This majestic planet is equal in volume to thirteen hundred worlds like ours, and casts a shadow that extends fifty millions of miles in space. He is called a planet but is more like a sun, and probably gives out some light and heat. The rapid changes visible on his surface through the telescope indicate the action of mighty forces, and a possible condition approaching incandescence.

Countless ages must pass before the planet's fires grow low, and are succeeded by periods of development, perfection and decay, the three processes that rule the material universe.

Observers, therefore, may watch the progress of world-making on this stately member of the sun's family, as the telescope reveals the varying belts, the rifts, the bright spots, and especially the famous red spot, showing that fierce forces are raging within and beneath the cloud-atmosphere that envelops the planet.

Those who are familiar with the planet's story will take a deeper interest in watching the course of the bright star that reigns supreme on August nights, and that may be recognized at a glance as, looming above the southeastern horizon like a young moon, he makes his way toward the zenith.

Sharp-sighted observers can see on moonless nights nearly three thousand stars. Jupiter is the brightest of them all. The telescope brings out fifty million stars. Not one can compare with him. Venus is his only rival, and she is now hidden in the sun's rays, so that he reigns alone.

IN A CREVASSE.

Christian Linda, of Lauterbrunnen, had accompanied a gentleman as second guide over the Tschingel glacier, and, his services being no longer required, he was dismissed at the village of Ried, whence he started back alone to Lauterbrunnen, taking a short route across the glacier. On the way, at seven or eight o'clock Sunday morning, he fell into a crevasse.

On Wednesday morning—that is, seventy-two hours later—a gentleman in ascending the Tschingelhorn with Fritz Graf as guide, passed the spot where Linda was engulfed, and noticing an ice axe on the edge of the crevasse, peered down and saw Linda at the bottom.

A rope was lowered, which Linda was fortunately able to secure about his waist. With difficulty he was raised to the mouth of the crevasse, but he was a very heavy man, and his two rescuers were not able to bring him to the surface.

It was decided that the gentleman should remain on the glacier while Graf went for assistance. This was obtained at the Steinberg hut, or châlet, and when Linda was finally hauled up he was found to be nearly dead.

During the seventy-two hours of Linda's imprisonment in the crevasse—at an estimated depth of fifty feet—he had no food, for he was so tightly jammed between the walls of ice that he could not get at the provisions which he carried in a bag on his back. He was, however, able to lick the ice with his tongue.

It is not strange that his hands and feet were terribly frostbitten; the marvel is that, situated as he was for so many hours without food to sustain animal heat, he was not frozen to death.

HOW SURE IT WAS.

Hank Yates was a born horse-trader. His father and his mother's father were horse-traders, too, and spent almost as much time riding over the Illinois prairies to get or to make bargains in horseflesh as in attending to their corn and pig-raising on their farms. Hank had traded horses from the time he was ten years old, when his grandfather bought him a Texas mustang from a herd.

Hank swapped the mustang within twenty-four hours for a Kentucky colt, which he traded to his father for a coveted mare, whose next colt he sold to his grandfather at an advance of seventy-five dollars over the price of the mustang.

Hank was only nineteen years old when he began his attentions to Lizzie Dodd in the next county, and scarcely twenty when he rode over on a fine young horse to ask her to marry him.

They were sitting out in front of the house in the starlight, and Hank was getting on well with what he had to say, when he saw Lizzie's father critically examining his horse, hitched down at the front gate.

"I think everything in the world of you, Lizzie," Hank was saying. "That's as sure as —"

Just then he saw her father feeling of his horse's feet, and the instinct of the horse-trader mingled with the spirit of his wooing, and he sprang to his feet and yelled, "That's as sure as that bay gelding of mine is worth forty dollars more than them little gray mares of yourn both put together!"

WOUND BY THE SUN.

A clock is to be seen at Brussels which comes as near to being a perpetual-motion machine as is likely ever to be invented; for the sun does the winding. The method by which it works is described in the *Optician*.

A shaft exposed to the solar rays causes an up draft of air, which sets a fan in motion. The fan acts upon a mechanism which raises the weight of the clock until it reaches the top, and then puts a brake on the fan till the weight has gone down a little, when the fan is again liberated, and proceeds to act as before.

As long as the sun shines frequently enough, and the machinery does not wear out, the clock will keep going.

TO REMIND HIM.

Little Pete is a good boy as well as a boy of a great deal of originality in his "notions," but he has the serious fault of being extremely forgetful.

One day, after having gone on an errand and forgotten what he was sent for, he exclaimed, bitterly, to his sister:

"Oh dear! I wish I was a snake!"

"You wish you were a snake?" said his sister, horrified.

"Yes, and a great long one—as much as six feet long."

"Why, what for, Pete?"

"So I could tie knots in myself to make me remember things!"

THE COW KNEW.

In this era of railways and newspapers, knowledge is not confined to cities and towns.

"How savagely that cow looks at me," said a young woman—a summer boarder—to a farmer.

"It's your red parasol, ma'am," he answered.

"Dear me!" said the maiden. "I knew it was a little out of fashion, but I didn't suppose a country cow would notice it."—*New York Weekly.*

"Brown's Household Panacea" will quickly remove pain and soreness from cuts, bruises and burns. Also an excellent remedy for internal pain. [*Adv.*

SHERWOOD'S WAX BLOCK

Cleans Flat Irons Beautifully. Send 25 cts. for Sample, and get our Special Offer to the one who sells the most Blocks during the balance of the year. This Block takes off all rust, starch, dirt, or any roughness, and waxes the iron with Beeswax all at the same time. Sent by mail for 25 cents. **Agents Wanted Everywhere.**

THE BODINE ROOFING CO., Mansfield, O.

What varnish do carriage-makers use? The good ones use good varnish. So do some of the bad ones.

We shall be glad to send you, free, the "People's Text-Book on Varnish," from which you will become intelligent, not on varnish itself, but on varnished things; know what to expect of and how to care for proper varnish on housework, piano, furniture, carriage, etc.; and how to get it in buying these things.

The intention is to help you avoid the losses that come of poor varnish, no matter who uses it.

MURPHY VARNISH COMPANY.

As distinct from figure and quality of the veneer itself is the manner it is cut from the log—the rotary cut—sliced cut—and sawed veneer being desirable in the order named. All veneer used in

The EVERETT PIANO

is sawed from the best quality logs, imported or foreign, depending on wood wanted, and is of handsome figure.

If not for sale by your local dealer, address THE JOHN CHURCH CO., Cincinnati, Ohio.

"From Andante to Allegro," an illustrated pamphlet, will be sent free to any one who will mention where this advertisement was seen.

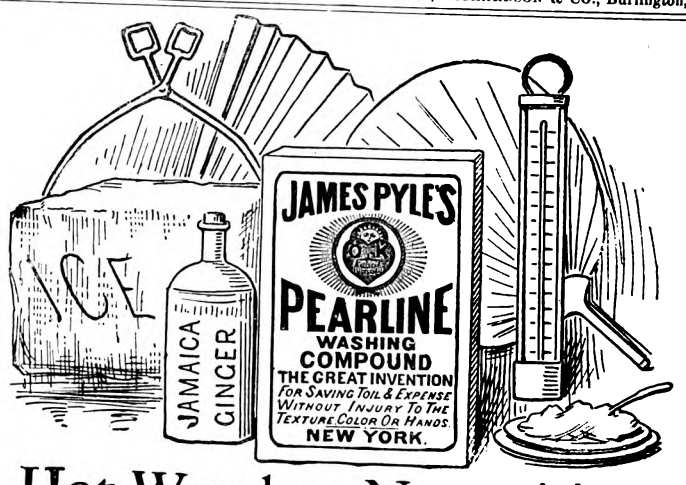
A CRY IN THE NIGHT.

Many a Home Has Heard it, and it is a Serious Thing.

"Baby had the colic, and we were up all night."

That's not an uncommon remark of some tired, dragged-out, sleepy parent. And the pain and suffering the little one went through have plainly drawn on its store of health and vitality, leaving it fretful and sick, ready to fall a victim to some dread disease of summer.

Catnip tea, anise, and all household remedies give only temporary relief, while medicines are often positively harmful and dangerous.



Mrs. E. D. Libby, of 18 Atlantic St., Portland, Maine, whose baby's picture is shown above, happily found a means of preventing colic. She says, "The first two months of my baby's life she was badly troubled with colic, but then we began feeding her lactated food, and she has been well ever since. She is just what her picture shows her to be,—a healthy, happy baby."

From this experience of an intelligent mother, other mothers can learn how to keep their darlings free from pain and suffering. Thousands of children are now well and strong, who would have been laid away in the cold grave had it not been for lactated food. While it is not a medicine,—only a pure, simple food,—yet it positively cures that scourge of summer, cholera infantum, by making the stomach and bowels healthy and strong.

Babies living upon it have but little trouble in teething, sleep well nights, crow and laugh all day, and are the happiest, rosiest, sturdiest youngsters that ever filled a mother's heart with proud joy.

Lactated Food is sold by druggists, or mailed on receipt of price: 25 cts., 50 cts., $1.00. Interesting book of "Prize Babies" and handsome birthday card free to any mother sending baby's name.

WELLS, RICHARDSON & CO., Burlington, Vt.

Hot Weather Necessities.

Notice the large square package in the front rank. That's where it belongs—ask any woman who has used it. See what it does. It saves work, saves strength, saves health, time, and temper. It saves wear and tear, too—and that's money. Delicate summer clothes don't have to be rubbed and wrenched when they're washed with *Pearline*. Everything is washed easily—and safely. *Pearline* doesn't *do* any more in warm weather than in cold, but you seem to *need* it more then. It's a necessity. But it's a luxury, as well. Try it in the bath, and you'll think so.

Beware Peddlers and some unscrupulous grocers will tell you, "this is as good as" or "the same as Pearline." IT'S FALSE—Pearline is never peddled, and if your grocer sends you something in place of Pearline, do the honest thing—*send it back.* 193 JAMES PYLE, New York.

INTERLOPERS.

In Eight Chapters.—Chapter V.

Wayward and Contradictory.

They were all sitting together in the twilight that evening,—Dorothy on a low stool at her mother's feet, leaning against her knee, Colonel Everest by the open window and Helen in a rather distant corner where the shadows were thicker than elsewhere and where she fancied she could not be seen. Occasionally Colonel Everest and his wife would speak together briefly, but the two girls were silent.

Dorothy, casting furtive glances at the corner where Helen sat, saw her raise her hand, now and then, to her eyes, as though she were wiping away tears. Dorothy wondered whether she was crying. She wondered what she was crying about.

And yet she need not have been at a loss to know. Perhaps she herself might not have been above shedding a tear or two if she had come with open arms to greet a stranger and the stranger had drawn stiffly away, repulsing her with cruel coldness, and had deliberately turned aside as though the sight of her were hateful in her eyes.

For a long time she and her mother had been left alone and undisturbed to talk and kiss and "cuddle" to their hearts' content, trying to make up for all the lonely hours of those lonely two years, and then there had come a gentle tap upon the door and Mrs. Everest had said:

"Come in, Helen, dear. This is Dorothy."

Then a tall, slender girl had appeared in the door-way, standing one moment upon the sill as if trying to gain courage to go on before she opened her arms—her tender brown eyes growing large and soft with love, while coming direct to Dorothy she cried: "O little sister, *do* love me!"

Dorothy had cast her off and turned carelessly away, saying:

"I guess I'd better go to my room now, mamma. I want to take a bath. I'm dirtier than I'm tired, and I'm hungrier than I'm either."

With that she had left the place before any one could say a word.

She had not seen her mother alone since then. But she was sure her mother was displeased with her, in spite of the caress she felt in the hand that was lovingly stroking her hair.

Oh dear! She knew that would be the way always now. Helen would be forever getting her into trouble and making her mother angry with her.

"Helen, dearest, do not sit hidden away from us all like that. Come here. I want my two daughters near me. There is another footstool here and always room at mother's knee. Come, dear. I want you."

Then out from the shadows came Helen, and even in the twilight Dorothy could see that she was pale and that her eyes were wet. But in her gentle voice there was no trace of tears as she said:

"I know it, mamma. I didn't go off by myself because I felt you didn't. But—I—was—thinking."

"Helen is like her father," said Colonel Everest. "She has to make a special business of thinking. It does not come natural and she has to absent herself in order to accomplish it. Solitude and silence. Eh, Helen?"

The girl smiled and answered, "Yes, papa," and then there was another long pause.

Everything seemed to Dorothy distant and dim and only half-real. Somehow she thought she would always remember this first evening. There was something queer about it that she did not seem to understand. Somehow or other she felt it was changing her whole life.

She felt as if this evening was the beginning of something—Oh! perhaps it was the "new life" Miss Lorimer had talked about. And then back came the memory of the little lecture she had had from her kind teacher, and particularly an admonition to let no unworthy feeling enter her heart, and to be kind.

But now her mother began talking about their plans for the morrow, and Dorothy was glad to listen and try to forget that her conscience was pricking her; and that in her heart she was harboring all manner of unworthy feelings without once trying to thrust them out; and that she had been anything but kind. And by and by it was bedtime, and she and Helen were kissing their parents good-night and going together, though as silent as ever, to their rooms. In the little hallway Helen stopped.

"Dorothy," she said, in a low voice that had a piteous little tremor in it: "Dorothy, I don't want to trouble you. If you don't want to have me love you, I'll try not to—but—but—I never had a sister and I—was—so glad and—If you'd only tell me why you hate me so I'd try to do better—and maybe—I—. Will you let me kiss you good-night?"

She was holding out both her hands pleadingly and looking straight into Dorothy's eyes.

It was strange; Dorothy had the same feeling now that she had had that night in the seminary when she had longed to run after her stepfather and beg for his forgiveness. But now, as then, she let the impulse cool, and closed her obstinate little heart to her better nature, and the moment fled uncrowned.

She thought: "It would be hypocritical to say I don't hate her when I do. And if I hate her I oughtn't to let her kiss me."

"You haven't done anything, I s'pose," she said to Helen. "It's all right just as it is. I don't like much to kiss—I never, that is, I don't very often—care anything at all about kissing any one but my mother," with which she entered her room and closed her door.

She was so tired that she fell asleep the moment her head touched the pillow, and the first thing of which she was conscious in the morning was of her mother's lips upon her forehead.

"I didn't like to wake you, Dorothy. It is early yet and not time to rise, but I felt I ought to say a word to you before the day begins and while we are alone and not in danger of being disturbed—"

"I s'pose we'll always have to do our talking this way now—early mornings and things," said Dorothy, rubbing her eyes and sitting up in bed. "I s'pose there'll always be some one round after this. Oh dear!"

Mrs. Everest made no response to this. She was in her heart praying to be taught just how best to help Dorothy to be true to herself. She knew that in the depths of Dorothy's heart lay nobility and justice and generosity—like truth at the bottom of the fabled well. She could see them in spite of all the deep flood above, but how to reach them?

How long she talked and what she said no one but Dorothy ever knew, but by and by she was resting her head on her daughter's shoulder and saying: "We must help each other. We must help each other to be good—" and at this Dorothy felt ready to make any sacrifice, to do anything that was right.

But when her mother had left her and she was alone again, it all came over her—how different it used to be in the old days when there was no Helen to be talked to about, and then back came all the troop of impatient, angry, envious thoughts, and by breakfast-time she was as silent and unrelenting as ever.

The journey to the country home (the home of Colonel Everest's boyhood) was made within the week, and Dorothy was overjoyed to get into the country again—the fresh, green country with its hills and dales, its sweep of sky and its broad, blue river. The house itself was in the old colonial style of architecture, with great wide windows and an ample hall that was a delight to lounge in.

There were all manner of strange nooks and corners, odd little steps leading to balconied chambers, and a gallery.

The two girls were given perfect freedom, and often in the morning would take long drives across the country or long rows upon the river or long tramps through the fragrant woods.

In spite of herself Dorothy often relapsed into her old sweet self, and then her stepfather and Helen caught glimpses of such a lovable, large-hearted girl as one seldom sees.

But a word, a look, would banish it all again, and she would once more be the Dorothy who could hurt them with her silence or stab them with her cruel thrusts.

But neither Colonel Everest nor Helen ever let her see that they felt the change, but waited patiently for the time to come when the better self would triumph once for all and these days of doubt and dread be past forever.

One morning Dorothy was singing in her room and brandishing her banjo above her head in much the manner of an Indian preparing to hurl his tomahawk, when the maid appeared at the door, her arms full of clean linen fresh from the laundry.

As she knelt before Dorothy's bureau in order to fold the articles away neatly in the drawer, she said:

"There's company coming, Miss Dorothy. Your mother just told me that folks is coming to-morrow. Now we'll have a houseful and goings on."

Of course Dorothy wanted to gain more information immediately, and so down she flew to her mother.

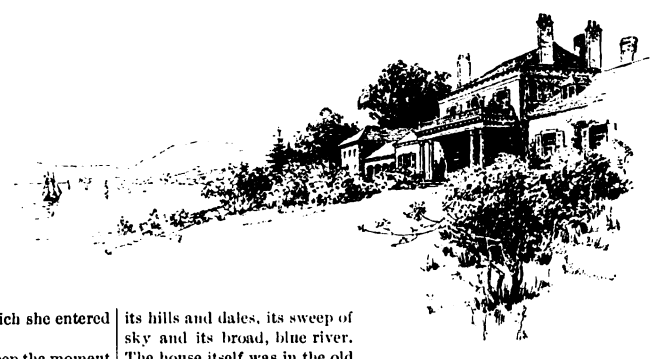
Mrs. Everest laughed.

"What a gossip Katie is," she said. "A nephew of your father's is coming. No one else. We met him in Germany, so I have seen him before. He is a very nice fellow and I hope you will like him and that he will like you. Try to be a little dignified, dear, and don't play any of your tricks while he is here. Let him and your father see how ladylike you can be."

Dorothy stood still and considered.

An Early Slice of Bread.

"Come when you're called. Do as you're bid,
Shut the door after you. Never be chid.
Speak when you're spoken to. Hold up your head.
Turn out your toes and go smiling to bed,"



she chanted, and then veering swiftly about ran out of the room and upstairs again, thinking: "So he thinks I am not ladylike. I s'pose he told her so. Oh *dear!*"

All that day and the next following she was a little more taciturn than usual, and when the "company" arrived, if he noticed her at all it was only as a particularly pretty girl with a particularly ugly expression.

She sat upright and immovable in her chair with a rigid look of determination upon her face. As a matter of fact she was thinking:

"I'll show him that I can be as ladylike as his dear Helen. I guess my mother knows how to bring me up."

The next morning she waked very early, and lay listening to the joyous sound of the birds caroling just outside her window.

She jumped up and slipped on her pink bath-robe, a pretty thing of soft, fine flannel with wide, silk-lined sleeves, and unlocking her door pattered along the hall barefooted toward the bath-room for her daily "scrub."

She set the water to flowing in the tub, and then all at once it struck her that she was hungry.

She ran down the staircase and toward the kitchen regions on a voyage of discovery. It was not very difficult to find bread and butter, and with a slice in her hand she was making the return trip, when a sound caught her ear that made her pause and listen.

She was well on in the hallway, and there was no escaping any one who should happen to be descending the stairs just then. But who could be abroad but herself so early in the morning?

It was the "company," dressed and hat in hand, evidently just ready to set out on a morning tramp.

He looked at her with unconcealed surprise,

Digitized by Google

Edward D Duffield Jan92

and then came down the remaining stairs and held out his hand.

"Good-morning!" he said. "I thought I was the only early bird, but I find you have got ahead of me and secured the worm. I wonder could you get me one like it?" he continued, pointing to her piece of bread.

Of course there was nothing left but to comply. Dorothy went back to the kitchen and got him his coveted slice of bread; and then sat opposite him as he ate, munching her own and swinging her feet backward and forward with the most careless ease in the world.

"You didn't tell me how it came about that you were up and doing so early in the morning," her companion remarked.

This opened the way for a gay conversation, which continued until Dorothy suddenly thought, Why was she talking so amicably with this relation of the "interlopers?" He wasn't *her* cousin. Immediately she stiffened herself up, and rising from her seat remarked frigidly that she thought it was time to go.

The young man opposite scrutinized her fixedly for a moment and then remarked:

"Come now, Miss Dorothy. You'd better like them. It doesn't pay not to. Besides, they're everything that's good, and they love you dearly in spite of the way you act—they—"

Dorothy did not pretend to misunderstand his reference. She flashed a look of anger at him, and retorted:

"So they have been complaining to you? They've been telling you how I've acted? But of course they would; so mean, so—"

"'Sh! Be careful. If any one tells it will be yourself," warned her companion. "No one has said anything to me, my dear little cousin,—you see I am going to claim you whether you like it or not,—I have eyes and can see. The fact is, you made up your mind to war against my uncle and Helen, and you are doing it pretty thoroughly. Really I wish you wouldn't. It isn't a good idea. It won't pay in the end, and you'll be awfully sorry some day."

Dorothy shook her head in stout denial, and then murmuring something about the water's overflowing the bathtub left him and ran quickly upstairs.

He watched her as she went and then, with an amused and regretful expression as he thought of her folly, started out on his tramp, coming home again just in time for breakfast.

For the life of her, Dorothy could not restrain casting a merry little glance over the table at him as they took their places. She tried to look demure and staid, but the remembrance of her escapade would make her eyes twinkle with laughter, and all her efforts were in vain.

"Now tell me; what mischief is brewing between you two, Fred and Dorothy?" inquired Mrs. Everest, presently. "You are hatching some wild scheme between you, I know."

Fred said nothing, but Dorothy, scorning concealment and being possessed by that spirit of reckless daring that so often attacked her in her stepfather's presence, rehearsed the whole scene graphically enough.

Her mother said: "O Dorothy, my *dear!* Why will you do such things?" but Colonel Everest laughed, though he said nothing.

Somehow he spoke very little to Dorothy nowadays. He had drifted into the way of saying "good-morning" to her at the beginning of the day, and letting that suffice. She made no remark upon it but it did not escape her, and often she felt an unaccountable desire to force him to notice her kindly, as he had been so ready to do at first.

Colonel Everest wondered dimly at times where Miss Lorimer found the admirable qualities she had pointed out to him in the girl. For his part, he saw nothing but scorn and rancor and petulance and pride in his stepdaughter.

But this morning seemed to promise better things, for Dorothy was smiling, and appeared quite ready to let the day pass in peace and harmony, and at these signs of fair weather from the variable little weather-cock, Helen gained courage to be quite gay.

"Do you know, mamma," she said, in her gentle voice, "that when I met Mrs. Beech yesterday she told me to tell you that after the tournament next week she's going to have a few young people to dine and dance, and she said she was going to ask if we—Dorothy and I—couldn't come. *Do* let us, please. We're not too young—Mrs. Beech said it was going to be for 'young people.' Say yes when she asks you. Beg her to say yes, Dorothy."

The two girls followed her upstairs with their gay clamor, and it was only when she reached her own room that she turned upon them suddenly and cried out with a despairing sigh:

"Yes, you ridiculous children. Now may I be permitted to write a letter in peace?"

But no; they still besieged her with anxious questionings as to what they should wear.

At length she seated herself in her rocking-chair and beckoned the girls beside her.

"In self-defence," she explained, laughing, and for a little while the three were as merry over their plans as though there had never been a ripple on the placid surface of their content.

Then suddenly, like a storm bursting from out of a clear sky, forth broke the old trouble again.

It grew out of Mrs. Everest turning to Dorothy and saying: "You see, I prefer to have you both in white. The pretty frock Helen sent you from Paris for Commencement will be just the thing for you to wear, Dorothy, it is so simple and —"

But Dorothy, at the mention of her sister's name, had started to her feet, and now interrupted her mother with the repetition of the word.

"Helen?" she said in a strange, smothered voice, while her face grew very pale and her hands cold and unsteady.

"Why, yes, of course. You knew Helen sent you the frock, dear. I had written you I could not afford it, and then one day Helen and papa formed a little conspiracy and got your measurements, through 'bribery and corruption,' and went and ordered the affair. It was entirely Helen's idea, and I had nothing to do with it."

By this time Dorothy's blood had come rushing back to her cheeks in an angry flood and she turned and faced Helen, who had drawn back a little and was very white and still.

But after looking at her for an instant as though she were about to hurl some cruel dart at her, she wheeled abruptly about and ran out of the room, one heavy sob escaping her just as she reached the door.

At the sound Helen sprung to her feet.

"O mamma," she cried, "what is it? Why does she feel so? I must go to her—I—"

But Mrs. Everest stretched out her hand and detained her. For once her sweet face was set and stern.

"No, Helen," she said, "I will go. Don't grieve, darling," and kissing the poor, anxious face, she followed in Dorothy's footsteps and knocked upon her door. At first she received no answer, but after a second Helen heard the latch spring back and the knob turn and a voice, racked by sobs, exclaim huskily:

"I'll never—wear—it, *never!*" and then the door closed again.

Helen bent her head in her hands and, wounded and smarting, cried as if her heart would break.

THE PRIZE PUMPKIN.

Upon the trunk of the big elm-tree in front of the schoolhouse gate appeared a huge yellow poster, announcing the attractions of the county fair to be held for three successive days in the little town of Lincolnville.

Before the poster stood Harry Arnold, reading aloud the flaring head-lines and occasionally, by way of emphasis, punching a capital letter with the long stick which he held in his hand. Two other boys stood by listening, while a third leaned indifferently against the fence.

"Say, boys!" suddenly exclaimed Bob Raymond, the largest and oldest of the group; "I'll tell you what will be huge fun! Old Peter Ruggles was up at the store last night bragging about his big pumpkin. It is e-normous, he says; and he's going to bring it to the fair on Thursday, and expects to get the prize—the first prize, mind you! Two dollars and seventy-five cents!" added Bob, imitating to perfection old Peter's tones.

"Pretty big amount!" said Guy Everett, the son of the wealthiest man in town, as he jingled in his pocket the silver coins which, as his companions had no doubt, would fully equal the sum that had seemed so large to old Peter.

"Big amount! I guess it is!" replied Bob. "We heard Joe Jackson joking old Peter and asking him whether he was going to invest his premium in government bonds or Western lands; and the old fellow said he rather thought he should buy a ticket down to Kingston about Thanksgiving time, and carry the pumpkin to his sister that he hadn't seen for twenty years."

"I would if I was him!"

All the boys turned in surprise as these words came slowly and in a childish voice from Ben Harrington, the big, awkward boy who still stood leaning against the fence.

"Who asked you to say anything, sonny?" exclaimed Bob Raymond, turning and glaring on the speaker. "You'd better go in and study your grammar!"

The boys laughed at Bob's attempt at wit. Ben made no reply; but a hot flush spread over his face.

"What's the joke, anyway?" demanded Guy. "Thought you had a bright idea when you begun this row."

"So I have," replied Bob; "and you'd just better listen to what I tell you! I propose that we three go up to old Peter's to-night after dark and get his precious pumpkin and make a jack-o'-lantern of it, and set it up on his door-step. Then we'll give a thundering knock and run. It'll scare the old man half out of his wits, besides being such a good joke!"

"E-normous!" said Guy.

"And the pumpkin will be just as good to carry to the fair after we've excavated it," added Bob, chuckling at the thought of old Peter's consternation.

"No it won't either," solemnly asserted Ben, who had listened with his mouth and eyes wide open. "It'll spoil it!"

A shout of derision followed this simple speech; and Bob Raymond shook his fist in Ben's face and said:

"You hush up, simpleton, and don't you breathe a word of what we've been saying to any living soul or—I'll make a jack-o'-lantern of you!"

Just then the school-bell rang, and Bob said in a low tone, "Come down to our barn, boys, to-night, after supper, and we'll fix up the plan."

Then snatching the old cloth cap from Ben's tousled head, Bob sent it skimming across the playground, while he stalked boldly up the path with his grimy hands in his pockets.

Ben Harrington was undoubtedly a very dull boy—the dullest boy in school. He was fourteen years old, overgrown and awkward. His face was freckled, his hair a neglected shock of tawny brown, and his eyes had frequently a look that made his teacher wonder to what remote corner of space stupid Ben's wits were straying.

His own mother was dead, his father was a poor, hard-working man, with no ambitions above earning the daily bread for his family; and his stepmother, always overburdened with the care of a numerous brood of her own, had no time to do anything for the dull, uninteresting boy whose father she had married. So Ben had grown up utterly neglected. If he hoed the corn-patch and went promptly after the cows, there was no further concern regarding him.

His sole delight seemed to be to run through the woods, where he knew the haunts of every wild flower that blooms, and the homes of the birds, the squirrels, and all the shy and timid creatures who, like himself, loved the freedom and solitude of a life out of doors.

Ben stumbled across the playground after his cap and, as usual, was the last one to enter the schoolroom. This, however, occasioned no surprise; and the boy took his seat and began to meditate on what he had heard. Ben's moral nature had been cultivated no more than his mind or manners, but his simple, honest soul was stirred with indignation at the thought of the outrage which was to be perpetrated upon poor old Peter Ruggles and his precious pumpkin.

Ben's face flushed as he thought of it; and then as suddenly blanched as he recalled the threat of Bob Raymond. Should he go that very night, while the boys were plotting their dark deed in the barn, and tell old Peter of the daring raid to be made on his pumpkin-patch, or should he keep quiet and leave the old man to face his loss and disappointment as best he might?

Then a wild and well-nigh overmastering thought suddenly entered Ben's brain. Why should not he himself send a pumpkin to the fair? Why should he not win that very prize on which old Peter had set his heart? Away up in the corner of the corn-field, back of the cow-shed, was a pumpkin-vine which Ben had himself planted and watched in secret; and of the existence of which no one else knew.

On this vine was one huge pumpkin, not so large as Peter's, to be sure, but perhaps—ah, terrible temptation!—perhaps, if Peter's pumpkin should not go to the fair, Ben's pumpkin might win the prize.

The prize! Two dollars and seventy-five cents! Ben had never had so much money of his own to do with as he pleased in his life. Visions of jack-knives, two-bladed, four-bladed, six-bladed even, passed before him.

Poor Peter, with his hopes and expectations, was entirely forgotten by the boyish dreamer. In his imagination he saw his own big pumpkin in the centre of the long table at the fair, holding the place of honor among other products of the vine, outweighing and outshining them all. He even heard his own name upon the judges' lips, and the praises of the people crowding through the hall to get a glimpse of the big pumpkin which he had raised.

Just at dusk, while Ben's thoughts were still absorbed in his own selfish plans, he saw two boys whom he well knew disappear around the corner of the village street in the direction of Bob Raymond's barn; and once more a sense of the great wrong about to be perpetrated upon poor old Peter Ruggles came over him.

He was already on his way to the corn-field, and to his pumpkin-vine. There was the pumpkin—a big fellow. He spanned it eagerly with his hands. Perhaps it was bigger than Peter's; and any way, if Peter's pumpkin should not be at the fair he might get the prize.

Ben threw himself down on the cool ground, put one arm doggedly around his treasure, and fought the battle out with his selfish heart.

When the boy arose it was with a sense of victory and a face aglow with a sublime plan which was to circumvent the most skilful of plotters, and preserve for Peter the grand hopes which the old man had staked upon his cherished pumpkin.

With his old, broken, one-bladed knife he cut the pumpkin from the vine, taking care, however, to cut it near the roots and thus leave a long, leafy stem upon the fruit, around which he carefully wrapped his old blue jacket.

With the unwieldy burden in his arms and the vine trailing behind, Ben skirted the field and crept as stealthily as possible along the walls and fences until he reached the garden of the little, low brown house apart from the village, where old Peter lived by himself.

It was now quite dark, and Ben realized that there was need of haste, for the boys would be sure to come before the moon rose.

With trembling hands Ben felt among the vines for Peter's pumpkin. There was no danger of mistaking the gigantic specimen, for the vine had been carefully pruned that it might throw its full strength and vigor into this one supreme effort.

Ben unhesitatingly cut the pumpkin from its stem, and it was fortunate for him that he was not detected at this point of his proceedings, for he never would have been credited with his just and generous motives.

Glancing furtively around, as though in some misdeed, Ben carefully placed his own pumpkin on the spot where Peter's mammoth fruit had grown, and dexterously twisted its long stem around that of Peter's vine, tying it securely at the end.

Then he took Peter's pumpkin in his arms and stole unobserved around the house and into Peter's little shed-like barn, where he crept into the darkest and most remote corner and laid down his burden with a sigh of relief.

He was none too soon, for hardly had he left the field when the three conspirators groped their way into the little garden.

They had no difficulty in finding the innocent big pumpkin, which lay awaiting them.

"Ha! here it is!" said Bob, attempting to twist it from its stem. "Isn't it a bouncer!" But the tough, fibrous stem resisted, and the small hatchet in the hands of Guy Everett severed the pumpkin from the vine.

"Here, I'll tomahawk him!" exclaimed Guy. "Isn't his scalp immense?" he added, as he deliberately cut the crown from the yellow sphere.

The pumpkin was then excavated, transformed into a jack-o'-lantern,—with long, oblique eyes, which suggested the Chinaman, a triangular nose, teeth that would have done credit to an ogre, and a mouth turned up at the corners into a horrid grin.

A candle was fixed inside, and then, with much chuckling, the would-be practical jokers carried the jack-o'-lantern to Peter's door-way. They placed it upon the fence-post, lighted the candle, and in the horrible glow from the fiendish face, the three boys executed a dance, which, perhaps, they thought was like a Sioux war dance.

Then Bob volunteered to go to the door and "knock up old Peter." To witness his dismay was to be the crowning point of their sport, but—shall it be said to their credit?—when the two boys, who waited across the road while Bob pounded on the door to summon the victim of their joke, beheld the expression of anguish which came over the expectant old face, they were seized with remorse, and fled precipitately in the darkness.

Even Bob Raymond, the ringleader in many dark deeds of mischief, forgot that he was to shout, "Peter, Peter, pumpkin-eater!" when the old man appeared, but took to his heels and ran in an opposite direction to that which his accomplices had taken, nor did he see anything more of them that night.

Poor Peter felt his limbs fail beneath him, and sank upon the door-step, while the demoniac face grinned at his woe. He took it all in at a glance. He realized that he was the victim of a cruel joke which had blotted out the hopes he had fondly cherished for many weeks.

Some one touched his arm.

He turned and saw a boy standing timidly beside him.

"Ha! is it you, you scamp!" and Peter seized by the collar the boy, who, so he supposed, had stayed behind to mock him.

"No, no! it's me, Ben! Don't you know me?" pleaded a familiar voice.

"What are you doing here? Stealing my pump kins, ruining my crops, spoiling *everything!*" gasped the old man, helplessly, as a sense of his misfortune came over him anew.

"Why, no, Peter!" exclaimed Ben, resolutely freeing himself from the old man's grasp, and standing firmly before him like a man. "I've saved your pumpkin! Sit down and look at me! I tell you I've *saved* your pumpkin! and if you don't believe me, here it is!" and Ben lifted the big yellow thing from the grass and put it safe and sound into the old man's lap.

"There, hold on to it! No, put it down or you'll smash it after all!" cried Ben, taking it again from the trembling hands of the bewildered old man.

The boy's explanation was brief and to the point. Poor old Peter Ruggles hugged his prize pumpkin with tears of joy; and Ben, stupid Ben, feeling very much embarrassed and as though he would like to thrash somebody, turned suddenly upon the jack-o'-lantern and shouted, "Stop your grinning at me, you old punkin-head, or—I'll knock your eyes an' nose an' mouth together!" which thing he summarily did.

The next morning a certain boy in the town of Lincolnville saw a sight which so astonished him that he stopped and gazed at it, and then ran and called another boy, who also stopped and gazed, and then ran and called a third.

It was quite early on the morning of the day on which the county fair was to open. Farmers and villagers were coming from all directions into town, bringing all manner of fruits and agricultural products. But the sight which so overcame the three boys of whom we speak was this:

Mr. Peter Ruggles in his best black coat and a tall hat, not of the latest style, was coming down the street wheeling a barrow, upon which was a large basket, tastefully lined and decorated with fresh vines and leaves, and on its green cushion, in this basket which it seemed to fill, reposed an enormous pumpkin! By the side of the wheelbarrow proudly walked Ben Harrington.

Straight to the agricultural hall they went—the owner and the preserver of the prize pumpkin—both confident of victory.

And well they might have been; for although many big pumpkins appeared upon the scene, there was not one which could compare with the mammoth produced by Mr. Peter Ruggles, to whom the judges had the honor of awarding the first prize.

Somehow, before the fair was over the whole story had leaked out. It was neither Peter nor Ben who first told it. It came from the lips of the three conspirators themselves. The truth was their curiosity overcame their caution.

They all understood how a pumpkin could be converted into a jack-o'-lantern, but how a jack-o'-lantern could be transformed into a perfect pumpkin was beyond their comprehension.

They put a few indiscreet questions to old Peter which at once revealed their share in the transaction, and resulted in the disclosure of the whole story.

The three boys, when called to account, had manhood enough to admit their misdeeds.

Bob Raymond left the fair immediately; but Harry Arnold, heartily ashamed and sorry for his part in the matter, awkwardly shook hands with Ben and said, "Good for you, old fellow!" while Guy Everett, with a newly awakened sense of honor, took a handful of silver from his pocket and insisted upon paying Ben for the pumpkin which they had destroyed. But Ben drew himself up with unaffected dignity and refused to accept the money.

For the next few days Ben Harrington was the

Digitized by Google

hero of the town; and in the classes with which he afterwards fought his way through the difficulties of a common school education, his position from that time was one not to be despised.

The boy who had so generously sacrificed his own property and outwitted three of the smartest boys in school had established himself in the respect of his fellows. He was no more "stupid Ben," nor could any one call him "a punkin-head" without recalling his brilliant victory in a contest of wits.

NEPIGON.

In Six Chapters.—Chapter V.

Blueberries, Black Flies and Bears.

It was not wholly safe to go on with canoes in the face of such a gale, but now that we were out in it, our Indian boatmen buckled down to their work. The canoes had to be driven by main strength against the full force of the wind and waves.

For an hour we made but slow progress. It was a rather joyless hour, for we all knew that if the gusts were to increase but a little in force, we should, indeed, be in grave peril. Even as it was, with unskilful boatmen the canoes would have been swamped.

It was, therefore, with a sense of great relief on the part of all, and a feeling of thankfulness on the part of three, at least, of the party, that we perceived that John and Joe were heading in toward a little cove, between high, bare ledges, on the east shore.

"Is that our port?" cried Thea.

"Yes, that is Flat Rock landing," replied John, laughing after his manner. "Are you glad, miss?"

"Don't ask me!" exclaimed Thea. "I'm more than glad; I'm perfectly happy!"

The great ledges here rise up steep and bare save for an occasional jack-pine or a tuft of blueberry bush, to a height of sixty or seventy feet, then extend away, inland, flat as the floor of some great temple. Hence the name, Flat Rock Portage, for it is from this landing-place that parties, touring and fishing, cross over to Lakes Hannah and Emma, on their way homeward.

The distance across to Lake Hannah is a mile and a quarter, nearly all the way over smooth, solid ledges. Below the path, to the right, there is a "mus-keag," or morass, of considerable extent; the breeding-place, probably, of the myriads of black flies which form the one drawback to camp-life here.

The plateau of the ledges, sixty feet above water-level on the Lake Nepigon side, commands a beautiful view of South Bay and its opposite shores.

Thea and Lucia, who had climbed up from the landing-place to the plateau in advance of the rest, came running to meet the others, who had delayed to carry up loads, displaying sprigs of bush blue with berries.

"I thought we had already seen blueberries!" Lucia cried. "But we haven't. We have seen nothing worth mentioning before. Why, the ground is more than blue, it is *piled* with them."

They led the way to a little plot, or rather a tract, of bushes, while the others followed wonderingly, for it was an astonishing spectacle. The sprigs of the shrubbery rested on the rocks, which were indeed piled up with the huge, luscious, even fragrant, blue fruit. It was unanimously declared, too, that the berries were the best in flavor of any which we had ever found.

The tents were pitched on the plateau in the midst of the berry pasture.

But the black flies!

Existence here, from sunrise till sunset, would have been one long, miserable struggle but for our nets.

No tourist in the wilderness should be without a good supply of netting. In the course of five minutes after landing, every head in our party was snugly covered in by a voluminous net, put on over hats and buttoned under jackets at the throat. The hat-brim keeps the net so far from the face that it does not discommode one. Thus defended, we did not mind the pests.

Dinner was eaten by the light of a jolly camp-fire. The Indians sat on the other side of the fire, mending their moccasins and smoking contentedly.

Presently Wap-a-sheesh started up and sprang to get Joe's rifle.

"What you see?" cried Joe.

"*Mar-qua*," was the reply, as he dashed away toward a group of pines. He had caught a glimpse of a black animal which he thought was a bear, but was unable to get a shot at it.

"It not strange at all to see bear here now," John remarked. "They are living on berries, and get very fat."

"Is there any danger from them?" asked Lucia.

"Oh, no; not very likely touch anybody. Most likely run away. Most always run. But sometimes not. Never tell exactly what bear will do. Sometimes want to stay and fight. Sometimes feel cross, I suppose."

The evening was warm and beautiful. The golden glow of the sunset lingered long over the wooded mountains across the bay, and altogether this was one of the most enjoyable camps of the trip.

We had the last of our Nepigon Falls trout for breakfast next morning. John told us that plenty of jack-fish were to be caught in Lake Hannah, across the portage.

"What is a jack-fish?" inquired Lucia.

"It is a sort of pike," replied John, "somewhat, but not just like what they call pickerel in the East. Some old jacks grow very large. I once was fishing in Nepigon Bay, below Red Rock, and hooked a jack-fish that weighed twenty-eight pounds. A few years ago I saw an Indian bring a jack-fish to the trading post which weighed, the post-trader said, not far from sixty pounds. The Indian had it on his back, and the tail of the jack dragged on the ground behind him. But generally they weigh from three to ten pound."

Immediately after breakfast the guides carried the canoes over the smooth, bare portage rocks a mile and a half to Lake Hannah, and Professor William, Alton and Dick went jack-fishing. Teacher Sarah, Lee and the girls gathered blueberries, cranberries, bird-pears and wild cherries, and went exploring the moss-covered crags along the shore of the bay, for ferns.

The fishing party met with great success.

The water of Lake Hannah, unlike that of Lake Nepigon, is what the guides term "black water." There are many shoals and shallow coves where the bottom is of black mud, and eel-grass and rushes abound.

The jack-fish like to bask in these spots, and are taken by trolling with spoon and grapple, and also by means of hooks baited with meat.

Alton and Dick shot two or three red squirrels along the carry-path, for bait. When they had rigged out their tackle the Indians took them in the canoes and paddled them slowly around the sedgy shores of the lake.

They had scarcely moved out from the little cove at the landing-place, when a ravenous old jack darted at Dick's spoon, was hooked, and leaped high out of water. It was allowed to tire itself out in this way for a few minutes, and then was hauled bodily into the canoe, where it made itself a very lively fellow-passenger, until Joe adroitly dislocated its neck.

Professor William soon hooked another, and before he had finished playing it, Alton had a third on his grapple. These three weighed not far from four pounds apiece. But in a cove near the south end of the lake Alton caught one weighing fully seven pounds, and later, while they were in the reedy arm of water, near the outlet into Lake Emma, Professor William hooked one still heavier. Altogether, while trolling about two hours, they caught seventeen, but brought home to camp only eight, which weighed thirty-four pounds, and were pronounced by John and Joe to be an average lot of "jacks."

Wen-a-goosh at once proceeded to dress and fry the largest for dinner, and it amply sufficed for eleven persons, with a large surplus for "manners."

About a mile to the southward of our camp there is a rugged headland, fronting on South Bay, sparsely covered with pines. As we sat discussing the comparative merits of trout and jack-fish, Alton suddenly discovered, or thought that he discovered, an object moving among the pines, near the summit of this distant eminence.

"How big was it?" Lucia asked.

"Oh, it was large; large as a horse. I think 'twas an elk," replied Alton, going hastily to the tent for his gun. "Come on, Dick!" he called out. "Let's go down there. We may get that elk."

Thea failed to discern anything through the glass.

"What do you think, John?" asked Professor William. "Is it likely that they saw an elk there?"

"Oh, I don't know. Elk are coming round this lake now, they say. I don't much think it was an elk," he added. "Maybe bear."

"No," cried Alton, coming out with his gun and cartridge belt. "It had long legs. It stepped off like a colt. Come on, Dick."

They set off, and were soon lost to sight among the pines.

"I can see two great birds flying around the top of the hill," said Thea. "There, one of them has alighted on a dry pine. I think it is an eagle. One is larger than the other."

"Let's go down there, too," said Lucia, "and see what we can discover."

"I'm a little afraid of bears," replied Thea. They finally arranged it to have John follow after them, at no great distance, with Professor William's gun. They were seized with the whim to go exploring by themselves, yet desired to have aid within call, in case they got frightened or found game.

The girls had been gone from camp fifteen minutes, perhaps, when those who had remained behind heard a scream—a cry of genuine alarm—in the direction of the hill; then, after a few moments, the report of a gun.

"Oh, what can be the matter!" cried Teacher Sarah. "Do let's go see!"

Lee, who had lain down for a nap, roused up; and all three of them, with Joe, set off in great haste in the direction of the sounds. Wen-a-goosh and Wap-a-sheesh had gone back to Lake Hannah, to pitch the bottoms of the canoes. Hurrying forward through the pines among the bushy ledges, the relief party proceeded for half a mile or more, and arrived at the base of the high hill, without discovering anything of the girls or of John. But at this point they were suddenly met by Alton, who came rushing down the hillside. He, too, had heard the scream.

They now hailed several times, but could elicit no response. Alton told them that Dick had separated from him shortly after leaving camp, as it was thought best to climb the hill from different points.

The relief party now climbed to the top of the hill and, from that elevated position, shouted again and again, without receiving a reply.

At length they surmised that in coming out to the hill they must have passed John and the girls; so after listening and shouting awhile longer, all five went back, half believing that the objects of their solicitude had already returned to camp.

But no one was stirring about the tents, and it was now plain that the girls and John must have gone far from the place where the scream was heard.

Joe was sent to search the hill on the south side, and Alton went with him.

It was six o'clock in the evening before anything was heard or seen of any member of either party. At that hour John, Joe, Alton and the two girls came to the camp, evidently much fatigued. John was carrying a dead wild-cat, or lynx.

Thea told the story of the tramp.

"Lucia and I were going along through the pines, with John a little way behind us, when we came upon that ugly creature amongst the bushes.

"It had a great bird in its mouth—a heron, John says—and it jumped up and growled. It looked so savage that I cried out. Alton says I screamed. With that it ran off a few steps, then stopped and growled again.

"John came up and fired at it, but he missed it, and it ran off again. So we kept following it for more than two hours, before John finally shot it. Then we rested a long time, for we were completely tired out, before starting to return. I assure you it was a long walk back to camp! I am tired half to death."

Such was the burden of her narrative.

"But where's Dick?" said Professor William. "Have you seen nothing of him?"

"Indeed I haven't," replied Alton.

We were already planning another search expedition for the benefit of Dick, when he was espied coming along the carry-path. He, too, looked tired, as he came up to the fire.

"You are a pretty fellow to go round a hill with," exclaimed Alton. "Let's hear now what *you're* got to say for yourself. Thea has made her report."

Dick examined the wild-cat for a moment. "I have had a singular adventure with a bear," said he.

"With a bear!" all exclaimed, in chorus.

"Yes, with a bear," replied Dick, feeling the ears of the defunct wild-cat.

"Why, where did you come across a bear?" said Alton, while the rest cast in expectant glances.

"I should rather say that the bear came across me," said Dick. "The first I saw of him, at any rate, he was contemplating me thoughtfully from amongst a patch of blueberry bushes."

"How far off?" exclaimed Alton.

"Well, not far; not more than fifty feet, I think."

"Humph; did you fire at him?" cried Alton.

"No, I didn't," said Dick, shortly.

"I'll bet he ran!" exclaimed Lucia. "Did you, Dick?"

"No, I didn't," replied Dick again.

"Well, what did you do, then?" shouted Alton.

"I didn't do anything," Dick answered.

"But what did the bear do?" cried Lee.

"He didn't do anything either, at first. He appeared to have his mouth full of blueberries, and he munched slowly and swallowed,—as if they tasted good."

"Sensible bear," remarked Professor William, quietly.

"Yes; he looked quite sensible, and not at all embarrassed," said Dick.

"Humph!" ejaculated Alton. "Did anything else happen? Why didn't you shoot?"

"Well, I had in only a cartridge of light shot, and the bear looked so calm and self-possessed that I didn't like to fluster him," replied Dick.

"That was thoughtfulness on your part," remarked Lucia.

"But for goodness' sake!" cried Thea, who had grown somewhat excited, "how did it end? What did you do? What did the bear do at last?"

Dick appeared to have grown weary of being quizzed. "If you must know," said he, with a fleeting gleam of mischief in his eye, "I suppose I can tell you."

"Well, tell then. What *did* he do?" cried both girls.

"After a time he rose slowly, cleared his throat of berries and *said*, 'Please, sir, won't you give me a black-fly net just like that one you've got on?'"

"Oho! what a yarn! You never saw a bear at all!" cried Alton.

"As you please," said Dick, wearily, going to the tent with his gun.

The others pursued him with shouts of ridicule.

"He saw a bear and he has been up a tree all the afternoon!" cried Lucia. "O Dick, what a hunter you are!"

"As you like," said Dick, and that was all the reply he would make.

Neither ridicule nor coaxing has ever drawn a more explicit account of his adventure from him.

John and Wen-a-goosh prepared a late supper, in which jack-fish, broiled, again figured largely.

"What do you all say this evening?" questioned Professor William, as we were about retiring to the tents. "Have we had fishing and hunting enough for one year?"

"Oh, no; I would like a month more," said Alton.

"But our cabinet of minerals, our amethyst and silver specimens to carry home; is it not time we were thinking of them?"

"I suppose it is," said Dick.

"We want to collect a lot of fine specimens, you know, and we wish particularly to visit the amethyst district near Port Arthur," continued Professor William. "I think that we had better set off for Red Rock in the morning, on our way to Port Arthur, to go amethyst hunting."

In this opinion all concurred.

On Lake Hannah.

For the Companion.

A CAUCUS IN BERLIN.

As you enter one of the caucus halls, or *Wahlsammlung Saal*, in Berlin, it is at first sight not unlike any of the beer-halls one finds by the hundreds on the better streets of the city. On each table lie circulars, which set forth the "platform" of the particular party assembled there, praise the gracious leniency of the Emperor in allowing the meeting to be held, and appeal to all thoughtful men to vote for this or that candidate.

Such was one of the *Freisinnige Partei's* rooms in February, 1890, in Berlin, about half an hour before the time set for the meeting to be held, when half a dozen young Americans entered and seated themselves at one of the many tables.

Gradually the large hall filled; table after table was taken by groups of Germans who straightway began to drink beer, smoke bad cigars, and read the circulars. They belonged in general to that part of the Liberal party in Germany known as the *Freisinnige*, and were the most radical thinkers, with the exception of the Social-Democrats.

There had been much talk of late that these two parties were going to join forces, to defeat the *Centrums;* but the more moderate Liberals hotly opposed any suspicion of such an alliance. Consequently when a party of long-haired, slouch-hatted individuals made their appearance—evidently by their dress Social-Democrats—there was much movement and audible comment as to what this meant.

On the platform sat Professor Virchow,—the famous specialist of pathology at the Berlin University, and late member for this district of Berlin to the Reichstag,—a number of reporters, the presiding officer, each with his glass of beer, and at the other end of the platform two lieutenants of police, detailed here, as everywhere, to keep order and close the meeting whenever they saw fit.

After a few introductory remarks by the chairman,—including again numerous references to the leniency of the Emperor in allowing the meeting to be held,—Professor Virchow arose and spoke for an hour on what the principles of the party should be during the coming three years.

When he had finished, the discussion was thrown open, and then began the interesting part of the meeting for the Americans.

It had been an extremely peculiar sight to them to see these men electing representatives to govern

Digitized by Google

them, all the time knowing that this caucus was "graciously permitted" by the supreme authority of the land; that the men there could say nothing against that supreme authority; that nothing could be proposed that was hostile to the general policy at present followed by the Emperor; and that if any of these rules should be broken, the meeting would simply be closed and they sent home on short notice.

In a Berlin Caucus.

However, the discussion began by a short speech of an old man on the subject of the Church. He had his children to educate, he maintained, and he wanted them to be governed and taught by Protestants, and not by a lot of "skulking Catholics"—this last referring to the Catholic, or *Centrum* party, and to some suspicion that Virchow had Catholic tendencies.

The remark caused a commotion. Every one rattled his glass, cries of "Put him out!" arose, and the presiding officer did his best to restore order; but it was the action of the municipal officer, who rose on the part of the police, that finally brought the meeting to quiet.

When all was again in order, and the thick clouds of smoke began to move slowly towards the ceiling once more, one of the group of Social-Democrats, who had taken their seats in the middle of the room, gave his name and address—as each and every speaker was obliged to do—and stated that they would be serving their best interests if they joined forces and voted in a body against the *Centrum* party.

This was the one thing many had feared might occur. Speaker after speaker arose, often being interrupted and reminded that in his excitement he had omitted to give his name and address, and maintained in heated terms that this was heresy, and that the Social-Democrats ought to be ejected from the door—or window, as some suggested.

It was quite evident who the Social-Democrats were, and when finally they grouped themselves into a pugilistic-looking squad, it seemed probable that some exciting scene might occur, unless the two police officers should interfere.

At this point some one in a distant corner arose and asked to be allowed to question Professor Virchow a moment. The chairman could scarcely see the man on account of the thick clouds of smoke; but consent was given.

The speaker astounded the entire company into silence by demanding, in a loud voice, whether Professor Virchow accepted the Darwinian theory or not. What that had to do with this meeting no one knew. The sequel showed. It appeared that Virchow had attended recently a scientific congress in South Germany, and had spoken there somewhat doubtfully of the theory of evolution.

The speaker wished now to prove that on this account Virchow was unfit for nomination, because he was unsound and a "crank." And he ended his speech by the statement that they did not want any "flannel-mouthed talker" as their representative in the Reichstag. Such was the phrase, literally translated from the German.

The venerable white-haired professor sitting on the platform looked at his colleagues in amazement, and a wild uproar began again, interspersed with bursts of laughter.

This time the chairman made greater efforts to have quiet, and when order was again restored he spoke strongly against such language. The man was prevailed upon to withdraw his epithet, and Professor Virchow remarked with a smile that as it was rather out of the field of the present meeting to discuss the Darwinian theory, he would be glad to receive his "honored friend" at his home at nine the next morning, and give him a detailed statement of his views on the subject. And so the meeting went on.

The noticeable things to the Americans were the hard class feeling, the religious antipathies, and the peculiar spectacle of a university professor of pathology standing as candidate for the Reichstag.

Not that a professor should not be a representative of his people in the great legislative house of the government, but because the average representative in America was anything but a college professor.

During the whole meeting these distinctions were clearly marked, and over and above all was the peculiar feeling that these men were electing representatives to make laws for them under the sufferance of a personal authority stronger than the laws themselves—something, in other words, utterly inconceivable to an American citizen.

Yet it was a privilege for which they all strove, and it suggested forcibly what political rights these men must have had in the past to make them consider their present ones valuable and efficacious.

At ten o'clock the meeting was over, Virchow again nominated, and the electors moving away in groups from the close, badly-ventilated beer-hall toward their homes. J. H. SEARS.

THE TIDAL WAVE.

When Doubt sweeps like a tidal wave
The ancient strand where Faith has trod,
Then from the furthest ocean-cave
Comes back a wondrous echo,—God!

WILLIAM H. HAYNE.

ENGLISH EDUCATION.

The session of the British Parliament which came to an end on August Sixth was chiefly notable for two measures of large importance.

One of these was the Irish Land Purchase Act, by which one hundred and sixty-five million dollars of national money is to be advanced, to enable the tenants of Irish land to become its owners. The main features of the act have recently been described in *The Companion*.

The other, which was introduced on June Eighth and became a law in the last days of the session, is called the "Free Education Bill." This title is a somewhat misleading one, as the bill by no means establishes universal free education.

Its main feature is to increase greatly the number of English and Welsh children to whom education is offered free.

The first great education act in England was passed twenty-one years ago. This measure had two main purposes: The creation, in School Boards, of machinery which should be used in establishing schools in every locality throughout England and Wales, so that every child might have the opportunity of an elementary education; and the making it compulsory on every child between certain limits of age to attend school.

But under this system parents have always been obliged to pay fees, different amounts in different places, for the schooling of their children. The schools have never been "free," in the sense that they are so in the United States.

The law just passed, however, is in the direction of free schooling, though it does not establish it universally.

By its provisions a large sum of public money is to be devoted to paying a certain portion of the fees now paid by parents for the education of their children. About ten millions of dollars is to be so applied.

The government will thus pay a fee of ten shillings for each scholar in the elementary schools who is now by law compelled to attend school; that is, who is between the ages of five and fourteen. This is estimated to amount, in the average, to a weekly payment of threepence for each scholar.

In all English schools, therefore, where at present the parent pays a fee of only ten shillings or less, the schooling will become by the new act absolutely free. In such schools as charge a higher fee than ten shillings, the parent will pay the excess of the fee now charged over ten shillings. By this law, it is thought that more than two-thirds of the elementary schools in England and Wales will become, as are ours in this country, free.

At the same time the fee to be paid for children under five years of age is established at twopence a week.

Besides the "Board" or national schools, there are in England a large number of "voluntary" schools, like our private schools, which are mostly denominational. The new act applies to them also, aiding the parents to the same extent in the payment of fees. The grant made from the public funds may be either accepted or rejected by the Board and the voluntary schools.

The money is to be paid over by the government to the schools which accept the grant every three months, and the operation of the act begins with the beginning of the new school year, in September.

While it does not, as the title implies that it does, give a free education to every English child, and while it is therefore in this respect behind the American school system, the new law is a large step in advance in the promotion of general intelligence, and the Tory ministry deserves credit for placing it on the statute book.

TO-MORROW.

To-morrow you will live, you always cry;
In what country does this morrow lie
That 'tis so mighty long ere it arrive?
Beyond the Indies does this morrow live?
'Tis so far fetched, this morrow, that I fear
'Twill be both very old and very dear.

—*Martial.*

LABOR DAY.

Labor Day sets people thinking, if it does no other good. On that festive occasion the orators tell us that labor is a very fine and dignified thing, and every one applauds the sentiment; though at the same time most people are trying to get their affairs into such a condition that they will not have to labor, except when they feel like it, and then not very much.

Few men would labor if they were not obliged to do so. Every one likes to rest from labor. Of all the sounds that salute the ear during a working day, the one that gives the most satisfaction to the greatest number is the six o'clock whistle. And they like the sound even more when the shriek comes at five o'clock.

Yet when men cannot get work they are of all creatures the most miserable, as we see during a long strike, and as we heard a year or two ago, when the prisoners in Sing Sing were forbidden to labor.

Scarcely any torture could be invented that would give more pain than those poor men suffered who were confined in small, close rooms twenty-two hours a day, with nothing to do. A harrowing cry was heard from every man who could get a chance to utter it: "Give us work! Give us any kind of work; the hardest, the most loathsome. Anything but this deadly idleness!"

On the other hand, who can wonder that working men, men who labor nine or ten hours a day with their hands and heads, should envy the lot of the idlers they sometimes catch a glimpse of, who look so pleasant and happy as they sit fanning themselves on the broad piazza of a summer hotel?

But this appearance of peace and content conveys an erroneous impression to the on-looker. Observant persons, who witness the daily lives of our small idle class through the year, well know that they are not more contented or cheerful or good-tempered than men and women who do a fair day's work every working day of their lives.

Unless a person of leisure has unusual qualities of mind and disposition, he has a poor, dull time, and can only escape his cheerless lot by going to work at something.

One extraordinarily hot day this summer, four carpenters were shingling a roof. The employer, when the thermometer stood at ninety-seven in the shade, which almost prostrated him, was so alarmed for them that he left his cool house and went to the building upon which they were working to get them to change to indoor work until the weather was cooler.

He found them hammering away merrily, scarcely aware that anything was the matter with the weather. They met his sympathizing remarks with laughter, and invited him to come up and enjoy the breeze. Up there on the roof they were having half a gale of wind, while he was panting for breath on the ground.

Too much labor, we grant, is a blighting curse. Multitudes of men and women, and children too, in various parts of the world, are still suffering from the inordinate and unnecessary length of their working day.

A few weeks ago all the omnibus-drivers in London struck for a shorter day; and what was the shorter day they asked for? Twelve hours!

And what do we mean by twelve hours' labor a day? The driver who actually works on the box twelve hours generally spends two hours more in going to and from his work, and in taking his hurried meals. In other words, he leaves his bed at five in the morning and finishes his day's work at eight at night, leaving him about one hour of ease and freedom by way of reward for his day's work. But these men asked for twelve hours, for they had been working fourteen and sixteen hours.

Punch made a driver say, "I finish my last trip at midnight, and have the rest of the evening to myself."

The workingmen of the United States are much more fortunate than those of Europe, but they, too, have their hardships, and they make a point of airing their grievances on Labor Day. No one can complain if they do so. Perfect content, it has been said, is a good thing for the individual, but a bad thing for the race.

It is not a grievance, however, to have to work, or to be what is called a "workman." The Americans are a nation of workmen.

Labor, like all other blessings, is turned into a curse by excess, and the same is true of leisure.

ON THE CARS.

Out from the doors of a great city church streamed hundreds of bright-faced boys and girls. The streets sparkled, the stations swarmed with them. From every jacket and dress waist fluttered a bright ribbon, bearing some magic initials which stamped the wearer as a young conventioner. Three girls, pretty and well-dressed, entered a short train which passed through a backwoods district.

Every seat had at least one occupant, most of them men, so a lady hastily emptied of its parcels the seat beside her. But the girls were already cared for. Two "drummers" had risen, a seat was turned, and the girls had bowed their thanks.

They made a pretty picture in the dusty car and seemed to create a new atmosphere. Men straightened themselves in their seats, women looked less weary, even the children ceased their worrying to fasten their eyes upon the interesting trio. The girls held the situation in their well-gloved hands.

Presently one of them began to hum a hymn, in which the others joined; and very soon three new song-books were opened. Gradually the tones grew louder and words were added; the alto came out strong on the accidentals, the tenor struck falsetto, the soprano opened her mouth wider and wider.

The lady behind looked first surprised, then pained. Men dropped their newspapers and turned to stare, or winked at one another. The brakeman brushed rudely against the shoulder of the eldest. A sleeping baby awoke and cried.

It was all such a mistake. The girls meant nothing wrong. They merely forgot that they were not in that great chorus of eight hundred voices, among persons of their own age, and all bound together by one tie.

They would have been shocked had they known how they had fallen in the estimation of even the most rustic of those passengers. They had voluntarily descended from the high pedestal upon which they had been placed.

"Remember that the credit of the college rests with you," was always the parting injunction of one of America's finest educators, as her girls started homeward at vacation time. "I like to think that our school is never advertised on the cars. That would be more objectionable in my eyes than Silas Lapham's Mineral Paint signs decorating the landscape."

The comparison is suggestive.

Have you not heard girls in the cars tell more than you cared to hear of the history of their relatives and friends?

Have you not heard their laughter above the puffing of the locomotive?

Nice girls, too. Girls, who, like the singing trio, simply forget that they are on the public highway, and do not think how their high spirits and bubbling vitality will appear to those around them.

In our country, girls and women often travel alone, and they have only themselves to thank if they are subjected to annoyance from fellow-travellers. If they meet with disrespect it is only because they harbor it in themselves.

SCHOOLS REOPENING.

As the schools are opening again, it is but natural that our boys and girls should turn their thoughts toward the business of their young lives, which is, to prepare for taking their part in carrying on the world's business.

The time is forever past when there could be a doubt as to the indispensableness of mental training for all. If any one indulges such a doubt, a ride of half a mile in an electric car, or crossing the Hudson River in a ferry-boat, ought to be sufficient to dispel it.

It must be evident even to the youngest inmate of a school that, as the world now is, the person without knowledge must take a very low place indeed in the industrial scale. He can be nothing but a hopeless drudge, unable even to handle the tools which a workman of high grade is obliged to use.

It is a mistake to say, as is so often said, that a modern workman is but the thoughtless servant of the machine he attends. To be efficient, he must understand his machine, which is usually a thing involving several important principles and many ingenious devices. He must understand those principles; he must be able to keep in order those devices. The machine merely saves him much rude, unprofitable labor, and renders his work an intellectual pursuit.

One might profitably pass days and weeks examining one of the large ocean steamers. Such a vessel contains a very large part of all that man has done and discovered since he emerged from the savage condition.

Every trade carried on in civilized life is represented, from the simplest to the most complex. All the learned professions contributed to her construction, equipment or navigation. The fine arts are seen in her decoration, and the composers of music have placed upon the piano and the organ in her cabin a selection from their productions.

Whatever men of thought have evolved, from Aristotle to Faraday; all that mechanics have invented, from the most ancient of the Chinese devices to the recent deposits in our Patent Office, we see combined in the beautiful ship, cut of the deep, cavernous hold of which merchandise is coming up at the rate of tons in a minute.

Let no student forget, as he or she hears the school-bell ring, that, in the days near at hand, all the work of man on earth is going to be done in the same majestic, magnificent way, and that they who are to bear an honorable part in that work must rise to the height of those superb vessels; must possess knowledge, trained intelligence,

Digitized by Google

minds habitually thoughtful, and bodies uncontaminated. In those ships the touch of the tranquil and virtuous hand is everywhere seen.

The day of the ignoramus is over forever! There is no longer any room for him in civilized lands, except in the kinds of work that no one likes to do; and even from them he is sure to be driven at last.

The men who empty drains and gather offal are learning to do it in a high, clean, intelligent way, using implements that make the work almost agreeable, and rendering their trade an important part of the system by which the fertility of the earth is kept up.

The school-bell invites the future masters of the world. The great point is to *understand* the matters taught. Never mind so much about getting the highest rank, but go for the main thing, which is to comprehend clearly the principles that underlie the triumphant industries of the modern world.

HIS WAY.

An incident that is narrated of General McClellan sheds light on the question often asked: Why did his soldiers love him so dearly?

When the Army of the Potomac left Harrison Landing, it marched to Newport News, along the north bank of the James River. The advance division began its march early in the morning of August Fifteenth; but the rear division did not move out of camp until four o'clock in the afternoon of the same day.

Just at dusk a creek was reached. It must be crossed, according to Southern custom, by fording, or by a single log by the roadside. The soldiers, disliking to fill their shoes with water, were trying to cross on this single log, which of course caused an obstruction to those behind, and really put the rear of the army in danger.

Soon several officers rode up and took in the situation. There was need of more haste. One of the officers called out:

"Wade right through, my men; wade right through."

Some surly fellow from the ranks growled out:

"Wade through yourself, and see how *you* like it."

No sooner had he spoken than the officer dismounted and waded through the creek. It was then discovered that the officer was General George B. McClellan.

The soldiers gave him a hearty cheer, plunged into the creek, and afterward the point was passed more rapidly four abreast.

The general might have reprimanded the soldier—indeed, he might have had him arrested and dealt with severely. But under the circumstances he did just the right thing,—he went where he asked his men to go; and his men were glad to go where he led.

PROMISING TOO MUCH.

The courts in many of the States are now engaged with suits growing out of the failure of numerous "investment" and "endowment" associations to keep their promises.

These "fraternities," as many of them called themselves, advertised to pay one hundred dollars in six months, one year, or more, for an investment of only a small part of that sum. They depended largely upon the failure of many members to meet their assessments for the money to satisfy the demands of those who did pay.

It is easy to see that if all the members continued to pay the assessments, the "bonds" first falling due might be paid, but there would be little or nothing left for the later comers.

That is what happened. One or two series of bonds having been paid, there was no money left, and the concerns were bankrupt.

It cannot be too deeply impressed upon every one that there are now very few safe investments in this country that will yield more than five per cent. interest. The company which promises to pay more is almost invariably engaged in some business that involves serious risk to the capital. Railroad bonds are not the surest investment, and yet at present prices, which are low, one can hardly get more than five per cent. upon the money invested in the best of them.

One may take it as a general rule to which there is no exception, that any fraternity or association, under whatever name, that undertakes to invest your money and return you more than five per cent. is surely a swindle, and will be known as such at no very distant day.

THE GROTTO OF CERVANTES.

Within a few years the Spanish Government has placed a commemorative tablet at the entrance of the grotto where Cervantes, the author of "Don Quixote," and his companions in slavery hid themselves. It is on the side of the hill of Hamma, about three miles south of Algiers, in a picturesque situation and surrounded by an impenetrable thicket.

Cervantes was taken prisoner in 1575 by Barbary corsairs, and fell into the hands of the renegade Albanian, Déli Mami. Cervantes and his companions escaped from Déli Mami, but could not escape from the country. A brother of Cervantes was ransomed in 1577, and promised the captives to send a frigate from Valencia or the Balearic Isles, which should touch at a point of the shore agreed upon, and rescue them by force or stratagem.

The place where they took refuge was near the sea-shore. A gardener named Juan, under the direction of Cervantes, secretly cut out a cave, in which the fifteen Christian prisoners hid themselves. Juan watched the neighborhood and allowed no one to approach the cavern, and another slave brought food to the captives, who dared leave their hiding-place only at night.

After eight days, during which Cervantes watched the sea, he saw the frigate which had come to rescue them. That evening the frigate approached the land, but fishermen gave the alarm, and so many people assembled that the captain was obliged to go to sea again. He made a second attempt a little later but unfortunately was captured.

The day after the frigate was taken the captives were betrayed. Cervantes was sent to the convicts' prison, and a little later, just as he was about to be sent to Constantinople, where the possibility of rescue would be lost forever, he was ransomed.

STRANGE RIM TO THE SEA.

Humboldt used to tell of the charm that the curious shapes of the Caspian Sea, the Black Sea, and other geographical features represented in maps, exercised over his imagination, breeding in him a desire to travel over the globe and see its strange sights.

That great bend in the coast of Africa which makes room for the Gulf of Guinea is another of the singular formations that strike the eye and excite the fancy—in this case with glowing pictures of the beautiful Gold Coast and the wonders of land and sea under the equator.

An account of recent explorations on this part of the African coast by Alvan Millson, an Englishman, adds to its interest, and calls attention to one of these great freaks of nature that science is able to explain but not to foresee. For five hundred miles along the Bight of Benin there is "an intricate chain of water-ways," lying just at the edge of the sea.

Mr. Millson says that "In many places these narrow and brimming channels are separated from the onslaught of the Atlantic rollers by no more than five or six level yards of shifting sand; the spray from the ocean drifts over them, and the roar of the surf is heard by the native as he glides over their calm surface in his fragile canoe."

There are hundreds of miles of similar lagoons bordering the Gulf of Guinea farther to the west. Many rapid rivers pour into them from the uplands behind, bringing down vast quantities of sand and mud.

At the same time the "Guinea current," which resembles our Gulf Stream, brings another endless supply of sand, worn from the headlands toward the west, and this sand, heaped up at the ocean's edge, arrests the rivers just where they are about to empty into the sea, and spreads them out into a great system of deltas.

The resistless strength of the narrow sand barriers is attributed principally to the vast quantities of papyrus and water grass brought down in huge floating islands by the rivers, which take root and flourish in the sand. Only at rare intervals can a passage-way be found through the sand. And so on this singular coast the ocean and the rivers unite to build up and perpetuate a barrier between them.

AMERICAN GEOGRAPHY.

The confusion which foreigners make of our geography is well illustrated by a German poem which appeared several years ago. The poet, with utter unconcern about locations and distances, makes such amusing blunders that its literary value is entirely lost. The argument is something as follows:

Under a palm-tree on the shore of Lake Erie the hero is devoured by an alligator. The heroine, hearing of his fate, rushes from her home in the Everglades of Florida on the banks of Lake Superior, captures the alligator, extracts the hero's body and buries it with magnificent pomp in Greenwood, in the city of New York in the State of St. Louis.

Another German, who really wished to know the geography of this country, fell into the mistake so common with Europeans, of not appreciating the rather large scale on which Nature has dealt with us in the matter of area of land and water.

Near Concord, Mass., is Walden Pond, the little body of water near which Thoreau lived alone in a hut for about two years. His most famous book is entitled "Walden." It purports to be an account of his life in the hut, and ranks with the masterpieces of American literature.

Not long ago a German professor, engaged in studies of America, received from Washington a large map of the continent. Soon afterward, in writing to an eminent American professor and historian, the German scholar said he had looked all over the map without finding Walden Pond. This seemed to him an amazing omission.

FRANKLY PLEASED.

"Hans Christian Andersen," said one who saw him often, "was the most charming egotist I ever knew." When the Danish Crown Prince brought home his Swedish bride, in the summer of 1869, a great assemblage of people stood in the streets of Copenhagen to see the royal couple pass.

In one group were several distinguished women and the great story-teller, Hans Christian Andersen. The women occupied front seats at the window, and received marked attention from the court dignitaries in the procession.

Some one in the company remarked that this particular window seemed to possess peculiar attractions.

"Oh, yes," said the aged poet, pleased and happy in his seat where he had been seen by nobody, "everybody knows me."

The quiet smile that went round the group had no trace of unkindness. His childish vanity was one of the amiable traits of the gentle old man. Everybody knew and loved it.

DIDN'T REMEMBER THE NAME.

At the time when Napoleon was the most prominent figure in Europe, one man at least was little impressed with his greatness. The conqueror's name actually slipped his mind, so slightly did his career concern the world that for the artist centred in his studio.

Edgar Quinet relates that when he went to Germany he visited the old sculptor, Dannecker.

"We talked," he says, "of art, and the sculptor was eloquent over his theories. Suddenly, wishing to fix a date, he stopped, reflected, and finally said:

"'I think it was in the time of that man,—what is his name? you know the man; the one who has won so many battles. I've forgotten the name. You must know it?'

"'Are you speaking of Napoleon?' I asked.

"'Yes, yes, that is it,' cried the artist, and went on with his interrupted statement without giving the incident a second thought."

A GREAT part of philosophy consists in knowing how to do without things. A horse, for example, enjoys his food best when he hasn't a bit in his mouth.

HOW TO CHOOSE A COLLEGE.

By President Merrill E. Gates, LL. D.,

Of Amherst College.

What do you wish to secure by a course of study at college? If your object is merely to form social ties with the largest possible number of the college men of your decade, the choice of a college becomes comparatively simple.

"Go with the crowd," and devote yourself to the social life of some institution which numbers its students by the thousand. The agglomerative tendency is strong among the young; and the large colleges, like the huge snowball, will grow larger by reason of their bulk.

Yet few thoughtful young men consciously decide in favor of a particular institution merely because of its numbers, and every sound college welcomes the question, "What good reasons are there why young men who go to a given college prefer that college to any other?"

In the light of this question, two large classes of institutions must at once disappear from the list of possibilities. You cannot afford to spend four years at a small college which does not maintain high standards of scholarship, which lacks strong, scholarly teachers, and is not equipped with libraries, apparatus or laboratories.

On the other hand, among the institutions which have throngs of students in attendance, if you are wise you will not select a college where the standards of scholarship are notoriously low, however rich it may be in buildings and endowment. You cannot afford to subject yourself to the relaxing, debilitating influence of an atmosphere without intellectual tone.

You want to study at a college where there is felt "in the air" the stimulating demand upon every man for the best there is in him, intellectually and morally, during every term of the course.

No fancied social advantages can make good the lack of intellectual tone and moral vigor in college life. Where these are wanting, great numbers serve only to "level down" more inevitably, more hopelessly to destroy manly aspiration and scholarly ambition.

The percentage of "waste" in time and effort, during the years spent at such a college, is greater than any thoughtful young man should tolerate.

Choose no college, large or small, to be your alma mater, unless you are satisfied that it has proved itself possessed of the power to make of its students scholarly men and manly scholars!

Neither numbers nor costly equipment can be taken as evidence of this life-giving, stimulating power in a college. The mere massing of students does not create scholarship.

Among institutions which are thorough in their work and are well equipped with a strong teaching force and ample libraries, apparatus and laboratories, is there a presumption that a young man will do best for himself by taking his college course at an institution where his class will be numbered by hundreds, rather than at a college which recognizes the value of limitation in numbers?

The prestige of great numbers, with many thoughtless people, is decisive. But many others see clearly that the highest values in education cannot be estimated in numbers, nor measured by dollars. It is an essential characteristic of all that is noblest in literature, in philosophy, in art, and in a liberal education, to refuse to lend itself to the gauge of money values, to escape numerical computation.

While we gratefully acknowledge the noble work and the inspiring history of certain of the largest colleges, we believe that in the nature of young manhood, and in the essential scope of a college education, there are strong reasons for preferring the well-equipped, scholarly college of limited numbers.

"The true test of civilization," says Emerson, "is not the census, nor the size of cities, nor the crops — but the kind of men the country turns out."

By this test, try the colleges you are comparing. See to it that the college you choose is one whose requirements for admission, whose standards of scholarship, whose moral tone, whose traditions and atmosphere as exemplified in its alumni and its undergraduates, are such as give it the right to inscribe over its portals the legend of the Greek temple, and in character and in scholarly attainment to demand of every man who comes to its halls: "Enter good; go forth better!"

For the boy who at eighteen selects his college, for the parents who select with him or for him, of more importance than any other consideration is the answer to this question: What is the history, what are the traditions, the inherited associations of the college? Does it make scholars? Does it make men?

This scholarly and inspiring spirit has never been the exclusive possession of the richest colleges, nor has its awakening or its perpetuation at any centre of learning depended upon numbers.

Harvard ranked as a small training college and had no cabinets illustrative of science, when she trained Emerson and Holmes and Lowell, among all her gifted sons still her triple crown of glory. Bowdoin had no expensive buildings upon her modest campus when Hawthorne and Longfellow there drank at the celestial fount. Amherst among her purple hills boasted no wealth of appliances or endowment when she printed the roll of undergraduates rendered forever illustrious by the names of Richard S. Storrs, Henry Ward Beecher and Roswell D. Hitchcock.

Presidents Woolsey and Wayland and Mark Hopkins and Martin B. Anderson were trained for their noble and ennobling work in colleges which lacked rich appliances and thronging numbers.

Success in college education is not a question of buildings and apparatus, nor of throngs of students; it is not a question of the number of facts implanted in the memory; it is a question of powers awakened and developed, of discipline imparted, of ennobling outlook and abiding impulse given.

What thought, what purpose dominates an institution? What men in its teaching corps embody and enforce these ideas?

Wealth of architecture, scientific collections and spacious laboratories and even books may utterly fail of their purpose. But right thinking, enforced by close contact with earnest, manly, scholarly men—this never fails to make a college a power!

When the tests of "numbers" and "popularity" are urged, is it not well to try the college you may have in mind by another test?

Do the young men who are graduated from it give evidence that they have heard the "still, small voice" which leads the loyal servants of Truth, each man for himself, to say, "I feel the thrill that comes from the touch of the great spirits who have reigned in literature, in science, in philosophy, and in life; I have seen something of what they saw; I have learned to work; I am ready to bow my neck lovingly to that yoke of willing service for others' good, which he must always wear who serves well his fellow-men?"

Does the college toward which you are looking train the intellect to clear, steady work, subject to the will? Does it train the desires and their master, the will, to subject themselves to the government of conscience? Does it subordinate body and intellect to moral law and order?

The higher education has not always done this. In place of the fermenting despair of nihilism, the reckless immoralities of atheism and the suicidal negations of agnosticism which have cursed liberally educated Europe, if we are to have here in America an influence strong, binding and beneficent in our social system, as the result of collegiate education, it must be, it can be, only by retaining in that system a clear faith in God, and by making prominent, as the highest aim of life, the service of God in serving the best interests of one's fellow-men.

The power to give this abiding impulse to students has never been limited to the larger colleges. On the contrary, the training given at the smaller colleges often seems to develop more fully manhood and power. Our smaller colleges can show among their alumni disproportionate numbers of the ablest, the most successful and the most scholarly men of our land.

When all just concessions have been made to the acknowledged advantages of certain large colleges, there are many considerations which have led and will still lead the great majority of the thoughtful people of our land to choose the education given at the well-equipped smaller colleges.

In the very nature of young manhood, and in the essential scope of college education, there are reasons for this choice.

At the college of limited numbers, the personality of every student can be respected as it should be. The intense importance of each man's life to himself need not be forgotten.

It is not necessary to deal with young men "in the mass." The strongest instructors of the college can know the students one by one, and can interest themselves in the fullest development of each man's powers, in the strengthening of each man's character. This is a consideration of the highest importance.

There is one form of growth and development for the tree which stands in close ranks among thousands of its kind in a dense forest, and a different and a much fuller growth for the same tree if it stands where it has more space and air, with the sunshine falling full upon it, where it stands by virtue of its own root and fibre, and not because it is shoulder to shoulder with a too dense mass of similar growths.

This is one reason why so many men of power have come from other than our largest colleges. Crowded "institution life" of all kinds is unwholesome. To have free breathing-room is a blessing! This holds in the intellectual and moral life as well as in physical hygiene. It is possible to have a "youngness" that is overwhelming and not healthful, where young men are too densely massed.

What is to leaven this mass of immaturity?

Valuable as is that influence in a course of liberal study which comes from a young man's fellow-students, the best results are attained where the number of strong men, of intellectually and morally dominant personalities, in the teaching force, is not too small in proportion to the number of students.

Where this is the case, too much of the life and energy of the faculty is consumed in merely "running the machinery." The hundreds of young men each year admitted come to be regarded merely as so much "raw material" to be put through certain mechanical processes, without reference to individual characteristics.

The law of the "survival of the fittest" is left to work out its results; and college life goes on without reference to the students' moral condition and spiritual needs, without help from friendly personal intercourse between the aspiring student and the strong instructor.

At those of our better colleges where the classes are large, a growing appreciation of the danger of massing students is leading to the breaking up of classes into smaller groups, and the assignment of each such group to a member of the Faculty for advice, direction, and as much as possible of personal contact.

This is a laudable effort on the part of larger colleges to insure to their students certain of the clearly recognized advantages of the smaller colleges.

At the smaller well-equipped colleges students need not be experimented upon for the first year or two by inexperienced tutors, who treat a tutorship as one more college honor, to be selfishly won and lightly tossed aside, with no study of the art of teaching and no appreciation of the noble scope of a work for which they have neither fitness nor vocation.

The wish to avoid the changing tutors of the first year or two, to be able to study from the beginning under the direction of full professors, ripe scholars of established reputation, has often taken a strong man to a smaller college.

Entrapped.

Personal contact between scholarly professors and all the students of each class is a marked advantage. From hand to hand the lamp of learning has been passed down the ages. Such personal friendship as often exists between professors and students at the smaller colleges has been an inspiration to many young men, often changing the entire course of a young man's life.

In that awakening consciousness of new powers and capacities which attends the young collegian through these formative years, to touch daily strong men and ripe scholars, to receive from them the friendly touch of a strong personality interested in each student personally, has been the beginning of a high and earnest intellectual and spiritual life for many men.

In such intimate relations with their instructors, hardly possible where the members of a class are counted by the hundreds, the students of the smaller colleges have often found an influence stronger and more helpful than the impetus of numbers.

Lower standards for all expenditures at the smaller colleges make it possible for the young man of restricted income to practise economy without feeling himself at a heavy disadvantage.

The college which is not so "popular" as to attract in large numbers the sons of families which have no idea above wealth and fashion, in avoiding the controlling social influence of young men who seek a college course only that they may make of it four years of fast club life, escapes a large percentage of intellectual "waste," and grave moral danger.

In securing for a student on leaving college an opportunity to prove his worth in an advantageous position, it is an open question whether the personal interest of your friends in the Faculty of a small college will not be of more value to you than would be "the name of graduating" at a larger institution, an advantage usually overrated.

After you are once engaged in your life-work, it is what you are and what you do that will tell in your favor. The man who proves himself a "failure" will not be kept afloat by the name of his college. The man who succeeds will reflect honor on his college, large or small, and need not long ask to be judged by the names on his diploma.

"The power to think and to act successfully is the test of successful education." It is a question of the power you get, not of the name of your college.

Is not the fullest power developed in the largest proportion of the class, where the college class is large enough to insure stimulating intercourse with classmates of ability, the impetus that comes from generous friendships and noble rivalries, yet not so large that a man's personality is lost in the mass of men about him?

Does not the study of life in all organic forms teach us that, for the strongest action and the freest play of all-permeating life-powers, there is a limit of tension, a *norm* of bulk, for every organism, beyond which the most desirable results are lost, or at least are endangered?

For purposes of liberal education, as distinguished from professional or technical studies, does not true wisdom teach a certain limitation in numbers?

For the Companion.

ADVENTURE WITH CANNIBALS.

By Charles W. Kennedy,

Formerly Commander of White Star Steamship "Germanic."

At the end of August, 1850, I was on the island of Annatom, one of the New Hebrides group in the South Pacific Ocean, waiting an opportunity to return to Sydney, in Australia.

The opportunity could only come with the arrival of some ship by which I could take passage to that port. There was nothing for me to do but wait as patiently as I could until one should arrive.

A few weeks before, I had shipped as chief mate of the schooner *Red Rover*, at Sydney, and sailed for the New Hebrides to engage in the sandal-wood trade with the natives.

The ship was wrecked on the coast of one of the islands, and everything I possessed in the world then lay at the bottom of the ocean.

At last I had an opportunity to embark upon a small vessel, of about fifty tons, named the *Xantippe*, which was chiefly owned by Mr. John Patton, a wealthy Australian who was then largely interested in the trade in sandal-wood, and was living at Annatom.

Her captain was desirous of giving up his command; and I was engaged to take command of the *Xantippe*, with the privilege of buying the share of the former captain, and working for the payment, since I had no money.

The following day, for the first time in my life I went on board a ship as commander and part owner.

All desire to return to Australia had vanished. I turned my whole attention to the work before me.

Two days later I had taken on board a large quantity of trading goods, and we sailed for the island of Erromango, the scene of our late shipwreck, for a cargo of sandal-wood.

A new trading station had recently been established at Tanna, one of the same group of islands, and Mr. Patton, having business there, had decided to sail with me and land at that point.

After a run of thirty-five miles, we arrived at Port Resolution, at Tanna, and anchored a short distance from the land.

Mr. Patton and I were rowed ashore in a small boat by two of the sailors, one of whom, a native of Annatom, was to act as interpreter for me in obtaining a supply of yams for the ship. Several natives were waiting for us.

We sprang on shore, and while Mr. Patton went to the station, I proceeded to attend to the object of my visit.

While I stood trading with the natives, one of their number, who had remained in the background closely watching my movements, suddenly advanced toward my interpreter, and in a very earnest manner began talking rapidly to him, frequently looking at me. Several times he pointed toward the interior of the island, at the same time making signs and gestures.

My interpreter explained that the man was one of a tribe of natives living in the part of the island which he had designated. This tribe, he said, had accumulated a large stock of sandal-wood of the most valuable kind which they were anxious to sell; but, owing to the hostility of another tribe living between them and the sea-coast with whom they were at war, it was impossible to get the wood to the shore.

He urged me strongly to accompany him into the interior to see the wood, assuring me that I should be conducted there and back in perfect safety.

The native's manner was apparently so sincere that I decided to trust him, though I was aware of the treacherous character of the islanders.

I made an appointment to meet the man the next morning soon after sunrise, at the place where we were then standing.

On our way back to the schooner I told Mr. Patton what I had undertaken. He did not attempt to dissuade me from my purpose, beyond reminding me of the bloodthirsty nature of the islanders, and their horrible appetite for human flesh. But he advised me if, when morning came, I still persisted in my intention, to take extra precautions, and go well armed.

Before going to bed that night, I cleaned and loaded three six-shooters, besides sharpening a large knife that I always carried with me.

Before dawn the next day, I was up and dressed. My costume consisted of a thick felt coat and pantaloons, both garments being arrow-proof. A broad-brimmed slouched hat of the same material covered my head. By drawing it down closely over my ears, and turning up the collar of my coat, I could protect my neck and face from the arrows and wooden spears with which the natives were armed.

I placed in my belt two of my revolvers and my knife, and carried the third revolver in the right pocket of my coat, ready for an emergency. With eighteen shots, I believed that I stood a very fair chance against any number of savages.

After breakfast I went on shore, leaving orders with the mate to be on the alert and come to my assistance, should he hear the report of my pistol.

Awaiting my coming on the beach I found my guide. But he was not alone. With him was another native, whose appearance and manner did not in the least please me. But though I was annoyed at this unexpected addition to our party, I decided to go on.

Digitized by Google

I gave the signal for the natives to lead the way, and followed, keeping a short distance in the rear.

Thrusting both hands into my coat, I firmly grasped the pistol that lay in my right pocket, with the full determination to fire at the slightest indication of treachery.

For the first half-mile our road lay through a thick undergrowth of bushes about waist-high. The guides went steadily and silently on, following a footpath that had been trodden by the natives.

With my eyes fastened intently upon them, I did not closely observe where we were going, until suddenly we entered a thick forest of immense trees with an almost impenetrable growth of shrubs, through which a footpath had been cut.

With a stronger hold on my pistol, I kept on, keeping my gaze fastened upon them as well as the density of the foliage would permit.

We had proceeded in this way for almost a quarter of an hour, when, catching my foot in a small branch that lay in my path, I stumbled and almost fell to the ground.

Upon regaining my feet, I looked for my guides. They had disappeared as completely as if the earth had opened and swallowed them.

I shouted. Only the sound of my own voice broke the stillness. I held my breath and listened. All was as silent as the grave.

The suspicion which had haunted my mind since I first started from the shore now became a conviction. I realized that I had been decoyed into the dense forest, to be slaughtered and devoured by these hideous cannibals.

I turned to go back. I had proceeded but a few steps, when a shower of arrows, followed by a dozen wooden spears, came whizzing around me.

The thick growth of the forest served as a protection, and none of the missiles struck me. Looking in the direction from whence they came, I saw, but a short distance from me, a hideously painted figure crouching behind a large tree.

I raised my pistol and fired full at it.

The woods rang with frightful yells as the savage straightened himself up and then fell backward to the ground.

From amidst the brush and shrubs where they had lain concealed, a dozen naked creatures rushed toward me. I fired one shot after another in quick succession, until my revolver was emptied.

With screams of rage and cowardly fear they fell back, and again concealed themselves in the bush.

Drawing a second revolver from my belt, I pushed my way as rapidly as the thick undergrowth would permit, following the path that led out of the woods. I had gone but a short distance when another shower of arrows came flying through the trees. Some of the arrows stuck in my coat, while others just grazed my head.

This proved that the scoundrels were nearer, and furthermore, that they were not disposed to let me go so easily. I stopped and discharged two shots in the direction in which I supposed they lay concealed, for I saw nothing; and turning, ran wildly ahead.

As long as my ammunition held out and I could keep the savages at a distance, there was a chance of escape.

Their arrows, made of small reeds with a piece of hard wood sharpened and fastened at one end, were comparatively harmless. But their clubs and tomahawks were dangerous, and my great peril lay in coming to close quarters with them.

All at once my feet became entangled in a bough thrown across the path, and I fell at full length on my face. I believed then that I was lost.

Tearing myself from the bush, I rose on one knee, and saw, a few feet in advance of me, the savage who had decoyed me into this villainous trap—his club held high above his head, just ready to dash my brains out.

I threw myself back, raised my pistol, which even in my fall I had retained, and fired straight at his naked breast. He threw up his hands, staggered, and fell dead to the ground.

The yells of the savages were deafening as they discharged another flight of arrows.

My hat had fallen off, leaving my head and face exposed. I tried to protect them with my hand and arm, when an arrow struck me in the back of my neck, making an ugly, painful wound, and remained there. I tore it away and ran for my life, with a wild desire to gain the open ground at least.

Evidently I had killed but this one; for the savages ceased pursuing me, and gathered around their dead companion.

A ray of sunlight, glancing through the trees, fell across my path. Looking ahead, I saw that I was nearly out of the forest. This gave me hope and courage, and I rushed on.

In a moment or two I had left the woods behind; and soon I heard the dull roaring of the sea breaking on the shore.

No other sound broke the stillness, and I fancied myself safe. Just as I was congratulating myself on my fortunate escape, from out the scrub into which they had stealthily crept, five or six of the savages sprang up and blocked my passage.

It was evident that they imagined I had exhausted all my ammunition, for they came boldly toward me. I backed up against an old stump of a tree, my revolver concealed in my coat pocket, and waited for them to approach.

When they had come within a few yards of me, I took quick aim at one who appeared to be the leader and discharged my pistol. He fell; and I fired in rapid succession at two others of the party.

Screaming and howling, they left me, and carrying with them their dead and wounded, disappeared into the bush.

I followed the path leading to the shore. Coming out of the low bush, I heard the shouts of white men. I distinguished the voice of my mate calling my name. He had heard the last report of my pistol, and, with two of the sailors, was running to my assistance. We very soon reached the shore.

Early in the afternoon we hove anchor and set sail for Erromango. Turning to look at the island as it slowly faded in the distance, a shiver of horror swept over me, as the terrible fate that might have been mine rose vividly before me.

I had, however, learned a lesson in the character of the natives that stood me in good service for the remaining fourteen months that I was engaged in the sandal-wood trade.

For the Companion.

OWLS AND THEIR USES.

Fig. 1.

There is a popular belief that owls are exclusively birds of night and cannot see by day, or, if they see at all, that their vision is extremely limited. "As stupid as an owl" is the common saying; but doubtless the phrase refers rather to feebleness of vision in open daylight than to any supposed mental deficiency.

In truth, owls are not stupid, nor are they by any means blind by day. Even ornithologists have, I think, erred in assuming that most owls are exclusively nocturnal, though it has long been known that one species, the Hawk Owl, hunts only by day. Probably at night its vision is as defective as that of a hawk.

I am inclined to believe that even the Great Horned, Barn and little Screech Owls, which are perhaps as nocturnal as any, are endowed with by no means keen vision in the dark, and that they do most of their hunting by twilight and by moon or bright starlight.

True, it is possible to approach closely many of the owls in the daytime, as they sit dozing in their shady retreats, and not infrequently the smaller species may be caught in the hands. But the passiveness of the owls by day is the result more of sleepiness than of inability to see; and, once started in the daytime, and given a chance to rub open their drowsy eyes, so to speak, they are able to lead their would-be captors a lively chase.

If any one has ever been aroused from a deep sleep to face the broad daylight suddenly, he will appreciate the feelings of the winking, blinking owl, and be surprised no longer that under such circumstances it has suffered the unjust imputation of stupidity.

Small birds are greatly afraid of all the owl tribe. It is rare sport to come across an owl in a wood when a crowd of birds is mobbing it.

Perchance the inquisitive eyes of a chickadee first espy the robber, as he sits dozing after his night's carouse. The little bird's usual happy-go-lucky *chickadee* at once gives place to a vehement scolding cry, which speedily summons all birds within hearing, from the bluejay down to the humming-bird.

Fig. 3.

How they all bristle up their feathers and scold! How they fly in his face and threaten to do all manner of unutterable things!

And how calmly the rascal sits, quietly blinking his eyes as if wondering what all the fuss is about, until a buffet or an angry peck arouses him to the situation. Then he lazily flaps off to find more comfortable quarters, followed by the scolding crowd.

But let us pass from general facts to particulars, and see what relation the owl tribe bears to man, especially to the farmer. It is high time the matter is understood; for if the owl be the farmer's friend, the farmer ought to know it, and bear a hand in the effort to stop the destruction of owls of all sorts for decorative purposes.

Of late there seems to be an abatement of the fashion, but in the last ten years many thousands of owls, from the Pigmy Owl, scarce a hand's breadth high, to the Great Horned Owl, with a spread of wing of three feet and more, have fallen victims to the fashionable craze.

Let us consider the Great Horned Owl (Fig. 1) first by reason of his size, his fine presence—for he is our finest species—and his economic importance.

He has short-comings. The chief one is a liking for fowls and turkeys. But as he does not begin to hunt until it is dusk, and retires to the deep woods by early daylight, he seldom gets a chance at the farmer's fowls unless they roost in trees. Then he becomes a dangerous foe indeed, and one the farmer is justified in disposing of by any means.

However, when rabbits are plenty this owl prefers them; and in the far West, where the rabbit is extremely abundant and a most destructive foe to the crops, the Great Horned Owl does good service in warring upon them. Many thousands of pounds are annually expended in Australia in an attempt to destroy the rabbits—an attempt this owl would gladly second if it were given a chance.

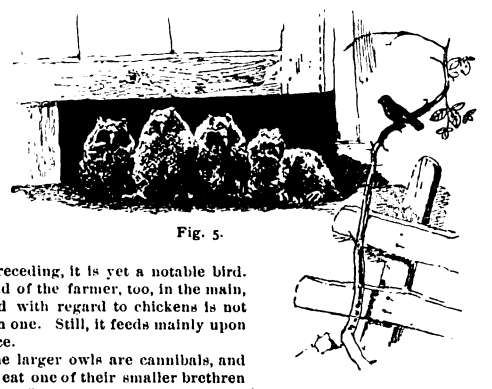

Fig. 5.

The Barred Owl (Fig. 2) is not quite so large as the Great Horned, but though by no means as fine a species as the preceding, it is yet a notable bird. It is a good friend of the farmer, too, in the main, though its record with regard to chickens is not altogether a clean one. Still, it feeds mainly upon squirrels and mice.

Probably all the larger owls are cannibals, and do not disdain to eat one of their smaller brethren when opportunity offers. The Barred Owl is no exception in this respect, and the remains of more than one Screech and Acadian Owlet have been found in the stomachs of their bigger relatives.

This species has often been tamed; and when taken from the nest it makes a gentle and interesting pet. Mr. Frank Bolles, in the *Auk* for April, 1890, tells a story of a pair he kept captive for a long time. It seems probable from one of his experiments that fish are eaten by this species when it can catch them. When some live perch were placed in the water-tank in the cage, both owls, though they were but three months old, and had never seen a fish before, exhibited great excitement, and immediately jumped into the water to seize their prey.

These pets, curiously enough, were fond of earthworms. At first they were afraid of snakes, but soon became curious about them, and subsequently killed and ate them with relish.

So far as our farmers are concerned, the Snowy Owl (Fig. 3) is of less economic importance than some others, since it is never present in the United States except in autumn and winter, and then usually only in comparatively small numbers.

Fig. 2.

Occasionally, however, as it did in 1877-8, it appears in large numbers, and is eagerly shot for the cabinet or parlor. Its food consists chiefly of lemmings, hares and ptarmigans. When in the United States it also destroys many rats. Singularly enough this owl is an expert fisher, and has often been seen on the margins of pools waiting an opportunity to seize its finny prey. Very different from the preceding species both in appearance and habits is the Barn or "Monkey-faced Owl" (Fig. 4), as it is often not inaptly termed. While the Snowy Owl is a bird of the inclement north, the Barn Owl loves sunnier climes, and is found from about the latitude of the Middle States southward, not only through the United States but over almost all the world. Doubtless in early times the Barn Owl had to depend upon its own resources for a habitation, but it was quick to perceive the advantages of a co-partnership with man, and early learned to build its nest in odd nooks and crannies of barns, churches and monasteries.

This owl feeds nearly exclusively upon rodents, and especially mice, and does its hunting almost at the threshing-floor of the farmer. It is therefore a friend which should be peculiarly cared for by him and not left, as now, to be sacrificed to the passing whim of the moment.

The pouched gopher of California is peculiarly destructive to lawns, which it injures by tunnelling under the grass roots. It also does much damage in the garden. The number of these animals captured by the Barn Owl is simply enormous. The Southern planter also owes it a debt of gratitude from the persistent war it wages upon the cotton-rat.

The Long-eared Owl (Fig. 5), as its name implies, has long ear-tufts, which give it a peculiarly wise appearance, and unfortunately render it a favorite ornament of the parlor and study. It is one of our most common owls, both East and West, and almost every dark pine thicket shelters a pair or two. It roosts in trees, and in them builds a rude nest of sticks and twigs.

Fig. 4.

In the far West, I have started a dozen or more from a thicket of bushes a few yards in extent.

It is one of our most assiduous mouse-destroyers, and the presence of hundreds of pellets of mouse hair and bones usually marks the retreat of a pair of these birds. The downy young of all owls are curious looking creatures, as may be seen from the accompanying illustration of a growing family of Long-eared Owls. Almost as soon as hatched, the nestlings will take food from the hand as readily as from the parent bird, and soon become remarkably tame and confiding.

The Short-eared Owl (Fig. 6) is of about the same size as the preceding, but the ear-tufts are inconspicuous.

Moreover, it is a bird of very different habits. It summers chiefly in the fur countries and the Northern prairie States, and winters far southward, becoming common in the United States in the early fall. It is most at home in the marshes and open country, where it spends the hours of bright sunlight among the thick grass.

While it thus prefers to doze during the brightest hours, it can see remarkably well in the daytime, and, once wakened to a sense of danger, it is no easy matter to shoot it. Its food consists chiefly of mice and insects. Occasionally, doubtless, it destroys small birds, but its main subsistence is derived from animals that the farmer properly

Fig. 6.

dreads; nor can he rid himself of them so easily and cheaply in any other way as by protecting the owls.

In the little Screech Owl (Fig. 7), whose length is less than ten inches, the farmer has another friend, and one whose value is not to be reckoned by its bulk. For this wise-looking tufted owlet is an inveterate foe to mice, and although he has been known to enter the farmer's domain and snatch a tender squab, or still more rarely a young chicken, he can plead that such misdeeds are performed but rarely, and only when family cares drive him to the necessity. For young owls are most voracious creatures, as one may learn who attempts to play nurse to a growing owl family.

Moreover, now that we know what a destructive pest is the English sparrow, it is well to note that "Scops" is very fond of this pestilent foreigner; and, from the habit of the sparrow of roosting about buildings, our owl is sometimes very successful in his patriotic attempts to reduce their numbers.

Very gentle and interesting pets Screech Owls make; and if taken from the nest when in the down, and well fed and petted, they may be released after a time with the certainty that they will not wander far. Frequently they roost in the shrubbery near the house during the day, and at dusk fly to the window where they are accustomed to be fed.

Fig. 7.

They nest in the hollows of trees, and this is where they usually roost during the day. Not an old apple orchard in New England that has not a pair of these little owls snugly hidden away in the hollows of some gnarled tree. Other owls there are which are worthy of mention, did space permit. There is the big Cinereous Owl of the far North, biggest of all our owl tribe.

In contrast is the little Pigmy Owl of the West, which is hardly larger than a big sparrow. So small is it that it is a marvel that it ever dares to stick its talons into a mouse, for fear of being run away with.

Take them all in all, the owls must be considered friends to man. They are emphatically mice-eaters, and they supplement the work of the hawks by day by waging incessant warfare against man's enemies at a time when both hawks and men are resting.

Moreover, though there is a migration of owls from the north into the United States, our own species are practically sedentary, and the greater number of individuals remain all the year near where they were born. Hence, while many of their cousins, the hawks, have gone south to a warmer climate, the owls remain behind to continue to fight man's battles against his tiny but formidable foes.

The treatment owls receive from man evinces no recognition of their value, no gratitude for their services. Large and small, they are shot wherever found, to serve as ornaments to the parlor or to do brief duty for a season on a fashionable hat, then to be cast aside and forgotten.

Truly, both owls and hawks deserve better at the hands of the being in whose service they labor early and late.

H. W. HENSHAW.

SUGGESTIONS

FORMS OF GOVERNMENT.

What European governments allow the people a voice?

What absolute monarchies has Europe?

What led to popular rule in this country?

Are there disadvantages in our form of government?

How are England's colonies governed?

How far are our States independent of the general government?

What are the "Guilds" of London?

For the Companion.

A SEPTEMBER AFTERNOON.

Who ever could dream of December
So sunny a morning as this is!
The breezes astray touch my cheek on their way
With fleeting and fairy-like kisses,
And the day is a day to remember
As dearest of dear summer blisses.

Lie here, ever near me, my baby!
My rosebud among the red clover!
The birds on the eaves may come flying with leaves,
A-thinking to cover you over.
Nay! darling, for mother's beside you,
Her love close above you will hover.

The earth is aglow in its beauty,
The sun sends us smiles without measure
To be happy to-day is a duty,
A duty that's nothing but pleasure.
How your eyes dance and shine, as they glance into mine!
Are you thinking so, too, dimpled treasure?

See the dear little pink and white asters,
And there are a few scattered daisies!
Can this be a world of disasters
When the birds are so singing God's praises?
It makes me sad-hearted to think it,
If 'tis so, ah! 'tis truly a pity!
Here's a grasshopper hopping, and near you he's stopping,
That is only to see if you're pretty.

But now the sun smothers his laughter
Behind the black cloud full in view, dear.
And is that, I wonder, a mutter of thunder?
And is this a raindrop on you, dear?
Away to the house we must scamper,
More raindrops will hurry down, maybe,
And on our delight prove a damper.
Such is life, O my dear daughter-baby.

PATTY CARYL.

For the Companion.

MISTAKEN AFFECTION.

When Mr. Ebbitt sent his son Jack to an Eastern college from the Western town where he lived, he said to a friend, "I have no fear for the boy. I have two sisters and a married brother living in the college town. He will have a home in both of the houses, and will be under the best of influences."

The Misses Ebbitt were anxious that Jack should live with them. Their house was luxurious, they were educated gentlewomen, and were ready to indulge the boy to the top of his bent.

But like other families we have known, they had a talent for gloom. Their place in the world was that of perpetual mourners for their dead. They wore heavy crape veils and dingy black gowns, in memory of their parents and a brother who had died ten years ago.

Upon the walls of the parlor hung several silver coffin plates, and over the table in the dining-room were funeral wreaths, with some copies of verses and resolutions heavily framed in black and headed, "*Memento Mori*." Jack could hardly swallow his pudding, so haunted was he by the ghastly things.

Miss Ellen was a good musician, but the piano had not been opened since her brother Arthur's death. She would not sing even hymns in the house. "It would be disrespectful to his memory," they said. "Indeed, John, those who are dearest to us lie yonder on the hill. We will never be disloyal to their memory."

"They almost make me hate these dead people!" Jack wrote home. "I never want to hear their names again!"

The Misses Ebbitt, not having married, had formed no strong ties outside of their own family. They were women of much sentiment and little energy. They shut their eyes to the real world and its needs, and as the illnesses and deaths in the family had been almost the only picturesque breaks in their dull lives, they gave themselves up to contemplation of them, out of a love of romance, which they fancied was regret.

Jack, after a week or two, betook himself to his Uncle Hugh Ebbitt's home.

"It is a large, sunny house," he wrote to his mother. "Everybody in it is busy and cheerful, —Uncle Hugh and Aunt Anne at the head of all the fun and work. And do you know their dead seem to be alive and with them still? They quoted grandfather's opinions constantly, until I felt, as they did, that he was the shrewdest and kindest of men.

"The girls will say, 'Don't buy that gown—grandma does not like yellow;' or 'Plant mignonette there. Grandma loves it best of all!'

"Uncle Arthur's sword hangs below his picture, and there are always fresh flowers near it."

There was no place for morbid misery in such a home. Their dead lived with them still; their noble thoughts and sayings, their whims, even their jests were remembered with tender care. Thus the brave young uncle who had been lying under the sod at Antietam for many a year, began to have a live influence over Jack, who never had seen him.

But the boy found life and duty and religion repulsive in his aunts' gloomy home. Their brother Hugh saw this, and one day said to them:

"Have you any right to shut in your life to the dimensions of a grave? Are you not neglecting your duty to the living, whom you might help, out of a false respect for the dead, for whom you can do nothing? Look out into this beautiful world, and remember that the sun is shining and that Christ is risen!"

But the sisters shook their heads sadly. Hugh, they thought, was lacking in proper reverence for the departed.

There will be found some good Christians who are in danger of making the mistake of these well-meaning women.

NEW ALLOYS.

At the United States Navy Yard at Annapolis, some very noteworthy experiments have recently taken place. A variety of armor plates nine inches thick, such as are used for the walls of warships, were fired upon by heavy shot. While plates of steel were pierced and rent asunder, the great projectiles shattered themselves in striking against an alloy of steel and nickel. This alloy is one of a remarkable group placed at the service of war and industry during the last few years. Iron has long been known to be greatly improved in both tenacity and elasticity when it appears in the form of steel, and steel is no other than a compound of iron with carbon.

Now that steel in its turn is to be made still more elastic and strong by alloying it with nickel, it seems as if an advance were at hand as important as that due to Bessemer, when he gave the world steel at a cost little more than that of iron.

With material of increased tenacity and strength the engineer will be able to build bridges of wider span, and towers of greater height. Pipes for the conveyance of water, oil, or steam under pressure need not be so thick and heavy as formerly. Boilers can be made thinner and lighter, economizing fuel as well as metal; and machinery can be run safely at a higher speed.

Tenacity and strength are most important qualities, but others scarcely less important can also be improved, or called into existence, by alloying. When iron or steel is used in constructing a ship, the metal causes serious derangement of the compasses on board. Let the iron or steel be united with a little manganese, and its magnetic influence will be reduced to almost nothing, although the metal has gained strength rather than lost it.

Wheels, tools and many parts of machines are exposed to very rough usage and wear. The harder, therefore, they can be made, the longer they will last. Manganese-steel, especially when suddenly cooled in water, has extreme hardness, and is thus highly suitable for the stamp mills which crush ore and for other uses where extreme hardness is desired.

Copper fused with tin forms bronze, an alloy known from remote antiquity. Bronze into which aluminium enters as an element takes on a variety of new properties. It is as strong as steel, and because it resists corrosion is an admirable material for propeller-blades and rudder-frames in ship-building. Its high price has hitherto restricted its use, but as aluminium grows constantly cheaper, and economies are introduced in the production of the electric current by which the alloy is made, its applications are steadily increasing.

Why alloys should vary in their properties so widely as they do from the metals which form them is an obscure question. Experiment is still the only means of discovering what properties such and such an alloy will have, or how these properties may be usefully changed by a slight difference in composition.

Aluminium, in a proportion of ten per cent., greatly improves the tenacity of bronze; let that proportion be doubled and the alloy is brittle enough to be readily reduced to powder in a mortar.

Bronzes, as a rule, reflect light only moderately well; when two parts copper combine with one part tin, speculum metal, as it is called, is produced —an alloy of so high reflective power as to be used in the best telescopes. Japanese artists produce colors of exquisite beauty, as well as great malleability, by adding to their ornamental bronzes a little gold.

Some metals, as lead and antimony, condense on union; others, like gold and silver, expand. This, as well as the heat given out in alloying, especially when brass and bronze are formed, proves that an alloy is not a mere mechanical mixture but a true chemical compound.

G. I.

THE FARADAY CENTENNIAL.

The hundredth anniversary of the birth of Michael Faraday has been modestly celebrated this year in Europe and America. It was Faraday who made or completed the discoveries in electricity that have given us the Atlantic Cable, the telephone and electric lighting; to say nothing of the brilliant coal dyes that have so much enhanced the beauty of fabrics and wall-papers. It was he who reduced to figures the power of electricity, and showed its inexhaustible quantity, proving by experiment that enough of it to make a thunder-storm of great power could be generated by the chemical action of one grain of water upon four grains of zinc.

Above all, Faraday showed the beauty and nobleness of character that can be attained by a man during the short compass of a lifetime. He was one of the most admirable creatures that ever wore the human form.

The son of a poor London blacksmith, he was one of those observant, inquiring, intelligent boys who get education from everything around them. He loved his father's shop, and reflected much upon the curious processes that went on in it. Once in after-life, when he was travelling in Switzerland, he visited a nail-maker's shop, and wrote thus in his journal: "Nail-making is a very neat and pretty operation to observe. I love a smith, and everything relating to smithery. My father was a smith."

His father being a poor man, Michael at twelve went to work as errand boy to a book-binder near his home, and after a year's trial was apprenticed to the trade, at which he worked for about nine years. During his apprenticeship he frequently attended the scientific lectures then given in London, admittance being one shilling.

A gentleman who frequently brought books to his employer to be bound, having noticed young Faraday's interest in science, gave him one day tickets to the last four lectures ever delivered in London by Sir Humphry Davy. Of these lectures he took extensive and careful notes, which he wrote out and bound into a handsome quarto volume.

This he sent to the distinguished lecturer with a letter in which he described his circumstances, and expressed a strong desire to devote his life to scientific experiment, and asked Sir Humphry Davy to give him some employment that would enable him to do this. A few nights after, as he was going to bed, he was summoned to the front door by a loud knock. It was Davy's servant, who brought a note asking him to call the next morning at the Royal Institution, of which Davy was President.

He went, and was engaged as laboratory assistant, at a salary equivalent in our money to six dollars a week. From that day to the end of his life he was a devoted and disinterested investigator, and obtained finally the highest distinction which the pursuit of knowledge can afford.

All his days he clung to his glorious and independent poverty, preferring his leisure to the wealth that often solicited his acceptance. He absolutely refused to accept the lucrative business of chemical examiner, which was almost thrust upon him, and he would have no part in the wealth which his discovery of the coal-dye process placed within his reach. He wanted all his time for the discovery of more truth.

From the Royal Institution he drew his little salary of eighty pounds a year and the use of three rooms; to which Prince Albert, by and by, caused to be added a pension of three hundred pounds a year, and the Queen in his old age lent him for life a pretty little cottage near Hampton Court.

With these emoluments he was more than content; he was grateful and happy. Even the presidency of the Royal Institution, though it was pressed upon him, he declined, and he would make no profit of his lectures, though for many years he was the most lucid and popular lecturer upon science in the world. He lived but to increase the sum of knowledge and to spread it abroad.

It is well to keep alive the memory of such a man.

For the Companion.

"FAR IN THE WILDWOOD."

Far in the wildwood there's a spot
Where the sun shines but scorches not,
For there the murmuring boughs are spread
Like a green lattice overhead;
Beech-drops and pungent toothwort grow
In patches on the bank below;
Would you this untilled garden try?
I'll take you with me by and by!

A little brook runs through the place,
The favored haunt of perch and dace,
Unused to change for line and hook
The brown bed of the laughing brook;
I catch amid the eddying tides
The fresh gleam of their watery sides—
These freckled beauties would you spy?
You shall go with me by and by!

In the tall pine-tree's withered crest
A lonely hawk broods on her nest;
The sheltering forests without doubt
Close round to keep intruders out;
There the dusk heron stoops to cool
His hoarse throat in the crystal pool:
So sweet a cup could none refuse—
Come, but with fernseed in your shoes!

DORA READ GOODALE.

ON HIS WEDDING TRIP.

Moses Frost stood six-feet-four in his socks, says a *Companion* correspondent, and was called "the best man on the river,"—a phrase that expressed admiration of his physical, not his moral, qualities. He was, nevertheless, generous, truthful, brave, and altogether a fine specimen of the wilder Canadian backwoodsman. The title implied that he had successfully "tackled" all the famous "bullies" of the Upper Ottawa, even the terrible Joe Maufraud, thirty years ago champion of "the French." Moses, in a squeaky, shrill, slow, small treble, that came absurdly from so big a man, used to tell me his experiences.

"Ther' *is* some use in havin' the repytation of bein' a purty good man," he squeaked, modestly. "I reckon ther' haint been no peacenbler man on the river than me sinst they give up tryin' to whale me, 'most three year back. Last time I fit was because two men that never seen me before didn't know me when they did see me."

"Tell me about it, Moses," said I.

"Well, surveyor, it was about New Year's, the time me'n Lilly Ann got hitched. My woman was dead sot on seein' the fashions down to Portage du Fort. So we started two days after the shindig for to have a weddin' trip. She said that was the right way. We stopped at Rattray's instead of Paddy Scully's place—the best ther' was goin' wasn't too good for Lilly Ann them days.

"Well, Lilly Ann was mighty took up with the circus picters on Rattray's barn. I'd 'a' took her in, too, on'y it was gone more'n four months."

"But what about your last fight, Moses?"

"Yas—yas—I was disremember in'! Well, it was when me'n Lilly Ann was goin' back home. You mind the bridge before you come to the Calumet?"

"The high bridge over Brabyon's creek?"

"Yas, that's it. I guess it's maybe the length of your chain down to the creek in summer. That time the holler was drifted half full of snow. Well, there was the two of 'em on the bridge—one of 'em looked like a good man. Says he to me: 'We're wantin' a ride!'

"'*I* can't give ye no ride,' says I. 'Ther' haint room, boys, for I've got the woman, don't you see?'

"With that the big one runs to the head of my pony. I didn't want to get out and hurt the man, but says Lilly Ann, 'Be you goin' to stand that, Moses? If you be, I'll get out and whale 'em myself.' She'd 'a' done it, too, surveyor. Mebby you never heard what Lilly Ann done to Joe Maufraud that time he—"

"You'll tell me that story another time, Moses. What did the two men do?"

"Oh, yas. Well, I jumped out and the other one come up, squarin' off. He fell easy. Then the big one runs in. Mebby you never see a bull moose comin' at you lickety-pelt?"

"The fellow ran at you head down, eh?"

"Jesseggsackly. Well, I stood to one side, sudden, and give him a trip. Then I takes him by the trowsis and the back of his neck and pitches him over the railin'.

"With that Lilly Ann says, 'You're purty good yet, Moses,' and she jumps out, laughing. There we stood and looked over the bridge right down."

"Was the man hurt?"

"Hurted! How could he be hurted, an' him fell into seventy foot of snow drifted in the gully? He *did* have some considible trouble gettin' footin' to lift out his head. Then he looks up and says he, 'Who in thunder be you, anyhow?'

"'He's Moses Frost,' says Lilly Ann.

"'Murderation!' says he. 'If we'd knowed that we wouldn't have wanted no ride.'"

REFORMED BY A RATTLESNAKE.

Jacob Smart, afterwards a temperance lecturer well known in the West, was on his way home after a week of hard drinking. For two years he had been going downhill, as he says, and was fast becoming a reckless sot. On this particular May afternoon, as he staggered along toward home, he stopped under a tree and threw himself at full length to sleep off the first effects of his carouse.

How long I had slept, he says, I know not, but I was at length aroused by a sense of suffocation and weight on my chest. I suppose I moved, for the next moment I was fully awakened by the whir of a rattlesnake. I raised my head; it was bright moonlight, and there, coiled on my chest, was a huge rattlesnake, its rattles whirring violently, and its ugly head raised threateningly, not a foot from my face!

Instinctively I threw up my hand to shield my face, and that instant the reptile's head advanced, and its fangs were buried in the cuff of my coat-sleeve, not half an inch above my wrist!

I sprang to my feet, and for a moment the rattlesnake dangled from my arm, its fangs still fastened in the coat-sleeve. Then it fell to the ground and coiled again, and again its ugly head darted towards me, but by that time I was at a safe distance.

Quickly seizing a limb which lay beneath the tree, I hit the reptile a blow and broke its back, the dead limb in my hand breaking at the same time into half a dozen pieces.

I have the string of rattles, nine of them, preserved. Never since that day has a drop of intoxicating liquor passed my lips.

REAL KINDNESS.

A blind and crippled old man sat at the edge of the icy stone pavement grinding out his few tunes on a wheezy hand-organ, and holding in one hand a tin cup for pennies. The cold wind blew through his rags, and he was indeed a pitiful object. Yet few of the passers by seemed to pity him. They were all in a hurry, and it was too cold to stop and hunt for pennies in pockets and purses.

A sudden gust of wind blew the old man's cap off. It fell by the side of the pavement, a few feet distant. He felt around for it with his bare, red hands, and then with his cane, but he could not find it, and finally began playing again bare-headed, with his scanty gray locks tossed about in the wind.

People came and went, happy, well-dressed men and women, in silks and velvets and sealskins, in warm overcoats and gloves and mufflers. But none of them paid any attention to the old man.

By and by a woman came out of an alley, an old woman in rags and tatters, with a great bundle of boards and sticks on her bent back. Some of the boards were so long that they dragged on the ground behind her, and it had evidently taken her a long time to tie all the boards and bits of lumber together and get them on her back.

She came along, bending low under her burden, until she was within a few feet of the old organ-grinder. She saw his cap lying by the pavement; she saw him sitting there bareheaded.

She stopped and untied the rope that bound the bundle to her back, and in a moment the boards were lying on the ground. Then she picked up the cap, put it on the old man's head and tied it down with a ragged string of a handkerchief taken from her own neck.

"Cold, haint it?" she said.

He nodded.

"Aint gittin' much to-day?"

He shook his head again.

She fumbled in her ragged skirts for a moment, and finally brought forth a copper. She dropped it into his little cup, hoisted the great bundle on her back, and went on her way.

HE "FETCHED HIM."

Mr. Giles B. Stebbins, in his "Upward Steps of Seventy Years," devotes a page or two to one of the "village oddities" of his boyhood, a man notorious for rum-drinking and Bible-reading. Every Sunday was given to reading the Bible, always in course. Mr. Stebbins remembers his coming into the store one Monday morning, and saying: "How still you be! Well, I've just read the old book through the seventeenth time."

He was a life-long Democrat—whether this was due to his rum-drinking or to his study of the Scriptures is a question which Mr. Stebbins does not raise—and used often to tell how his persistency had once carried the State for his party.

For seventeen years Marcus Morton was the Democratic candidate for governor of Massachusetts, and was elected at last by a majority of one vote. Of course every man who voted for him could say that he elected him, and this particular Democrat was not at all backward about claiming that honor.

"I begun to vote for Marcus," he would say, "and I stuck to him. I wasn't ashamed of my politics, and I got a good penman to write my ballot in big letters on a half-sheet of paper.

"I took my ballot in my hand, walked up the broad aisle with the rest to the ballot-box that stood on the communion table under the pulpit, handed my sheet to the town clerk to put in, so that everybody could see it, and then went down the side aisle and went home; for I never believe in hangin' round and makin' a noise election days; 'taint right. Seventeen times I voted for Marcus, and I fetched him. Git a good hold and stick to it is my way."

PHOTOGRAPHING SPECTRES.

It is possible that the famous spectre of the Brocken may yet have its photograph taken, and so become familiar to thousands who have never seen the mysterious shade itself. It is known that the so-called spectre is simply the shadow of a person standing upon the mountain, projected upon the surrounding mist.

Two or three years ago Professor Hazen, while making meteorological observations on the summit of Mount Washington, used to amuse himself by causing the spectres of night visitors to the observatory to appear in the mist enveloping the peak.

For this purpose it was only necessary to so place a light as to cast the shadow of a person upon the foggy cloud ahead of him.

Sometimes a gigantic spectre was produced with startling distinctness, although never any equalling the phenomenon seen from the Brocken, where the conditions are peculiarly favorable. Recently Mr. A. W. Clayden has reported to the Royal Meteorological Society the results of similar experiments made by him in the London fog of last February. He succeeded in raising his own spectre by placing a lime-light behind his head. Then he photographed the spectre.

TRUE TO LIFE.

An Italian paper, *Il Carlino*, recalls a practical joke that appeals to our sympathy as well as to our sense of humor. A painter had been commissioned to paint the image of a saint on the refectory wall of a convent.

The price stipulated was very low, but it was agreed that the painter should have his meals provided at the expense of the convent until the work was finished. But the only food supplied to the poor artist was bread, onions and water.

The day for unveiling the fresco at length arrived. The friars stood round the artist, the curtain was removed. It was no doubt a very fine picture, but the saint had his back turned toward the spectators.

"What does this mean?" shouted the indignant prior.

"Padre, I was compelled to paint the picture as you see it, for the saint could not bear the smell of onions."

DAISY'S CALENDAR.—IX.

S-e-p-t, and the school-bells call
To summon the children, one and all;
They troop together through Summer weather,
Though the bright little calendar says 'tis Fall.
But snow still sight, from grain or glen,
Jack Frost will ride on a rail, and then
Good-by to the flowers and the green of the leaves;
Good-by to the August fruits and sheaves;
Good-by to the bird-songs merry and clear;
The sun shines fair thro' the keen, sweet air,
And we know there's a Summer in every year.
Oh, bright and fleet are the days we greet,
For the joys of Summer and Autumn meet
In the sweet September,
Daisy, my dear.

For the Companion.

LADY JANE GREY.

Lady Jane Grey was Miss Procter's doll. She was forty years old. She had a walnut head and a rag body.

Her arms stood out at right angles with her body, and her feet toed in. Her face indicated dignity, sternness and determination.

She wore a snuff-colored silk dress and cape, and a black silk apron. A little green crape bonnet concealed the startling fact that she had neither ears nor hair.

Lady Jane Grey lay wrapped in a blanket in a drawer, except when some little girl came to make a call. Then the brown-faced dolly was taken out and unwrapped for her to play with.

Though Lady Jane Grey had always been so quiet and retiring, she was destined, in her old age, to lead a very active life and to meet with thrilling adventures.

Miss Procter went to California to live, and Lady Jane Grey was her parting gift to little Millie Baker.

Millie and her large family of dolls received the new comer with bright faces and smiles. But Lady Jane Grey answered none of their smiles. She sat up very straight and prim, and looked very stern.

When Lady Jane Grey first came into the playhouse, Bite, the magpie, saw her.

Bite never had noticed any of Millie's dolls before; but something in the appearance of this quaint little lady attracted him greatly.

He stopped his noisy chattering, and stared at her very impolitely. Then he flew down, and tried to take off her bonnet.

After that, whenever he saw Lady Jane Grey, he would stop his chattering and cock his head to one side in a funny way, and never take his bright, sharp eyes off from her.

One day in May Lady Jane Grey was missing. The house was searched from garret to cellar. Bite was strongly suspected of the theft, and all his known storehouses for stolen goods were overhauled, but not a trace of her could be found.

Millie cried a great deal, but at last gave Lady Jane Grey up for lost.

The leaves were beginning to fall, when, one day, mamma came running down from the attic, calling to Millie, "Come with me, Millie. I want to show you something."

Millie followed her mamma to the attic, and to the south window overlooking the great elm in the yard. Some of its branches were quite bare.

Millie looked where her mamma pointed, and rubbed her eyes to be sure she was not dreaming. There was Lady Jane Grey, swinging in the wind, suspended from one of the topmost branches.

Bite had stores of stolen strings, and somehow he had wound one around the doll's arms and fastened her firmly to the branch.

Millie cried and laughed at the same time, and wanted her taken down at once. But the branch was so slender and high that there seemed no way of getting her except by cutting it off, and this Millie's papa was not willing to do. So the doll was left, in the hope that a strong wind would break the string.

The tree was soon bare, and every night Millie would look out from her chamber to see poor Lady Jane Grey's form outlined sharply against the sky. And when the wind blew she would dance and turn somersaults with a gaiety quite unbecoming her years.

One day in a violent wind the string broke and Lady Jane Grey came bouncing to the ground, where Millie caught and hugged and kissed her.

But she was only the wreck of her former self. All her stiffness was gone. The ink which marked her face had entirely faded, leaving it blank.

Her clothes were in rags, and there were holes in one leg and each of her arms, through which the sawdust was slowly oozing out.

Very sadly Millie wrapped Lady Jane Grey in her blanket and laid her away, to begin again a retired life, and Bite, much to his wrath, was never again allowed inside of Millie's playhouse.

M. H. P.

For the Companion.

A LONG AFTERNOON.

"What *shall* I do all this long afternoon?" cried Will, yawning and stretching himself. "What—shall—I—do? A whole long afternoon, and the rain pouring and nothing to do. It will seem like a whole week till supper-time. I know it will. Oh—*dear*—me!!"

"It is too bad!" said Aunt Harriet, sympathetically. "Poor lad! What will you do, indeed? While you are waiting, suppose you just hold this yarn for me."

Will held six skeins of yarn, one after another, and Aunt Harriet told him six stories, one after the other, each better than the last.

He was very sorry when the yarn was all wound, and he began to wonder again what he should do all the long, long afternoon.

"Will," said his mother, calling him over the banisters, "I wish you would stay with baby just a few minutes while I run down to the kitchen to see about something."

Will ran up, and his mother ran down. She was gone an hour, but he did not think it was more than ten minutes, for he and baby were having a great time, playing that the big woolly ball was a tiger, and that they were elephants chasing it through the jungle.

Will blew a horn, because it spoke in the "Swiss Family Robinson" of the elephants' trumpeting, and baby blew a tin whistle which was a rattle too; and the tiger blew nothing at all because tigers do not trumpet.

It was a glorious game; but when mamma came back, Will's face fell, and he stopped trumpeting, because he knew it would tire mamma's head.

"Dear mamma" he said. "What *shall* I do all this long, long afternoon, with the rain pouring and nothing to do?"

His mother took him by the shoulders, gave him a shake and then a kiss, and turned him round toward the window.

"Look there, goosey!" she cried, laughing. "It stopped raining half an hour ago, and now the sun is setting bright and clear. It is nearly six o'clock, and you have just precisely time enough to run and post this letter before tea-time."

LAURA E. RICHARDS.

One morning little five-year-old Eva May came running into the kitchen where auntie was ironing, and exclaimed, "O auntie! I was out in the hen-house, and I couldn't see in the nests, but I *smelled fresh eggs*, and it smells like there are *five* in one nest. Won't you come out and see?"

Little Alice, three years old, was dressed one very hot day by her auntie in low neck and short sleeves. She stood for a few moments looking at her bare arms; then she exclaimed, "Auntie, my mamma don't low my arms to go barefooted!"

Enigmas, Charades, Puzzles, etc.

1.

BROKEN WORDS.

In each of the following sentences fill the first blank with a word, and the second to be inserted in the third blank, but so divided as to make two separate words. Example—She ate *tea* minutes to which she can hasten to school.

If you can't find the —— —— again; I am sure it is in the ——.

If you see the —— —— by the station without the ——, tell him to be sure the ship's —— was not taken off.

The —— —— —— my boy, and showed him the —— on the lawn.

I inquired for a grocer, —— a little way," she the response. I went and found some dell.

The butcher said, "Madam, this is a nice —— —— ne-sent you a —— for dinner."

2.

DOUBLE ANAGRAM.

Omitted rhymes are found in the first and contained in the fourth and last lines.

I'm thinking of a famous man,
Whom schoolmates
saying called him
Jack. Ne-
Cruelties his death re-
vealed.
I'll give his birth. It
was at * * * * * *.

In seventeen hundred
twenty-six
He birthday came,
And cannon fired.
Full many poor and
wretched ones
Their friend in need
this man have * * * *.

Hospitals, prisons, too,
he visited,
Traveled through Eu-
rope, hither, * * *.
And many changes in
them wrought,
Which filled their in-
mates' hearts with
joy.

Who was this brave
philanthropist?
Brave? Yes, indeed!
He was no * * *.
But
Who risked his life for
others' sake.
I'll give his name just
here, * * * * * * *.

LILIAN PAYSON.

3.

RIDDLE.

When victory I symbol-
ize,
I live beneath the tropic
skies;
But every day in every
land
Each person holds me
in his hand.

4.

TRANSPOSITION PUZZLE.

Change the first and last letter of the first word defined to form the second word defined.

Change a garment to a highway.

Answers to Puzzles in Last Number.

1. 1. Let this—thistle. 2. He wife—whistle.

2.

J A H L O N O W
C O N P O N A L
U N M O U S E D
S T A N M O P S
I N B I R I N G
E U S T A I N S
N U R S L I N G
H Y A C I N T H
S H A L L O O S
E C A N N I N G

Zigzags—John Bunyan, Washington.

3. 1. Germ—ny (Germany). 2. Hallow—ell (Hallowell). 3. Sora—tat (Sarabat). 4. Water—bury (Waterbury). 5. Roc—Hester (Rochester). 6. Nan—ing (Nanking).

4. 1. Flaunt. 2. Fly rate (ulcer). 3. X treets (extracts). 4. Farthing. 5. Man or beast. 6. Prime (P) (primeval). 7. Plastic (plantain). 8. Cankle. 9. Kidnap.

Example—Change poverty to a stick. W ant, can-e.

When these changes have been rightly made, place the words one below the other in the order here given; the primals will spell a month and the finals a flower belonging to it.

Change part of the human body to a ballad.
Change a pain to a reverberation.
Change a metal to a loud sound.
Change a fish to a pronoun.
Change part of a ship to rest after labor.
Change a respite to the sea.
Change to allow to the Latin word meaning therefore.

Digitized by Google

OUT OF HIS LATITUDE.

It would be hard to say which a "funny man" likes best, a listener to whom all his jokes are new and "side-splitting," or one of those dull souls who take everything seriously. An ex-governor of Wisconsin, famous as a story-teller, is reported by the Chicago *Tribune* as having related an anecdote of his own experience with a man of the latter class. The governor was at a clam-bake in New Jersey, and after dinner was called upon for a speech.

I started off by saying that I had eaten so many of their low-neck clams that I wasn't in the least sort of condition for speech-making. At that moment a long-faced old man directly across the table scowled at me and said in a stage whisper:

"*Little*-neck clams, *little* necks—not low-necks."

I paid no attention to him and went on with my remarks. After dinner he followed me out of the hall.

"You are from Wisconsin, aint you?" he asked.

"Yes," I answered.

"You don't have many clams out there, I reckon?"

"Well," said I, "we have some, but it's a good way to water, and in driving them across the country their feet get sore and they don't thrive very well."

He gave me a look that was worth a dollar and a half.

"Why, man alive!" said he, "clams aint got no feet."

He turned away, and shortly afterward approached one of my friends.

"Is that fellow Governor of Wisconsin?" he inquired.

"Yes."

"W-a-l-l," said he, "he may be a smart man in Wisconsin, but he's a good deal of a fool at the sea-shore."

JUST THE SAME.

A writer in the New Orleans *Picayune* gives an interesting portrait of an old negro who describes himself as "mos' er hunderd," and is devotedly attached to the people who once owned him, and with whom he still lives. He declares that he may be free, but that nothing can shake his belief that, in some way, he does belong to his beloved mistress. Though she has married, and brought up children of her own, she is still "Miss Carrie" in his eyes, and one of his pet theories is that she looks exactly as she did years ago, when she and her little bondman were children together.

One day he was looking on at a dance, and declared proudly to one of the younger members of the family:

"Miss Carrie could dance better than that when she was young."

"Do you remember how she looked at a ball?" some one asked.

"Oh, yes, honey," he said, "Miss Carrie looked jes' as pretty as a rose, she wus jes' beautiful."

"Well, isn't she beautiful now?"

"Go long, honey, can' yo' see how yo' mar looks? she looks jes' lak she always did."

WEBSTER'S READY WIT.

More or less sportive artifice enters into the parry-and-thrust of lawyers' combats in court. Fancy the drollery of a man like Webster playing upon the word "doctor." *Harper's Magazine* says:

Daniel Webster, when in full practice, was employed to defend the will of Roger Perkins, of Hopkinton. A physician made affidavit that the testator was struck with death when he signed his will.

Webster subjected his testimony to a most thorough examination, showing, by quoting medical authorities, that doctors disagree as to the precise moment when a dying man is struck with death, some affirming that it is at the commencement of the disease, others at its climax, and others still affirming that we begin to die as soon as we are born.

"I should like to know," said Mr. Sullivan, the opposing counsel, "what doctor maintains that theory."

"Dr. Watts," said Mr. Webster, with great gravity:

"The moment we begin to live
We all begin to die."

The reply convulsed the court and audience with laughter.

TERRIBLE PUNISHMENT.

Men have a natural horror of "shopping" at its best; but send one of them to "match shades," and he shrinks from the ordeal like Macbeth from the ghost. "Take any shape but *that*!"

"I have come in here, sir," said the angry citizen to the superintendent of the horse-car company, "to get justice. Yesterday as my wife was getting into one of your cars the conductor stepped on her dress and tore off a yard of it."

"Well, sir," calmly replied the superintendent, "I don't know that we are to blame for that. What do you expect us to do—get her a new dress?"

"No, sir, I do not," grimly replied the other, brandishing in his right hand a small piece of cloth. "What I propose to have you do is to help me match this cloth."

DIPLOMACY.

A salesman should know his goods and his customers; and if, beyond that, he has some general knowledge of human nature, he will often find it useful.

"I am very sorry, sir," said a clerk in a dry goods store, "but I have nothing exactly like the sample. The very last remnant was sold yesterday."

"But I must *have* it," said the customer. "Otherwise how shall I face my wife?"

"Well, now," answered the salesman, "if I might venture to suggest, why don't you invite a friend home to dinner with you?"

THE following note was prefixed to some verses printed in a country paper: "These lines were written nearly fifty years ago by one who has for several years lain in the grave for his own amusement."

HANSON'S MAGIC CORN SALVE.
If your druggist does not keep it, do not let him convince you that some imitation is just as good; send by mail to W. T. Hanson & Co., Schenectady, N. Y. Every box is warranted to cure, or money refunded.
Price, 15 and 25 cents.

Teething Made Easy.
Increased flow of saliva, sore gums, dry mouth, diarrhœa, unusual redness of cheeks, eruptions, ulcerations, itching of the nose, twitching of the muscles, dilation of the pupils, fretfulness, restless sleep or wakefulness, thirst, and loss of appetite, all are symptoms of Teething. Although painful, Teething is not in itself dangerous. It is not disputed, however, that during the teething period the greatest number of deaths occur. A cold, an indigestion or an eruptive fever, coming at this time, acts upon a system less able than usual to resist injurious influences.
"Tooth-Food"
will prevent or cure all teething pains and carry the child comfortably through a period of unusual irritation and danger.
Children who are late in cutting teeth, slow to walk and whose bone formation is defective, should be given "Tooth-Food." The use of this remedy will prevent rickets, convulsions, spasms of the glottis, St. Vitus dance, retention of the urine, etc. "Tooth-Food" is the best anti-scrofula remedy known.
This remedy is made of the nutrient elements necessary to bone growth, supplying material lacking in most natural and all artificial food. It is absolutely harmless and pleasant to the taste. Around each bottle is wrapped a circular with full description of "Tooth-Food" and directions for its use. A bottle will be sent, expressage free, to any address, on receipt of one dollar.
THE REYNOLDS M'F'G. CO., CINCINNATI, O.
Your druggist should have "Tooth-Food" and before sending to us you had better ask him for it.

A MERCIFUL SUGGESTION.

It necessarily often happens that the life of cats must be taken. Perhaps it would be more agreeable to most people in this merciful age, if all the kittens that are born could be permitted to grow to mature cathood, and all the old cats left to die of old age; but in the case of at least four out of every five kittens, it is more merciful to kill them than to suffer them to live a miserable, starved, neglected life.

This being the case, it is the duty of people to put out of the way, in as merciful a manner as possible, the cats which must be killed. This result is most easily attained with chloroform, if it is properly used.

Draw a stocking—a knitted one if possible, because it is more elastic—over the cat's head so that the toe of the stocking shall be brought as near the animal's head as possible. Then pour almost half a teaspoonful of chloroform on the stocking, close to the cat's nose.

Almost as soon as pussy has begun to wonder what it is that smells so queer, she goes quietly to sleep. Then a little more chloroform should be added, and still a little more; and she will never wake again.

One finds that, instead of having the nine lives that cats seem to reveal when one tries to drown them, they really have but one.

The cat may also be thrown into the sleep of death by means of a spray of chloroform thrown by an "atomizer" or spray-producer.

Nothing is more cruel or dangerous than the laying down of poison for cats, which is sometimes practised. And merciful persons who have occasion to take rats in wire cages would do well to keep in a secure place an atomizer containing chloroform, by means of which the creatures can be destroyed without taking them out of their cages.

Chloroform is very cheap, and enough may be bought for fifteen cents to kill three cats. In most of the States it is sold only under proper restrictions, and great care should of course be taken to prevent it from falling into the hands of young children.

ASPIRING HIGH.

Uncle Jasper was a colored man of very devout intentions, but his knowledge of the Scriptures was of a somewhat uncertain character. He lived in "single-blessedness" a good many years, but finally in the evening of life he married, and in due time an heir was born to him. The next day after the advent of the little one, a gentleman met Jasper in the street.

"I understand you have a baby at your house, Uncle Jasper?"

"Yas, sah; we has dat," Jasper replied with a broad grin and a satisfied chuckle. "We'se got a baby dar, sho'."

"Is it a boy or a girl?"

"Hit's a boy, sah. Yas, sah, hit's most sho'ly a boy."

"Have you named him yet?"

"Yas, sah; we has."

"What name have you given him?"

"Wah, sah; you knows I'se done allus been a pow'ful han' fer dem Scriptur' folks, 'cause I'se allus been a monst'ous strong b'liever in de Bible. So I 'lowed I'd name him arter some o' de big officers what de Bible talks ob, an' I studied 'bout which 'un I'd name 'im arter, an' at las' I settled onto Beelzebub, sah.

"Hit's a mouty fine name, sah; an' hit 'pears lack I'se 'spirin' powerful high, but I 'lows dat chile'll sho'ly do credit to hits namesake, sah. Hit most sho'ly will."

INDIGESTIBLE.

The old inhabitants of a certain New England town remember a peddler who used to come around a good many years ago, and who had a cry quite as remarkable as most of those given in the books which have been written about the street cries of old London.

He had a long, covered wagon, drawn by a large gray horse of uncertain age, and he "held up" in front of each house in the town, once a fortnight.

He never dismounted from his seat unless assured that he had a customer; but he gave his cry three times, in a clear, loud voice and then, if he received no response, drove on to the next house, and this was his cry:

"Any eatables to-day? Such as clothes-lines, clothes-pins, tongues and sounds?"

The last was given with an indescribable inflection, which those who tell about him never fail to say they cannot reproduce.

TOO STILL.

It is considered a certain sign of approval, and a compliment to the artist, to say that a picture is "a speaking likeness." One very particular widow demanded more than that, however. She wanted a *jumping* likeness.

Sculptor—"Why do you object to this bust of your husband, madam?"

Widow—"It doesn't seem natural."

"You have admitted that it looks like him."

"Yes, the features are all right; but there's no use talking, that statue will never remind me of my dear dead husband. It's too quiet. My husband had St. Vitus's dance."—*New York Weekly.*

MAKING IT CLEAR.

The *Spectator* tells a funny story of a definition given by a well-known public speaker, in an address to children.

"Now, children," he said, "I propose to give you on the present occasion an epitome of the life of St. Paul. Perhaps some of you are too young to understand what the word 'epitome' means. 'Epitome,' children, is, in its signification, synonymous with synopsis."

Having made this simple and clear explanation to the children, the speaker went on with his story.

THE father of a fretful baby consoled himself with thinking that, after all, he shouldn't know how to get along without it; in fact, that it was "a crying necessity."

Itching Piles.

HUMORS of the BLOOD & SKIN Cured by Cuticura

HUMORS OF THE BLOOD, SKIN AND Scalp, whether itching, burning, bleeding, scaly, crusted, pimply, blotchy, or copper colored, with loss of hair, either simple, scrofulous, hereditary or contagious, are speedily, permanently, economically, and infallibly cured by the CUTICURA REMEDIES, consisting of CUTICURA, the great Skin Cure, CUTICURA SOAP, an exquisite Skin Purifier and Beautifier, and CUTICURA RESOLVENT, the new Blood and Skin Purifier and greatest of Humor Remedies, when the best physicians and all other remedies fail. CUTICURA REMEDIES are the only infallible blood and skin purifiers, and daily effect more great cures of blood and skin diseases than all other remedies combined.

Sold everywhere. Price, CUTICURA, 50c.; SOAP, 25c.; RESOLVENT, $1. Prepared by Potter Drug and Chemical Corporation, Boston, Mass.

Send for "How to Cure Blood and Skin Diseases."

Pimples, blackheads, chapped and oily skin prevented by CUTICURA SOAP.

Backache, kidney pains, weakness, and rheumatism relieved in one minute by the celebrated CUTICURA ANTI-PAIN PLASTER. 25 cents.

IT COSTS MORE to make Royal Baking Powder than any other, because its ingredients are more highly refined and expensive. But the Royal is correspondingly purer and higher in leavening strength, and of greater money value to the consumer. Attempts may be made to substitute other powders for the Royal by the grocer, because of the greater profit in them to him. Send them back.

The chemist of the department of Health of Brooklyn, after examining the various powders, said: "The Royal is superior to all baking powders with regard to leavening power, economy in use, and healthfulness."

Look Out for frauds.

Honest Competition is all right, but to introduce an inferior article on some one else's reputation is piracy.

A few cheap grocers are offering an inferior article under the name of French Soups. Be sure to ask for the

FRANCO AMERICAN FOOD CO'S.

The Youth's Companion is an illustrated weekly paper of eight pages. Its subscription price is $1.75 a year, payment in advance.

Twelve or sixteen pages are often given its subscribers in a single weekly issue of the paper. All additional pages over eight—which is the number given for $1.75—are a gift to the subscribers from the Publishers.

New Subscriptions can commence at any time during the year. The Companion does not employ agents to solicit renewals of subscriptions.

Payment for The Companion, when sent by mail, should be made in a Post-Office Money Order, Bank Check, or Draft, or an Express Money Order. WHEN NEITHER OF THESE CAN BE PROCURED, send the money in a Registered Letter. All postmasters are required to register letters whenever requested to do so.

Silver should never be sent through the mail. It is almost sure to wear a hole through the envelope and be lost, or else it is stolen. Persons who send silver to us in a letter must do it on their own responsibility.

Postal Notes are not a safe means of sending money. Any one can collect them at any Money-Order Post-office, and, if lost or stolen, the money cannot be recovered, as no duplicates are issued. Subscribers who send us Postal Notes must do so at their own risk.

Renewals.—Three weeks are required after the receipt of money by us before the date opposite your name on your paper, which shows to what time your subscription is paid, can be changed.

Discontinuances.—Remember that the publishers must be notified by letter when a subscriber wishes his paper stopped. All arrearages must be paid.

Returning your paper will not enable us to discontinue it, as we cannot find your name on our books unless your Post-office address is given.

Always give the name of the Post-office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed and drafts made payable to

THE YOUTH'S COMPANION,
41 Temple Place, Boston, Mass.

ANKLE-SPRAINS.

An ankle-sprain is a stretching or tearing of the ligaments of the joint, caused by a sudden twist, the weight of the body being unexpectedly applied to the ligaments, as if by a lever. In most cases the foot is turned inward, and hence it is the external ligaments that suffer.

If the sprain is slight, simple rest of the foot for a few days may be sufficient. The more absolute the rest, the better. But an apparently slight sprain, causing, beyond the first pain, no discomfort for perhaps twenty-four hours, may, without proper care, become sorely troublesome for months.

Sprains may result from the most trivial accidents. Some persons are more liable to them than others, but no one is exempt from the liability. All may be interested in the main points of an article on the subject in the "Journal of the American Association of Railroad Surgeons."

Severe sprains require elevation of the limb, support to the foot, and a local bath, as hot as can be borne, to be repeated every three hours. After each bath the ankle should be wrapped generously in cotton batting, over which should be applied a tight flannel bandage, or a loose rubber bandage.

After the third day, the stage of active hyperæmia (excess of blood) having passed, massage may be used on the parts, and when the swelling has somewhat subsided, a starch bandage may be applied.

The splint should include the entire foot, except the toes, and extend one-half or two-thirds up the leg, and when hardened, should be cut open down the front and thus made removable. The hot bath should be repeated several times a day, from ten to twenty minutes at a time, the limb being dried and then well massaged during the intervals.

Precaution should be used in working the foot not to turn it *in*, otherwise the external lateral ligament fibres which were torn and stretched—now undergoing repair slowly because of their low vitality or meagre blood-supply—may be re-torn, the tender parts bruised, pain caused, and repair delayed.

For the Companion.

TYKE AND FIDO.

Tyke was an old and homely bulldog. He was the pet of Miss Sophy Staples, who believed him to be as intelligent as he was ugly. He belonged to the people with whom Miss Staples was boarding, but was not the pet of the family, all their attention being lavished upon Fido, a little black-and-tan terrier.

Miss Mary Staples, who was also boarding in the house, was not so fond of animals as her sister.

"You talk to that Tyke as if he had human motives and feelings," she said one day. "If you must pet something, why don't you pet Fido? He is bright and pretty."

Miss Sophy looked down into the ugly face of the dog, who was standing by her side.

"We are not beautiful, but we know what we are about, don't we, Tyke?" she said, stroking his head. The dog lazily blinked his eyes and wiggled his short tail feebly.

"You see he has an affectionate heart," she said, laughing at his awkwardness. "He thinks everything of that silly little Fido. You will notice that he shows real animation when Fido comes in."

The smaller dog at that minute came through the open door, whining pitifully. He scratched at his face with one paw, and wiped it along the floor.

Miss Sophy took him up into her lap and bathed his eyes, which seemed to be hurt, with warm water and milk. Tyke stood by and whined and scraped the floor sympathetically.

"You see they are talking together now," Miss Sophy said to her sister; "I haven't any doubt that Fido is telling Tyke how he got hurt."

"I really believe that you think he is," her sister answered, sarcastically.

Fido scrambled to the floor and ran out of the house, Tyke following him. It was hardly five minutes before both dogs were back, Tyke running, and carrying in his mouth a cat that had the appearance of having had the life recently shaken out of her. Fido followed, still scratching at his face.

Tyke brought the cat and laid it at Miss Sophy's feet, wagging his stump of a tail enthusiastically.

Both sisters were greatly interested. They went out into the shed, where the hired man was sawing wood, carrying the cat with them.

"Do you know where Tyke got this cat?" they asked the man.

"My gracious! I should say I did. He got her in here. That scamp of a Fido had been worrying her. She was that stray cat that has been hanging around here for some time. Fido seemed to think it his business to drive her off, and they had it out this afternoon, and the cat beat, and he ran away whining like a good fellow.

"First thing I knew here comes Tyke, and quick as a flash he dashed at that cat and shook her life right out of her, and Fido stood by and barked to see him do it."

Miss Sophy laid the cat down on the wood, and turned to her sister.

"There now, I hope you are convinced that dogs have human motives and feelings!"

"This does surely look like it, but it is a question whether it is a worthy motive to emulate."

Tyke, meanwhile, had surreptitiously taken up the cat and darted out of the door, Fido after him.

The two women and the man followed. They were curious to see how the thing would end. They followed the two dogs to a little wooded knoll at the back of the barn.

Laying the cat on the ground, the dogs began rapidly digging a shallow hole, and after laying the cat in and imperfectly covering her with dirt, they chased each other joyfully back to the house.

FISH THAT SHOOT FLIES.

There is a curious fish of the Indian Ocean, to which, although it has long been known to naturalists, attention has recently been called on account of some new observations of its peculiarities. It is flat and chubby, not unlike the ordinary sunfish, and seldom exceeds seven or eight inches in length.

It is furnished with a short snout or muzzle, which, as we shall see, serves very much the purpose of a sportsman's gun. It is fond of insects, and its method of capturing them has suggested its name of the archer.

Swimming close beneath the surface it watches the brilliant flies flitting above, and, having selected one to its fancy, suddenly thrusts its muzzle out, and with almost unerring marksmanship discharges several drops of water at its victim.

Confused by the watery projectiles, and with its wings entangled and rendered temporarily useless, the insect falls upon the surface of the sea, and is immediately seized by its voracious enemy. The fish is said to be able to bring down a fly in this manner from a height of two or three feet.

Some of the inhabitants of Java keep these little fish in captivity for the sake of watching them practise their archery upon flies and ants suspended above them.

WRONG BOX.

A freshman in a college in the city was anxious to mail a letter. Having been told to drop it into the red box at the corner, he hurried out of the building and ran down the street.

He saw a red box, but could find no opening in which to put his letter. He searched for any possible direction on the box, and noticed in large letters, "Ring twice."

He rang twice and waited to see what would happen, expecting a door to fly open into which he could drop the letter. Suddenly an open buggy dashed up, and a man in blue uniform jumped out.

"Where is it?" he demanded.

"Here it is, thank you," said the freshman. "Please mail it at once."

The fire-captain looked at the letter and then at the retreating student's figure. Then he dropped the letter into the box across the street, reported the alarm false, and went back to the station.

STATIONERS' WISDOM.

Every occupation affords opportunities of its own for the study of human nature, if only there be a little aptitude for putting this and that together.

A young woman was trading in a stationer's shop, says a German paper, and the elderly proprietor suddenly asked:

"And when does the wedding take place?"

"The wedding? Why, you don't think —" the fair customer blushed and hesitated.

"Ah, fräulein, when young ladies buy a hundred sheets of paper and only twenty-five envelopes, I know there is something in the wind."

DISPOSING OF A RIVAL.

The way in which a small boy of our acquaintance met the crisis which, in the language of the nurses, was "to put his nose out of joint," showed at least a readiness to dispose of a troublesome impediment with a word.

The little fellow was taken into his mother's chamber to see for the first time a baby brother. The three-year-old looked the infant over with a calmly critical regard and then, turning to the maid who accompanied him, he said very decidedly:

"Jane, you keep *that* in the kitchen."

"HOW LONG."

A story is told of an old negro woman in Alabama, whose extreme age and helplessness caused her friends and neighbors to supply all her needs.

She was very grateful for all such attentions, and never failed to express her gratitude in original language.

One day she could not sufficiently thank the son of her old master, who had brought her some choice grapes.

"You is powerful good to a pore ole 'oman like me, wid one foot in de grabe an' de oder a-cryin' out, 'Lawd, how long, how long?'"

THE WONDERFUL

A·B·CHASE ·PIANO·

Write for Catalogue and prices to any of the agents, or address

THE A. B. CHASE CO., Norwalk, O.

Wonderful in Tone quality.
Rich, deep, bell-like and pure.

Wonderful in strength of frame.
Strongest possible combinations of wood glued and bolted together.

Wonderful in improving by age & use.
Pianos sold five years ago are said to be better in tone than when they were sold.

Wonderful in selling qualities.
Tone, action, style, finish, patented improvements all taking.

Wonderful in popularity.
Even our strongest competitors praise them.

Wonderful in phenomenal success.
The leading dealers and musical artists in our large cities endorse them as unexcelled.

Wonderful in character of its agents.
The very best men in the trade seek the agency for these instruments.

In Eight Chapters.—Chapter VI.

For Charity's Sake.

Upon the bed lay Dorothy, and by her side sat her mother. For a little time both had been silent.

Mrs. Everest had been talking long and earnestly, but it seemed to her that her words fell on barren soil. Even as she uttered them she doubted their power to move the stubborn young heart that somehow appeared to be, day by day, growing harder. It caused a chill ache to creep into her soul—the thought of Dorothy shutting herself away from all the good within her. Sometimes she almost lost hope that she would ever recover her old self—she almost doubted if the old self could have been genuinely noble.

If there had ever been any tenderness in her nature, how could she bear to hurt an innocent creature?

Dorothy would give no reason for her refusal to wear the gown. At first she had opened her lips to speak, but her mother had interrupted to reproach her with her groundless hate of Helen, and she had from that moment declined to say one word.

She had long ago ceased sobbing, and now the only sound to be heard in the room was the twittering of the canary, and now and then, one of her own deep sighs.

At last Mrs. Everest said, "Dorothy, I want to tell you a little about Helen. It is not much; but I wish you to know it. Years ago Colonel Everest married a beautiful girl. She was the daughter of a very wealthy man, and had everything, one might fancy, to make her happy and her life sweet—beauty, riches, and, better than all, a lovely soul.

"Only one thing she lacked, and that was health. She was an invalid. She and her young lover were married, and for a year were entirely happy. Then Helen was born to them, and the poor young mother died, bequeathing to her little daughter her great fortune, and, in all probability, her malady.

"That is all, except that for years her father has been separated from her, because he was always stationed at posts to which he felt he could not bring the fragile child. And so, in spite of her wealth, Helen has been a poor child.

"Her first moments of real happiness have come since I—since we—came to her, she says; and you cannot know, Dorothy, how my heart yearns over her, and how I pray God she may be enabled to escape from her sad inheritance.

"Just fancy; poor little Helen with the shadow of death always hanging over her! There are chances that her constitution may strengthen, so that the heart will outgrow its weakness and be able to throw off the disease; but there is always the chance—but I cannot talk about it, it hurts me so!"

Dorothy was sitting up by this time, and two large tears that had gathered in her eyes rolled glittering down her cheeks and dropped upon her clasped hands.

Her mother walked to the window. Leaning her head against the frame she looked out into the garden that she did not see.

Presently she came to the bedside again, and, bending over, kissed Dorothy upon the forehead.

A gentle tap upon the door caused them both to start up quickly. It was the maid, who told her that Mrs. Beech was in the drawing-room.

"It is probably about the Tournament, Dorothy," said her mother. "Smooth your hair and be ready to come down when I send for you, dear. She will want to see you and Helen, I know."

When Dorothy was once more alone she went to swiftly to the door, and locking it, went back to the bed and fell on her knees beside it, praying: "O God, please help me to be good. Make me to be good!" and she kept repeating this again and again, her voice trembling with intensity and her hands clasped so tightly together that the fingers were red with the pressure. "O God, make me to be good—for Jesus' sake. Amen."

It was not much of a prayer, perhaps, but it came from the very depth of her heart, and was heard and answered, for by and by there seemed to creep into her soul a great peace, and she felt stronger to do right than she had felt for many a day.

It was not long before Dorothy was summoned below. She bathed her flushed face and smoothed her tumbled hair, thinking, as she saw in the glass, how her mouth drooped at the corners, and how very invisible were the dimples.

When she reached the drawing-room she found Helen there before her, listening to Mrs. Beech's account of the preparation for the Tournament. The lady rose and met her with a cordial kiss of welcome.

"So glad to see you, my dear," she said in a brisk, bright way. "Your mamma has made me happy by promising me you and Helen for dinner on Tournament day. I have a young cousin visiting me from Albany, just about your age, and it will be so nice for her to have you. You will be such fine company for one another among all of us ancient folks.

"You have no idea," she said, clasping her tiny hands, "how overwhelmed I am with business. It is driving here and driving there all day and every day to an almost securing sum to work, and that sort of thing. And besides—I am going almost petitioning my friends to subscribe to a fund for the erection of a hospital here. I have been quite successful, but you cannot fancy what work it is.

"Now I am sure you two girls will be glad to give me something to swell the fund. Such a worthy object, you know! I don't speak about your parents—for I am sure they will give generously—but you two girls; now tell me, won't you give me something for my hospital?"

Mrs. Beech asks for a Sacrifice.

Helen rose at once, and, hurrying upstairs, came down with her purse in her hand, while Dorothy sat silent and ashamed. Helen always had money; Dorothy seldom had any.

"Here, Mrs. Beech," said Helen, giving her two bank-notes. "It's all I have just now, but I will give you more as soon as I get my allowance."

She did it very simply and unpretentiously, but it caused a sharp pang to shoot through Dorothy's heart, as she saw how easy it was for Helen to give twenty-five dollars where she herself could scarcely offer so many cents.

"And you, dear?" said Mrs. Beech, turning to Dorothy. "You can spare me as much out of your pin-money as Helen, surely? Won't you add another twenty-five to this, so that I can deposit a round fifty in the bank?"

By this time Dorothy had managed to stammer out the beginning of an apology, when her mother explained kindly:

"The fact is, Mrs. Beech, our girls have not equal allowances. Dorothy would in any case be unable to give as much as her sister. But it is not because the impulse would not prompt her to do so. You must accept twenty-five dollars from me in Dorothy's name. Little daughter, will you get my purse?"

But Mrs. Beech stretched out a detaining hand.

"No, stay," she said. "Really, I think Dorothy's money will be all the brighter if she makes some little sacrifice to procure it. You girls are so clever nowadays, you ought to be able to earn twenty-five dollars very quickly. Now suppose Helen and Dorothy rack their bright young brains for ways and means of earning some money for the fund.

"Won't you do it, girls? Really, the virtue in giving is in the sacrifice it costs. Not that I will not keep your bills, Helen, for I cannot afford to lose one penny; but don't you think you can manage to spare me more by and by? More than you have earned, or are able to give through some sacrifice?"

Dorothy said, "Yes, I'll do what I can, but I don't know how I can earn any money. It doesn't seem to me I can do anything at all."

"I tell you, Dorothy," said Helen, "I know! We can embroider. I was taught that at school, and I'll show you; and we can do an altar-cloth or something of that kind, and have the church people buy it. Do you think St. Thomas's would buy an altar-cloth of us, Mrs. Beech, if it were very handsome? I made a beauty once—it took the prize at the exhibition of our work, and—we could do another just like it—Dorothy and I. Do you think they'd buy it, Mrs. Beech?"

"Why, yes, dear, if 'twas really handsome. I would buy it myself and give it to them as an offering at Easter. And you will help, Dorothy?"

Dorothy was silent for a moment. She could not imagine herself sitting down demurely to stitch, with her little brown hands, at a white satin altar-cloth, she who had never hemmed even a kitchen towel in all her life.

"I don't know," she replied, hesitatingly. "I should spoil it if I tried my hand at it. I'd better try to think of something else—some other way of getting the money. But I'm so stupid! There's nothing I can do, it seems to me, but play the banjo."

At this they all laughed, and Mrs. Beech playfully suggested her going from house to house singing negro songs for pennies.

"But now why should not you two girls just on your hats and drive with me?" she concluded. "I'm alone in the dog-cart—except for Baxter. Won't you come and see the course they are making on our grounds for the Tournament? There will be plenty of room in the trap if one of you won't mind riding backward and sitting next to Baxter."

In a very little while they were being bowled along the smooth, hard road. All the while Dorothy was busily wondering what she could do to earn the money for the hospital.

Even now Helen was planning to send an order to New York for the richest ivory satin and the heaviest of bullion, while she had not the vaguest idea how to make a "sacrifice" yield a financial return. She knew well how fruitless would be any attempt she might make at fancy-work, and had really never considered it at all.

"Now this," said Mrs. Beech, drawing up some distance within her own grounds, "this is where the course is to be. You see they have begun to mark out the track already. The distance around the circle is a mile, and at each quarter there is to be placed a pole with a slender cross-beam, at the end of which is a ring. Then the riders, gaily costumed, galloping around the circle, try to pierce these rings with their spears, and the one who goes around the circle the specified number of times in the least space, securing the most rings, meanwhile, is the winner of the prize—a silver cup."

"And there are to be mounted pages!" said Helen.

"Yes—my Bronson is to be one. They ride about on their Shetlands and pick up the rings that fall or the spears that are dropped, and make themselves generally useful as they are ornamental, for we mothers prank them out very finely. The place will be crowded with carriages."

She chatted on, pointing out and explaining. She prevailed upon the two girls to remain to luncheon.

Thus it came about that they did not see each other alone all day, for when they insisted that they must go home, Mrs. Beech induced them to let her young cousin drive them back in the pony-carriage; and on their arrival at their own door they both had to hasten to their rooms to dress for the afternoon.

At the stair-head Dorothy paused.

"Helen!" she said, abruptly, and then stopped. She was going to continue immediately—as soon as that tightness in her throat would permit her—but just then Colonel Everest came up the stairs, and she turned away.

Once in her own room she made fast the door, and slipping off her frock sat down to consider.

She could not rid herself of her worry concerning the money for the hospital. It possessed her like a fever.

Mechanically she opened her bureau-drawer and tumbled everything out of it—laces and handkerchiefs, perfumery and ribbons, fans and bits of gold and jewelry. She had not many treasures—at the most a few rings and a chain or two—but as she held them spread forth in her hands, she wondered if by selling them she would realize twenty-five dollars.

"It would be a sacrifice to do without my rings," she thought. Then came the remembrance of the giver, her mother, and she knew she could not part with them. Besides, they would not bring much, and she had not enough money to enable her to get to New York to sell them.

Then happening to catch a glimpse of her unbound locks in the mirror, a new thought struck her.

"Jo, in 'Little Women,' sold her hair and got twenty-five dollars for it, and why shouldn't I sell mine? How do you suppose I should look

Digitized by Google

with shingled hair? Horrid, of course; but that would be just the thing that would make the sacrifice that Mrs. Beech wants."

But here, as in the case of the jewelry, there loomed an obstacle—lack of travelling money, for of course she could only dispose of her wares in the city. But the plan to sell her hair seemed more feasible than the other, and she sat for some time deep in consideration of it.

How could she escape from home without being detected and stopped? and how, having actually reached her destination, could she discover the best place to serve her purpose? Many projects suggested themselves to her, which she entertained for a moment and then rejected as impossible.

She poured the contents of the drawer back into its depths and left them there in confusion, to sit down in her rocking-chair and play on her beloved banjo.

Her object in coming to her room—the making of her toilet—she had completely forgotten. It was like Dorothy to sit down in the midst of the most unfavorable conditions and begin to play upon her banjo.

Her mother, sitting on the piazza below, heard the sounds and smiled across at Helen who, already dressed, sat opposite her.

"Hadn't we better send word to her to dress?" asked Mrs. Everest. "She will delay, I am afraid, so that she will hardly be ready for dinner."

"Oh, no. Please let her play. It rests her, she says; and somehow, mamma, Dorothy doesn't look very well nowadays. She has a sad and tired look in her eyes. I suppose it is because she is unhappy. Poor Dorothy! But now maybe she'll get used to me—we'll have to be together so much doing the altar-cloth. I'm so glad I thought of it. But if it makes her like me a little it won't be a 'sacrifice,' will it, mamma?"

Mrs. Everest passed her hand over her eyes, and then glanced lovingly across at her young companion.

"You dear little girl!" she said. "Always so patient to wait for and anxious to gain wilful Dorothy's love. She will give it to you, darling; never fear. In fact, I think you have it already, only she is too proud to surrender."

"But I don't believe she'll ever wear the gown," said Helen, wistfully. "She said she wouldn't—ever. I wish she didn't feel so. I wish she could have some of my money. I wish that she would take it. I wish—but anyway, she's going to do the altar-cloth with me," she concluded, happily.

From above came the mellow notes of an odd little Mexican dance Dorothy was playing on her banjo, with now and then the sound of her voice joining in, in plaintive accompaniment.

In her hands the commonplace instrument grew to have a peculiar and definite charm. She succeeded in producing an excellent effect when she played, for her supple figure lent itself perfectly to whatever attitude she happened to assume; and when she danced, her blue eyes beneath their black fringe sparkled and shone, her cheeks flushed, her hair grew dusky and loose about her head, and her feet seemed scarcely to touch the ground at all—so very light were they.

Her mother often felt that Dorothy had become too old for this amusement, but she was so small that she seemed but a child. As it did no harm she was permitted to continue with her "gipsy tricks," as they gave her pleasure.

This evening she seemed to take special joy in them, for all by herself she played the banjo and danced and sang until even she grew conscious that it was near dinner-time.

Out toward the west the sun was glowing, a huge red disk, preparing to set. The birds were singing their evening songs. A robin, perched upon the topmost twig of a large tree, carolled joyously, and farther away in the edge of a thicket, she heard the rich melody of a brown thrush. From far away came the mellow sound of a bell.

From behind her bowed shutters she looked out upon the peaceful country—the green hills; the illumined sky; the placid river.

She watched it all in silence, and then a great wave of thankfulness swept over her.

"I'm glad I'm alive," she thought. "It is nice to be alive, only one ought to be good to deserve it all. It is *so* beautiful. Thank God!"

From up the river came a thin column of smoke, which shone dark gray against the pale azure of the sky. Dorothy watched it as it rose slowly cloudward, and then she waited, aimlessly watching still, for the steamer which caused it to become distinct and plain—more than a mere speck appearing from behind the steep river-banks.

As it neared the wharf beyond, it gave a series of sharp whistles that seemed to wake the birds from their first early rest, and set them to twittering in affright. But the sounds electrified Dorothy.

She sprang from her chair with a joyful bound.

"I have it! I'll do it! Just the thing!"

She was trembling with excitement. Her breath came in short gasps, and she had to hold on to the bed's foot for a moment to steady herself, she felt so suddenly dizzy with the magnitude of the enterprise she meant to undertake.

"I needn't sell you, my poor old hair," she murmured, caressingly, as she saw its reflection in the glass.

"I've an idea; something better. Now I can get it. My red dress—my banjo! To-morrow morning—early! Oh, *dear!* How glad I am!"

PASSING SUMMER.

Oh for the land where length of days
And long life shall be given
To souls whose orisons of praise,
Like incense, rise to heaven;
Where summer never knows decay
And night no more shall veil the day.

For the Companion.

THE STRIKE AT ELM HOLLOW.

We were sitting on the piazza in the twilight of a warm summer day, which we had spent in visiting a large manufactory in a neighboring city. One of the foremen in this establishment, a fine, manly young fellow, Joe Jamieson by name, was a favorite in my uncle's family, and always acknowledged a great indebtedness to my cousins Robert and Edward for his start in life.

I had seen Jamieson so often, and heard his name spoken with so much consideration, that I was curious to know the story of his life. To-night, in reply to my questions, Cousin Ned gave me this account of it:

"Five years ago this summer, we had our great Elm Hollow strike. I suppose you never saw a report of that in the papers?"

"No," I replied. "What in the world could any one find to strike about in this out-of-the-way place?"

"It was a school strike," said Ned. "We had an excellent teacher that summer, and as there were no more than thirty scholars, we had a chance to do some pretty good work.

"Our teacher, Miss Ward, had taught the school for a year, and we thought there was no one like her. She took a great deal of pains, and helped us in every way she could.

"Our class, the first one, was composed of five boys. We were doing well in our studies, but we were not wise enough to appreciate it.

"We were studying history and civil government, and Miss Ward encouraged us to read the newspapers and keep informed about public events. She would take a few minutes occasionally to ask us questions about what we had read, and explain matters which we did not understand. In this way we learned a great deal about what was happening in the world.

"That summer the papers seemed to be full of accounts of strikes. There were great strikes in one place, and lockouts in another, with workmen combining against employers, and employers against workmen.

"One day, after eating our lunch, the boys of our class were all lying on the grass, discussing the latest news about the strikes.

"'I say, fellows,' said Harry Rogers, 'here we are shut up by ourselves in this little out-of-the-way place, where nothing ever happens to 'liven a fellow up. Let's do something the way they do it in the rest of the world. Let's have a strike!'

"'What are you going to strike about?' asked Fred Andrews.

"'Oh, we'll put in a petition,' said Harry, 'and if it isn't granted, we'll march out in a body. That's the way they always do.'

"'What shall we petition for?'

"'Oh, longer noonings, for one thing.'

"'And to have school dismissed earlier,' said another boy.

"'And for shorter algebra lessons, this warm weather,' said another.

"That afternoon Jack Burns wrote out the 'petition,' and each one signed it. I don't remember all our demands, but we wanted the morning recess lengthened to half an hour, the nooning to an hour and a half, and the day's session shortened by half an hour. We gave up the afternoon recess. So much for hours.

"In regard to work, in warm weather the lessons were to be shortened, and algebra never to exceed five problems; and we were to be allowed to study out of doors when we wished.

"The paper closed with the statement that if our requests were not all granted by Thursday—that day was Tuesday—we should leave school in a body. It was important that we should go out 'in a body.' That phrase always occurred in the reports of strikes.

"We knew that the trustees, as well as our parents, were not a little proud of their first class, and we thought that, in their anxiety to keep us in the school, they would do almost anything we might ask.

"It was, therefore, with a good deal of confidence, that, after school, we handed the paper to Miss Ward. She merely bowed, and laid it on her desk without looking at it. Nothing remained for us but to file out.

"All the next day we were in a fever of excitement, but Miss Ward said nothing, though when we had our 'history talk' she spoke of a strike which had been especially disastrous to the strikers. Their employers had refused to take them back, and their families were in want.

"Thursday morning just before school was called, we asked Miss Ward if our demands were to be granted. She replied that, having no authority herself to change the hours, she had sent our petition to the trustees, and as she had heard nothing from them, the school would go on as before.

"Perhaps the trustees might come during the morning. We gave them the benefit of the doubt, and decided to stay until recess.

"Recess came, but no trustees. Then we went to Miss Ward and told her that, while we had nothing against her, we must leave the school, as the trustees had not acceded to our demands. She talked to us, and tried to convince us that we were taking a very foolish step; but when the bell rang, we did not go in.

"We had been lying on the grass just across the road, for a time, joking and telling stories, when I noticed that Jack was looking at the schoolhouse in a wistful way, and was not listening to the talk.

"'Sorry you struck, Jack?' I asked in fun.

"'Yes,' he said, springing to his feet, 'I am! I know it seems mean for me to go against you boys, especially when I wrote the petition, but I believe we'd better give it up and go back to school. I'm sorry, boys, but *I'm* going back, anyhow.'

"He picked up his hat and dinner-pail.

"Jack and I were of the same age and had always been good friends. His 'treachery' made me angry. I am afraid I spoke pretty harshly to him, and so did the other boys; but he kept on.

"There were only four of us now, but we agreed to 'stick it out.'

"The next morning Rob and I made no movement toward getting ready to go to school, after breakfast.

"'Aren't you going to school, boys?' father asked.

"'No, sir,' I said. 'We are out on strike.'

"'Oho!' said he. 'Then the strike came off, did it? How many of you are out?'

"'Four,' said Rob. 'Jack Burns didn't have spunk enough to stay in it.'

"'Well,' said father, 'I am inclined to think Jack has as much spunk as any of you. He certainly has more sense.' With that, he turned and walked away.

"Later in the day, Rob and I met Fred and Harry, and we all decided not to speak to Jack. Poor Jack! He felt pretty sore when we passed him that day without paying any attention to him, though he tried hard not to show it. It was a little hard, too, to crush him in that way, but we felt that it had to be done.

"Well, Monday morning came, and that's where Joe Jamieson's part of the story begins. Joe's parents had been very poor and had never got ahead in the world. They died when Joe was very young and left him to take care of himself.

"He wasn't very strong, but he had grit, and that helped him. He worked around for different farmers, and though there was some talk at first about sending him to the poorhouse, when he showed that he could take care of himself they let him do so.

"He had been working two years for father, and was a great overgrown, awkward fellow, but a steady workman and always so good-natured that we all liked him.

"That morning, at the breakfast table, father asked:

"'Is the strike still "on," boys?'

"'Yes, sir,' we both answered very promptly.

"'You don't intend to go back to school, then?'

"We said that we proposed to stay out till our petition was granted.

"Father didn't speak for a few minutes; then he turned to Joe.

"'Joe,' he said, 'how would you like to go to school?'

"Joe started, grinned and looked greener than ever, but said nothing. He thought father was making a joke at his expense; and Rob and I thought so, too, and were considerably amused until he went on.

"'Well!' father continued, 'when you finish your breakfast, Joe, you can change your clothes and get ready for school.'

"You ought to have seen Joe then! If he wasn't surprised I never saw any one who was.

"'But what about the work, Mr. Howard?' he stammered.

"'The boys will do that,' father said.

"'Why, father!' said Rob, 'you don't expect Ned and me to do farm work?'

"'Why not?' father asked. 'I've fed and clothed you, and hired Joe to do the work that you might have time for something else. In return I have asked that you attend school and do the best you can in your studies. Now you refuse to do that any longer. If Joe, here, is willing to go to school and do what I expected you to do, why, I'm willing to give him the chance. Turn about is fair play, and I shall expect you and Ned, between you, to do the work that Joe would do.

"'Remember,' he continued, 'I have let you make your own choice in this matter of the strike, and haven't tried to coerce you. Miss Ward reasoned with you, and did her best to make you see how foolish your act was, but you refused to listen.

"'Now there is no more to be said about it, one way or the other. The matter is settled.

"'I think you are both old enough to use your own judgment, so I have let you follow your own course. But now, if I am to support you longer, and you refuse to repay me in the way I wish, it's only fair you should make some other return.'

"By that time there was a big lump in my throat, and I wished the strike had never been thought of. I guess Rob did, too, for he was staring hard at his plate.

"I looked at mother, but she said nothing.

"After breakfast Rob and I went upstairs, put on our old clothes without a word, and went out to work. In addition to Joe, father kept another man, so the hardest of the labor did not fall to us, though what did was quite hard enough to make the days seem very long.

"Joe had his share of discomfort, too; shut up indoors all day, and obliged to be in classes with much younger children. Besides all this, he had never learned to apply himself, and for a while he made but little progress.

"However, as time went on he improved. Miss Ward was very kind to him, and he was determined to succeed, if only 'to please Mr. Howard.'

"At first Joe was ashamed to come to Rob and me for help in his studies, but before long Rob offered to assist him. After that we both took a hand, and he improved fast. All this time he helped us with the farm work at night and in the morning.

"Those were very long days that we spent at the farm work. Our hands were made sore with pitchforks, and our legs ached pitifully every night. We began to talk in a furtive, half-ashamed way at first, and then openly of surrendering.

"We had been working about two weeks when we went to father one evening and told him that we should like to go back to school.

"'But how about Joe?' he asked abruptly and in surprise.

"We had not thought about the injustice of taking Joe out of school now. We said no more.

"We did a good deal of thinking in those days, however. We wondered at first why Harry Rogers didn't come to see us; but one day we heard that Harry's father had set him to work on the farm, too.

"Jack kept right on at school, but now he avoided us so as not to give us another chance to snub him. I wished a good many times that I had stood by him, as I had always done before. When I thought of all the ill-natured and cruel things I said the afternoon he went back to school, I thoroughly despised myself.

"One afternoon when I was driving in the wagon, whom should I see ahead of me but Jack, walking slowly along with his head down, and looking forlorn enough. I made up my mind to speak to him and see if he was willing to forgive and forget, though I would not have blamed him if he were not. He was going the same way I was, and didn't see me till I drove along beside him. Then he looked up.

"His face flushed and he turned his head away quickly, pretending not to see me. Something stuck in my throat, but I managed to say, 'Hello, Jack!'

"It was pretty feeble, but he heard it and looked up with a quick, 'Hello, Ned!'

"I stopped the horse and asked him if he didn't want to ride. He looked at me steadily for a minute, and I stammered out:

"'It's pretty warm to walk, Jack,—and—it's very lonesome riding alone.'

"'All right,' said he, and climbed in.

"It didn't take us very long to make up, you may believe. After that he used to come often to see us, and would help us with our books, for we were trying to study when we had time.

"When the school term ended Joe worked on the farm again. Miss Ward was to be married in the autumn, and although the trustees urged her to remain, she was obliged to give up her position. So our parents decided that we had better go to the academy at Kingsport.

"When we came to take our entrance examination we found out how much we had lost by our strike. While the rest of us had to join the class in elementary Latin, Jack went into an advanced class; and that's the reason he's a year ahead of Rob, Harry and me in college.

"After the fall work was done Joe went back to school, and continued there, working at home nights and mornings until the spring work began on the farm. Father encouraged him to go ahead, and the next fall offered to send him to the Kingsport academy for two years. Joe accepted the offer, and did some very good work at the academy. He isn't exactly brilliant, and would never be likely to carry off many honors for scholarship, but what he does, he does well.

"When the two years were over he decided to become a mechanic, and got a place in the factory at Kingsport. He has been promoted once or twice already, and a short time ago a member of the firm told father that he was one of the best men they had. He did not give up trying to learn when he left school; he studies the structure and uses of materials and machinery as closely and patiently as he did his books. The firm mean to promote him as fast as he shows himself capable.

"Joe insisted on repaying to father the amount of all his expenses while he was in school. He is devoted to all of us, and always declares that if Rob and I had not gone on a strike that summer he would never have been where he is."

"So your strike," said I, "did some good after all?"

"Yes—to Joe," said Ned. "But it left us one

Digitized by Google

class behind in college. It gave us a very good lesson, to be sure, and hardened our muscles; but that was because father was wise enough to turn our folly to our own advantage."

GLENN HOLLEY.

DOG-DAY ADVICE.

Lay the worries of the day
All at eventide away;
Put life's troubles on the shelf—
Be good-natured to yourself!

NEPIGON.

In Six Chapters.—Chapter VI.

Johnny Amethyst.

On the second evening after we broke camp at Flat Rock Portage, we reached the little hotel at Nepigon station on our return. Sunday was spent here; and the next day, after bidding adieu to our faithful guides, we went by rail up the northwest shore of Lake Superior to Port Arthur.

We spent at this point three days in making inquiries regarding minerals, visiting the Indian village at Fort William, and accompanying an excursion, in the little steamer *Kakabeka*, to Pie Island, Thunder Cape and two silver mines, from which we obtained several specimens of ore.

At Port Arthur we mentioned to a resident of the town our intention to search for amethyst crystals.

"Then," he said, "you must go to see Johnny Amethyst."

"Who is Johnny Amethyst?" we inquired; "and where does he live?"

"Oh, he is a queer little hermit who lives at Amethyst Harbor, and spends most of his time getting out amethysts."

Amethyst Harbor is twelve miles from Port Arthur, in Thunder Bay. We were told several times during the three days that Johnny was in town, but it was not till the evening of the third day that Dick and Alton succeeded in encountering him. He is so shy that the boys had to lead him in by the arm at last.

Having induced him to sit down in the parlor of the hotel, Alton ran to notify the rest of our party, while Dick engaged him in conversation and mounted guard to prevent his retreat.

"Johnny Amethyst" is a nickname, of course; the man's real name is John Gill.

Going one by one to the parlor in order not to alarm him by a sudden irruption, we found an undersized, rather delicate man, apparently about fifty-five years old, of remarkably gentle, timid appearance, slow of speech, with a broad Cornish accent.

In this then remote corner of America he made his appearance fifteen years ago, as a solitary immigrant. True to the inherited Cornish mining instinct, he immediately began to prospect the mountains and rocks in search of ore, as naturally as a squirrel seeks nuts among the dry leaves.

Discovering amethyst crystals in the seams and crevices, he began to mine them, and to bring sack-loads to the village for sale.

The lovely purple and violet crystals seemed to have a great charm for the little Cornishman. It is said that he sometimes becomes quite talkative in pointing out the beauty of these amethysts.

He took up his residence in the bight of an arm of the bay, now known as Amethyst Harbor. Here he built a small cabin; and here, thenceforth, he lived alone, going to the village only to sell amethyst specimens and procure supplies of food.

Mr. Gill agreed to enter our employ, and for three days to serve as our guide in a real "amethyst hunt," in which we hoped to see the crystals in the seams, and to procure at least a few good specimens. His knowledge of the ground, and his skill in blasting the rocks to detach the crystals, rendered him a desirable assistant.

He possessed a small stock of amethysts, laid aside in or near his hut, which he offered to give us as a token of his appreciation of the honor we were doing him.

"To think," said Teacher Sarah, after "Johnny" had furtively made his escape, "of the life that retiring, unworldly little man has led for years here among these rough Northwesterners! It is enough to make one weep to fancy it."

"There is really something quite pathetic," Lucia remarked, "in the manner in which he has devoted himself, for years, to searching for and mining these lovely amethysts."

At six o'clock the next morning Dick and Alton were astir, borrowing drills and other tools for blasting, and purchasing powder, fuse and food supplies for our excursion of four days. The owner of a sail-boat was bargained with to convey us to Amethyst Harbor.

Alton and Dick believed that they were able to drill holes in the ledges for blasts.

"There's no need of an extra man for that," they said.

We sailed to Amethyst Harbor in about two hours. It is a pretty cove, with several outlying islands. We espied the little hermit-cabin, half-hidden in the bushes, and Johnny himself waiting on the sand-beach to welcome us.

It was evident that he expected to entertain us, though we had brought our tents. His door-step was wet from a recent scrubbing, and apparently he had been house-cleaning.

We had barely time to land and take refuge in the cabin before rain began to fall heavily. The cabin was rather contracted quarters for eight persons, but it was not uncomfortable. Luncheon was prepared over Johnny's stove, and our boatmen sailed away for home, with a promise to return for us after three days.

Toward two o'clock, when the rain had abated, we set off, Johnny piloting us, for the amethyst grounds. A hard-trodden little path wends from his cabin on the shore up the slope of the long, craggy ridge.

Once, before the railway came across the country, this slope was densely wooded with fir, spruce and jack-pine. But the "railroad fires" have now ravaged the forest on both sides of the track for several miles. Although the line is on the other side of the ridge, and at a considerable distance inland from the bay, the fire, nevertheless, extended to the water, and has burned the country over around the head of the bay.

Not only the trees and brush, but the shallow, scurfy soil was burned up, and great tracts of ledges, once clad in verdure, now lie bare and exposed to the sun and air. The fire destroyed untold quantities of amethyst crystals, which cracked and shivered like glass, far down the seams and crevices of the quartz strata.

Johnny's path winds among the trunks of fallen trees and in and out among clumps of raspberry-bushes. How often has the solitary man followed it with his hammer, drills and small jug of powder; or when returning, with his sack-load of purple specimens!

After all, it may not have been a joyless life, but rather like that of a gardener who loves his flowers; for a beautiful amethyst crystal is like a rose in Johnny's eyes.

Half a mile from the beach we came to ledges where he had mined and broken out specimens. Fragments of purple crystals lay about, and large defaced blocks of violet-tinted rock. There were scores of these old-time workings scattered along the entire slope, over a tract of four or five square

miles, and hundreds of other prospecting-holes, where he had dug into the crannies and chasms of the crags.

Other specimen-hunters, too, chiefly dealers in precious stones, had been here delving, and often with rude and reckless hand destroying many lovely crystals in order that they might secure a dozen or two. It is always difficult to get out the large and most beautiful crystals in groups or masses together, for the jar of a hammer or of a blast is very likely to cleave them asunder.

Most of this tract in the near vicinity of Amethyst Harbor has been ransacked for specimens. But Johnny knows a few openings which the transient wielder of the hammer is not likely to find.

To one of these he presently led the way. He had been working in it for a year or two, off and on, he told us. The evidences of his industry lay all about on the adjoining ledges and stones, in the shape of imperfect specimens which he had piled up.

The mine or working itself was reached by first entering a cleft in the crags along which it is possible to squeeze one's way for thirty or forty yards. Then a rude ladder, made by the miner on the spot by nailing cross-sticks upon two poles, led down a cavernous chasm to a depth of fifteen feet into darkness and dripping water; a gruesome, unpleasant hole, indeed, from which Thea and Lucia at first drew back in some dismay.

Alton, Dick and Professor William followed, one by one, down the ladder, and soon Johnny, who was in advance, lighted an old lantern.

Still the way was onward, or rather downward, over holes and ugly fragments of rock, for twenty yards at least, into the side of the mountain.

There was an occasional glimmer of light overhead, showing that the crevice above opened faintly up to daylight.

The lantern ahead stopped. Johnny was holding it before a great block of rock, which at first we could see but dimly. It sparkled and gleamed, even in that dull light. Upon crowding up to it we found that it was a huge mass of amethyst; a block larger than a bushel basket, studded all about with violet crystals as large as one's fist. Many of them were quite perfect, without a scratch or a scar.

"Been't eet a booty, muster?" said Johnny, his eyes looking very large and wistful.

"An enormous specimen!" exclaimed Professor William. "Why, it is set all over with crystals!"

On one side of it, Johnny, who had given up all idea of getting it out whole, had already broken out a few smaller masses of crystals. To get it out entire, indeed, would have been impossible without a large expenditure of time and money to blast away the adjoining rock.

"Oh, but wouldn't that be a specimen to set up on a pedestal beside the door of our academy at home!" exclaimed Dick. "What a splendid ornament! Mineralogists would come from all over the country to see it! 'Twould be fame for us!"

"Can't we contrive to get it up and transport it home, somehow?" cried Alton.

"No use, boys," said Professor William, with something quite like a sigh. "This block will weigh at least two tons. All that mass of stone overhead must be blasted away to get it out. It would cost many thousand dollars to raise it and transport it so far. It is too heavy a specimen for us."

The girls and Teacher Sarah had heard our exclamations of wonder. Presently Lucia came picking her way along, in our wake. She had descended the crazy ladder alone, stimulated by curiosity, and presently Thea followed her. Teacher Sarah could not be persuaded to come down the ladder.

For at least fifteen minutes we gloated over the lovely tinted rock, which we coveted with all our hearts. Many of the crystals upon it had a setting of glistening iron pyrites; and the effect of the deep violet points, rising out of the sparkling ore, was very striking.

It seemed gross vandalism to break up so noble a specimen, but since Johnny had begun the rude task, we offered to purchase three or four of the finest specimens which he detached from it, and which weighed from fifteen to thirty pounds. These, arising from a bed of iron pyrites, with several cubes of galena, projecting here and there, are now among the show pieces of our school cabinet.

Rain fell all the next day, but we managed to pass the time very pleasantly in Johnny's two rooms. Alton, Dick and Professor William spent the most of the day at the amethyst ledges, but Lee had a bad cold, and was obliged to remain indoors.

We still wished to discover, or at least mine for, specimens on our own account, and that evening Johnny was induced to reveal the whereabouts of a hitherto unvisited locality to us—a crag in a hollow of the hills, beside a small pond, about five miles from his cabin.

In a cleft or crevice of this crag, he assured us, there were some of the handsomest crystals that he had ever seen.

Next morning the weather was cloudy, but at seven o'clock the entire party, save Lee and Teacher Sarah, started for the new locality, with luncheon-basket and tools,—Johnny leading the way.

The cleft in the crags beside the little pond was reached soon after nine o'clock. After a careful inspection of the rocks, Johnny Amethyst's advice being taken in the main, Alton set to work to drill a hole, preparatory to putting in a small blast of powder.

Johnny prefers the use of powder to the more modern cartridges of dynamite, which, he declared, shake the crystals apart and crush everything.

Tink-tink-tink went Alton's drill hammer. He kept at it merrily for some minutes, but had not drilled a hole more than three inches in depth when his drill stuck fast in it.

Dick tried it, and did a little better for an inch, perhaps. Then it stuck fast again. Alton tried it once more, and pounded his hand by striking off.

The skilful services of Johnny Amethyst had to be called in to liberate the drill, and when it was done, he gave the boys a little lesson on the art of handling a hammer and drill.

At eleven o'clock Johnny and the boys put in the first blast. It broke off a mass of the outer rock, and the next one detached a fragment, one side of which was studded with five handsome crystals. The piece weighed—as was found afterward—just twelve pounds.

After lunch three more small blasts were exploded, as rapidly as the holes for them could be drilled. The second of these blasts cracked off a fine specimen, the face side of which is studded with forty-six beautiful crystals of very deep purple tint. They pried it out of the cleft, and got it up without grazing, scarring, or otherwise mutilating the points of the crystals.

"What a wonder!" cried Alton; "but it's so heavy! We shall have to break it in two."

"No, indeed, we will not break it!" exclaimed Dick. "We will take it along in some way, heavy as it is."

Professor William lifted it tentatively. "Eighty pounds, surely," he said. "I'm afraid, boys, it would give us a backache, the way is so rough."

"I think we might make a kind of stretcher of poles," suggested Dick.

It was agreed to try it. There was no time to be lost, for the sun was sinking in the west. Two poles, each about eight feet in length, were prepared for the purpose. Three short cross-sticks were lashed on midway, and to them the heavy specimen was bound with green withes.

Lucia and Thea assumed, as their share, the two baskets and the jug of powder; but the drills, hammer and sledge we made into a pack and lashed on beside the specimen upon the poles.

Then with Professor William and Dick ahead, and Alton and Johnny Amethyst behind, the stretcher was raised and the homeward trip begun.

We had not proceeded many yards, when it became apparent that for two to walk abreast through the tangled forest, over logs and rocks, was quite impracticable. One, standing between the two ends of the poles, before, and one behind the load, could do a little better, and so after that fashion we tried to make our way shoreward.

About every hundred yards the relief would take it up. The rain had left all the holes and hollows full of water and mud. Through these we splashed and spattered, till our feet were soaked. Several times we were on the point of casting down our burden and leaving it there.

Lucia and Thea did not mention their offer to assist us to carry the big specimen, and it was not until we were descending the long slope within a mile and a half of Johnny's hut, that we discovered that each of the girls had a specimen in her basket. Thea had taken the first one that we blasted out, and Lucia had selected the next best one; and each of these weighed from twelve to fifteen pounds.

It was dusk when we reached Johnny's cabin, and it must be confessed that we were quite exhausted. But we had secured three very fine specimens.

Teacher Sarah and Lee had dinner ready, and after resting for half an hour, we did full justice to it.

All retired early, and slept rather late next morning—so late, in fact, that we had barely taken breakfast, when our sail-boat was espied, heading into the cove.

"Let's send the boat back and stay two days more," exclaimed Alton.

"Yes!" exclaimed Lucia.

But our vacation days were too nearly gone. After making Johnny Amethyst a proper payment for his services, and purchasing some of the finest of his crystals to go with what we had already obtained, we bade him good-by and embarked for Port Arthur.

By noon we were back at our lodgings, in time for dinner, and in the nick of time, afterward, to pack up our specimens in boxes and go on board the steamship *Athabasca*, which sailed at three for Sault de Ste. Marie, on our journey home.

One whole day, after our return, was spent unpacking our specimens and arranging them in a new cabinet at the Academy, which stands against the wall, to the left of Professor William's table.

It was a very enjoyable day, too—almost as delightful as some of those days we spent at Nepigon and Amethyst Harbor. The amethysts came out beautifully, and are a notable feature of our collection.

After all the specimens were arranged and in their places, "Septem" sat down on two benches, in front of the cabinet, and passed a happy half-hour gloating over them.

C. A. STEPHENS.

The End.

For the Companion.

SHARK-FISHING.

If one wishes to introduce some exceptional liveliness into his experience as a fisherman, he can do no better than to get up a sharking party.

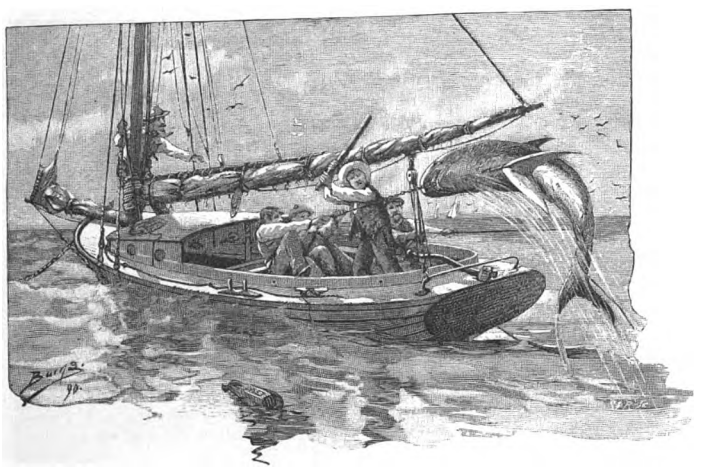
The waters with which I am most familiar are those of Narragansett Bay—that beautiful sheet which forms so large a part of the State of Rhode Island that the abundance of water has been playfully assigned as the reason why Roger Williams, when driven from Massachusetts, sought its shores as his place of settlement. But sharks are to be found in these placid waters, as no doubt they are in almost all the bays of our seaboard. Some other bay may be more convenient of access for the party.

The place having been chosen, the next requirement is the outfit. There will be needed a boat not less, for comfort, than thirty feet in length; half a dozen cotton clothes-lines, each cut into two; a dozen cork or wooden floats, eight or ten inches long; and a dozen shark-hooks,—which the blacksmith can make if you are not near where they are for sale.

To these hooks must be attached small chains, about two feet in length, else at one bite you may lose your hook and shark both. Each hook, too, must be provided with a swivel, for without it your line may become so twisted and tangled that you will spend most of your day undoing the snarls. Last, but not least, a barrel of menhaden fish for bait will be needed.

Arrived at the grounds, the boat comes to anchor in water not very deep. The floats are adjusted so that the hook will hang about six inches from the bottom. The menhaden are cut in two, as the blood very quickly attracts the sharks, and carefully placed upon the hooks, the point of each being well covered. The end of the line is made fast to something in the boat; and the sharking begins.

If one is so fortunate as to have anchored near a school of sharks, much activity is soon noticed among the floats. They begin to bob up and down, or to move off in the slow and heavy manner which indicates that there is a large fish at the hook.



Allow the shark to have his own way, and to play with the hook for a few moments, in order that you may be sure that he has had time to get the bleeding fish well into his mouth. Then give a strong jerk.

If you have hooked him you will soon know it, for a lively scene will follow. The shark is a very gamy fish, and expresses very vigorously his dislike of changing his element. If he is of good size, from four to six feet long, it would probably be impossible for you to get him in alone, and you will be very glad of one or two more pairs of hands to take hold with you; and if now it should chance, as it not infrequently does, that one or two of your companions should at almost the same moment hook a fish, there will be seen about as

Digitized by Google

much life, not to say excitement and confusion, on board as one often witnesses.

The water foams about the boat. Lines are intertangled, fishermen slip and fall in their efforts to board the sharks; and the sharks that may be in already, flap about and snap their rows of white teeth together in a way very suggestive of a lost leg should you happen to fall overboard. I once knew of a shark, snapping at his captor, to take off the heel of his boot.

Shark-Fishing.

A thump on the head with a belaying-pin or large club is all that will bring the shark to terms.

In this way the sport continues. Not less than thirty or forty sharks, from three to six feet long, sometimes lie in the bottom of a boat as the result of a day's fishing. It is at this time, and when several sharks are hooked at once, that the importance of having a boat of good size is felt.

Indeed, sharking from a small boat might be followed by serious consequences. An incident of one sharking expedition on Narragansett Bay well illustrates this.

A short, stout Irishman, formerly a sea-captain, finding the sport rather dull on a day when the sharks did not bite well, thought he would put off a little way from the boat in a small skiff that was in tow, and which had only a small stone on the end of a rope for an anchor. He made fast his line in the bow and began to fish.

Presently he hooked a six-footer. The shark, finding himself caught, darted off at a tremendous rate, dragging the tiny skiff through the water.

The little captain seized both sides of the boat and held on, expecting that every moment would be his last. First the shark rushed off in one direction, and then in an instant turned and went in another. The skiff went out like the snapper of a whip at each turn, almost capsizing, and the captain well nigh flew out from sheer centrifugal force.

"Faith," said he, when it was all over, "I thought the varmint would have drownded me."

And so, no doubt, he would, had not the line parted.

But what is the use, some one will ask, of capturing these creatures? Is it not too much like needless butchery to be sportsmanlike?

It is, perhaps, open to such a charge, though in every instance of which I have known, use has been made of the captured sharks for fertilizers. They are valuable in composts, and it is certainly no more cruel to take them than to seine fish for the same purpose. Indeed, it is less so, for in the one case the fish have no chance for their life, and in the other they have.

The sharks of which we have been speaking are not the Man-Eater sharks, so called, of the genus and species *Carcharodon rondoleti*. Perhaps the majority of them are the *Squalus Acanthias* or dog-fish.

The "man-eater" is popularly known as the white shark, and is the terror of mariners. The species of which we have been speaking is comparatively harmless.

All derive their name, shark, from a Greek word of similar sound, which means having sharp teeth.

The creatures' utility to man is nothing in contrast with the havoc they commit among food fishes.

Some of the smaller varieties of the shark are sometimes eaten. Oil is obtained from their livers, which is chiefly used in the adulteration of cod-liver oil.

"Shagreen," well known to cabinet-makers as a rough skin for smoothing and polishing wood, is only a bit of shark's skin, which is covered with small, pointed, calcified papillæ. It is also often used for covering sword-hilts, affording from its roughness a firm grasp.

In India and China the fins of sharks dried are an important article of trade, and are valuable for making gelatine.

The many varieties of the shark are divided into the littoral, the pelagic, and the bathybial, according as they are found near the shore, or in mid-ocean, or at great depth. Beside those that we have mentioned, there are the liver, the hound, the shovel-nose, the tiger, the hammer-heads, the porbeagles, the fox or thresher, and the basking shark, sometimes, though wrongly, called the sunfish.

But if one wishes to study the natural history of sharks, a good way is to examine a specimen; and to do this, let him follow the recipe for the cooking of a hare, and first catch his shark. In other words, let him go sharking; and he may pass either the liveliest or—the dullest day, he ever knew.

REGINALD H. HOWE.

AIMLESS.

The busy world shoves angrily aside
The man who stands with arms akimbo set
Until occasion tells him what to do;
And he who waits to have his task marked out
Shall die and leave his errand unfulfilled.
—*Lowell.*

ASIATIC RAILWAYS.

Many events of importance to the world at large take place on the oldest of the continents, without attracting much attention in Europe or America.

Among such events have been the strides made in recent years, in developing the resources of Asia by the construction of long railway lines.

The Russian Empire, as far as its interests in Europe are concerned, is not regarded as a very progressive power. We hear a great deal about the tyranny of the Czar, the persecution of the Jews, and the financial straits to which the Empire is subjected.

But if Russia is not progressive in Europe, it is so in those vast Asiatic regions over which its sovereign holds sway. Whatever the condition of his treasury, the Czar does not hesitate to embark in enormously expensive railway constructions in the East.

Two or three years ago, the Russian Government completed a railway line from the Caspian Sea to Samarcand, the ancient city where lies entombed the great Tartar conqueror, Tamerlane, or Timur, as he should be called. It is built across the dreary desert of Kara-Kum.

Its purpose is doubtless in the first instance military. Russia looks forward to the day when it will engage in a mighty conflict with England for the possession of India; and this Trans-Caspian railway, reaching to the very borders of Afghanistan, would then be of incalculable use, as a means of military communication, to the Czar.

The road, however, has already served a useful purpose to Russian commerce, for by it the cotton of Central Asia is introduced into Russia at the rate of over sixty millions of pounds a year; while Russian manufactures are returned by it to the thriving cities on the Oxus and the Syr-Daria.

But a far greater railway undertaking has just been begun in Asia by the Czar's government. On the Twenty-fourth of May the Czarewitch, the Czar's son and heir, laid the first rail of the "Great Siberian Line" which, when completed, will connect Europe with the Pacific Ocean. This line will pass entirely across the vast dominion of Siberia. It will cost two hundred million dollars, and is expected to be finished in five years.

Then trains will be able to run direct from the Baltic Sea to the far-east Siberian town of Vladivostok on the Pacific. The difficulty of constructing this line, however, is by no means confined to its enormous cost. It will cross long and dreary expanses of solitary desert, and the engineering obstacles will not be less great, certainly, than those which lay in the way of the railroads which have been built across the American continent.

The possible results of this vast enterprise cannot easily be estimated. There are large fertile tracts in Siberia, despite its bad name for cheerlessness, and these may prove a source of profit to Russia, and be rapidly colonized. The lot of Siberian exiles is likely to be less severe. The military advantage of the railway to the Empire, moreover, is likely to be considerable.

While Russia is thus active in Asiatic railway enterprise, the extension of railways in the other great Asiatic Empire ruled by a European sovereign, India, is rapidly going on.

The most recent reports show that in 1888–9 the length of the Indian railway lines was extended by nearly one thousand miles; and that the total railway mileage in that country in March, 1890, was over sixteen thousand miles. The increase in passenger and freight traffic, and in receipts, indicates a corresponding growth in the travel on the Indian lines.

Thus the "iron horse" of the railway is gradually wakening the echoes of remote regions of the earth, and carrying civilization and commerce to the homes of the most ancient races of men.

HEREDITY.

There is no thing we cannot overcome.
Say not thy evil instinct is inherited,
Or that some trait inborn makes thy whole life forlorn
And calls down punishment that is not merited.

Back of thy parents and grandparents lies
The Great Eternal Will! That, too, is thine
Inheritance, strong, beautiful, divine,
Sure lever of success for one who tries.
New York Press. —*Ella Wheeler Wilcox.*

RECIPROCITY AGREEMENTS.

By the act of Congress of October 1, 1890, commonly called the "McKinley Bill," provision was made for the admission into the United States, free of duty, of sugar, molasses, coffee, tea, skins and hides; but, "with a view to secure reciprocal trade" with the countries producing these articles, it was provided that, whenever the President is satisfied that reciprocal favors are not granted to the products of the United States in these countries, he shall suspend the free admission of those articles, and impose upon them certain duties specified in the act.

The President is to have this power after the first day of January, 1892.

The first country to take steps, at the instance of our own government, to grant reciprocal favors in return for the free introduction of the products named, was Brazil. An agreement was entered into with the government of that country which admits certain United States products free of duty, and others at a reduced rate.

Recently the President has announced the consummation of another and very important convention or agreement of the same kind. It is with the Government of Spain, and covers the commerce between the United States and the Spanish West Indian possessions of Cuba and Puerto Rico.

By the terms of this agreement, certain products of the United States are to be admitted free into Cuba and Puerto Rico, provisionally or "transitorily" after September 1, 1891, and definitely after July 1, 1892, and sugar and the other products already named are to continue to come free into the United States from those islands.

The list of American products and articles admitted free into Cuba and Puerto Rico includes cotton, crude petroleum, provisions of all kinds, mineral coal, ice, lumber, oats, barley, rye and large classes of iron manufactures, machinery, implements and wood manufactures.

Among the articles to be admitted to Cuba and Puerto Rico at a reduction of fifty per cent. in the duties are glass and stoneware, hardware and cutlery, furniture and rubber goods; and among those admitted at a reduction of twenty-five per cent. are refined petroleum, cotton manufactures, boots and shoes and leather.

Certain other American products are to pay specified duties, which are much reduced from the rates at present imposed.

Among these are corn or maize, corn meal, wheat and wheat flour. The last named is to pay a duty in Cuba and Puerto Rico of about ninety cents a barrel.

Flour from Spain is admitted there duty free; but the United States has already been sending to Cuba much more flour than Spain has sent, though a heavy duty has been imposed upon American flour.

This agreement with Spain is not a treaty. If it were, it would require ratification by the Senate of the United States. It is simply, on the part of our own government, the carrying out of an arrangement which it has been authorized by Congress to make.

The President's proclamation covering the matter is merely a public announcement that the Spanish customs duties have been modified in the respects described, and that this has been accepted as a due reciprocity.

The principal articles of export from the United States into Cuba and Puerto Rico are wheat, flour, coal, cotton manufactures, iron manufactures, provisions, oils and wood manufactures; so that practically our whole business with those islands is put upon a new basis by this agreement.

The Spanish West Indies are profoundly affected, on their part, by the abolition of the United States duties on sugar, for more than nine-tenths of the product of their cane fields comes to this country.

At about the time of the announcement of the Spanish agreement, it was also announced that the United States and the Dominican Republic, or Santo Domingo, as it is commonly called, had entered into a similar arrangement. In return for a free market in the United States for sugar, coffee, and so forth, the Dominican Republic admits free, from the United States, certain food products, agricultural implements, railway material, and other articles, and makes a reduction of twenty-five per cent. on the duties on canned meats and vegetables, cotton and iron manufactures, and other articles.

Our trade with Santo Domingo is not large, and we have lately imported from that country more than twice as much as we have exported to it.

TOO LATE.

Sarah Noyes was still a very young woman, but she was the mother of two children. Her husband was a poor, hard-working farmer, not able to hire service, so that all the care and comfort which the little ones had in this world must come through their mother.

She did not begrudge it to them; she gave it to them out of a full heart, throbbing with love and tenderness. But she was a weak woman. The winter had been unusually cold and long, and she had a strange ache in her breast which frightened her.

Suppose she should die—who would take care of the children?

John, the oldest, had had scarlet fever and then pneumonia during the winter. For weeks she had hardly removed her clothes, but had held him in her arms day and night.

He was nearly well now, but she still carried the heavy fellow out into the sunshine every day, staggering under his weight. She was afraid to let any one else carry him lest they should hurt him or let him fall.

Then the baby had the croup. It made her shudder to look back upon those terrible sleepless nights when she thought God was taking her darling from her.

Mrs. Noyes was very thin and white when spring came; the doctor said all that she needed was rest and freedom from care. But how could she leave the children? Who would care for them?

Besides, all of their summer clothes were to be made.

Whenever they were quiet or asleep, therefore, she stitched at the machine, often smiling to herself, thinking how clean and pretty they would look in their new clothes. She meant to keep them always clean and pure in mind and body. She worked one day until late at night, and rose long before dawn to finish the little coats, fancying fondly to herself how they would look in years to come, as boy and girl, as man and woman.

She stole into their room at last, and knelt to say her morning prayers by their crib. How could she ask enough for them? She did ask God to let her live for their sake. She was so tired—so tired! Her heart was so full of love for them it was like pain.

Then she went out to the door where the gray dawn was driving the mist from the fields. Suddenly she forgot her work and her children, for the thought came to her for the first time in her life:

"Did my mother love me in this way? Did she bear all this for me?"

For twenty years she remembered she had lived with her mother, taking all her love, her work, her self-sacrifice as a matter of course, as she took the sunshine or the air. She could not remember, in that time, that she had said once to her, "I know what you have done for me, my mother." Not once.

Now—

She stretched out her hands towards the graveyard on the hill with a bitter cry. For her mother lay there under the mist. She could never tell her now; that she knew.

WINE.

Students who are entering college this fall should reflect seriously upon the question of wine-drinking.

They will often be invited and expected to drink wine, and they will occasionally see their elders drinking it at college festivals. They are likely to hear those who drink speak disparagingly of those who decline drinking, and they will read descriptions of banquets in which wine is represented as figuring honorably.

For many other reasons it would be well for students to come to a clear understanding with themselves upon the matter, and make up their minds what is the proper thing for them to do when they are asked to drink.

No one likes to be thought a milksop. But even that can be borne, and easily borne, if the accused person knows he is right and knows why he is right. Clear and certain knowledge is a wonderful help at the moment of temptation, though it is not always sufficient.

To get light upon this subject it is not necessary to go into a library and pore over a heap of books. A healthy young man who drinks wine or any such fluid need not be long in doubt whether he has taken into his system a friend or a foe.

He cannot help knowing, if he observes himself closely, that the wine is an enemy. He perceives that it increases, not quenches, thirst; that it raises his spirits for half an hour or more, according to the amount used, and depresses them for several hours that follow; that it flushes, excites, disturbs, perverts, and therefore injures him.

If he conscientiously watches its effects, he *knows* this, and all the sophistry of all the sophists cannot disguise the fact from him. He knows it as well as Sydney Smith knew it when he wrote to Lady Holland that, without abstaining from wine, "London was stupefaction and inflammation."

Nothing has been more certainly demonstrated than that the use of alcoholic drinks by young persons in our keen, exciting climate is a mistake, and is to no class so injurious as to students. To them, more than to any other class, wine increases the difficulty of every duty and adds alluring force to every vice.

This is not preaching; it is simple fact, and known to be such by all honest investigators.

Digitized by Google

Students need the best food that civilization can supply, and that food should be eaten in the best manner known to civilized life. But when it comes to intoxicating drinks, there is only one safe and wise rule, which is expressed in one word: Abstain.

IN A HURRY.

One of the authors of "Military Essays and Recollections" suggests, with reason, that the explosion of a certain torpedo might have changed the entire history of the Civil War.

On the evening before the battle at Fort Henry, in 1862, Generals Grant, McClernand and Smith went on board the *Cincinnati*, about dusk, to hold a conference with Admiral Foote.

While they were in the cabin the gunboat *Conestoga*, which had been reconnoitring up the river to ascertain whether the channel was clear, came alongside the flag-ship, and unloaded on the ship's "fan-tail" a huge torpedo which she had pulled from the water above. The "fan-tail" of these iron-clads was a clear space at the stern of the boat, near the water's edge; from its extremity rose the iron end of the gun-deck, to be reached by a ladder.

When the conference was over the officers descended the ladder to this fan-tail, and as they were about entering their row-boat the torpedo attracted their attention.

General Grant expressed a wish to see its mechanism, and so the ship's armorer was summoned, and soon appeared with monkey-wrench, hammer and chisels. Its iron end was removed, disclosing another, terminating in a cap with a screw head. The examination was growing interesting, and every officer bent closely over the deadly contrivance.

The cap was unscrewed, and suddenly allowed vent to a quantity of gas, probably generated from the wet powder. It rushed out with a loud, hissing noise, and on the instant two officers threw themselves face downward on the deck.

Admiral Foote sprang with the agility of a cat up the ship's ladder, followed with commendable enthusiasm by General Grant. Reaching the top, and realizing that the danger had passed, the Admiral turned to General Grant, who was displaying more energy than grace in his first efforts on a ship's ladder, and said, with his quiet smile:

"General, why this haste?"

"That the navy may not get ahead of us," as quietly responded the General, turning to go down.

After this little interruption the business of examining the torpedo continued.

PROFIT-SHARING.

In England twenty firms adopted profit-sharing in 1890, bringing the total number in which profit-sharing, pure and simple, is practised, up to forty-seven.

The South Metropolitan Gas Company of London is one of the last large firms to adopt it. In the winter the company employs thirty-five hundred men, and two thousand in the summer. The system was begun by a present from the company to every man who had been in its employ June 30, 1889, and would sign an agreement not to leave it for three months. This gift varied with each man's term of previous service.

The amount was credited on the company's books to each workman, to draw four per cent. interest for five years. In June, 1890, about fifteen hundred men were entitled to share in the scheme, and the sum they received reached about twenty-five thousand dollars.

Already a great improvement is seen in the men's work. They are more diligent, and see and suggest ways of saving expense.

In other English firms the results are equally good. In France, where the movement began, it continues to grow rapidly. Wherever it is fairly tried, whether through cash payments, credit in provident funds or presents of the company's stock, the outlook is nearly sure to be encouraging.

A system under which the humblest toiler, in just measure with the man of more brains or skill, sees his work recognized, and knows that, good or bad, it affects the total result, must be better than old methods.

A man's ambition cannot last long when its bounds, in wages and narrow opportunities, shut him and his family in on every side. If it can be quickened by profit-sharing or any other just plan, by all means let the plan be tried.

AT THE GLOVE COUNTER.

The hard life of the saleswoman at the counter of a great retail store is often rendered less burdensome by the kindly acts of fellow-workers, and sometimes by the generosity of employers.

It is not infrequently the case that girls are at their posts in these stores who are not strong enough to do the work properly. Under such circumstances the public which must be served is generally less indulgent than the employer.

At a great retail store in Boston, the girls at the glove counter work almost constantly in fitting gloves to customers' hands. The work is arduous, for the saleswoman must lean over the counter in doing it, and her back often aches with the strain upon it.

At one of these glove counters a young girl was employed who was in consumption, though perhaps neither she nor her relatives were fully aware of the fact.

Though she knew she was ill, she hesitated to leave off her work, for the loss of one of her parents and a subsequent marriage had made the circumstances of her home life unpleasant to her; and, moreover, she did not know where she should turn for the six dollars a week which she earned.

The lunches which she brought to the store indicated extreme poverty or else unkindness at home, and the other girls at her counter often shared their lunches with her, pressing upon her the most nourishing and delicate bits that they had brought. One day she came to the store looking unusually pale and weak, and when an exacting customer required her services in fitting gloves, she was slow in making the effort which the customer—a woman—seemed disposed to exact.

The customer scolded, and possibly the girl, weak and ill, answered impertinently. At any rate, the customer went to the superintendent and complained sharply of the saleswoman's conduct.

"I am very sorry, madam," said the superintendent, "but the girl is ill to-day."

"Then she ought not to be here," said the lady.

There was nothing more that could be said; but that there was no unkindness on the part of the saleswoman's superiors is evident from the fact that within a day or two her case was reported to the head of the firm, Mr. Jordan, as one worthy of benevolent action.

"Send her to me," said Mr. Jordan.

The poor girl turned pale when she was told that Mr. Jordan wished to see her, and became suddenly faint. She feared that her discharge—a thing much more to be dreaded than any hardship of her daily task—was coming. But she was quickly assured that no harm would come to her.

The proprietor questioned her kindly about her work, her family and her health. Learning from her that she had friends in Maine, he asked her to ascertain how much it would cost her to go thither. When she had learned, Mr. Jordan gave her money for her fare and expenses; and not only this, but paid her wages regularly, until, two months later, her strength failed her utterly, and death came.

ATTACHING A HOLE.

A laughable instance of legal sharp practice is recorded in the Rev. Frederic Denison's history of the town of Westerly, R. I. It occurred almost a hundred years ago when, it seems, lawyers were quite as adroit at quibbling as their successors are at the present day. A farmer of broken fortunes hired for cultivation a piece of land, agreeing to pay for its use with a certain proportion of the crop.

He planted potatoes, and had an unusual degree of success. Being without a store-room, he obtained the consent of a neighboring landholder, and deposited his share of the potatoes in what farmers call a potato-hole; that is, an excavation in the earth, into which the potatoes were placed and covered with earth and straw in the form of a pyramid.

Shortly afterward he had occasion to go to Connecticut, and one of his creditors seized the opportunity to attach the "potato-hole."

Upon this another creditor bestirred himself, and consulted a lawyer, a Mr. Cross, as to what could be done to secure his claim. Mr. Cross was equal to the occasion. He secured the issuing of a second writ, by which an attachment was levied upon the potatoes in the potato-hole, the document specifically setting forth that the potato-hole should be left upon the land where it was found.

The warrant was promptly served, and when the first creditor appeared upon the scene he found the potato-hole, but not the potatoes.

HIS AUDIENCE.

A pretty story, which has, moreover, the merit of being true, is told of a certain professional singer. He had a beautiful tenor voice, of which he was apt to take the best of care, so that when he was crossing the Atlantic one summer with a party of friends, they were not surprised to find that he disappeared from view every evening at just about the same time.

"Afraid of the night air," said one, with a slight smile.

"Afraid we'll ask him to sing, probably!" said another, but no one questioned him, as he was known to be quite immovable from his own way.

But when the last night on board came, a delegation descended to his state-room to beg for a song or two, and discovered that he was not there. They looked for him in vain, until at last the captain, who had evidently kept the secret as long as he could, said, pointing in the direction of the engine-room:

"I think you'll find him down there; that's where he's gone every evening."

Sure enough, when the delegation arrived at the engine-room, they heard the sound of a guitar and a voice, and there, lolling against the wall, was the recreant tenor, singing his best for the delight of the stokers, whom he had entertained in this way for more than an hour every evening during the voyage.

MIGHT HAVE BEEN WORSE.

The Princess Charlotte, daughter of George IV., was a young woman of great spirit and originality. One day she took a fancy to make her will, and in it bequeathed all her property to one of her teachers. He was imprudent enough to keep the document, and was, in consequence, dismissed as soon as it was discovered.

The gentleman who then undertook his duties did so with great zeal, and had reason to find one, at least, of his corrections productive of good.

He chanced to enter the room when the princess was reviling one of her attendant ladies, in great wrath, and after giving her a lecture on hasty speech, he presented her with a book on the subject.

A few days later he found her still more furious, and using language even more violent.

"I am sorry to find your Royal Highness in such a passion," said he. "Your Royal Highness has not read the book I gave you."

"I did, my lord!" cried she, tempestuously. "I both read it and profited by it. Otherwise I should have scratched her eyes out!"

NOTHING GOOD TO EAT.

Necessaries, delicacies, luxuries—all such words have different meanings in different ears and under different circumstances. When Mr. Seward was in Alaska, says his son, the people were naturally very desirous to treat him handsomely.

Some amusement was occasioned at table, one day, by the remark of one of the ladies that they had been much disappointed at obtaining no beef by the last steamer, as all were looking for steaks.

"So we can offer you nothing but the fare of the country, Governor Seward," she said.

"But that is excellent," answered he.

"Oh, no; we have nothing but venison, and grouse, and wild ducks, and salmon, and trout!"

One of the army officers remarked that this reminded him of a mutiny among the soldiers at a Florida fort, against being served with green turtle soup more than once a week.

Good Housekeepers are fast finding out that a pure Extract made by Joseph Burnett & Co., costing a cent or two more a bottle, goes farther and makes the most delicious of dishes. Avoid goods only recommended by their cheapness. [*Adv.*

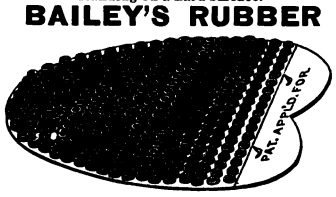
INFANTILE SKIN SCALP AND DISEASES CURED BY Cuticura

EVERY HUMOR OF THE SKIN AND Scalp of infancy and childhood, whether torturing, disfiguring, itching, burning, scaly, crusted, pimply, or blotchy, with loss of hair, and every impurity of the blood, whether simple, scrofulous, or hereditary, is speedily, permanently, and economically cured by the CUTICURA REMEDIES, consisting of CUTICURA, the great Skin Cure, CUTICURA SOAP, an exquisite Skin Purifier and Beautifier, and CUTICURA RESOLVENT, the new Blood and Skin Purifier and greatest of Humor Remedies, when the best physicians and all other remedies fail. Parents, save your children years of mental and physical suffering. Begin now. Delays are dangerous. Cures made in childhood are permanent.

Sold everywhere. Price, CUTICURA, 50c.; SOAP, 25c.; RESOLVENT, $1. Prepared by Potter Drug and Chemical Corporation, Boston, Mass.

Send for "How to Cure Skin and Blood Diseases."



Baby's skin and scalp purified and beautified by CUTICURA SOAP.

Kidney pains, backache, and muscular rheumatism relieved in one minute by the celebrated CUTICURA ANTI-PAIN PLASTER. 25 cents.

Tired and Cross

are thousands of people every day, from walking and standing on a hard surface.

BAILEY'S RUBBER

HEEL CUSHION

gives **elasticity** and **ease** to **every step** taken by the wearer. It breaks the **shock** or **jarring** of the body when walking, and is particularly adapted to all who are obliged to be on their feet. To those suffering from **Spinal, Kidney, Rheumatic and Nervous Affections,** it will be found a **great relief.** The rubber with its annular projections is as **soft as velvet,** thoroughly vulcanized, always elastic, leather covered next to the foot, and can be instantly adjusted inside of the boot, directly under the heel. All sizes, **25 cents per pair,** mailed upon receipt of price.

C. J. BAILEY & CO., 22 Boylston St., Boston, Mass.

Gentlemen.—Having practically tested the efficiency of your Rubber Cushions, I have every confidence in recommending them in Spinal and Kidney diseases. They certainly prevent the jarring of the body when walking. HENRY C. WILLIAMS, M. D., 6 Park Square.

NO Experiments

With our food. Good health is too highly important to permit experiments to be made upon us with the new, cheaply made, crude, untried baking powders. Only baking powders thoroughly tested and proven by long, practical use to be perfectly pure, reliable, and wholesome, must be permitted in our food. There is no experimenting when Royal Baking Powder is used. It has been the standard baking powder for over a quarter of a century, and its reputation is established as the finished, perfect leavening agent. It is always uniform, never fails in its work, makes food more palatable and wholesome than it can be otherwise made, and because of its greater leavening power, as shown by the Government tests, is the most economical of all the baking powders.

The U. S. Gov't Chemist says: "ROYAL BAKING POWDER is undoubtedly the purest and most reliable baking powder offered to the public." The Canadian Gov't Chemist says: "ROYAL BAKING POWDER is pure, 23 per cent. stronger, and far superior to all others."

If any one attempts to experiment upon you, or with your food, by sending you any substitute for Royal Baking Powder, send it back.

The King Pneumatic Rifle. Pistol-Grip.

A Beautiful Rifle.

This is the best Air Rifle we have ever seen. Its polished barrel shines like silver. Its curves are graceful, and its proportions perfect. It is a Gun any boy would be proud to carry, and prouder still to own. Yet, with all its beauty, its shooting qualities do not suffer in comparison. It shoots with precision, and carries a shot for a long distance.

The great advantage of an Air Gun is that it uses no powder. It is hence inexpensive. There is scarcely any noise. No danger of explosions. No possibility of fires.

The King Pneumatic Rifle is made entirely of brass, iron and steel, with the exception of the stock. This is of wood, stained and polished to represent mahogany, and has a **pistol-grip.** The barrel and other exposed parts are nickel-plated. Its length is 33 inches. It is designed entirely for shot. Common BB shot are used. These can be bought for a few cents a pound at any local store.

Price, $1.25. We send with the Rifle a small quantity of Shot and a Target. **Postage and packing 50 cents,** when sent as a premium or purchased, or it can be sent by express not paid.

THE YOUTH'S COMPANION, Boston, Mass.

For the Companion.

ENGLISH UNIVERSITIES

For American Boys.

By Professor Goldwin Smith, LL.D.

Is it good for an American youth to go to an English University?

Before I answer that question, I ought perhaps to confess that I am not so great an enthusiast about going to universities at all as I once was, and as an old Oxford professor might be expected to be.

I believe in culture. I believe in it as a preparation for practical life. I believe that it makes statesmen large-minded and prescient, lawyers and physicians liberal and philosophic, even chiefs of commerce and industry worthier of a position the importance of which to society increases every day.

British government has been during the last half century, and is still, largely in the hands of the Oxford honor list. Of the prominent under-secretaries of departments who really carry on the administration, and are chosen solely for their business qualities, a large proportion was at one time taken from the Oxford first class. The Indian Empire is now administered by men chosen by examination, "Competition Wallahs" as they are nicknamed.

I once asked Lord Lawrence, a practical man if ever there was one, what he thought of the system, rather expecting that he would be against it, but I found that he was thoroughly satisfied with its fruits, and willing to exchange any men he had who had been nominated under the old system for the same number of Competition Wallahs.

If high culture is good for the man it is certainly good for the State: a highly-cultivated man could hardly be a demagogue or a boodler in politics, a pettifogger and trickster in the law, a quack in medicine, or a maker of corners and combines in trade.

What I doubt is whether the mass of men who go to a university get high culture. I am afraid the mass of the "passmen" at Oxford and Cambridge do not. The modicum of classics and mathematics which they carry away with them after their three years' residence—the usual course—is soon forgotten, and leaves little trace. The great majority, then, probably never again open a classical or mathematical book.

A man at the university cannot be made to work as a boy can be made to work at school; and unless he has a taste for study, or a strong sense of duty, he wastes a great part of his time, putting on a spurt of reading just before his examinations. He acquires habits of idleness, perhaps also habits of expense, possibly habits which are worse still.

At all events he wastes some money, and partly wastes three or four years of life.

Whom Does the University Benefit?

Universities are good for those who have a real aptitude and inclination for science and learning. They are good for those who will really employ them as places of culture, and are capable of putting their culture to good use in practical life. But these are limited classes, the second perhaps quite as limited as the first.

When my advice is asked in the case of an ordinary youth I usually say, "Send him, when he is through the High School, into business where he will be in harness and must work, keeping him at the same time under your own roof, or finding him as good a home as you can."

He will pick up a good deal of general knowledge from journals, from books, from converse with other men. These are not the Middle Ages when there were no books, when knowledge could be derived only from the lips of professors, and when Paris and Oxford swarmed with students who had flocked out of the feudal darkness to the only source of light.

Friendships are formed at the universities, but not there alone. Athleticism is practised—perhaps too much just at present—at the universities, but it may be practised elsewhere.

There seems reason to fear that we may have too many universities and more graduates than will find a market; and that we may in time thus breed an educated proletariat, disqualified for ordinary labor, not qualified for higher employment, unhappy and possibly dangerous.

In England there is a large class of wealthy youths, with whom something must be done between Eton or Harrow and the time when they are to be their own masters. But even for these youths, unless they have a real taste for study, the army might be better than the university. In the army they are under discipline and they must at least learn their drill and appear upon parade.

However, the British army is now a scientific profession; it is no longer a place for valiant cocked-hats upon poles, and to get into it is not so easy as it was in my school days.

Moreover, I must say, if it is a question of comparison between English and American universities, that the only American university which I know well is Cornell. Mr. Cornell's scheme of combining manual labor with study, and thus enabling poor youths to earn their bread while they are going through their university course, has fallen to the ground. As a system it was plainly impracticable. Mental and physical effort draw on the same fund of nervous energy, which in very few is large enough to answer both calls.

But the founder's design, it seems to me, has not altogether failed of effect. The stamp of special industry and frugality has been left on the university. Almost all our students come to us, I believe, resolved to work. When we have a rich student he seems to be kept from excess—at least from any excess injurious to his fellows—by the spirit of the place. I should not wonder even if the absence of luxury had something to do with the success of Cornellians as oarsmen.

The case may be somewhat different in the universities to which the wealthy resort in large numbers and where they set the fashion.

When I have been asked whether an American or a Canadian boy should be sent to an English university, I have answered with a loud *No*.

The Reason for a "No."

In the way of knowledge, which after all is the main object for which the time is given up and the money is spent, I do not see what is to be gained. Science, I should suppose, is just as well taught in American universities, now, for the purposes at least of all ordinary students, as it is in the universities of the Old World. Oxford and Cambridge are not preëminent as schools of science. Science was exiled from them till yesterday by ecclesiastical ascendancy, and she has hardly yet had time fully to reëstablish herself in her home.

A specialist may wish to attend the lectures of some particular professor, but I am speaking of those whose object is a general education.

Cambridge, I presume, retains in mathematics the preëminence which she owed to Newton.

Both the great English universities are preëminent in classics: they are the seats of a traditional familiarity with the ancient authors, and with everything helpful to a knowledge of them, beyond anything which we can be supposed yet to have on this side of the water. Greek and Latin verses may not be worth much, but the men who can write these well must know Greek and Latin. Yet I suppose that with the excellent teachers whom America has now bred or imported, not only mathematics but classics enough for all the purposes of general education may be learned without crossing the Atlantic.

Science, however, seems destined more and more to become the staple of education as well as the light of human life; and science, as I have said, may apparently be as well learned, for all the purposes of culture, on this side of the Atlantic as on the other.

Life at Oxford or Cambridge has great charms. Of this no *alumnus* of either can fail to be sensible. John Bright, who had grown up in severe Quaker antagonism to everything of which Oxford was the peculiar seat, when brought to the Delilah, as he often was in his later years, could not help laying his head in her lap.

Looking over the ancient city, as she lay before him in her glory one summer afternoon, while the music of her bells filled the air, he was heard to murmur, "How pleasant it would be to be eighteen and to be coming here!"

It is true Oxford had then been overhauled by a reforming Commission, and she was beginning to show signs of turning from reaction to progress. To have been brought up in a home of historic beauty, as the *alumni* of Eton and Winchester, of Oxford and Cambridge have, is a thing for which one may be thankful, and for which one may be envied by those who live in a land without historic ivy.

English and American Colleges Compared.

Perhaps it must be conceded, too, that the old country has still the advantage in refinement. That manners are substantially less good here than there I fail to see: perhaps in these matters a student's eyes are not the sharpest. The behavior of Oxford or Cambridge students towards each other is regulated by the code, and reflects the habits of a polished society.

Practical joking is not unknown, and never will be unknown where boys are gathered together. A student has even been ducked by his fellow-students in the college fountain; but it was for "Vulpicide," the most heinous crime known to a community of fox-hunters. The unspeakable practice of hazing does not exist.

An English university also has an advantage in being a federation of colleges, each of which is a little community in itself, supplying a genial bond and affording happy facilities for friendship. It is partly, perhaps, the lack of something of the kind that has called into existence what we style our "Secret Societies."

The relation between tutor and pupil in the English college is close, sometimes affectionate, and useful if the tutor is a man of the right sort. The "tutor" designates a member of the college staff of teachers, "professor" being reserved for members of the university staff. The limits of the two sets of teachers are not very well defined; but in the main the professors are supposed to take the higher work. Physical science, requiring laboratories and demonstration-rooms, falls almost entirely to the university professors.

There is much less idleness, much less extravagance, far fewer snares for the feet of the weak and foolish in the American university than in the English. No one, I should think, in an American university can have such power for evil as a wealthy and vicious young nobleman, with the influence of his rank added to that of his purse, has at Oxford and Cambridge.

That prince of heartless sybarites, who figures as Lord Steyne in Thackeray's "Vanity Fair," began at college his career not only of licentiousness but of corrupting and ruining his companions. One of them who could ill afford it lost heavily to him at play: the father of the victim paid the debt, exacting from his son a solemn promise that he would play no more.

The nobleman induced him to break that promise by an assurance that, if he lost, any amount of time should be given him so that he would not have to encounter his father's wrath. He lost again, and gave his note to the nobleman, who negotiated it next day.

College debt is a cruel thing: I have seen the misery which it entails, and which is often prolonged for many years after leaving the university. I could mention a case in which the accumulating weight was dragged through a life of distinction and of high preferment till the man died, as was generally believed, by his own hand.

It must also be borne in mind that the benefits and pleasures of life at Oxford and Cambridge depend in some degree on the connections and habits which the student brings with him at entrance. The influence of the great public schools predominates in university society, and the great public schools of England have a social character of their own.

An American youth would find himself perfectly well-received, and see at once that there was not a particle of national prejudice among the Britishers; but he might not at once find himself at home.

The discipline at Oxford and Cambridge, though it has none of the strictness of a seminary, proceeds decidedly on the theory that the student is *in statu pupillari*. I am not sure that it would suit a young American who had become his own master in his teens.

English universities, I have said, are federations of colleges. Not long ago the rule was that every student must be a member of a college, and at Oxford that he must board within the walls. That rule is now relaxed. But a student must still belong to a college and live in it if he would enjoy the full advantage and pleasures of English university life; and to get into a good college his name must be put down several years beforehand.

Athletics.

It is from Oxford and Cambridge that America has caught the fever of athleticism. The natural source of that epidemic is in universities where there are a great many young men who have not to earn their bread. There are much worse kinds of dissipation, no doubt, than athleticism; but athleticism is dissipation, and a youth who is thoroughly infected with it misses the proper object of university education, and is in danger of missing the proper object of life.

It is vain to fancy that in men of ordinary mold study and athletics will go together. A few men at Oxford I have known who were good cricketers or oarsmen, and took high honors in the examination-room. But they were very few.

Games by all means. They wash the brain as well as invigorate the body, which ordinary exercise does not. Kept up in later years, they hold old age at bay. But we may have games without the athletic mania.

The great English game itself is alien to Americans. Cricket is played in the United States, but it never can be the American or Canadian game. It takes too much time, especially since the batting has become so much stronger than the bowling.

In a business community, nobody can afford to give two or three days to a match. Nor is it possible in this climate to have the green playing-fields for each school and the village greens in which the cricketers of England are bred.

Cricket and base-ball have no doubt been both developed by evolution out of the same old English game of trapball, single wicket cricket being the link in the first case, rounders in the second. But, like other institutions of British origin, the game has adapted itself to the conditions of the New World.

Base-ball, we are told, is declining; but if it is, cricket cannot take its place. Another game, which can be played in two hours and does not interfere with business, will have to be found.

Then there is the system at Oxford and Cambridge of stimulating industry by honors and prizes.

In American universities we have the same examinations for all the students of the year and are satisfied with requiring all to come up to the common standard, trusting to spontaneous industry and personal interest in the subject to carry the superior students up to the higher mark.

In the English universities they have class-lists in which students are arranged in order of merit as shown in the examination, besides which there is a multitude of prizes.

At Cambridge, competition is carried even to a higher point than at Oxford. There are two examinations, one for honors, the other for a common degree; and the students fall into two divisions, classmen and passmen, according as they are or are not aspirants to honors.

This use of the spur, while it undoubtedly produces high achievement, implies a comparatively low level of spontaneous industry.

Two Classes of Students.

Probably the level of spontaneous industry in these seminaries of wealth and rank is comparatively low. The division of passmen from classmen, though a necessity of the system, is an evil. An American, if he could not aspire to honors, would find himself thrown among the ruck, with a poor standard of effort set before him, and rather slighted in comparison with the honor men by the college staff. He would not be brought up to the standard—probably he would be allowed to fall considerably below the standard—of a good American university. Nor is it so easy for a man to win high honors at an English university without having gone through the training of the English schools, where the competition begins in full force.

There has hitherto been a justification in aristocratic England for the system of university honors which does not exist in the United States. It has opened the gate of distinction and of success in life to youths who had no heritage but their brains, and against whom the wicket might otherwise have been closed. In America the gate is still open to all. Besides, English university honors would be of no use here.

On the physical dangers of the competitive system I do not dwell, because it seems to me that they are greatly overrated. Let a man be regular in his reading habits and let him work early in the morning, not late at night, and he may get his first class without doing himself any harm.

Nor can I see why the effort to win distinction at the university should have any worse effect on character than the effort to rise in life.

Above all, the old English universities reflect English society, which is aristocratic and therefore anti-American.

Not that servile deference to rank or social servility of any kind prevails among the students generally at Oxford or Cambridge. Nowhere in England is there less of these; and the same may be said of the public schools, which are the most thorough-going little democracies in the world. Oxford admits negroes on a footing of perfect equality.

But the ideas, the sentiments, the tastes, the view of life are aristocratic. I am not going to rail against aristocracy, though I heartily desire to see it fairly cleared out of this continent, where it has never had any business, and where its presence is an unmixed evil. Railing against aristocracy is after all a sort of inverted flunkeyism, and not seldom is coupled with a large measure of flunkeyism of the ordinary kind.

Suffice it to say, that aristocracy belongs to the Old World, and that by imbibing its spirit a youth will be in danger of unfitting himself for the part which he will have to play as a citizen of a democratic country in the New World.

We need not worship democracy any more than we need rail against aristocracy. Heaven knows there is enough to be done before "government of the people, by the people, and for the people" will cease to be government of the Boss, by the Boss, and for the Boss, or the reason and conscience of the community become the rule of government instead of popular will and passion.

The Duty of Americans.

But there is the American's allotted sphere, and he had better even forego, if it were necessary, a certain measure of culture and refinement than estrange himself from it in heart, and unfit himself for the performance of its duties.

It is with democracy as with nature: *parendo vincimus;* we must embrace it heartily and enter thoroughly into its spirit in order to qualify ourselves for guiding it into the right course.

Some good things of a political kind there are which an American trained among Englishmen might bring back with him from the old country to the model Republic. He might bring back independence of mind, and a power of standing firm, when principle gives the word, in a minority of one. But estrangement from the spirit of his own community, with consequent weakness, would be the chief result.

Already it is alarming to see how many rich Americans pass a great part of their lives, or even settle permanently in Europe, deserting their posts of social duty and depriving the community of which they are members of its natural chiefs. They are drawn by the superior brilliancy of the society and perfection of the services, especially of the household service. But not to mention any higher motives of duty, if they leave the land of their investments to the anarchist, they may some day find their remittances cease.

It is possible, indeed, that the American youth just at present, if he fell into a certain set at Oxford or Cambridge, especially at Oxford, might come back democratic and something more. After being for centuries in the hands of the clergy and bound through their ascendancy to the

Digitized by Google

political party which upheld the Established Church, the English universities have been suddenly restored to nationality, freedom and science.

The natural consequence is a strong recoil and a sudden development of extreme Liberalism, nay, of Socialism, among the younger men of intellect. I trust it will not be too grandmotherly to say that this also would be an unwholesome element for an American youth, who no more wants to be inoculated with the revolutionary than with the reactionary spirit of the Old World.

Oxford herself, it is to be hoped, will presently get over the fermentation of newly-won liberty, and slide into the placid course of academical duty. Seats of learning and science, places of high education ought to be calm and politically neutral. I should say that American universities are.

For Anglophobia, a year or even a month at Oxford or Cambridge would be a certain cure. But I am sanguine enough to believe that the whole American people will presently be cured of Anglophobia in other ways, and we do not want any American boy to become an Anglomaniac, a "masher" or a "dude."

For the Companion.

TRICKS OF INDIAN JUGGLERS.

First Paper.

Two of the tricks of the Indian jugglers are especially famous—the "tree-growing trick" and the "basket trick." Inasmuch as very few know exactly how these tricks are performed, I will give a detailed explanation of the method employed by some jugglers whom I saw at Madras.

As commonly described in travellers' tales, the tree-growing trick might well seem impossible of explanation. But if the spectator expects to see a seed placed in the ground, the leaves starting up above the soil, the growth increasing, the shrub spreading and the fruit appearing and ripening directly under his eyes, he will be grievously disappointed.

The juggler makes a little heap of moist earth, perhaps six or eight inches high, on the stone step or the hard carriage-drive in front of the hotel where the traveller is staying. The juggler himself, dressed in a loin-cloth only, squats on the ground behind the heap, places in it a nut, usually that of the mango-tree, and spreads a cloth over the whole.

After a short time, during which he waves his hand in the air or assumes to call upon a pagan divinity to help him, he snatches away the cloth, and two or three tender leaves are seen appearing above the soil.

He spreads the cloth over it once more. The plant appears to be growing rapidly and pushing the cloth up. The juggler again snatches the cloth away, and a large and wide-spreading shrub is seen, its leaves covered with dew.

Sometimes a tripod frame is used, over which the cloth is thrown, so that the plant may "grow" freely beneath the small tent thus formed.

When the leaves are just visible above the ground, the juggler lifts the plant from the earth and shows the spectators how the nut has apparently swollen and germinated, pointing out the rootlets that extend from the nut through the moist earth.

If, when it has fully grown, there is no fruit on the tree, the juggler covers the plant once more with the cloth, and after another short interval of waiting, again removes it. Two or three mangoes are seen, which the juggler breaks off and presents to the spectators.

The best performance of it I have ever seen was in Madras, and I learned from the jugglers exactly how it was done.

When the juggler apparently places the new mango nut in the earth, he really places an old split nut there, which he has held concealed in the palm of his hand. The new nut he conceals in the place previously occupied by the old nut; in other words, he "palms" it.

After spreading the cloth, he drops the new nut from his palm into a fold of his loin-cloth, whence he takes and "palms" a small plant, two or three inches long—sometimes a little twig of mango with the root of another plant fastened to the end of it.

This he does while the attention of the spectators is given to the waving of his other hand in the air, or to his gestures upward for the help of a god.

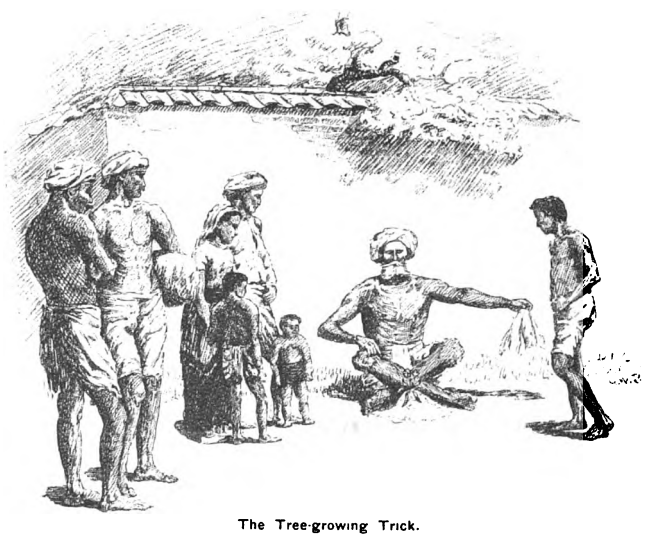
He then removes the cloth for the first time. No leaves appear. While replacing the cloth, he inserts the root end of the twig in the old nut, and arranges the soil so that the top of the stem and one or two small leaves appear above the surface.

This done, and the cloth being fully spread, he waves his hands again in the air, and after a short time removes the cloth for the second time, and reveals the plant in its first stage.

While with one hand showing the plant with its roots, etc., to the spectators, he takes with the other hand from his loin-cloth a piece of branch half an inch or more in diameter, which is well provided with twigs and leaves. All of these are pressed close to the branch, and the whole wrapped round tightly with a piece of wet cloth. I have seen this branch as much as a foot and a half long.

The juggler conceals this behind his bare arm, and with a swift movement slides it under the cloth while he is apparently replacing the small plant.

While spreading the cloth he unwraps the branch, sticks it into the soil, expands the twigs and leaves, and squeezes over them the water from the wet cloth. Then, "palming" and withdrawing the small plant, he proceeds as before with his gesticulations, removes the covering and shows the spreading shrub.



In the same manner he slips the fruit, provided with stalks, under the cloth in the next stage, and twists the end of each stalk round one of the twigs. When he pulls the fruit afterward, he takes care to break the stalk close to the fruit.

The cleverness lies in the wonderful dexterity which the juggler displays in making his important movements without being observed.

Scarcely one of my readers, even with this knowledge of the way in which the trick is done, would actually see the juggler make any one of the movements which he desires to be concealed.

The basket trick is performed differently in different parts of India. The ordinary traveller would describe the trick thus: The juggler puts a child into a basket three or four feet long, one foot and a half or two feet deep and about two feet wide. He shuts the lid and thrusts a naked sword repeatedly through the basket. The sword is reddened apparently by the blood of the child, whose screams are heard during the performance.

The juggler then opens the basket, and it is found empty. Immediately the child, uninjured, comes running up from behind a neighboring tree or from behind the spectators. The trick is

The Tree-growing Trick.

performed on the open ground, usually in front of a house.

One of their methods is as follows: The juggler, after placing the boy in the basket, offers up a series of incantations, and while doing so twirls a large cloth, which he finally flings over the basket and then slowly draws toward himself, tucking one end of it in at his waist and allowing it to hang down before him very much like a long, wide apron.

Then the sword-plunging begins; and after it is over, the basket is found empty and the boy reappears some distance away. In this case the boy crawls out of the basket while it is covered by the cloth, seizes the band around the waist of the juggler, and draws himself up between the juggler's legs. While the spectators are examining the basket, he seizes the opportunity to slip off behind a tree or wherever he has been directed to reappear.

This is the explanation which a European conjurer obtained from the jugglers in the north of India. The method which I saw was far superior.

The juggler first passed me a strong, open network bag to examine, and I also examined the basket and the sword. The basket was somewhat elliptical in shape, and its sides widened outward from the top down. The lid was in a separate piece, with a rim about an inch deep. A large hole had been broken through the middle of the lid.

There was no trick about the basket, nor any about the sword. The bag looked as if it might have been made from a fragment of a fishing-net, but except for this peculiarity it seemed honest enough.

The juggler directed his wife, a young, fully-developed, but slender woman, to get into the bag. Her chief clothing consisted of loin-cloth and breast-cloth, which fitted close to her body. She placed herself in the bag, and I was then directed to draw the neck of the bag together, and knot the strings as I pleased.

I made various knots, and the juggler lifted the bag, with the woman in it, deposited her in the basket, placed the lid on, and spread a cloth over the lid. The basket was placed in the middle of the carriage-road directly in front of the hotel porch.

He then stood by the basket with the sword, and began a colloquy, which sounded like an angry one, in his own tongue. Replies came apparently from the basket, and the anger of the juggler seemed to increase until he suddenly sprang in the air, and came down feet foremost over the hole in the lid. The cloth, of course, yielded.

At the moment of his descent a terrible shriek was heard, as though he had jumped upon the woman. He leaped out again at once, and began frantically to plunge the sword through and through the basket, the point always appearing on the further side. His thrusts were very rapid and very complete and apparently very erratic, and he manifestly plunged the sword through every part of the basket.

Finally he ceased. I then never doubted but that, in some marvellous way, the woman had managed to slip out of the basket unobserved; and having read of the basket trick, I was prepared for her advent from behind one of the trees or the corner of the hotel.

The juggler, however, again began to converse, and a voice seemed to answer, at first faintly, from a distance, then gradually approaching until it appeared to come from the basket. Then, to my amazement, the woman rose up through the hole in the lid, holding the network bag in her hand.

Later, the juggler performed the trick for me in my room, and showed me the whole process. One of the joinings in the network was false; the woman undid this, and got out of the bag while the juggler was carrying on what was really a ventriloquistic performance.

She then lay with her body curved in the shape of a crescent round one side of the basket, while the juggler jumped through the hole, landing on the bottom of the basket between her head and feet. The thrusts which the juggler made with the sword, though apparently at random, had all been calculated to a nicety, and the woman was trained to know the exact direction of each thrust. She slid and drew herself and wriggled accordingly, moving her body, head and limbs with astonishing rapidity, in order to escape the thrusts, which were repeated while I looked on. The lid of the basket was removed so that I could see her clearly.

The sword passed under and over and between all her limbs in turn, just over and just under her neck, and so forth; and she was writhing and twisting and turning all the time, more like a snake than a human being. Once or twice she was not quite quick enough with her body; but her keen, shifting black eyes were on the alert, and, pressing the sword to one side, she changed the direction of it enough to avoid the danger.

The closing colloquy was also ventriloquistic, and at the conclusion of it the woman stood up.

The juggler declared to me that his wife was out of practice, and had grown rather too heavy for the trick; that he had been using two little boys, whom, however, he had not brought with him on that occasion.

His explanation of the appearance of the boy in a neighboring tree at the end of the trick was this: the first boy remains in the basket all the time. The second boy looks almost exactly like the first, and has a similar loin-cloth. When the sword-thrusting is over, the second boy appears a little distance off, and draws the attention of the spectators. In the meantime the first boy slips out of the basket and conceals himself. Then the basket is discovered to be empty.

Those who are familiar with deceptions practised by conjurers will not be surprised at this oversight on the part of the on-lookers.

My readers may try the mango trick, but I advise them not to try the basket trick unless the sword used is made of paper.

Richard Hodgson.

For the Companion.

OUR BASKET FESTIVAL.

First we called a meeting, and each one of us agreed to take a special department of basket-ware and to enlist the active sympathies of all available relatives and friends.

Every one was so good about it, from the people who lent us their handsome willow furniture, down to the small boys who begged to help carry the packages in for us and so get a free peep at the preparations.

We trimmed the walls and the pillars of the church vestry with wreaths and garlands of wheat-heads, oats, and pretty grasses. A good many of those plumy Pampas sprays were sent in. It lighted up beautifully; the wheat and oats looked as if they were gilded, in the strong light.

There were ever so many squares of fancy straw-mattings spread about the floor, and some of the larger baskets were arranged on them instead of on the tables.

In the centre of the room was a large tent, with two of the boys dressed for a "chief" and a "brave" respectively, to sell Indian baskets of all sizes and shapes. These were not lined nor fitted up in any way, but just as the Indians sent them to market. They sold a great many, for all were very cheap and pretty.

There was a mender's table. That had work-baskets of more styles than I can remember, but I know the darning-baskets went first and we took orders for more. These were square and about three inches high, some lined with figured sateen for keeping-and-using purposes, and some with china silk for "give-aways." The sides were covered smoothly and had pockets across the ends to hold the cottons and yarns. After the bottom was lined, a piece of cardboard the same size and shape was covered and fitted on the under side with a flannel leaf stuck full of big needles The upper side was puffed a little like a cushion, and diagonally across it was fastened a ribbon with this motto in letters of gold paint:

If you would preserve your soles,
Be sure to mend the little holes.

This was fastened in the bottom of the basket at one end and could be lifted at the other by a loop of ribbon.

Another table had several different kinds of baskets all made on the same foundation, a common splint grape-basket. Some of these were covered all over with plush or fleecy cotton flannel, to stand on the table and hold extra knives and forks at dinner. Others were nicely trimmed with silk and lace, for photographs, fancy work or knitting.

On one of the straw mats were a number of cat and dog baskets. These had little mattresses fitted in, and a blanket to match, which could be thrown across the top to keep the cold air from the pets. Some of them had a row of little bells across the front.

The newspaper wall-baskets were new to most people and sold well. We found them in one of the willow-ware stores, ready to fit up. Only a very shallow, circular basket which looked like nothing but a basket-lid, with a loop behind to hang it up by. A piece of satin with a shirred ruffle at the top was arranged across the front, half-way up, to hold the papers in, and a large bow completed the decoration. We found we could use palm-leaf fans in the same way.

Babies' toilet-baskets were lovely. Covered first with silesia in some delicate shade and outside that a removable cover of muslin with the ruffled edges feather-stitched in wash silks to match the lining, and trimmed with narrow lace. The little bags, cushions and powder-puff were all in accord.

On the miscellaneous tables were scrap-baskets, lunch and market-baskets, bonbon-baskets bronzed and be-ribboned, balls of twine in round Japanese baskets with scissors tied on, and even a great basket-work trunk which somebody bought for a laundry basket.

We had a programme (printed on what is known as "straw paper") of songs, recitations and tableaux, all of which referred in some way to our subject, or to straws, willows, reeds or the like.

For the little children's entertainment, there was in one corner a line stretched about four feet from the floor and on it, suspended by strings, a row of little baskets covered and tied up snugly, but with a small toy or a little candy in each. Then, being blindfolded, they were allowed to take a pair of scissors and snip off the first string they touched.

It was not at all a grand affair, but considering our inexperience and limited time to prepare, it was such a pleasant way to raise our "fresh air fund" that we pass our method on to others.

WATER AND STEAM.

Notice the spherical form that water takes when dropped on a hot stove.

Do these little globes touch the iron?

Why do they jump about and sputter?

Observe the bubbles that rise in heated water.

Do they change their size as they near the top?

For the Companion.

PURPLE ASTERS.

I had a garden when I was a boy,
Wherein I planted fondly many a flower,
And watched it grow, until I felt the joy
That every gardener feels, as Nature's power
To make rare perfumes burst from stalks of green,
And dash rich colors o'er dull earth, is seen.

In that old garden, bright with golden bloom,
From early tulip time till winter fell,
It seemed as if no sombre shade, nor gloom,
Had any right, or could desire, to dwell;
Yet o'er one spot, where wildness still had sway,
I always felt some melancholy lay.

Among the grasses scattered wild flowers grew,
Sweet, tender, trembling things that we called weeds,
(Names mean so little), always wet with dew,
That clung to their pale disks in liquid beads,
And seeming in the color symphony
Of the gay garden, minor chords, to be.

In that sad spot, pale purple asters came,
When earth wore gorgeous colors on her breast,
And fields were ripe, and autumn's flood of flame
From scarlet maples, swept from east to west:
They bore no wealth of royal purple bloom,
But seemed the children of the great earth's gloom.

My life has been a garden, from whose soil
Have sprung pale-petalled roses, violets blue
As heaven, and where the passion-flower's coil
Has closed round frail anemones, heart's-ease, and rue;
But in one sombre spot, apart, alone,
Pale purple asters in the shade have grown.

I would not life should be forever gay
With golden blooms, for brilliant tints would pall;
I would not have spring's heavy odors weigh
The senses down too long,—Heaven wisely limits all
Our joys; but sometimes earth appears
To breed naught but despondency and tears.

And as with heavy heart one walks his way,
When fields are ripe, and autumn's flood aflame
Is passing from the hills, and dark decay
Is creeping in its track with steps of shame,
He thinks that only purple asters pale
Belong by right to earth, her hill and vale.

They tell us there are gardens always clad
With summer's richest robes, awaiting men
Beyond the stars, where hearts at once grow glad,
And never to low levels sink again;
Should we not long in such light lands to see
The purple asters of despondency?

ARTHUR WENTWORTH EATON.

OUR KING.

When a king in Asia enters one of his provinces, the people prostrate themselves before him; they crowd about him laden with gifts. They are quite willing that he should trample them underfoot, if he will only bless the world by remaining in it strong and happy.

Such homage seems absurd to free Americans. Yet there comes, some time, a king into almost every family among us, to whom we all hasten to pay a slavish allegiance. Nothing can be beautiful or pure or dainty enough for this little sovereign! Let us all go shabby and hungry, but let him be royally clothed and fed.

A mere mite of a creature, soft and helpless and innocent. It is his helplessness and innocence which give him power over the roughest, coarsest men.

A story was told lately of a certain noble family in Europe composed of middle-aged, peevish, moody men and women, who for years had been at odds with each other. One of the brothers married, and the bride was met with jealousy, suspicion and dislike. But presently the little monarch—the baby—arrived, and they all gathered around it in wonder and delight.

The crabbed aunts watched it with tender smiles; the stiff old uncles were proud to take it on their shoulders and become its horses. When it pulled the beard of the old grandfather he laughed with pleasure. They learned to love each other through loving it.

One of these little princes comes, black and puny, into a negro's cabin or an Indian tepee, and with what rapture is it received—as if it were the fairest and dearest thing on earth.

The keeper of a prison in Alabama, who wished to reform the convicts, found them implacably sullen and revengeful. All his attempts at kindness were met with suspicion and savage jeers. One day he went among them carrying a beautiful baby, who laughed and crowed and held out its arms to them as to friends.

The men gathered about it with flushed faces and wet eyes; they spoke to it tenderly, they touched its white gown with reverence. It was to each of them his own child in the far-away home that he had lost. The friendly keeper found them afterward more amenable to reason and kindness. The touch of the baby's hand still rested on their hearts.

Did the reader ever look for the secret of the baby's power, or think how wise and high was God's purpose in planting in the vilest and most vicious soul an instinct which pays homage to helpless innocence? The man, however long dormant in the brute, rises at the baby's touch.

For the same purpose the Saviour came first into the world—not as a human king, not as a mighty spiritual presence, but as a loving little child.

No brute force, no power of money or rank can gain from a man the fealty which he pays to weakness and purity. The wild-beast passions in his heart lie down together, and a little child leads them.

WORSE THAN MOSQUITOES.

Summer heats, which are so oppressive to man, summon into life myriads of small creatures, some of which are highly inconvenient to us. In the early weeks of our short summer the woods and fields are comparatively silent, only the birds and bees being active and melodious. But in August all nature teems with life; every leaf is a colony; every tree a densely inhabited province; every forest a world of humming, buzzing, singing, croaking, shrieking, hooting existence. In torrid climates the generation of life through the continuous heat is amazing and terrific, and occasionally it overflows into countries lying just north of the tropics, like the line of States which form the southern boundary of the Mediterranean Sea.

During the early torrid summer of Africa myriads of locusts are generated, more than can be maintained even by the luxuriant vegetation of the heated zone, and hence come those armies of locusts, which once in four or five years lay waste and devour all before them. The French Government has at present a commission of scientists in Algiers to devise means for preventing the ravages of the locusts; but, so far, they are as helpless before these little creatures as the people of Australia are in destroying the rabbits.

A traveller who was in Morocco recently describes the appearance of the advancing locust horde as that of a vast green field in motion like a sea; as the locusts, when they reach good feeding ground, advance by leaps, devouring as they go. An aged native of Morocco gave this traveller—the brilliant Italian author, De Amicis—such a vivid account of the progress of one of the locust armies that he wrote it down in his journal, which we translate.

"Sir," cried the old man, with indescribable energy, "it is terrible! It is frightful! They come from *there*," pointing to the south. "It is a black cloud. We hear the noise from afar. They approach; they cover the roads, the fields, the houses, the woods. The cloud gets larger, larger; comes, comes, comes; devours, devours, devours; crosses rivers, ditches, walls, fire; destroys grass, flowers, fruit, grain, the bark of trees, and keeps on, always on. No one can stop it; neither the tribes with fire, nor the Sultan with his army, nor all the people of Morocco united.

"Heaps of dead locusts, and beyond them the locusts that survive. Ten die, a hundred are born. A hundred die, a thousand are born. I have seen them at Tangier: roads covered, gardens covered, shores of the sea covered, the sea covered; all green, all green, all in movement; living, dead, rotten; infection, plague, famine, curse of heaven!"

The old man did not exaggerate. Gordon Cumming, the lion-hunter, who spent five years in Africa, describes the locusts as coming on like a resistless, illimitable storm, flying steadily and rather slowly, darkening the air, and finally covering the plain as far as the eye could reach. He saw swarms that were a whole hour in passing.

Our Western States have been occasionally visited by them, but never with such destructive consequences as have been experienced in Africa, where the locusts will find a province in the morning covered with harvests and fruit trees, and leave behind them in the afternoon nothing but a black and seething waste. Happily, in our latitude, nature is less violent, and most of us in the hot months can find some cool corner and languidly pity distant populations who know what summer can be.

JENNY LIND.

Jenny Lind, the woman, was greater than Jenny Lind, the singer. "I would rather hear Jenny talk than sing—wonderful as it is," wrote Mrs. Stanley, the wife of the Bishop of Norwich, in whose palace the great singer was a guest while in that city. The Bishop's son, subsequently Dean Stanley, who had no "ear for music" and on whom, therefore, her singing was wholly lost, wrote that she had "the manners of a princess with the simplicity of a child, and the goodness of an angel." Her character showed itself, he added, "through a thousand traits of humility, gentleness, thoughtfulness, wisdom, piety."

She looked upon her natural faculty as a gift of God, and never sang without reflecting that it might be for the last time.

"It has been continued to me from year to year for the good of others."

This feeling was no fine sentiment, but a religious principle. While she was the Bishop's guest she begged Mrs. Stanley to allow her to take three of the maids to a concert where she was to sing.

At a service in the cathedral she was moved to tears by the singing of the boy choristers, and had places reserved for them at her concert the next morning. When she came on the platform she greeted them with a smile of recognition, which the boys never forgot.

She gave to charitable objects thousands of pounds gained by her wonderful voice. While singing in Copenhagen, such was the excitement that court and town begged her to give them one more day of song. A gentleman of musical culture had, with his wife, anxiously looked forward to her visit. When she came he was on a sick bed. Jenny Lind heard of his desire, and found time to go to his house and sing to him and his wife.

When she went to London, Mendelssohn asked her to sing to a friend of his, who had long lain upon a bed of sickness. She went and cheered her with songs, the remembrance of which are still cherished by the family.

Again and again, when the opportunity offered for such an act of kindness, she sang to invalids who could not be present at her concerts. The gift of God within her was a trust to be administered for the good of others.

ON A CAKE OF ICE.

One of the selectmen of Palmer, Massachusetts, was engaged in a public-spirited attempt to save one of the town bridges from destruction last winter, says the Springfield *Republican*, when he came near losing his own life. The river had risen to a dangerous height, and the ice was accumulating above the bridge, subjecting it to an enormous pressure. Axe in hand, Mr. Dillon walked out upon the firm ice below the bridge and began cutting with a view to widening the channel.

He was still engaged in the work when he discovered that the ice on which he was standing had parted from the main body, and was drifting down the current. The fact was of itself sufficiently startling, but he perceived at once that his ice-raft was rotten and leaky.

As soon as a firmer-looking piece came near enough he made a jump for it, and by good luck landed upon it safely. Down the black stream he floated till at last he brought himself to anchor by seizing a branch of a willow. The river was so high, however, that he was still seventy-five feet from the shore, and though men could be seen passing in and out of the wire mill, it was impossible for him to make himself heard.

Just then two telegraphic linemen, Raiche and Whalen, crossed the bridge and happened to see the selectman's predicament. Whalen at once fastened the end of a long coil of wire about his own waist, unharnessed and mounted his horse, and drove into the icy water, leaving Raiche to manage the wire from the shore.

Their plan was to run a wire across the stream just below Mr. Dillon, so that a boat could put out to his rescue. It was a perilous experiment. The wire nearly pulled the man off his horse again and again, while the raging current threatened to carry away the horse himself. But at last dry land was reached.

By this time the mill-hands had flocked to the shore, and under the direction of the superintendent a raft was built and launched. A young man volunteered to act as boatman, and armed with a long pole he shoved off. The wire saved him from being carried down stream, and he kept clear of the ice by means of the pole.

After many narrow escapes the brave fellow finally pushed the raft alongside Mr. Dillon, who by this time was almost exhausted, and grabbing him by the collar, pulled him on board. The return trip was made in safety, and the half-dead selectman was hurried away to the nearest farm-house.

For the Companion.

CHANGELINGS.

Along the orchard's fragrant way
I walked in flower-embroidered May;
The apple-trees were all alight
With opening buds of rose and white.

On the same path I pass again,
The faded grass is wet with rain.
The sweet young year is growing old,
My flowers are changed to globes of gold.

Within the polished spheres there be
Rare honey and rich spicerie
From sun and wind and blossom-bell;
The patient days have wrought the spell.

M. F. B.

THE DEATH-WATCH.

The old superstition of the "death-watch" is supposed to have vanished with the scientific explanation that the sound is only the work of a harmless insect; but as a matter of fact there are still many people foolish enough to be disturbed if they happen to hear the mite at work. A gentleman who supposed himself entirely free from this or any other superstition, went to pass the night at the house of a friend in the country, and when he was shown to his chamber for the night, his host said:

"I hope you are not superstitious?"

"Not in the least," the guest answered. "Why do you ask?"

"Because," was the reply, "the death-watch is sometimes heard in this room, and I wondered if you would mind."

"Oh, not at all," the guest answered.

He went to bed, and soon fell asleep, but about midnight he awoke, and on becoming thoroughly conscious, perceived that he was straining his ears to listen to the steady and continuous ticking of the death-watch in the wall. He smiled to find that so slight a thing had awakened him, and composed himself to sleep again; but to his annoyance he found it impossible to do so.

He listened to the sound of the death-watch with an indefinable but constantly increasing uneasiness, and when, after a time, he heard the distant howl of a dog, he was surprised and not a little disgusted to find his heart beating with unnatural rapidity.

The gentleman lay awake for the remainder of the night, uneasy, disconcerted, and vainly endeavoring to reason himself into a saner frame of mind. He rose in the morning thoroughly worn out.

"You do not look as if you had slept well," the host said. "I hope the death-watch did not keep you awake."

"It did, though," the guest answered. "I heard it all night long."

"Well, I am very sorry," the host said, "but the masons are coming this morning to fix it."

"To fix what?" the other asked.

"Why, the noise is made by a tiny leak in the side of the reservoir for rain-water. It is just outside the wall of your room on the terrace, you know; and the water falling, a drop at a time, makes that sound of a death-watch."

The guest said no more, but he declares that it is beyond the power of any mysterious noise in the wall to keep him awake another night.

MONKEYS AND MEN.

Men of science have discussed quite freely the statement attributed by Mr. Stanley to Emin Pasha, that the chimpanzees which inhabited the forest of Msongwa, in Central Africa, had raided the plantations of Mswa at night, lighting their way with torches which they carried in their hands. The statement is received among naturalists with entire incredulity; and it is supposed that Emin Pasha, being very near-sighted, mistook a tribe of the negro pigmies found in that region for monkeys. It is denied that any monkeys ever possessed a sufficient amount of intelligence to obtain fire and light torches. Such a performance would require a degree of original understanding which only man, among living beings, possesses.

In mere imitation, however, the monkey may be taught, or may himself learn, to do many wonderful things.

In the hotels and private houses of India, monkeys have been found who were trained to wait at table, bringing dishes and articles of food in a more or less mechanical way.

The story of the talented orang-outang of Buffon, the naturalist, is classic. This creature gave visitors his arm, walked with them, showed them to the door, ate with a knife and fork and drank from a glass, poured tea into a cup, sweetened it and waited until it cooled before he drank it.

An orang-outang at the Jardin des Plantes Zoölogical Garden in Paris regularly unlocked with a key the door of the room which he occupied, opened the door, locked it on the other side after he had entered, and then hung the key on a nail.

M. Flourens relates that he once visited the Jardin des Plantes in company with an aged scholar whose appearance greatly interested this orang-outang, who was at large in the rooms of the institution. The old scholar wore very old-fashioned clothes, one article of which was a tall hat with a wide brim. He was much bent from age, and in walking supported himself upon a heavy cane.

When the two gentlemen were about to depart, the hat and cane of the old man were missing. Presently the orang-outang was seen tottering through the room, his back bent almost double, wearing the hat upon his head and walking stiffly by the aid of the cane.

Father Conbassou, a French missionary in the South Pacific, related that he had trained a young orang-outang to perform many useful offices; but he took good care that the monkey should be locked up when he was conducting any service at church.

One Sunday, however, the monkey escaped from his captivity and, unseen by the missionary, crept into the church while the sermon was being delivered, and took an elevated position in full view of the congregation.

Here he began to imitate the gestures and manner of the preacher in a way so comic that the congregation could not help bursting into a laugh.

The priest was very indignant at such irreverent behavior, and reprimanded the native congregation sharply, pounding upon the pulpit as he did so, still without seeing the monkey.

At this the animal fell to imitating and exaggerating the performance of the priest, greatly to the increased mirth of the congregation. Matters were rapidly becoming worse, when the people began to point to the orang-outang, who was then peremptorily removed.

WHAT SHE WANTED.

The beauty of a photograph depends somewhat upon the personal appearance of the "subject"; but when old Mrs. Spencer, of Berryville, decided, at the age of seventy-two, to have hers taken, for the first time in her life, she made no allowances for any difficulties of this sort. "I hope," she said, rather severely, to the "operator" in the town where she was spending the day for this particular purpose, "I hope you'll make it look as much like sister Mary as possible, for everybody says there's a strong family resemblance, and you probably recollect takin' Mary's photographs some twelve years ago!"

The young man began to explain that he had been there only three years, but Mrs. Spencer was evidently not much impressed by his statements.

"I shall rely on you to make it as much like sister Mary as possible," she repeated, as she settled herself in the chair.

"Shall I send you the proofs?" inquired the operator, when the sitting was over.

"'The proof of the puddin' is in the eatin',' I've always heard," remarked Mrs. Spencer. "I'll call in again in a fortnight, when I believe you said they would be done. I'll leave this photograph of sister Mary, as it may be a help to you."

In two weeks she appeared again, and her photographs, in two different styles, were displayed to her. Half of them she gazed at with approval, saying, "I'll take *them*, for there's a strong look of sister Mary in 'em; the others I sha'n't take, though of course I'll pay you for your time and trouble in gettin' 'em up, unsightly things as they be!"

"We preserve the negatives for two years," said the operator, as he did up the half-dozen she liked, and looked regretfully at the neglected ones, "and if at any time you should —"

"Young man," interrupted Mrs. Spencer, "you'll have to preserve *my* negative for a good deal more'n two years, for I mean 'no' when I say it. I shall *never* take them other photographs, for there's not a look of sister Mary in 'em—and they're homely as hedge fences besides!"

Still keeping to her "negative," the old lady departed. She explained to her Berryville friends that she was "afraid that young man wouldn't never be any great of a success in his business, he was so slow to ketch a likeness. As fer as the other half-dozen o' my pictures was concerned, I might just as well 'v' left sister Mary's photograph to home!"

UNRECOGNIZED.

Involuntary flattery is sweet to the soul, but its opposite, the obtuseness which fails to recognize our good points, is hard, indeed, to bear. A lady whose portrait was on exhibition in a certain gallery had her own attention called to it by the owner of the place. "B—— has put some of his best work into this, madam," said he. "Everybody acknowledges it to be a fine portrait."

"Does it remind you of any one?" asked she, looking him full in the face.

"Why, no! I don't know the original; but she must certainly be a very beautiful woman."

"Then you never saw her?"

"Never! Why," as some meaning in her tone and merry face broke upon him, "it isn't *you!*"

The beautiful Mrs. Norton one day went to buy some plaster casts, for her niece to use as models in drawing. The proprietor of the shop displayed a large collection of hands, arms and ears, and finally held up a very symmetrical nose.

"There, ma'am," said he, "I can safely recommend that. It's the Honorable Mrs. Norton's nose, and hartists do buy a lot of 'em. It's very popular."

The same failure to grasp the situation took place at the meeting of two young women, at the "reunion" of a prominent New England family. Fifth cousins and relatives by name rather than blood were talking together, sometimes not knowing in the least "who was who," and these two women especially had discovered that they had many tastes in common, though as yet neither had found for the other "a local habitation and a name."

"I want chiefly to see Charlie Pennell's wife," said one. "When they were married he wrote my brother that she was a beauty, and had a mouth like Cupid's bow. Now, I never met precisely that sort of mouth, and I've been on the lookout for it all day."

"My dear," said the other, merrily, but with a little sadness in her eyes, "I am Charlie's wife. That Cupid's bow is now before you; but I suppose it has been twanged so many times in saying 'don't' to the children, and complaining about the cook and the housemaid, that it has grown straight as the line of duty!"

THAT WAS ALL.

It seems that the word "gentleman" is subject, in one country at least, to the misconceptions so frequently attendant on the hardly-used term "lady." The author of "A Colonial Tramp" gives the following instance of such an absurd and mistaken phrasing:

When we were at Port Said, in passing down one of the side streets we missed our little guide for a moment, and as he had our parcels we looked round to see if he had not run off with them. Upon that we became aware of a dark, evil-looking and dirty half-caste of some kind, cuffing him about at an alley corner. We turned to give assistance to our little friend, and the bully left off and shuffled once more into shadow.

"Is that your father?" I asked, guessing at the fact for the reason that the boy had not resisted very much, and now shook himself together without offering any explanation.

"My fader? No, sar," with great scorn. "He one dirty thief-gentleman wanting the parcels, that's all."

"Oh, that's all, is it?"

"Yes, sar, he gentleman who waits at dark corners when Englishman pass at night, and stab."

MAYBE.

Perhaps there is an old white owl
  Afraid to stay in the dark,
And possibly there's a yellow dog
  Who doesn't know how to bark,
And it maybe there is a brindled cow
  Who isn't proud of her calf,—
But I hope there isn't a boy or girl
  Who doesn't enjoy a laugh.

A. M. P.

For the Companion.

Pompey's Vegetable Band.

"You Pompey—you go 'way fum dat dar tub! No, suh. You carn't go to no p'rade. You jus' got ter stay right here an' play long yosefs. Ef you an' 'Miah goes, dat Sally Ann'll holler ter go too, an' den how's I gwine min' Piney an' Angeline an' do Miss Ma'y washin', I'd lak ter know. No, suh. You all gotter go out ter de gyarding an' play an' take dem chillun 'long, too. Now min' I don' heah no wud fum you till de ho'n blow."

Poor Aunt Dinah did not mean to be cross to her little boys, whom she loved as dearly as any mother could, but she was very busy that morning and could hardly take her hands from the suds for a moment.

Since Pappy Jim died, six months ago, she had found it very hard to get enough for her five little ones to eat, to say nothing of clothes for them to wear. Most of those they had on now were gifts from Miss Mary's small brothers and sisters.

Pompey and Jeremiah were greatly disappointed, but being the oldest of the family the twins were quite used to staying home to "min' de chillun," so putting Angeline into their two-wheeled cart, and telling Sally Ann to "bring 'long Piney," they set out for the "gyarding," as they called the little patch of ground behind the house.

"Le's us play p'rade oursefs," said Pompey. "Me an' 'Miah'll git de tings. I'll be de man wot goes in de front ith a big hat an' a stick an' 'Miah can be de capting."

"An' wot'll we all be?" asked Sally Ann, with a sober face.

"You can be de sojers," said Pompey, "an' you can march an' play de fiddle an' de drum."

"But dere aint no drum," objected Piney.

"I'll make you one," said 'Miah. And while Pompey got some paper for their "sojer caps," 'Miah found a small watermelon that could never ripen. Into this he stuck two sticks, and tying to them some string, he slipped the queer little drum around Piney's neck.

The fiddle took much longer to make, but Pompey and 'Miah were experts. Pompey made the fiddle and 'Miah made the bow. Both were just alike, so it did not make much difference which was called fiddle and which bow.

This is the way Pompey went to work on his. He took a good long piece of the green corn stalk and cut four slits from joint to joint. Then he slipped his knife under and loosened the skin from the stalk. That made three fiddle-strings. Under each end of these he poked a bit of stick for a bridge, and the fiddle was done.

Then 'Miah made a trumpet from the stem of a squash leaf, and the band was ready to begin its march.

Pompey took his place as drum-major. 'Miah was captain. Piney beat the drum. Sally Ann played the fiddle, and little Angeline rode behind and called out to them all, "Dap horsey!"

"Le's go p'rade mammy first," said Pompey. So off they started, up the hill, out the gate into the road that passed by the little cabin. Tootle-te-toot, rub-a-dub-dub, and squeakety-squeak. What a fine big noise they did make.

Mammy heard them, and leaving her clothes in the boiler, she came to the door and watched the band go by.

"How their father would like to see them," she thought. And she went back to her washing with a tender smile on her face. The little band had cheered one sad heart.

"Now le's go past Lame Jakey's house," said 'Miah. "Maybe it'll make him laugh."

Lame Jakey was a poor little boy who lived in the next cabin. He could not play like other children, but sat day after day with his little dark face peering out of the window.

Over the hill came the band—Toot-le-te-toot, rub-a-dub-dub, squeak-e-ty-squeak.

The tired face brightened, and when they stopped right under his window, Lame Jakey laughed aloud and clapped his hands for joy.

"I'll give you de fiddle w'en de p'rade is done, Jakey," called out Sally Ann, touched by the wistful little face.

After they were gone Jakey lay back in his chair for a long time. Then he called out:

"Mammy—say, mammy!"

"What, chile?" said mammy.

"Do you tink, mammy, dat maybe sometime I can be de capting and march in de ban'?"

"I hope so, honey," answered mammy, as cheerfully as possible.

Tootle-te-toot, squeakety-squeak went the band in the distance. "Hep, hep, hep," said Pompey, and on they marched till they came around to the wood-pile in the back of the yard.

"Le's s'prise mammy," exclaimed Sally Ann. "Le's fill the wood-box all up."

"Yes, le's," said Pompey. "You Angeline—you git outen dat ar cart."

The children worked with a will. Five times they marched from the wood-pile to the house, the drum beating, fiddle squeaking and trumpet blowing, while little Angeline marched behind pushing the loaded cart and shouting, "Dap horsey, dap horsey!" with all her baby might.

By the time the box was filled dinner was ready, and mammy gave to each child an extra slice of "bread an' 'lasses." "'Cause," said she, "you has been de bes'es' chillun dat ever was dis mornin'."

Grace Brownell Peck.

For the Companion.

ONE LITTLE SEED.

A very little girl had a very little seed,
  And she put the little seed in the ground to grow;
It grew and it grew, till 'twas very big indeed,
  And it gave the little girl red apples, oh!

For the Companion.

"HOW THEY MAKE THIMBLES."

Grandma Ross was frying doughnuts, and little Polly was "helping"—cutting the holes in the centres of the cakes with grandma's big steel thimble. She thought it was fun, for grandma let her have the little round balls of dough, which she cut out, to fry for her own.

How they did bob and dance about in the hot fat! But once Polly dropped in a ball too quickly and a drop of the fat flew up and hit her *spat* on the nose.

Didn't she hop and dance about the kitchen! Then she plunged her nose deep into a basin of cold water to take away the smart, and presently she was rolling her balls in sugar and cutting away again as busy as ever, with a big red spot on her nose; for Polly wasn't a cry-baby.

"How do they make thimbles, grandma?" she queried, jabbing her little cutter energetically through the dough.

"La, child! how should I know?" said grandma, spearing a big fat cake from the kettle with her long fork and rolling it in sugar. "I never thought, dear. But here's your Uncle Tom. He knows everything—a'most. Take a doughnut, Tom, and tell the child how thimbles are made. For the life of me, I can't."

"Whew!" cried Uncle Tom, munching the brown, crisp cake. "Polly's scraping the bottom of the kettle again!"

For Polly was forever trying to find out the *whys* and *wherefores* of things, just as every little boy and girl should. That was what Tom meant by "scraping the bottom of the kettle."

"Well—well, let me think!" and he "eyed" Polly's sugary balls sharply. "In the first place the thimble-maker has an iron bench with lots of little dented holes, or pits, in it, just the shape of a thimble, but of different sizes, all the way from grandma's great thimble down to Polly's teenty one.

"Then he cuts little round disks out of a very thin sheet of iron, and after heating them in the fire till they are as red as Polly's nose, he claps a disk over each one of these little pits and hammers and tinkers and punches it down into the pit, quick as a wink, with a little iron punch shaped like the hole. See?"

"Why, yes, to be sure!" cried grandma. "That's easy enough."

"In a minute," continues Tom, slyly appropriating several of Polly's sugary balls, "out they come, and they are hardened and 'tempered' by heating again and dashing them into cold water with a great *whiss* and sputter. (More balls.) After that they are polished till they shine and *clickety-click*—they are ready to help sew on a button or mend a three-cornered rent in Polly's frock. (Another ball.)

"These are only the every-day steel thimbles, mind you. The Christmas and company thimbles are the every-day thimbles plated with silver and gold. And that's all I know," and away went Tom with his pocket of cakes out under the butternut-tree to read Greek sentences.

"Dear me!" cried grandma, after a minute. "You've paid dear for your lesson, child. He's eat all your cakes!"

"But I've learned how they make thimbles, anyway, grandma," laughed Polly. "And I can cut out some more cakes."

For the Companion.

ROBIN'S CURLS.

Robin had long, beautiful curls; but he was three years old,—almost too big to wear curls, papa thought.

One day mamma and papa were talking the matter over, and wondering how he would look with short hair.

"Robin," said mamma, "do you want your hair cut?"

"Yes," said Robin, "you may cut off my hair; but don't cut off my curls!"

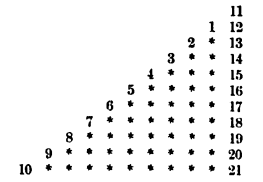
For the Companion.

FOND OF MINCE PIES.

It was her first summer in the country, and her enjoyment of the fruits in their season had been very keen.

One day dessert was being served; when little "Happy's" turn came she was asked which she would like, apple or berry pie. She turned to her mamma and earnestly inquired, "Mamma, when will the *minces* be ripe?"

Enigmas, Charades, Puzzles, etc.



1.

PUZZLE.

Take a part of a house or a letter or measure
  And add to it something that curves,
And 'twill give you an angle, but 'twon't give you pleasure
  To find it is fitted with nerves.

2.

A TRIANGLE.

Across.

11. A Roman numeral.
1, 12. To exist.
2 to 13. A voyage.
3 to 14. Parched with heat.
4 to 15. The language of ancient Scandinavia.
5 to 16. A poetical foot, consisting of three syllables, the first long and the others short, like the joints of a finger.
6 to 17. Young fellows.
7 to 18. Cunning.
8 to 19. A place in the Russian Empire.
9 to 20. Somewhat covetous.
10 to 21. A disentangling.

From 1 to 10. The name of a battle fought on Sept. 11, 1777.
11 to 21. The name of a celebrated musical composer who was born on Sept. 12, 1809.

F. S. F.

3.

NOVEL ACROSTIC.

Define each of the italicized groups of words by one word. When rightly guessed and placed one below the other, the primals will spell the name of a famous inventor.

1. The picture is poorly drawn and the *frame on which it rests* is a bungling piece of work.

2. When travelling in Europe, I found *the people of Holland* very interesting and hospitable.

3. Do you think *an indolent person* will ever set the river on fire?

4. Read good authors and study their *manner of writing* if you would become a writer yourself.

5. When the boy stood on the burning deck, he felt he *was obliged by duty* to obey his father.

6. What a wonderful thing is the *telegraph that carries the news to the brain* when you cut your finger.

4.

HISTORICAL ANAGRAM.

Many years ago the bold *lead hand, At fair*, stretching out from the coast of *Panis*, was the headquarters of a gang of *Oh! mamma, Ned! tar pies!* who exacted tribute or toll from every *pish* passing through the *sit rats* of *Brag tilar*, to or from the *Emir deter Anna*. This process was called *gift rain*, and gave rise to the word *fat fir*, so influential in political life.

5.

EASY AMPUTATED QUOTATIONS.

Each word is beheaded and curtailed.

-rea- -at-, -mal- -at-, -ca- -at-, -rawn- -at-,
-row- -at-, -lac- -at-, -re- -at-, -awn- -at-,
-rav- -l- -lodder-, -a- -oun- -risker-,
-ather-, -other-, -ncle-, -ousin-.

—Browning.

-omewha- -ac- -ro- -h- -illag- -tree-
-tand- -h- -l- -ashlone- -ountr- -ea-.

—Longfellow.

Conundrums.

What girls weigh the least? Cork maidens.
What door may be said to be warlike? Battle-door.
What kind of frames are disliked by everybody? Unhappy frames of mind.
Which is the most dandyish tree? The spruce-tree.
What two letters of the alphabet can talk together? U and I (you and I).
When may merchants be said to stay underground? When they are sellers (cellars).

Answers to Puzzles in Last Number.

1. Pan-try, car-go, Rob-in, stir-up, cut-let.

2. 1st stanza—Hackney. 2d stanza—Reckoned. 3d stanza—Yonder, wonder. 4th stanza—coward, John Howard.

3. Palm.

VEGETARIANISM.

A theory carried to an extreme throws its light on queer sides of human nature. Many people believe that it is not only foolish, but wrong to eat meat, and their conclusions, pushed to their furthest bounds, have an odd sound in the ears of carnivorous mankind. One enthusiastic gentleman announces his intention of eating merely the raw fruits and grains of the earth, believing that cooked food was not intended for man or beast. He acknowledges that a diet of nuts and fruit has hitherto made him rather ill, but cheerfully hopes to adopt it, after a longer trial.

Another gentleman, who is not only a vegetarian but a conscientious eater of those fruits and grains which meet his approval, would not discard the rind of a fruit merely because it may be tough. Having grown there, he says, it must be intended for some good purpose, and he concludes that this purpose is connected with the palate of man.

"I believe there must be something medicinal or nutritious in the peel of an orange," he writes a friend, "and so I always eat it with the rest of the fruit. I must confess, however, that it never seems to agree with me."

Far removed from these ultra enthusiasts, however, are many persons who have adopted the mild form of vegetarianism which consists in eating vegetables when they are to be conveniently found. In London, especially, will such wanderers from the beaten track find ample sustenance in vegetarian restaurants, one of which, "The Apple Tree," is so entirely satisfactory as to merit many a visit.

Its bill of fare is long and elaborate. If one desires French names, they are here to be found. Translated, the tempting titles inevitably suggest the presence of meat, and inspire the inexperienced eater with an excited longing to know how it is all done.

You order "Saronny Steak," with a triumphant feeling that here, at last, the cook has been caught in his own ambitious toils, and beguiled into serving up flesh. A sort of browned cake is produced, and when one investigates, it offers a hint of many grains and vegetables, so cunningly mingled and so deliciously flavored that neither eye nor tongue can distinguish form or distinct taste.

A vegetable *ragout* sounds marvellously insipid, does it not? Yet when one has before him a steaming plate of tender young carrots, turnips and other spring benefactions, flavored with wondrous herbs, he must be an exacting man, indeed, if he is not content.

From "The Apple Tree" also are to be gathered delicious puddings of figs and dates, plates of fruit smothered in cream, and many-colored salads, which delight the eye and tickle the palate. Surely, in a land where such provision is made for the flesh-hating tooth, it is by no means so bad a thing to be a vegetarian.

HER MONEY-MAKERS.

"Come out and see my money-makers," said a lady living in the country to a friend from the city who was visiting her. "These," she continued, as they came to a large and well-appointed hen-house, "are my 'church-hens;' all that I make out of them above expenses is devoted to religious objects.

"The geese you see down there on the pond are my 'poor and needy geese.' They cost little or nothing, and the profits are applied to the relief of the poor and needy. Away down beyond that wood I keep a drove of hogs; 'dress hogs' I call them, because I buy my dresses out of what I make from them.

"Those Alderney cows are my 'theatre and opera cows.' I saw four Wagner operas last winter out of the profits of one of them. You see that bed of strawberries? Well, we don't call them strawberries, but 'shoe-berries.' I buy all the children's shoes and my own, too, out of the income from that strawberry-patch.

"These and many other little money-making schemes I manage myself, without troubling my husband, who works in the city for a not very big salary. Consequently we have a great many comforts and luxuries that we couldn't otherwise have; and I thoroughly enjoy the work, too."

Do not this lady's methods suggest a host of little things which other ladies might turn to use as money-makers, and find health and pleasure in so doing?

TOLD BY MARK TWAIN.

Mark Twain the other day told a writer for the Buffalo *Courier* a story which illustrates the point that all clerks in bookstores, alert and generally accurate as they are, are not a final authority in literary matters. Mrs. Clemens and a friend recently went into a bookstore in New York, and called for a copy of Taine's "Ancient Régime."

"Beg pardon," said the clerk; "what book did you say?"

Mrs. Clemens repeated the author and title of the book. Going to the rear of the store the clerk soon returned, only to inquire:

"May I ask you to repeat the name of the author?"

"Why, Taine," replied Mrs. Clemens, becoming a little annoyed.

Assuming an air of superior knowledge, and looking at his customers with a sympathetic smile, he remarked:

"Pardon me, madam, but you have the name a little wrong. You mean Twain—not Taine."

QUALIFIED AFFECTION.

Genuine sorrow is sometimes expressed so strangely that the listener finds it hard not to smile. A case in point is mentioned by a clergyman.

While passing a summer vacation in a thinly-settled portion of Maine, he was called upon to officiate at the funeral of a farmer, who had died leaving a widow with whom he had lived in wedlock for nearly half a century.

After the service the widow came to the side of the coffin for a last look at the face of the departed, and as she stood there she heaved a deep sigh, and turned to the clergyman to say with perfect simplicity:

"Wal, I ruther liked him."

"WE shall go," said a colored gentleman, attempting to quote "Hamlet," "to that land whence no traveller's bones ever return."

Itching Piles.

WOODCHUCKS.

Last summer, writes a New Hampshire boy, I had an interesting experience with woodchucks. The mischievous rodents nearly destroyed a field of clover, and then began to forage in a bean-patch in which I had a particular interest, as the proceeds of it were expected to defray my expenses a term or two at the village academy. I set traps in vain. The woodchucks were too cunning to touch my bait when they had a field of clover in which to forage. I tried to get a shot at them, but they were too wary for me. Tim, my dog, managed, with my energetic assistance in demolishing the stone wall where they had taken refuge, to catch two of the trespassers and shake them to death, but that was all.

When I saw my academy tuition falling before the woodchucks' sharp teeth and adding to the sleekness of their fat sides, I was fully roused. I stoned up half a dozen woodchuck holes, but it availed nothing. The rascals seemed just as numerous, and devoured clover and beans just as persistently as before. They had reached an age and size when holes were of small account. In several instances the stones were removed. I doubt if I ever succeeded in penning a single woodchuck.

Their time of feeding, I learned, was very early in the morning, and I resolved to be in season for them. For four mornings I was in the field watching for them between three and four o'clock. I succeeded in shooting one. The wily fellows then began feeding in the evening. It seemed as if they kept spies on the lookout constantly.

Just at dusk one day I came upon a solitary woodchuck helping himself to my beans. I seized a stone and threw it, and the woodchuck fell. I ran forward to secure my game. The next moment the little beast, which had been merely stunned, rallied and set his sharp teeth in my finger. I choked him until he was glad to let go.

I was on the point of closing his career then and there in a summary fashion when I decided to wait a bit and make an experiment. I carried the chattering, brown-coated animal to the house, where I smeared him all over with tar and then attached an old sleigh-bell to his neck by a stout wire. I took him in a wire cage, an angry, disgusted woodchuck, to the bean-patch and gave him his freedom. The instant he was at liberty he began scratching at the bell wire, rolling over and pawing the dirt in a vain endeavor to clean himself. Soon he ran off into the bean-patch.

I went out to the field next morning to see if my experiment had resulted in anything. There were no fresh signs of devastation in the beans, and I was proceeding toward the clover, following along a little beaten track made by the woodchucks in their travels between their two feeding grounds, when I came upon the dead and mutilated body of the unlucky creature which I had tarred the previous day.

From the signs I judged that his fellow-woodchucks, enraged at his disgraceful appearance, had attacked him in a body and literally torn him to pieces.

That was the end of the woodchucks' depredations last summer. I never saw a sign of their work afterward. They deserted the premises. I learned, however, that a farmer living a few miles away was much annoyed by woodchucks about that time, and think it probable that they were the same which had given me trouble earlier in the season.

THEORY AND PRACTICE.

It is quite likely that many an observant person has witnessed a similar scene to the one described below, since the characters are types that are distributed world-wide. In this case the dialogue occurred in a thriving Western city, and the particular place was a corridor of the post-office. A large, fleshy, indolent-looking man came in, opened his lock-box, and was glancing over his mail when his attention was attracted by a wordy dispute among a group of men near by.

A very small, bright-looking and chipper man was doing nearly all the talking, and evidently having everything his own way.

"The situation is like this," said the small man, with great vigor. "I care not how much money a man makes, he must use brains in investing it or he will die poor. Isn't that so, Colonel?"

The large man nodded indolently.

"Any fool can make money, but it takes a wise man to keep it," observed the small man, oracularly. "A man must read up and keep posted on finance and business, especially if he ventures on speculation."

"Yes," assented the large man, making a movement to go, but the small man would not permit it.

He backed the large man up against the wall, took him by the button of his coat, and held him there for several minutes while he gave his views on business and finance. During the dissertation the large man was manifestly uneasy, answering "Yes," "No," and "I shouldn't wonder," almost at random. When he finally escaped, the small man marched away with an air of importance, and a stranger inquired who he was.

"Oh, that," replied a bystander, "is Ben Storms. He's a shoemaker and a mighty poor one. Rich? Oh dear, no! Failed so many times that he can't fail any more, because no one will trust him."

"And the large man?"

"That is Colonel Duval, Vice-President of the D. G. R. road, owner of the marble quarry, and one of the biggest capitalists in the State!"

HIS FORTUNE.

Wealth and poverty are relative terms, as almost every one must have learned by his own experience. Many a man who now thinks twenty dollars a week pretty small wages, can remember the time when he felt rich with half that sum.

A citizen of Westerly, R. I., says the historian of the town, enlisted as a privateer during one of the early wars of the country. It was perilous business, but patriotic feelings and visions of gold carried the day with him.

His cruise was long and eventful, but at last he returned home, and received an appropriate welcome. As soon as the first greetings were over, his mother inquired:

"Well, Harry, how have you made out? Did you get much money?"

"Oh, yes, mother; good luck. I am rich. I shall have enough, with prudence in the care of it, to carry me through life, I hope."

"I am glad, my son; but how much did you get?"

"Well, I don't know exactly; but I think, when we settle up, I shall have as much as thirty dollars."

The Youth's Companion is an illustrated weekly paper of eight pages. Its subscription price is $1.75 a year, payment in advance.

Twelve or sixteen pages are often given its subscribers in a single weekly issue of the paper. All additional pages over eight—which is the number given for $1.75—are a gift to the subscribers from the Publishers.

New Subscriptions can commence at any time during the year. The Companion does not employ agents to solicit renewals of subscriptions.

Payment for The Companion, when sent by mail, should be made in a Post-Office Money Order, Bank Check, or Draft, or an Express Money Order. WHEN NEITHER OF THESE CAN BE PROCURED, send the money in a Registered Letter. All postmasters are required to register letters whenever requested to do so.

Silver should never be sent through the mail. It is almost sure to wear a hole through the envelope and be lost, or else it is stolen. Persons who send silver to us in a letter must do it on their own responsibility.

Postal Notes are not a safe means of sending money. Any one can collect them at any Money-Order Post-Office, and, if lost or stolen, the money cannot be recovered, as no duplicates are issued. Subscribers who send us Postal Notes must do so at their own risk.

Renewals.—Three weeks are required after the receipt of money by us before the date opposite your name on your paper, which shows to what time your subscription is paid, can be changed.

Discontinuances.—Remember that the publishers must be notified by letter when a subscriber wishes his paper stopped. All arrearages must be paid.

Returning your paper will not enable us to discontinue it, as we cannot find your name on our books unless your Post-Office address is given.

Always give the name of the Post-Office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed and drafts made payable to

THE YOUTH'S COMPANION,
41 Temple Place, Boston, Mass.

For the Companion.

PILLOWS.

The use of a pillow is not a matter of mere blind usage. It has a physiological basis. We sleep, for the most part, on the side, and without a pillow the head would be uncomfortably and harmfully lower than the body.

It will be remembered that Jacob, when fleeing from Esau, took a stone for a pillow. He needed something for the purpose, and nothing better than a stone presented itself. Such practices are common in Africa at the present day. Bishop Taylor probably found it convenient, if not necessary, to take up with them in his travels in that land; for on his return to this country, he rejected the soft pillows of his friendly hosts, and, sometimes at least, substituted one of books.

Some peoples rest the neck instead of the head on hard pillows. In Africa extraordinary headgears make this practice necessary, and many a civilized woman has been compelled by a somewhat similar coiffure to forego both the pillow and the recumbent posture.

A consideration of the physiological reason for pillows will suggest their proper thickness. They should merely bring the head to the natural level. Some pillows are much too thick. By bending the neck unduly, they interfere with the outflow of the venous blood from the head. The pillow that just fills up the space above the shoulder best suits its end.

Again, pillows of feathers are objectionable. While they furnish the needed support for the head, they are too heating, as they have a remarkable capacity for holding and accumulating heat.

It should be remembered that more blood, and hence more heat, goes to the head than to any other part of the body. Head-heating pillows are against the wholesome maxim, "Keep the feet warm, but the head cool." There is nothing better than the hair pillow.

Further, the pillow is for the head, not for the shoulders. To rest the shoulders on the pillow defeats the very end for which it is used.

Finally, special care should be taken of infants in this matter. We have seen their heads sunken deep in the softest and thickest of pillows, and their faces, as a natural consequence, covered with great beads of perspiration. It is no wonder that children so treated die.

PRECESSION OF THE EQUINOXES.

The precession of the equinoxes is a subject intimately connected with the zodiac, for wherever the vernal equinox occurs, the first sign of the zodiac begins.

The point where the ecliptic and equator cross each other is called the equinox, because day and night are there of equal length. The crossing point, however, is not the same every year. The equinox is moving westward, or retrograding on the ecliptic, as if it advanced to meet the sun at each annual return.

The motion was called by Hipparchus, as long ago as 120 B. C., the precession of the equinoxes, and the name is still retained, though recession would be more appropriate to the retrograde movement. The recession is 50.2 seconds of a degree each year, and, small as the distance appears, it has amounted to thirty degrees in the last two thousand years.

As the vernal equinox is the astronomical starting point, from which longitude is reckoned, its retrograde movement must cause a corresponding increase in the longitude of the stars. The result is that the constellations of the zodiac no longer agree with the signs, and that star-maps have to be renewed at intervals of fifty years, to give the true position of the stars.

It might be supposed that this constant change would bring confusion into the celestial machinery, but so regular is the irregularity that its limit can be determined and its periods calculated with mathematical precision.

The cause of this strange motion has long been known. The earth is not a perfect sphere, but bulges out at the equator. The combined attraction of the sun and moon on this protuberance or ring of matter causes a gyratory or wabbling motion of the pole of the equator round the pole of the ecliptic, a motion so slow as to take nearly twenty-six thousand years for a complete revolution, at the end of which time signs and constellations once more agree, and a new circuit is commenced.

Some curious results follow from the precession of the equinoxes. The pole star varies from age to age, for the pole of the equator in its revolution round the pole of the ecliptic must pass in succession different stars. Wherever it points, the star nearest is the pole star.

When the first catalogue of stars was made, the present pole star was twelve degrees from the pole. It is now one and one-fourth degrees from the pole. It will approach the pole during the next century until the distance is thirty minutes, and then recede. Gamma Draconis was the pole star three thousand years ago. The brilliant Vega will be the pole star twelve thousand years hence.

The picture of the heavens that is now seen will not be repeated for twenty-six thousand years, and, after this long interval, the earth will still be young!

PROMPT AND HEROIC.

All Australian boys are taught the necessity of guarding against snake-bites. The treatment of such wounds is a necessary part of their education. One day two little fellows, six and eight years old, went into the bush to play. The smaller one, chasing a rabbit into a hole, pushed in his hand, and brought it out quickly with the head of a venomous snake attached to one of the fingers.

"Quick, Charley!" he cried, putting his hand down on a stump. "Chop off my finger! The snake has bitten it."

Charley, without a pause, lifted his axe and chopped, not only the damaged finger, but two of the others as well. Then the boys ran straight into town, over a mile distant, and sought a surgeon, who dipped the injured members in ammonia before dressing them. Imagine the pain of such a burning bath!

A young Australian lady was one day walking along the street, when she saw a dirty and wretched-looking tramp to whose leg a venomous snake had affixed itself.

After killing the reptile with her parasol, she borrowed his pocket-knife, cut the trousers away from the wound, and then, cutting a cross upon the bite itself, applied her lips to it, and sucked the poison away. The tramp's life was saved, at the sacrifice, perhaps, of some dainty scruples.

HER WINDOWS.

Anybody who has ever looked out of one of the old-fashioned windows with sixteen or twenty-four panes of "bubbly" glass, knows the peculiar appearance which objects present when seen through such a medium.

"Old lady Hawley," who had lived seventy-two years in a house liberally supplied with windows of this kind, and who spent a good deal of time looking out of them, was filled with amazement when she first sat down to view the landscape from her niece Mehitable's "best room," where the old-fashioned panes had been replaced by new ones of good clear glass and modern size.

"Well, I do declare!" she ejaculated, after about five minutes. "It does beat all how folks look through this winder! Makes a sight o' diff'rence in their gaits, seem 's ef. It's allus 'peared to me 's ef my neighbor, Mis' Spofford, hed a kind of a hobblin' walk when she got out onter the road, but she's jest gone past, steppin' as straight as ken be.

"But there," she went on, "I dunno but I like my winders on some accounts, livin' in a kind of a lonesome spot, as I do. Fer I notice a man goin' past here looks like jest one man; but through my winders, he allus looks like a gin'ral muster!"

RELATED TO THE QUEEN.

It must be a very exceptional person who does not prefer to be addressed with consideration and a measure of politeness. Lady Duff Gordon, in her travels among ignorant peoples, seems to have carried her "manners" to an uncommon degree. Writing from Capetown, she says:

An old "bastaard" woman, married to the Malay tailor here, explained to me my popularity with the colored people, as set forth by "dat Malay boy," my driver. He was sure I was a "*very* great Missis," because of my "plenty good behavior."

I spoke to him just as to a white gentleman, and didn't "laugh and talk nonsense talk." "Dat Missis never say, 'Here, you black fellow.'"

English people, when they mean to be good-natured, are generally offensively familiar, and "talk nonsense talk," that is, the Dutch-English of the blacks, while the blacks feel it the greatest compliment to be treated with seriousness. One of them said that I must be related to the Queen because of my "not knowing bad behavior."

DENTAL BOOTJACK.

Yankees think themselves fairly ingenious and "handy," but how many of them ever thought of a simple trick which an American traveller in Siberia saw performed by a native of that country?

We had been wet since morning, and, as a natural consequence, our feet were swollen and boots shrunken to such an extent that we despaired of getting them off at all. No plan which our ingenuity could devise was found to answer.

When all had failed, our invaluable Yakov came to the rescue, and by the application of his teeth to the toe of each boot—which were fortunately long—aided by his hands at the heels, effected his purpose with surprising ease.

UNFORGIVEN.

The pet of the household knelt as usual to say his prayers at his mother's side.

"God bless papa and mamma and Uncle Ed and —and —" here he hesitated.

"And Polly," prompted his mother.

Polly was his nurse.

"Ma'," he cried indignantly, looking up, "can't I skip Polly? She spanked me to-day."

AN exchange speaks of young women who ride bicycles as "Daughters of the Revolution."

To cleanse and preserve the teeth use "*Brown's Camphorated Saponaceous Dentifrice.*" Microscopical examinations have proved that the use of soap is the only safeguard against the accumulation of animal and vegetable parasites on the teeth. Camphor strengthens and relieves soreness of the gums. Price, 25 cents a bottle. Sold at drug stores. [*Adv.*

In Eight Chapters.—Chapter VII.

Hard-earned Gold.

ALL the evening after the visit to Mrs. Beech's and Dorothy's sudden resolution about earning the money for the hospital, Dorothy was so much preoccupied that she was scarcely conscious what was going on about her.

At last even her mother gave up trying to engage her in conversation, and reluctantly left her to her own devices, thinking regretfully that it was very sad that Dorothy had developed a disposition to sulk.

She could only attribute her silence to the effect of the morning's misfortune and her own remonstrance against it, which she supposed the girl was resenting. That she could be planning to obtain money for the hospital did not enter her mother's mind. She had no other thought than that Dorothy would help Helen with the altar-cloth.

Next morning Dorothy's dressing seemed to demand more care and attention than she usually gave to it; and when she finally stood before her mirror, quite ready, she presented a very different appearance from her usual every-day gingham-and-cambric one.

Upon her feet, which were encased in black silk stockings clocked heavily up the sides with red, were a pair of high-heeled Spanish slippers. Her frock was of red cashmere, and the skirt but touched her ankles, while the bodice she wore was of black velvet laced across the bosom with gold cord. Upon her head she set a coquettish little cap, and in her hand she carried her banjo.

A fantastic little figure she was in her fancy costume, and any one who saw her might well have wondered what madcap performance was on foot so early in the morning.

But no one did see her. She threw a long cloak over her shoulders and crept stealthily downstairs and out of the silent house before even the maids were stirring, munching a bit of bread, and smacking her lips over a long draught of milk from her bowl.

It was a lovely morning. Dorothy exulted in the bright sunlight, the clear air and the glancing river, and more than all in her own foolish project.

By and by the *Mollie Elwell* arrived. It was too early for more than one or two stray passengers to board her, and so it was not long before Dorothy heard the shouts of the men preparing to cast off the ropes and draw back the gang-plank.

It was only then that she darted from her place of concealment and hurried breathlessly aboard.

When the captain, who was a burly, good-natured man, saw before him the little figure in its long, dark cloak, he fancied he had to deal with some superior sort of beggar-girl, and prepared himself to listen to her woes with a patient charity.

He was not a little surprised when the young mendicant pleaded for nothing more than his permission to dance and play her banjo upon the upper deck of the *Mollie Elwell*.

"You see, sir," said Dorothy, breathlesly, "I want to earn money for a hospital, and I can't do anything but play the banjo and dance; and if you'd only let me do it on your boat, people might give me pennies, and it would be so nice! *Please* let me, sir. I won't be a nuisance, truly I won't. See! I'll show you what I mean."

Casting off her cloak, she stood before him in her fantastic attire, and holding her banjo in place began to twang upon it the accompanying chords of an old plantation-song.
